**LP\_CLKRST\_DRES\_XTAL32K** Configures the bias resistor of XTAL32K\_CLK.  
0: Turn off internal resistor, use external resistor  
1-3: Internal bias resistor value  
(R/W)

**LP\_CLKRST\_DGM\_XTAL32K** Configures the gm of XTAL32K\_CLK. (R/W)

**LP\_CLKRST\_DBUF\_XTAL32K** Configures the buffer of XTAL32K\_CLK.  
0: Single-ended buffer  
1: Differential buffer  
(R/W)

**LP\_CLKRST\_DAC\_XTAL32K** Configures the bias current DAC of XTAL32K\_CLK. (R/W)

Register 9.66. LP\_CLKRST\_HP\_CLK\_CTRL\_REG (0x0040)

Reset

**LP\_CLKRST\_HP\_ROOT\_CLK\_SRC\_SEL** Configures the clock source of ROOT\_CLK.

- 0: XTAL\_CLK
  - 1: CPLL\_CLK (360 MHz)
  - 2: RC\_FAST\_CLK
  - 3: Invalid
- (R/W)

**LP\_CLKRST\_HP\_ROOT\_CLK\_EN** Configures whether to enable ROOT\_CLK.

- 0: Disable
  - 1: Enable
- (R/W)

**LP\_CLKRST\_HP\_PAD\_PARLIO\_TX\_CLK\_EN** Configures whether to enable PAD\_PARLIO\_TX\_CLK from IO pin.

- 0: Disable
  - 1: Enable
- (R/W)

**LP\_CLKRST\_HP\_PAD\_PARLIO\_RX\_CLK\_EN** Configures whether to enable PAD\_PARLIO\_RX\_CLK from IO pin.

- 0: Disable
  - 1: Enable
- (R/W)

**LP\_CLKRST\_HP\_PAD\_UART4\_SLP\_CLK\_EN** Configures whether to enable PAD\_UART4\_SLP\_CLK from IO pin.

- 0: Disable
  - 1: Enable
- (R/W)

**LP\_CLKRST\_HP\_PAD\_UART3\_SLP\_CLK\_EN** Configures whether to enable PAD\_UART3\_SLP\_CLK from IO pin.

- 0: Disable
  - 1: Enable
- (R/W)

| 0                | 0  | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

Reset

**LP\_CLKRST\_CLK\_EN** Configures register clock gating.

0: Support clock only when application writes registers

1: Force on clock gating for registers

(R/W)

### 9.5.3 LP Peripheral Clock and Reset (LPPERI) Registers

The addresses in this section are relative to LPPERI base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section [Programming Reserved Register Field](#).

### Register 9.71. LPPERI\_CLK\_EN\_REG (0x0000)

**LPPERI\_CK\_EN\_RNG** Configures whether to enable LP RNG clock.

0: Disable

1: Enable

(R/W)

**LPperi\_ck\_en\_lp\_tsens** Configures whether to enable LP temperature sensor clock.

0: Disable

1: Enable

(R/W)

**LPPERI\_CK\_EN\_LP\_PMS** Configures whether to enable LP PMS clock.

0: Disable

1: Enable

(R/W)

**LPPERI\_CK\_EN\_LP\_EFUSE** Configures whether to enable LP eFuse clock.

0: Disable

1: Enable

(R/W)

**LPperi\_ck\_en\_lp\_iomux** Configures whether to enable LP IO MUX clock.

0: Disable

1: Enable

(R/W)

**LPPERI\_CK\_EN\_LP\_TOUCH** Configures whether to enable LP touch sensor clock.

0: Disable

1: Enable

(R/W)

**LPPERI\_CK\_EN\_LP\_SPI** Configures whether to enable LP SPI clock.

0: Disable

1: Enable

(R/W)

Continued on the next page...

**Register 9.71. LPPERI\_CLK\_EN\_REG (0x0000)**

Continued from the previous page...

**LPPERI\_CK\_EN\_LP\_ADC** Configures whether to enable LP ADC clock.

0: Disable

1: Enable

(R/W)

**LPPERI\_CK\_EN\_LP\_I2S\_RX** Configures whether to enable LP I2S RX clock.

0: Disable

1: Enable

(R/W)

**LPPERI\_CK\_EN\_LP\_I2S** Configures whether to enable LP I2S clock.

0: Disable

1: Enable

(R/W)

**LPPERI\_CK\_EN\_LP\_I2CMST** Configures whether to enable LP I2C master clock.

0: Disable

1: Enable

(R/W)

**LPPERI\_CK\_EN\_LP\_I2C** Configures whether to enable LP I2C clock.

0: Disable

1: Enable

(R/W)

**LPPERI\_CK\_EN\_LP\_UART** Configures whether to enable LP UART clock.

0: Disable

1: Enable

(R/W)

**LPPERI\_CK\_EN\_LP\_INTR** Configures whether to enable LP interrupt matrix clock.

0: Disable

1: Enable

(R/W)

**LPPERI\_CK\_EN\_LP\_CORE** Configures whether to force on LP CPU clock.

0: Controlled by hardware

1: Force on, bypassing hardware control

(R/W)

### Register 9.72. LPPERI\_CORE\_CLK\_SEL\_REG (0x0004)

**LPPERI\_LP\_I2S\_RX\_CLK\_SEL** Configures LP I2S RX clock source.

- 0: LP\_FAST\_CLK  
1: XTAL\_D2\_CLK  
2: PLL\_LP\_CLK  
3: Invalid  
(R/W)

**LPPERI\_LP\_I2C\_CLK\_SEL** Configures LP I2C clock source.

- 0: LP\_FAST\_CLK  
1: XTAL\_D2\_CLK  
2: PLL\_LP\_CLK  
3: Invalid  
(R/W)

**LPPERI\_LP\_UART\_CLK\_SEL** Configures LP UART clock source.

- 0: LP\_FAST\_CLK  
1: XTAL\_D2\_CLK  
2: PLL\_LP\_CLK  
3: Invalid  
(R/W)

Register 9.73. LPPERI\_RESET\_EN\_REG (0x0008)

**LPPERI\_RST\_EN\_LP\_TSENS** Configures whether to reset LP temperature sensor.

0: Release from reset

1: Reset

(R/W)

**LPPERI\_RST\_EN\_LP\_PMS** Configures whether to reset LP PMS.

0: Release from reset

1: Reset

(R/W)

**LPPERI\_RST\_EN\_LP\_EFUSE** Configures whether to reset LP eFuse.

0: Release from reset

1: Reset

(R/W)

**LPPERI\_RST\_EN\_LP\_IOMUX** Configures whether to reset LP IO MUX.

0: Release from reset

1: Reset

(R/W)

**LPPERI\_RST\_EN\_LP\_TOUCH** Configures whether to reset LP touch sensor.

0: Release from reset

1: Reset

(R/W)

**LPPERI\_RST\_EN\_LP\_SPI** Configures whether to reset LP SPI.

0: Release from reset

1: Reset

(R/W)

**LPPERI\_RST\_EN\_LP\_ADC** Configures whether to reset LP ADC.

0: Release from reset

1: Reset

(R/W)

**Register 9.73. LPPERI\_RESET\_EN\_REG (0x0008)**

Continued from the previous page...

**LPPERI\_RST\_EN\_LP\_I2S** Configures whether to reset LP I2S.

0: Release from reset

1: Reset

(R/W)

**LPPERI\_RST\_EN\_LP\_I2CMST** Configures whether to reset LP I2C master.

0: Release from reset

1: Reset

(R/W)

**LPPERI\_RST\_EN\_LP\_I2C** Configures whether to reset LP I2C.

0: Release from reset

1: Reset

(R/W)

**LPPERI\_RST\_EN\_LP\_UART** Configures whether to reset LP UART.

0: Release from reset

1: Reset

(R/W)

**LPPERI\_RST\_EN\_LP\_INTR** Configures whether to reset LP interrupt matrix.

0: Release from reset

1: Reset

(R/W)

**LPPERI\_RST\_EN\_LP\_ROM** Configures whether to reset LP ROM.

0: Release from reset

1: Reset

(R/W)

**LPPERI\_RST\_EN\_LP\_CORE** Writing 1 triggers LP CPU software reset. (WT)

### Register 9.74. LPPERI\_CPU\_REG (0x000C)

Diagram of the LPPER1\_LPCORE\_DBGM\_UNAVAILABLE register. The register is 32 bits wide, with bit 31 labeled 'LPPER1\_LPCORE\_DBGM\_UNAVAILABLE' and bit 0 labeled 'Reset'. The register is divided into two sections: a 30-bit section labeled '(reserved)' and a 2-bit section labeled 'LPPER1\_LPCORE\_DBGM\_UNAVAILABLE'.

**LPperi\_LPCore\_DBGm\_Unavailable** Configures whether the LP CPU can be accessed by the HP CPU.

0: Not accessible

1: Accessible

(R/W)

**LPPERI\_LP\_UART\_WAKEUP\_FLAG\_CLR** Write 1 to clear LPPERI\_LP\_UART\_WAKEUP\_FLAG. (WT)

**LPPERI\_LP\_UART\_WAKEUP\_FLAG** Represents whether an LP UART wakeup has occurred.

0: No LP UART wakeup occurred

1: LP UART wakeup occurred

(R/WTC/SS)

**LPPERI\_LP\_UART\_WAKEUP\_EN** Configures whether to enable the LP UART wakeup function.

0: Enable

1: Disable

(R/W)

**LPPERI\_LP\_UART\_MEM\_FORCE\_PD** Configures whether to force the LP UART memory to power down.

0: Do not force power down

1: Force power down

(R/W)

**LPPERI\_LP\_UART\_MEM\_FORCE\_PU** Configures whether to force the LP UART memory to power up.

0: Do not force power up

1: Force power up

(R/W)

Register 9.76. LPPERI\_ADC\_CTRL\_REG (0x002C)

 1: Force on clock gating for registers  
 (R/W)

## Chapter 10

### Chip Boot Control

#### 10.1 Overview

Chip boot process and some chip functions are determined on power-on or hardware reset using strapping pins and eFuse bits. The following functionality can be determined:

- chip boot mode
- enable or disable of ROM messages printing
- source of JTAG signals

ESP32-P4 has five strapping pins:

- GPIO34
- GPIO35
- GPIO36
- GPIO37
- GPIO38

During Chip Reset (see Chapter 9 [Reset and Clock](#)), hardware samples and stores the voltage level of strapping pins as strapping bit of “0” or “1” in latches, and holds these bits until the chip is powered down. Software can read the latch status (strapping value) from [GPIO\\_STRAPPING](#).

#### 10.2 Functional Description

This section provides description of the chip functions and the patterns of the strapping pins and eFuse values to invoke each function.

**Notice:**

Only documented patterns should be used. If an undocumented pattern is used, it may trigger unexpected behaviors.

##### 10.2.1 Default Configuration

By default, GPIO35 is connected to the chip’s internal pull-up resistor. If GPIO35 is not connected or is connected to an external high-impedance circuit, the internal weak pull-up determines the default input level of this strapping pin (see Table [10.2-1](#)).

**Table 10.2-1. Default Configuration of Strapping Pins**

| Strapping Pin | Default Configuration |
|---------------|-----------------------|
| <b>GPIO34</b> | Floating              |
| <b>GPIO35</b> | Pull-up               |
| <b>GPIO36</b> | Floating              |
| <b>GPIO37</b> | Floating              |
| <b>GPIO38</b> | Floating              |

To change the strapping bit values, users can apply external pull-down/pull-up resistors, or use host MCU GPIOs to control the voltage level of these pins when powering on ESP32-P4. After the reset is released, the strapping pins work as normal-function pins.

## 10.2.2 Boot Mode Control

The values of GPIO35, GPIO36, GPIO37 and GPIO38 at reset determine the boot mode after the reset is released. Table 10.2-2 shows the strapping pin values of GPIO35, GPIO36, GPIO37 and GPIO38 and the associated boot modes.

**Table 10.2-2. Boot Mode Control**

| Boot Mode                             | GPIO35 | GPIO36         | GPIO37 | GPIO38 |
|---------------------------------------|--------|----------------|--------|--------|
| SPI Boot mode (default)               | 1      | x <sup>1</sup> | x      | x      |
| Joint Download Boot mode <sup>2</sup> | 0      | 1              | x      | x      |
| SPI Download Boot mode <sup>3</sup>   | 0      | 0              | 0      | 1      |
| Invalid Combination <sup>4</sup>      | 0      | 0              | 1      | x      |
|                                       | 0      | 0              | 0      | 0      |

<sup>1</sup> x: values that have no effect on the result and can therefore be ignored.

<sup>2</sup> Joint Download Boot mode: Joint Download Boot mode supports the following download methods:

- USB-Serial-JTAG Download Boot
- UART Download Boot
- SPI Slave Download Boot
- USB 2.0 OTG Download Boot

<sup>3</sup> SPI Download Boot mode: GPIO37 and GPIO38 need to be reserved only when using SPI Download Boot mode. GPIO37 and GPIO38 are floating by default and are in a high-impedance state at reset.

<sup>4</sup> Invalid Combination: This combination can trigger unexpected behavior and should be avoided.

In SPI Boot mode, the ROM bootloader loads and executes the program from SPI flash to boot the system. SPI Boot mode can be further classified as follows:

- Normal flash Boot: supports Secure Boot. The ROM bootloader loads the program from flash into L2MEM and executes it. In most practical scenarios, this program is the 2nd stage bootloader, which later boots the target application.

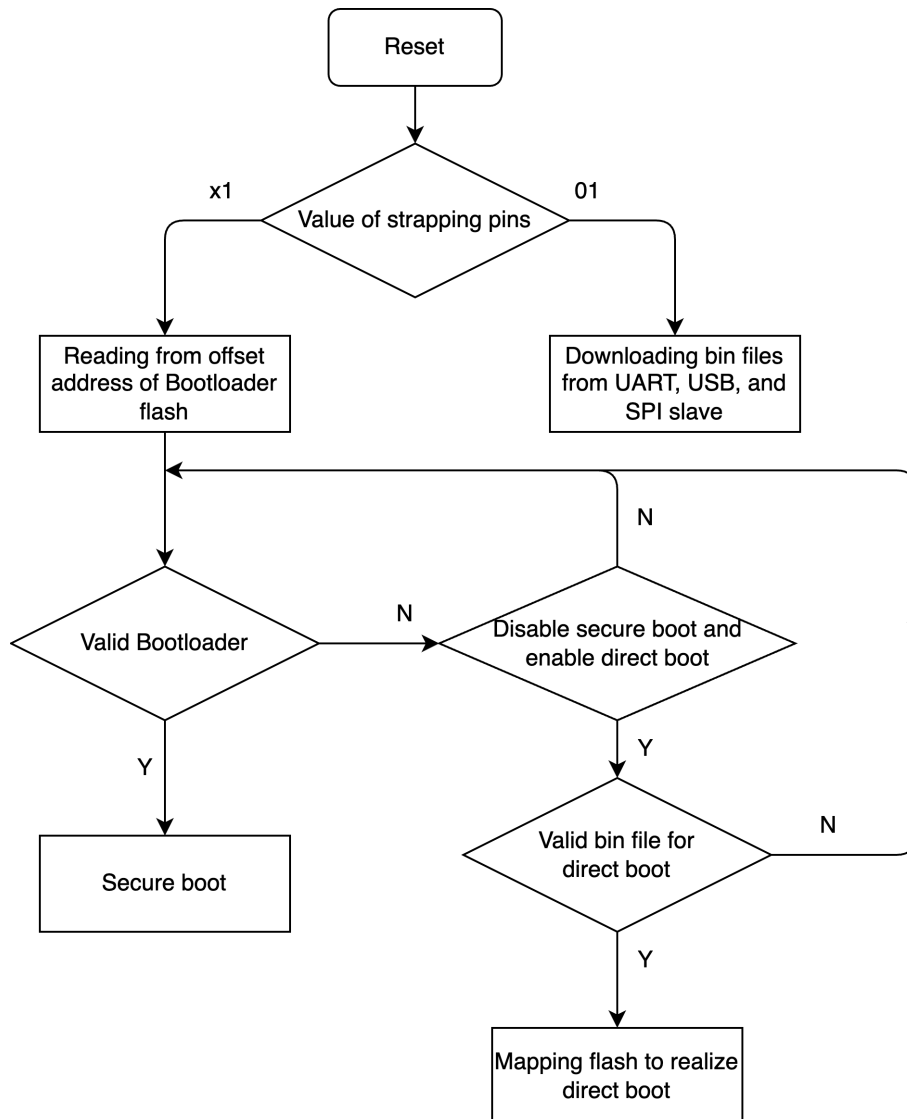

- **Direct Boot:** does not support Secure Boot and programs run directly from flash. To enable this mode, make sure that the first two words of the bin file downloaded to flash are 0xaedb041d. For more detailed process, see Figure 10.2-1.

In Joint Download Boot mode, users can download binary files into flash using UART0, SPI slave, USB 2.0 OTG or USB Serial/JTAG interface. It is also possible to download binary files into L2MEM and execute it from L2MEM.

In SPI Download Boot mode, users can download binary files into flash using SPI interface. It is also possible to download binary files into L2MEM and execute it from L2MEM.

Figure 10.2-1 shows the detailed boot flow of the chip.

**Note:** “x1” and “01” are combination values of strapping pins GPIO35 and GPIO36, see Table 10.2-2.

Figure 10.2-1. Chip Boot Flow

The following eFuse bits allows controlling boot mode behaviors:

- [EFUSE\\_DIS\\_FORCE\\_DOWNLOAD](#)

If this eFuse is 0 (default), software can force switch the chip from SPI Boot mode to Joint Download

Boot mode by setting register LPSYSREG\_FORCE\_DOWNLOAD\_BOOT and triggering a CPU reset. If this eFuse is 1, LPSYSREG\_FORCE\_DOWNLOAD\_BOOT is disabled.

- [EFUSE\\_DIS\\_DOWNLOAD\\_MODE](#)

If this eFuse is 1, Joint Download Boot mode is permanently disabled.

- [EFUSE\\_ENABLE\\_SECURITY\\_DOWNLOAD](#)

If this eFuse is 1, Joint Download Boot mode only allows reading, writing, and erasing plaintext flash and does not support any L2MEM or register operations. Ignore this eFuse if Download Boot mode is disabled.

- [EFUSE\\_DIS\\_DIRECT\\_BOOT](#)

If this eFuse is 1, Direct Boot would be disabled in SPI Boot Mode.

USB Serial/JTAG Controller can also force switch the chip to Joint Download Boot mode from SPI Boot mode, and vice versa. For detailed information, please refer to Chapter [46 USB Serial/JTAG Controller \(USB\\_SERIAL\\_JTAG\)](#).

You can set eFuse bit EFUSE\_DIS\_USB\_SERIAL\_JTAG\_DOWNLOAD\_MODE to disable USB Serial/JTAG Controller from force switching to Joint Download Boot mode.

### 10.2.3 ROM Messages Printing Control

During early SPI Boot process, the messages by the ROM code can be printed to:

- (Default) UART0 and USB Serial/JTAG controller
- UART0
- USB Serial/JTAG controller

[EFUSE\\_UART\\_PRINT\\_CONTROL](#) and GPIO36 control ROM messages printing to **UART0** as shown in Table 10.2-3 ROM Message Printing Control.

Table 10.2-3. ROM Message Printing Control

| eFuse <sup>1</sup> | GPIO36         | ROM Code Printing |
|--------------------|----------------|-------------------|
| 0                  | x <sup>2</sup> | Always enabled    |
| 1                  | 0              | Enabled           |
|                    | 1              | Disabled          |
| 2                  | 0              | Disabled          |
|                    | 1              | Enabled           |
| 3                  | x              | Always disabled   |

<sup>1</sup> eFuse: [EFUSE\\_UART\\_PRINT\\_CONTROL](#)

<sup>2</sup> x: values that have no effect on the result and can therefore be ignored.

[EFUSE\\_DIS\\_USB\\_SERIAL\\_JTAG\\_ROM\\_PRINT](#) controls the printing to **USB Serial/JTAG controller**. When this bit is 1, printing to USB Serial/JTAG controller is disabled. When this bit is 0, and USB Serial/JTAG controller is enabled via [EFUSE\\_DIS\\_USB\\_SERIAL\\_JTAG](#), ROM messages can be printed to USB Serial/JTAG controller.

Note that if [EFUSE\\_DIS\\_USB\\_SERIAL\\_JTAG\\_ROM\\_PRINT](#) is set to 0 to print to USB, but USB Serial/JTAG Controller has been disabled, then ROM messages will not be printed to USB Serial/JTAG Controller.

## 10.2.4 JTAG Signal Source Control

GPIO34 controls the source of JTAG signals during the early boot process. This GPIO is used together with [EFUSE\\_DIS\\_PAD\\_JTAG](#), [EFUSE\\_DIS\\_USB\\_JTAG](#), and [EFUSE\\_JTAG\\_SEL\\_ENABLE](#). See Table 10.2-4.

Table 10.2-4. JTAG Signal Source Control

| eFuse 1 <sup>a</sup> | eFuse 2 <sup>b</sup> | eFuse 3 <sup>c</sup> | GPIO34         | Signal Source   |
|----------------------|----------------------|----------------------|----------------|---|
| 0                    | 0                    | 0                    | x <sup>d</sup> | JTAG signals come from USB Serial/JTAG Controller.                    |
|                      |                      | 1                    | 0              | JTAG signals come from corresponding pins MTDI, MTCK, MTMS, and MTDO. |
|                      |                      |                      | 1              | JTAG signals come from USB Serial/JTAG Controller.                    |
| 0                    | 1                    | x                    | x              | JTAG signals come from corresponding pins MTDI, MTCK, MTMS, and MTDO. |
| 1                    | 0                    | x                    | x              | JTAG signals come from USB Serial/JTAG Controller.                    |
| 1                    | 1                    | x                    | x              | JTAG is disabled.   |

<sup>a</sup> eFuse 1: [EFUSE\\_DIS\\_PAD\\_JTAG](#)

<sup>b</sup> eFuse 2: [EFUSE\\_DIS\\_USB\\_JTAG](#)

<sup>c</sup> eFuse 3: [EFUSE\\_JTAG\\_SEL\\_ENABLE](#)

<sup>d</sup> x: values that have no effect on the result and can therefore be ignored.

# Chapter 11

## Interrupt Matrix

### 11.1 Overview

The interrupt matrix embedded in ESP32-P4 independently routes peripheral interrupt sources to the ESP-RISC-V CPU's peripheral interrupts to timely inform HP CPU0 or HP CPU1 to process the coming interrupts.

Peripheral interrupt sources must be routed to HP CPU0/HP CPU1 peripheral interrupts via this interrupt matrix due to the following considerations:

- ESP32-P4 has 126 peripheral interrupt sources. To map them to 32 HP CPU0 interrupts or 32 HP CPU1 interrupts, this matrix is needed.
- Through this matrix, one peripheral interrupt source can be mapped to multiple HP CPU0 interrupts or HP CPU1 interrupts according to application requirements.

**Note:**

This chapter focuses on how to map peripheral interrupt sources to HP CPU0/HP CPU1 interrupts. For more details about interrupt configuration, vector, and interrupt handling operations recommended by the ISA, please refer to Chapter 1 *High-Performance CPU [to be added later]*.

### 11.2 Interrupt Terminology in ESP32-P4

The following terms related to interrupts are defined in the context of the *ESP32-P4 Technical Reference Manual* to help readers better understand this document:

#### 11.2.1 Interrupt

An interrupt refers to the event or condition that occurs, causing the CPU to temporarily suspend its current execution and handle a higher-priority task. It is a mechanism that allows the CPU to respond to specific events promptly.

The *ESP32-P4 Technical Reference Manual* may use the term “interrupt” in a broader sense to refer to both interrupt signal and interrupt source.

#### 11.2.2 Interrupt Signal/interrupt Source

Interrupt signal and interrupt source are only defined from different perspectives and mean the same thing.

From the perspective of peripherals, interrupt signals are generated by the peripheral's internal interrupt sources and are sent to the interrupt matrix.

From the perspective of the interrupt matrix, it receives the interrupt signals sent from the peripheral and considers them interrupt sources. The interrupt matrix then outputs CPU peripheral interrupt signals to the CPU.

From the perspective of the CPU, the interrupt signals from the interrupt matrix become sources and are sent to the CPU core together with the core local interrupt sources.

### 11.2.3 Interrupt Flow in ESP32-P4

Figure 11.2-1 shows the interrupt flow in ESP32-P4.

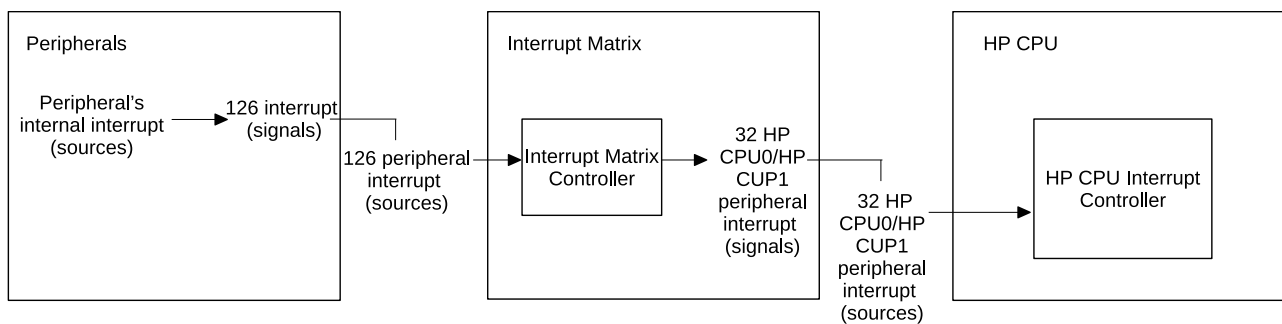

Figure 11.2-1. Interrupt Flow in ESP32-P4

## 11.3 Features

The interrupt matrix embedded in ESP32-P4 has the following features:

- 126 peripheral interrupt sources accepted as input
- 32 HP CPU0 peripheral interrupts and 32 HP CPU1 peripheral interrupts generated to HP CPU as output
- Current interrupt status query of peripheral interrupt sources
- Multiple interrupt sources mapping to a single HP CPU0 or HP CPU1 interrupt (i.e., shared interrupts)

Figure 11.3-1 shows the structure of the interrupt matrix.

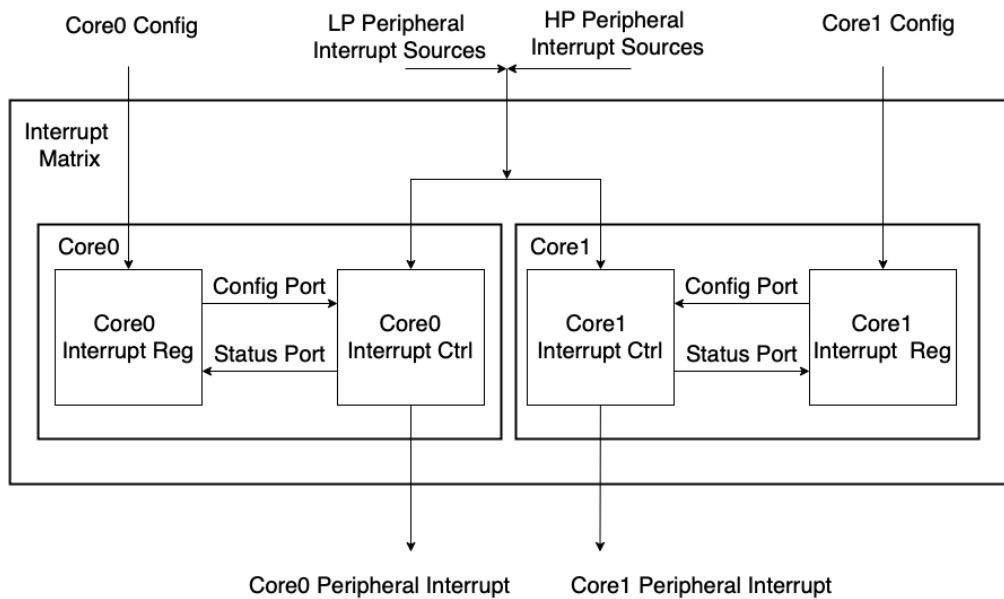

Figure 11.3-1. Interrupt Matrix Structure

All the interrupts generated by the peripheral interrupt sources can be handled by HP CPU0 or HP CPU1. Users can configure [HP CPU0 interrupt registers](#) (“Core0 Interrupt Reg” module in Figure 11.3-1) to assign peripheral interrupt sources to HP CPU0, or configure [HP CPU1 interrupt registers](#) (“Core1 Interrupt Reg” module in Figure 11.3-1) to assign peripheral interrupt sources to HP CPU1. Peripheral interrupt sources can be assigned both to HP CPU0 and HP CPU1 simultaneously, and if so, HP CPU0 and HP CPU1 will both accept the interrupts.

## 11.4 Functional Description

### 11.4.1 Peripheral Interrupt Sources

ESP32-P4 has 126 peripheral interrupt sources in total. Table 11.4-1 lists all these sources and their mapping/status registers.

- Column “No.”: Peripheral interrupt source number, can be 0 ~ 98, 100 ~ 111, 113 ~ 127 (99 and 112 are reserved).
- Column “Chapter”: in which chapter the interrupt source is described in detail.
- Column “Interrupt Source”: Name of the peripheral interrupt source.
- Column “Interrupt Source Mapping Register”: Registers used for routing the peripheral interrupt sources to HP CPU peripheral interrupts.
- Column “Interrupt Status Register”: Registers used for indicating the interrupt status of peripheral interrupt sources.
  - Column “Interrupt Status Register - Bit”: Bit position in status register, indicating the interrupt status.
  - Column “Interrupt Status Register - Name”: Name of status registers.

The register in column “Interrupt Source Mapping Register” and in column “Interrupt Status Register” correspond to the peripheral interrupt source in column “Interrupt Source”. For example, the interrupt source

mapping register for interrupt source RMT\_INTR is `COREx_RMT_INT_MAP_REG`, and its status register is `COREx_INTR_STATUS_REG_1_REG`.

Note that CORE<sub>x</sub> in the table can be CORE0 (HP CPU0) or CORE1 (HP CPU1).

Table 11.4-1. CPU Peripheral Interrupt Source Mapping/Status Registers and Peripheral Interrupt Sources

| No. | Chapter  | Interrupt Source    | Interrupt Source Mapping Register                | Interrupt Status Register |   |
|-----|--|---------------------|--|---------------------------|---|
|     |  |                     |  | Bit                       | Name  |

## 11.4.2 Assign Peripheral Interrupt Source to HP CPU Interrupt

In this section, the following terms are used to describe the operation of the interrupt matrix.

- Source\_*Y*: stands for a peripheral interrupt source, wherein *Y* means the number of this interrupt source in Table 11.4-1.
- CORE<sub>x</sub>\_SOURCE\_*Y*\_MAP\_REG: stands for an interrupt source mapping register for the peripheral interrupt source (Source\_*Y*) of HP CPU<sub>x</sub>.
- Num\_P: the index of HP CPU interrupts which can be 16 ~ 47.
- Interrupt\_P: stands for the HP CPU interrupt numbered as Num\_P.

### 11.4.2.1 Assign One Peripheral Interrupt Source (Source\_*Y*) to HP CPU<sub>x</sub>

Setting the corresponding source mapping register CORE<sub>x</sub>\_SOURCE\_*Y*\_MAP\_REG of Source\_*Y* to Num\_P assigns this interrupt source to Interrupt\_P.

### 11.4.2.2 Assign Multiple Peripheral Interrupt Sources (Source\_*Y*) to HP CPU<sub>x</sub>

Setting the corresponding source mapping register CORE<sub>x</sub>\_SOURCE\_*Y*\_MAP\_REG of each interrupt source to the same Num\_P assigns multiple sources to the same Interrupt\_P of HP CPU<sub>x</sub>. Any of these sources can trigger CPU Interrupt\_P of HP CPU<sub>x</sub>. In other words, the CPU Interrupt\_p will be shared between these interrupt sources. When an interrupt signal is generated, HP CPU<sub>x</sub> should check the interrupt status registers to figure out which peripheral generated the interrupt. For more information, see Chapter 1 *High-Performance CPU [to be added later]*.

### 11.4.2.3 Disable HP CPU<sub>x</sub> Peripheral Interrupt Source (Source\_*x*)

Writing 0 to the CORE<sub>x</sub>\_SOURCE\_*Y*\_MAP\_REG register disables the corresponding interrupt source.

## 11.4.3 Query Current Interrupt Status of HP CPU<sub>x</sub> Peripheral Interrupt Source

After enabling peripheral interrupt sources, users can query current interrupt status of HP CPU<sub>x</sub> peripheral interrupt source by reading the bit value in CORE<sub>x</sub>\_INTR\_STATUS\_*n* (read only). For the mapping between CORE<sub>x</sub>\_INTR\_STATUS\_*n* and peripheral interrupt sources, please refer to Table 11.4-1.

## 11.5 Register Summary

The addresses in this section are relative to the interrupt matrix HP CPU0/HP CPU1 base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

### 11.5.1 HP CPU0 Interrupt Matrix Register Summary

| Name   | Description                          | Address | Access |
|--|--------------------------------------|---------|--------|
| <b>CORE0 LP RTC INT MAP REG</b>                  |                                      |         |        |

### 11.5.2 HP CPU1 Interrupt Matrix Register Summary

| Name   | Description                          | Address | Access |
|--|--------------------------------------|---------|--------|
| <b>CORE1 LP RTC INT MAP REG</b>                  |                                      |         |        |
| <a href="#">CORE1_LP_RTC_INT_MAP_REG</a>         | LP_RTC_INTR mapping register         | 0x0000  | R/W    |
| <b>CORE1 LP WDT INT MAP REG</b>                  |                                      |         |        |
| <a href="#">CORE1_LP_WDT_INT_MAP_REG</a>         | LP_WDT_INTR mapping register         | 0x0004  | R/W    |
| <b>CORE1 LP TIMER REG 0 INT MAP REG</b>          |                                      |         |        |
| <a href="#">CORE1_LP_TIMER_REG_0_INT_MAP_REG</a> | LP_TIMER_REG_0_INTR mapping register | 0x0008  | R/W    |
| <b>CORE1 LP TIMER REG 1 INT MAP REG</b>          |                                      |         |        |
| <a href="#">CORE1_LP_TIMER_REG_1_INT_MAP_REG</a> | LP_TIMER_REG_1_INTR mapping register | 0x000C  | R/W    |
| <b>CORE1 MB HP INT MAP REG</b>                   |                                      |         |        |
| <a href="#">CORE1_MB_HP_INT_MAP_REG</a>          | MB_HP_INTR mapping register          | 0x0010  | R/W    |
| <b>CORE1 MB LP INT MAP REG</b>                   |                                      |         |        |
| <a href="#">CORE1_MB_LP_INT_MAP_REG</a>          | MB_LP_INTR mapping register          | 0x0014  | R/W    |
| <b>CORE1 PMU REG 0 INT MAP REG</b>               |                                      |         |        |

| Name   | Description                      | Address | Access |
|--|----------------------------------|---------|--------|
| <a href="#">CORE1_PMU_REG_O_INT_MAP_REG</a>  | PMU_REG_O_INTR mapping register  | 0x0018  | R/W    |
| <b>CORE1 PMU REG 1 INT MAP REG</b>           |                                  |         |        |
| <a href="#">CORE1_PMU_REG_1_INT_MAP_REG</a>  | PMU_REG_1_INTR mapping register  | 0x001C  | R/W    |
| <b>CORE1 LP ANAPERI INT MAP REG</b>          |                                  |         |        |
| <a href="#">CORE1_LP_ANAPERI_INT_MAP_REG</a> | LP_ANAPERI_INTR mapping register | 0x0020  | R/W    |
| <b>CORE1 LP ADC INT MAP REG</b>              |                                  |         |        |
| <a href="#">CORE1_LP_ADC_INT_MAP_REG</a>     | LP_ADC_INTR mapping register     | 0x0024  | R/W    |
| <b>CORE1 LP GPIO INT MAP REG</b>             |                                  |         |        |
| <a href="#">CORE1_LP_GPIO_INT_MAP_REG</a>    | LP_GPIO_INTR mapping register    | 0x0028  | R/W    |
| <b>CORE1 LP I2C INT MAP REG</b>              |                                  |         |        |
| <a href="#">CORE1_LP_I2C_INT_MAP_REG</a>     | LP_I2C_INTR mapping register     | 0x002C  | R/W    |
| <b>CORE1 LP I2S INT MAP REG</b>              |                                  |         |        |
| <a href="#">CORE1_LP_I2S_INT_MAP_REG</a>     | LP_I2S_INTR mapping register     | 0x0030  | R/W    |
| <b>CORE1 LP SPI INT MAP REG</b>              |                                  |         |        |
| <a href="#">CORE1_LP_SPI_INT_MAP_REG</a>     | LP_SPI_INTR mapping register     | 0x0034  | R/W    |
| <b>CORE1 LP TOUCH INT MAP REG</b>            |                                  |         |        |
| <a href="#">CORE1_LP_TOUCH_INT_MAP_REG</a>   | LP_TOUCH_INTR mapping register   | 0x0038  | R/W    |
| <b>CORE1 LP TSENS INT MAP REG</b>            |                                  |         |        |

## 11.6 Registers

The addresses in this section are relative to the interrupt matrix base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section *Programming Reserved Register Field*.

### 11.6.1 HP CPUO Interrupt Matrix Registers

Register 11.1. COREO\_LP\_RTC\_INT\_MAP\_REG (0x0000)

Register 11.2. COREO\_LP\_WDT\_INT\_MAP\_REG (0x0004)

Register 11.3. COREO\_LP\_TIMER\_REG\_O\_INT\_MAP\_REG (0x0008)

Register 11.4. COREO\_LP\_TIMER\_REG\_1\_INT\_MAP\_REG (0x000C)

Register 11.5. COREO\_MB\_HP\_INT\_MAP\_REG (0x0010)

Register 11.6. COREO\_MB\_LP\_INT\_MAP\_REG (0x0014)

Register 11.7. COREO\_PMU\_REG\_O\_INT\_MAP\_REG (0x0018)

Register 11.8. COREO\_PMU\_REG\_1\_INT\_MAP\_REG (0x001C)

Register 11.9. COREO\_LP\_ANAPERI\_INT\_MAP\_REG (0x0020)

Register 11.10. COREO\_LP\_ADC\_INT\_MAP\_REG (0x0024)

Register 11.11. COREO\_LP\_GPIO\_INT\_MAP\_REG (0x0028)

Register 11.12. COREO\_LP\_I2C\_INT\_MAP\_REG (0x002C)

Register 11.13. COREO\_LP\_I2S\_INT\_MAP\_REG (0x0030)

Register 11.14. COREO\_LP\_SPI\_INT\_MAP\_REG (0x0034)

Register 11.15. COREO\_LP\_TOUCH\_INT\_MAP\_REG (0x0038)

Register 11.16. COREO\_LP\_TSENS\_INT\_MAP\_REG (0x003C)

Register 11.17. COREO\_LP\_UART\_INT\_MAP\_REG (0x0040)

Register 11.18. COREO\_LP\_EFUSE\_INT\_MAP\_REG (0x0044)

Register 11.19. COREO\_LP\_SW\_INT\_MAP\_REG (0x0048)

Register 11.20. COREO\_LP\_SYSREG\_INT\_MAP\_REG (0x004C)

Register 11.21. COREO\_SYS\_ICM\_INT\_MAP\_REG (0x0054)

Register 11.22. COREO\_USB\_DEVICE\_INT\_MAP\_REG (0x0058)

Register 11.23. COREO\_SDIO\_HOST\_INT\_MAP\_REG (0x005C)

Register 11.24. COREO\_GDMA\_INT\_MAP\_REG (0x0060)

Register 11.25. COREO\_SPI2\_INT\_MAP\_REG (0x0064)

Register 11.26. COREO\_SPI3\_INT\_MAP\_REG (0x0068)

Register 11.27. COREO\_I2SO\_INT\_MAP\_REG (0x006C)

Register 11.28. COREO\_I2S1\_INT\_MAP\_REG (0x0070)

Register 11.29. COREO\_*I2S2\_INT*\_MAP\_REG (0x0074)

Register 11.30. COREO\_*UHCIO\_INT*\_MAP\_REG (0x0078)

Register 11.31. COREO\_*UART0\_INT*\_MAP\_REG (0x007C)

Register 11.32. COREO\_*UART1\_INT*\_MAP\_REG (0x0080)

Register 11.33. COREO\_*UART2\_INT*\_MAP\_REG (0x0084)

Register 11.34. COREO\_*UART3\_INT*\_MAP\_REG (0x0088)

Register 11.35. COREO\_*UART4\_INT*\_MAP\_REG (0x008C)

Register 11.36. COREO\_*LCD\_CAM\_INT*\_MAP\_REG (0x0090)

Register 11.37. COREO\_*ADC\_INT*\_MAP\_REG (0x0094)

Register 11.38. COREO\_*PWMO\_INT*\_MAP\_REG (0x0098)

Register 11.39. COREO\_*PWM1\_INT*\_MAP\_REG (0x009C)

Register 11.40. COREO\_*TWAI0\_INT*\_MAP\_REG (0x00A0)

Register 11.41. COREO\_*TWAI1\_INT*\_MAP\_REG (0x00A4)

Register 11.42. COREO\_*TWAI2\_INT*\_MAP\_REG (0x00A8)

Register 11.43. COREO\_*RMT\_INT*\_MAP\_REG (0x00AC)

Register 11.44. COREO\_*I2CO\_INT*\_MAP\_REG (0x00B0)

Register 11.45. COREO\_*I2C1\_INT*\_MAP\_REG (0x00B4)

Register 11.46. COREO\_*TIMERGRPO\_TO\_INT*\_MAP\_REG (0x00B8)

Register 11.47. COREO\_*TIMERGRPO\_T1\_INT*\_MAP\_REG (0x00BC)

Register 11.48. COREO\_*TIMERGRPO\_WDT\_INT*\_MAP\_REG (0x00C0)

Register 11.49. COREO\_*TIMERGRP1\_TO\_INT*\_MAP\_REG (0x00C4)

Register 11.50. COREO\_*TIMERGRP1\_T1\_INT*\_MAP\_REG (0x00C8)

Register 11.51. COREO\_*TIMERGRP1\_WDT\_INT*\_MAP\_REG (0x00CC)

Register 11.52. COREO\_*LEDC\_INT*\_MAP\_REG (0x00D0)

Register 11.53. COREO\_*SYSTIMER\_TARGET0\_INT*\_MAP\_REG (0x00D4)

Register 11.54. COREO\_*SYSTIMER\_TARGET1\_INT*\_MAP\_REG (0x00D8)

Register 11.55. COREO\_*SYSTIMER\_TARGET2\_INT*\_MAP\_REG (0x00DC)

Register 11.56. COREO\_*AHB\_PDMA\_IN\_CHO\_INT*\_MAP\_REG (0x00E0)

Register 11.57. COREO\_*AHB\_PDMA\_IN\_CH1\_INT*\_MAP\_REG (0x00E4)

Register 11.58. COREO\_*AHB\_PDMA\_IN\_CH2\_INT*\_MAP\_REG (0x00E8)

Register 11.59. COREO\_*AHB\_PDMA\_OUT\_CHO\_INT*\_MAP\_REG (0x00EC)

Register 11.60. COREO\_*AHB\_PDMA\_OUT\_CH1\_INT*\_MAP\_REG (0x00F0)

Register 11.61. COREO\_*AHB\_PDMA\_OUT\_CH2\_INT*\_MAP\_REG (0x00F4)

Register 11.62. COREO\_*AXI\_PDMA\_IN\_CHO\_INT*\_MAP\_REG (0x00F8)

Register 11.63. COREO\_*AXI\_PDMA\_IN\_CH1\_INT*\_MAP\_REG (0x00FC)

**COREO\_SOURCE\_Y\_MAP** Map interrupt signal of source (Source\_Y) to one of CPU0's external interrupts, can be configured as 16 ~ 47. Writing 0 ~ 15 will disable the interrupt source (0 is the recommended value). The remaining values are invalid. For Source\_Y, see Table 11.4-1. (R/W)

**Register 11.126. COREO\_INTR\_STATUS\_REG\_0\_REG (0x0200)**

**COREO\_INTR\_STATUS\_0** Represents the status of the interrupt sources from 0 ~ 31. Each bit corresponds to one interrupt source. (RO)

**Register 11.127. COREO\_INTR\_STATUS\_REG\_1\_REG (0x0204)**

**COREO\_INTR\_STATUS\_1** Represents the status of the interrupt sources from 32 ~ 63. Each bit corresponds to one interrupt source. (RO)

**Register 11.128. COREO\_INTR\_STATUS\_REG\_2\_REG (0x0208)**

**COREO\_INTR\_STATUS\_2** Represents the status of the interrupt sources from 64 ~ 95. Each bit corresponds to one interrupt source. (RO)

Register 11.134. CORE1\_LP\_TIMER\_REG\_O\_INT\_MAP\_REG (0x0008)

Register 11.135. CORE1\_LP\_TIMER\_REG\_1\_INT\_MAP\_REG (0x000C)

Register 11.136. CORE1\_MB\_HP\_INT\_MAP\_REG (0x0010)

Register 11.137. CORE1\_MB\_LP\_INT\_MAP\_REG (0x0014)

Register 11.138. CORE1\_PMU\_REG\_O\_INT\_MAP\_REG (0x0018)

Register 11.139. CORE1\_PMU\_REG\_1\_INT\_MAP\_REG (0x001C)

Register 11.140. CORE1\_LP\_ANAPERI\_INT\_MAP\_REG (0x0020)

Register 11.141. CORE1\_LP\_ADC\_INT\_MAP\_REG (0x0024)

Register 11.142. CORE1\_LP\_GPIO\_INT\_MAP\_REG (0x0028)

Register 11.143. CORE1\_LP\_I2C\_INT\_MAP\_REG (0x002C)

Register 11.144. CORE1\_LP\_I2S\_INT\_MAP\_REG (0x0030)

Register 11.145. CORE1\_LP\_SPI\_INT\_MAP\_REG (0x0034)

Register 11.146. CORE1\_LP\_TOUCH\_INT\_MAP\_REG (0x0038)

Register 11.147. CORE1\_LP\_TSENS\_INT\_MAP\_REG (0x003C)

Register 11.148. CORE1\_LP\_UART\_INT\_MAP\_REG (0x0040)

Register 11.258. CORE1\_SOURCE\_Y\_MAP\_REG (0x0000 - 0x01FC)

**CORE1\_SOURCE\_Y\_MAP** Map interrupt signal of source (Source\_Y) to one of CPU1 external interrupts, can be configured as 16 ~ 47. Writing 0 ~ 15 will disable the interrupt source (0 is the recommended value). The remaining values are invalid. For Source\_Y, see Table 11.4-1. (R/W)

Register 11.259. CORE1\_INTR\_STATUS\_REG\_O\_REG (0x0200)

**CORE1\_INTR\_STATUS\_O** Represents the status of the interrupt sources from 0 ~ 31. Each bit corresponds to one interrupt source. (RO)

**Register 11.260. CORE1\_INTR\_STATUS\_REG\_1\_REG (0x0204)**

**CORE1\_INTR\_STATUS\_1** Represents the status of the interrupt sources from 32 ~ 63. Each bit corresponds to one interrupt source. (RO)

**Register 11.261. CORE1\_INTR\_STATUS\_REG\_2\_REG (0x0208)**

**CORE1\_INTR\_STATUS\_2** Represents the status of the interrupt sources from 64 ~ 95. Each bit corresponds to one interrupt source. (RO)

**Register 11.262. CORE1\_INTR\_STATUS\_REG\_3\_REG (0x020C)**

**CORE1\_INTR\_STATUS\_3** Represents the status of the interrupt sources numbered from 96 ~ 127. Bit 0 ~ 31 each corresponds to one interrupt source. (RO)

Register 11.263. CORE1\_CLOCK\_GATE\_REG (0x0210)

**CORE1\_REG\_CLK\_EN** Configures whether to force interrupt register clock-date on.

- 0: No effect
- 1: Force interrupt register clock-gate on

(R/W)

Register 11.264. CORE1\_INTERRUPT\_REG\_DATE\_REG (0x03FC)

**CORE1\_INTERRUPT\_REG\_DATE** Version control register. (R/W)

## Chapter 12

### Event Task Matrix (ETM)

#### 12.1 Overview

The Event Task Matrix (ETM) peripheral contains 50 configurable channels. Each channel can map an event of any specified peripheral to a task of any specified peripheral. In this way, peripherals can be triggered to execute specified tasks without CPU intervention.

#### 12.2 Features

The Event Task Matrix has the following features:

- Receive various events from multiple peripherals
- Generate various tasks for multiple peripherals
- 50 independently configurable ETM channels
- An ETM channel can be set up to receive any event, and map it to any task
- Each ETM channel can be enabled independently. If not enabled, the channel will not respond to the configured event and generate the task mapped to that event
- Support for checking event and task status
- Peripherals supporting ETM include GPIO, LED PWM, general-purpose timers, RTC Timer, system timer, MCPWM, temperature sensor, ADC, I2S, LP CPU, GDMA-AHB, GDMA-AXI, 2D DMA, and PMU

Note that the 50 ETM channels are identical regarding their features and operations. Thus, in the following sections, ETM channels are collectively referred to as channel *n* (where *n* ranges from 0 to 49).

#### 12.3 Functional Description

##### 12.3.1 Architecture

The Event Task Matrix has 50 independent channels. A channel can choose any event as input, and map the event to any task as output (see Section 12.3.2 and Section 12.3.3 respectively). Each channel has an individual enable bit (see Section 12.3.6).

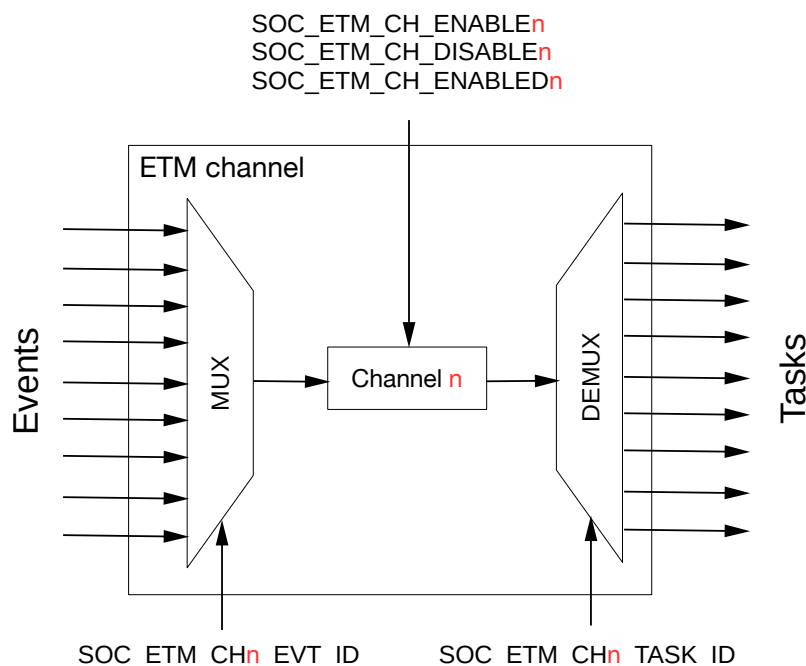

Figure 12.3-1. ETM Channel $n$  Architecture

Figure 12.3-1 illustrates the structure of an ETM channel. The `SOC_ETM_CH $n$ _EVT_ID` field configures the MUX (multiplexer) to select one of the events as the input of channel $n$ . The `SOC_ETM_CH $n$ _TASK_ID` field configures the DEMUX (demultiplexer) to map the event selected by channel $n$  to one of the tasks. `SOC_ETM_CH_ENABLE $n$`  and `SOC_ETM_CH_DISABLE $n$`  are used to enable or disable channel $n$ . `SOC_ETM_CH_ENABLED $n$`  is used to indicate the status of the channel $n$ .

## 12.3.2 Events

An ETM channel can be set up to choose which event to receive by configuring the `SOC_ETM_CH $n$ _EVT_ID` field. Table 12.3-1 shows the configuration values of `SOC_ETM_CH $n$ _EVT_ID` and their corresponding events.

Table 12.3-1. Selectable Events for ETM Channel $n$ 

| <code>SOC_ETM_CH<math>n</math>_EVT_ID</code> | Selected Event         | Peripheral Generating This Event |
|--|------------------------|----------------------------------|
| 1  | GPIO_EVT_CHO_RISE_EDGE | GPIO                             |
| 2  | GPIO_EVT_CH1_RISE_EDGE |                                  |
| 3  | GPIO_EVT_CH2_RISE_EDGE |                                  |
| 4  | GPIO_EVT_CH3_RISE_EDGE |                                  |
| 5  | GPIO_EVT_CH4_RISE_EDGE |                                  |
| 6  | GPIO_EVT_CH5_RISE_EDGE |                                  |
| 7  | GPIO_EVT_CH6_RISE_EDGE |                                  |
| 8  | GPIO_EVT_CH7_RISE_EDGE |                                  |
| 9  | GPIO_EVT_CHO_FALL_EDGE |                                  |
| 10   | GPIO_EVT_CH1_FALL_EDGE |                                  |

| SOC_ETM_CH $n$ _EVT_ID | Selected Event             | Peripheral Generating This Event |
|------------------------|----------------------------|----------------------------------|
| 11                     | GPIO_EVT_CH2_FALL_EDGE     |                                  |
| 12                     | GPIO_EVT_CH3_FALL_EDGE     |                                  |
| 13                     | GPIO_EVT_CH4_FALL_EDGE     |                                  |
| 14                     | GPIO_EVT_CH5_FALL_EDGE     |                                  |
| 15                     | GPIO_EVT_CH6_FALL_EDGE     |                                  |
| 16                     | GPIO_EVT_CH7_FALL_EDGE     |                                  |
| 17                     | GPIO_EVT_CH0_ANY_EDGE      |                                  |
| 18                     | GPIO_EVT_CH1_ANY_EDGE      |                                  |
| 19                     | GPIO_EVT_CH2_ANY_EDGE      |                                  |
| 20                     | GPIO_EVT_CH3_ANY_EDGE      |                                  |
| 21                     | GPIO_EVT_CH4_ANY_EDGE      |                                  |
| 22                     | GPIO_EVT_CH5_ANY_EDGE      |                                  |
| 23                     | GPIO_EVT_CH6_ANY_EDGE      |                                  |
| 24                     | GPIO_EVT_CH7_ANY_EDGE      |                                  |
| 25                     | GPIO_EVT_ZERO_DET_POS0     |                                  |
| 26                     | GPIO_EVT_ZERO_DET_NEG0     |                                  |
| 27                     | GPIO_EVT_ZERO_DET_POS1     |                                  |
| 28                     | GPIO_EVT_ZERO_DET_NEG1     |                                  |
| 29                     | LEDC_EVT_DUTY_CHNG_END_CH0 | LED PWM Controller (LEDC)        |
| 30                     | LEDC_EVT_DUTY_CHNG_END_CH1 |                                  |
| 31                     | LEDC_EVT_DUTY_CHNG_END_CH2 |                                  |
| 32                     | LEDC_EVT_DUTY_CHNG_END_CH3 |                                  |

Whenever any of these events occurs, the corresponding peripheral generates a pulse signal. As soon as the pulse signal is high, the event is considered as being received.

For more detailed descriptions of an event, please refer to the chapter for the peripheral generating this event.

### 12.3.3 Tasks

An ETM channel can be set up to map its event to one of the tasks by configuring the `SOC_ETM_CH $n$ _TASK_ID` field. Table 12.3-2 shows the configuration values of `SOC_ETM_CH $n$ _TASK_ID` and

their corresponding tasks.

**Table 12.3-2. Mappable Tasks for ETM Channel  $n$**

| SOC_ETM_CH $n$ _TASK_ID | Mapped Task                     | Peripheral Receiving This Task |
|-------------------------|---------------------------------|--------------------------------|
| 1                       | GPIO_TASK_CH0_SET               | GPIO                           |
| 2                       | GPIO_TASK_CH1_SET               |                                |

When a channel receives a valid event pulse signal, it generates the mapped task pulse signal.

For more detailed descriptions of a task, please refer to the chapter for the peripheral receiving this task.

Events from different channels can be optionally mapped to the same task. For example, field [SOC\\_ETM\\_CH \$n\$ \\_TASK\\_ID](#) of multiple channels can be configured with the same value, and field [SOC\\_ETM\\_CH \$n\$ \\_EVT\\_ID](#) can be configured with the same or different values. In this case, when the event received by any of the channels is valid, the task is generated. If events received by multiple channels are valid at the same time, the task will be generated only once.

### 12.3.4 Event and Task Status

The ETM module supports checking the status of events and tasks by reading registers as follows:

- Event status can be checked by reading the [SOC\\_ETM\\_EVT\\_ST \$n\$ \\_REG](#) register. If the field corresponding to an event is 1, it indicates that the event has been received by ETM. Otherwise, it indicates that the event has not been received by ETM. The fields in the [SOC\\_ETM\\_EVT\\_ST \$n\$ \\_REG](#) register can be cleared by writing 1 to the corresponding fields in the [SOC\\_ETM\\_EVT\\_ST \$n\$ \\_CLR\\_REG](#) register.
- Task status can be checked by reading the [SOC\\_ETM\\_TASK\\_ST \$n\$ \\_REG](#) register. If the field corresponding to a task is 1, it indicates that the task has been generated by ETM. Otherwise, it indicates that the task has not been generated by ETM. The fields in the [SOC\\_ETM\\_TASK\\_ST \$n\$ \\_REG](#) register can be cleared by writing 1 to the corresponding fields in the [SOC\\_ETM\\_TASK\\_ST \$n\$ \\_CLR\\_REG](#) register.

### 12.3.5 Timing Considerations

Figure [12.3-2](#) shows the structure of clocks that drive received events, sent tasks, and ETM channels.

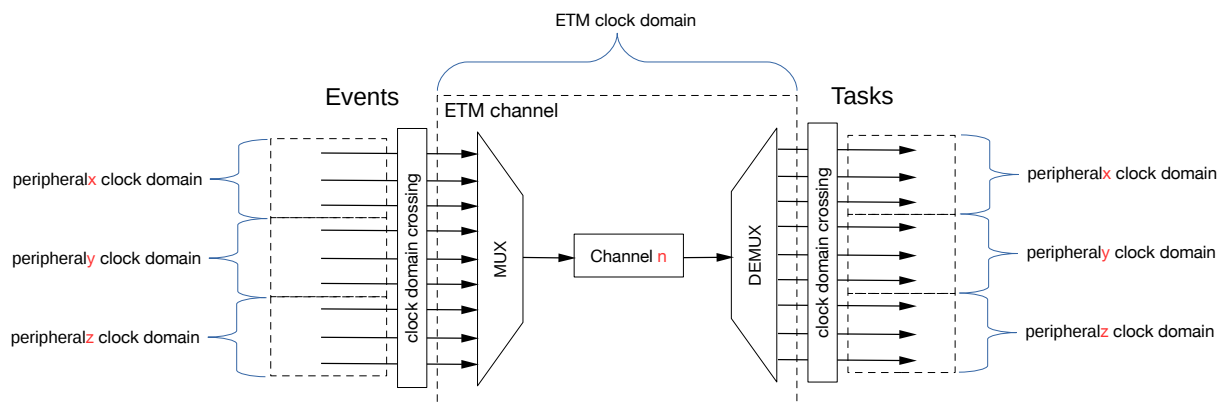

Figure 12.3-2. Event Task Matrix Clock Architecture

ETM is running at the SYS\_CLK domain (see Chapter 9 *Reset and Clock*). Each event corresponds to a pulse signal generated by the corresponding peripheral in its clock domain, while each task is mapped by the ETM to a pulse signal under its corresponding peripheral clock domain. The peripherals generating events, the Event Task Matrix, and peripherals receiving tasks are not necessarily running off the same clock and as such need to be synchronized. Therefore, to avoid event loss, there should be a delay between two consecutive event pulses which is dependent on the clock of the peripheral generating the event, on the ETM's clock, and on the clock of the peripheral executing the task.

To make sure the Event Task Matrix receives every event successfully, for peripherals generating event pulses, the interval between two consecutive pulses must be greater than one ETM clock cycle, namely  $\text{ceil}(\frac{\text{peripheral\_clock\_frequency}}{\text{ETM\_clock\_frequency}})$  in the unit of peripheral clock cycles.

For example, assuming that peripheral A is in the 80 MHz clock domain (REF\_80M\_CLK), and the ETM runs in the 40 MHz clock domain (SYS\_CLK). Peripheral A generates event 1, which should be received by ETM. To receive each event 1 successfully, the interval between two consecutive event 1 must be greater than two peripheral A clock cycles (i.e., one ETM clock cycle).

Likewise, to make sure the Event Task Matrix maps the received event (i.e., event synchronized to the ETM's clock domain) successfully to a task, the interval between two consecutive event pulses in the ETM clock domain must be greater than one peripheral clock cycle, namely  $\text{ceil}(\frac{\text{ETM\_clock\_frequency}}{\text{peripheral\_clock\_frequency}})$  in the unit of ETM clock cycles.

For example, assuming that peripheral B is in the 20 MHz clock domain (FOSC\_20M\_CLK), and the ETM runs in the 40 MHz clock domain (SYS\_CLK). ETM maps an event to task 1, which should be received by peripheral B. To map each received event successfully to task 1, the interval between two consecutive events must be greater than two ETM clock cycles (i.e., one peripheral B clock cycle).

As a result, to map two consecutive events generated by peripheral A to peripheral B, the interval between these two events must be  $\text{ceil}(\frac{\text{peripheral\_A\_clock\_frequency}}{\text{ETM\_clock\_frequency}}) * \text{ceil}(\frac{\text{ETM\_clock\_frequency}}{\text{peripheral\_B\_clock\_frequency}})$  in the unit of peripheral A clock cycles.

For example, assuming that peripheral A is in the 80 MHz clock domain (REF\_80M\_CLK), peripheral B is in the 20 MHz clock domain (FOSC\_20M\_CLK), and the ETM runs in the 40 MHz clock domain (SYS\_CLK). ETM maps event 1 generated by peripheral A to task 1 received by peripheral B. To successfully map each event 1 to task 1, the interval between two consecutive event 1 must be greater than  $2 * 2 = 4$  peripheral A clock

cycles.

### 12.3.6 Channel Control

Each ETM channel can be independently configured to be enabled or disabled. When channel *n* is enabled and receives the event configured via `SOC_ETM_CHn_EVT_ID`, it maps the event to the task configured via `SOC_ETM_CHn_TASK_ID`. When channel *n* is disabled, even if it receives the event configured via `SOC_ETM_CHn_EVT_ID`, no task will be generated.

To enable ETM channel *n*, write 1 to `SOC_ETM_CH_ENABLEn`. To disable ETM channel *n*, Write 1 to `SOC_ETM_CH_DISABLEn`.

The status of ETM channel *n* can be obtained by reading `SOC_ETM_CH_ENABLEDn`. 1 indicates that channel *n* has been enabled, and 0 indicates disabled.

If `SOC_ETM_CHn_EVT_ID` or `SOC_ETM_CHn_TASK_ID` is configured to 0, ETM channel *n* will also be disabled.

The complete procedure to configure ETM channel *n* is as follows:

1. Enable the ETM's clock by writing 1 to `HP_SYS_CLKRST_REG_ETM_SYS_CLK_EN`
2. Select the event to be received by channel *n* via `SOC_ETM_CHn_EVT_ID`
3. Select the task mapped to the received event via `SOC_ETM_CHn_TASK_ID`
4. Enable channel *n* by setting `SOC_ETM_CH_ENABLEn`
5. When channel *n* no longer needs to map the selected event to the selected task, disable channel *n* by setting `SOC_ETM_CH_DISABLEn`. To configure a new event and task mapping, repeat Steps 2 to 4. If no configurations, channel *n* will remain disabled
6. The whole ETM module (i.e., all ETM channels) can be reset by writing 1 and then 0 to the `HP_SYS_CLKRST_REG_RST_EN_ETM` field

## 12.4 Register Summary

The addresses in this section are relative to Event Task Matrix base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name                                       | Description                | Address | Access    |
|--|----------------------------|---------|-----------|
| <b>Status register</b>                     |                            |         |           |

## 12.5 Registers

The addresses in this section are relative to Event Task Matrix base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section [Programming Reserved Register Field](#).

**Register 12.1. SOC\_ETM\_CH\_ENA\_ADO\_REG (0x0000)**

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   | |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  | ## Chapter 13

# Low-Power Management

### 13.1 Overview

ESP32-P4 features an advanced low-power management system that optimizes the chip's power consumption while maintaining its high performance.

The low-power management system employs various power-saving techniques such as sleep modes, dynamic voltage and frequency scaling, and peripheral power gating to minimize the chip's power consumption.

At the core of this low-power management system is the power management unit (PMU) hardware component. The PMU powers up and down different power domains of the chip to achieve the best balance between chip performance, power consumption, and wake-up latency.

### 13.2 Terminology

The following terms related to low-power management are defined in the context of the *ESP32-P4 Technical Reference Manual* to help readers better understand this document:

|                                    |   |
|------------------------------------|---|
| <b>Low-power management</b>        | Refers to the whole system that manages the chip's power consumption.   |
| <b>Power management unit (PMU)</b> | Refers to the specific hardware module that controls power up and down for power domains, clocks, and power-related logic.                      |
| <b>Power domain</b>                | Refers to the smallest unit that can be independently powered up or down. A power domain can contain one or multiple modules within the chip.   |
| <b>PMU states</b>                  | Refers to the states of the PMU's state machine. Users can configure the clock gating and power gating of a power domain in each of the states. |
| <b>Power modes</b>                 | Refers to the preset power modes that power up different domains for typical application scenarios.   |

### 13.3 Features

The PMU has the following features:

- Supports three configurable PMU states. Software can flexibly configure them according to the needs.
  - HP\_ACTIVE
  - HP\_SLEEP

- LP\_SLEEP
- Supports four preset power modes that suit various typical usage scenarios:
  - Active
  - Light-sleep0 (This mode does not power down the peripherals, but only stops the clock, resulting in higher power consumption and a smaller wake-up delay.)
  - Light-sleep1 (This mode powers down the peripherals and needs data backup and restoration, resulting in lower power consumption and a larger wake-up delay.)
  - Deep-sleep
- LP SRAM (32 KB): Keep power up in all modes, can store HP CPU's non-volatile data, and LP CPU's instructions and data.
- Supports a programmable retention DMA that backs up and restores the CPU and peripherals status when the chip switches between PMU states.
- Supports a power controller that controls the power and clocks depending on the power modes.

## 13.4 Functional Description

ESP32-P4's low-power management involves the following components:

- **Power scheme:** The power scheme of ESP32-P4 includes power regulators, digital power domains, analog power domains, etc.
- **PMU controller:** It is the core part of the PMU, controlling the power up and down of power domains, clocks, etc.
- **One RTC timer:** For more information, please refer to Chapter [17 RTC Timer](#).
- **16 LP GPIO pins (GPIO0–GPIO15):** These pins are always powered up and are not affected by any low-power modes, which makes them suitable for working as wake-up sources when the chip is in low-power modes. These pins can also work as regular GPIOs. For more information on LP GPIOs, refer to Chapter [8 GPIO Matrix and IO MUX](#).
- **32 KB SRAM:** The 32 KB SRAM is accessible to both HP CPU and LP CPU. It works under the HP CPU clock when accessed by the HP CPU and under the LP CPU clock when accessed by the LP CPU.
- **Brownout detector:** Monitors the power of the voltage supply pins, ensuring stable chip operation and preventing the SoC from potential malfunction if it is subject to glitches or under-voltage. For more information, refer to Chapter [21 Brown-out Detector](#).

The following sections provide a detailed description of the components mentioned above.

### 13.4.1 Power Scheme

Figure [13.4-1](#) shows the power scheme of ESP32-P4 that mainly includes:

- A DCDC voltage regulation feedback system
- Two internal regulators
- Four output regulators (EXT\_LDO)

- Analog power domains
- Digital power domains
- Battery power domain

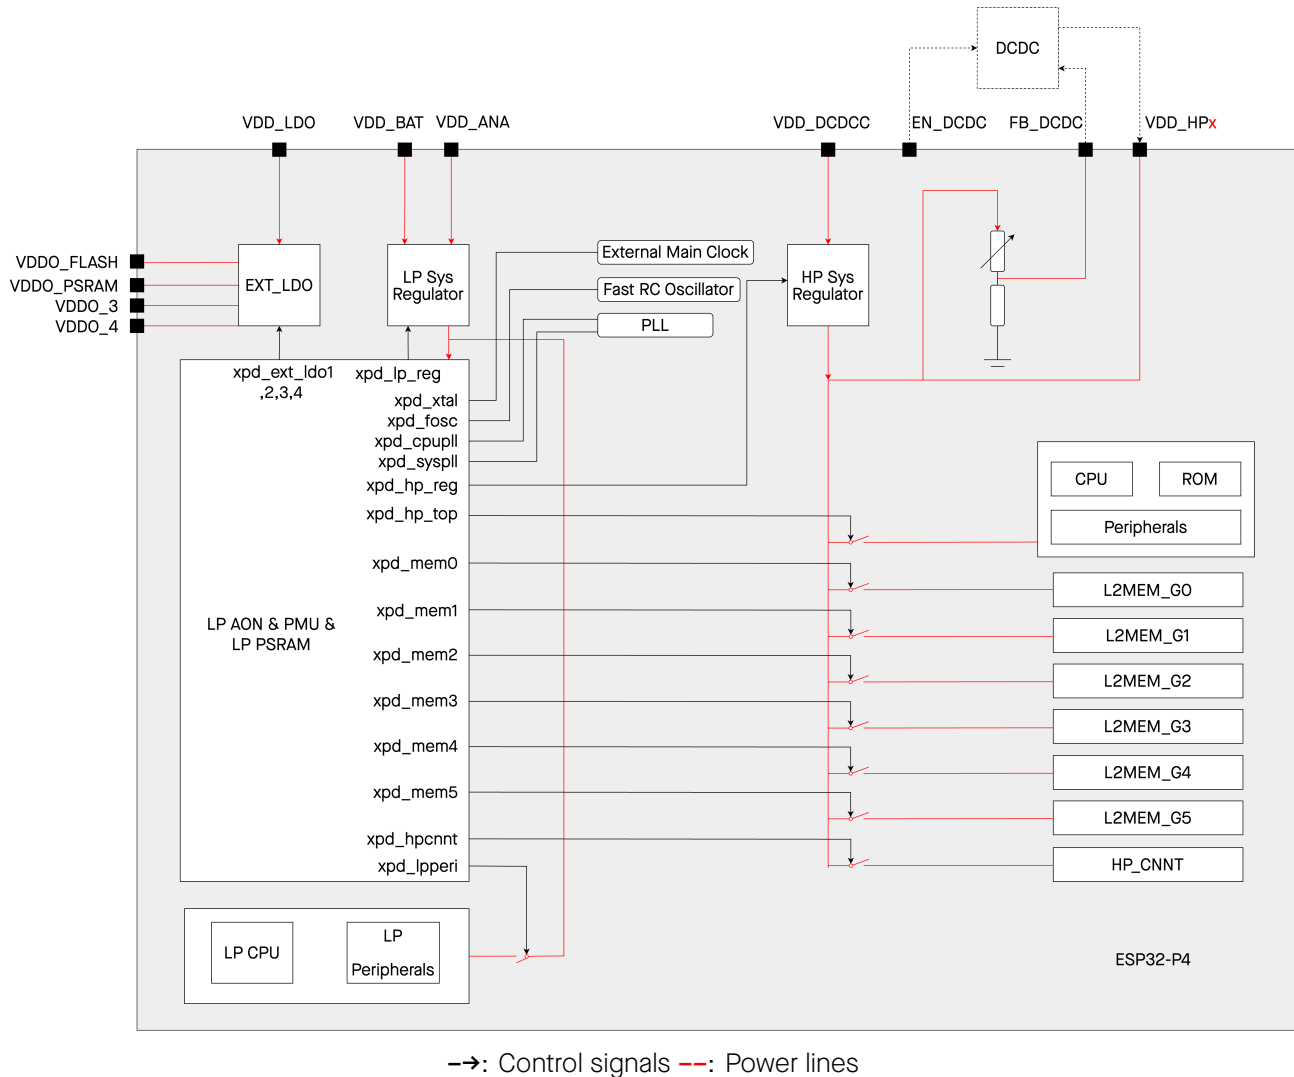

Figure 13.4-1. ESP32-P4 Power Scheme

### 13.4.1.1 Regulators

As shown in Figure 13.4-1, the analog section of ESP32-P4 includes one external DCDC with feedback regulation and two internal HP/LP system regulators, responsible for regulating the power supply for different power domains.

- The **DCDC voltage regulation feedback system** adjusts the voltage of the external DCDC.
- The **HP (high-performance) system regulator** has strong drive capability, higher power consumption, and adjustable output voltage. It is only suitable for power-up and sleep modes.
- The **LP (low-power) system regulator** regulates the power supply of low-power modules. Its output voltage is also adjustable.

The DCDC voltage regulation feedback system and the HP system regulator are responsible for powering the HP system. The external DCDC can adjust its output voltage through the internal voltage feedback system. By

default, the chip is powered by the HP system regulator when powered up. After power-up is complete, it is recommended to switch to the DCDC power supply for better efficiency and load capacity.

### 13.4.1.2 Digital Power Domains

- The HP system contains the following digital power domains:
  - **Peripherals + ROM + CPU (PD\_TOP)**: Mainly includes the bus and HP peripherals.
  - **L2MEM\_G0–G5**: It is divided into six sub-power domains, as shown in Figure 13.4-1.
  - **HP\_CNNT (PD\_HP\_CNNT)**: Mainly includes USB and SDIO modules.

There is an independent power switch between the regulator and each power domain, enabling up/down control of the digital power domain.

- The LP system contains the following digital power domains:
  - **LP PD peripherals (PD\_LP\_PERI)**: Mainly includes LP CPU and LP peripherals.
  - **LP always-on (PD\_AON)**: It mainly includes LP always-on peripherals (e.g., RTC timer) and PMU controller. This power domain keeps powered up all the time.

### 13.4.1.3 Analog Power Domains

- The HP system contains the following analog power domains:
  - CPLL\_CLK
  - SPLL\_CLK
  - Audio PLL
  - SDIO PLL
- The LP system contains the following analog power domains:
  - External Main Clock
  - Fast RC Oscillator

### 13.4.1.4 Battery Power Domain

The battery power domain (VDD\_BAT) serves as a backup power domain. When all external power supplies (VDD\_ANA) are turned off, the low-power system regulators, LP\_SLOW\_CLK, and LP\_FAST\_CLK can all be powered by the VDD\_BAT supply.

## 13.4.2 PMU

The PMU of ESP32-P4 controls power consumption-related components of each power domain, such as power and clock. PMU consists of the following major parts:

- **PMU main state machine**: It records and switches the PMU states.
- **Sleep/wake-up controller**: It sends sleep or wake-up requests to the PMU main state machine.
- **Power controllers**: They control the power and clock signals depending on the power modes of the chip. The power controllers include:

- **Digital power controller:** It powers up or down the digital power domains.
- **Analog power controller:** It enables the analog modules, such as the regulators, analog clocks, etc.
- **Clock controller:** It manages the clock gating of peripherals and selects analog clock sources for digital clocks.
- **Data backup controller:** It controls the data backup and restore process when the chip switches between PMU states.
- **System controller:** It controls some system-level modules, such as suspending watchdog functionality in sleep mode (when the CPU is unavailable).

The PMU workflow involves the following steps:

- The sleep/wake-up controller sends sleep or wake-up requests to the PMU main state machine.
- The PMU main state machine generates power gating, clock gating, and reset signals.
- The power controllers and clock controllers power up or down different power domains and clocks based on the signals generated by the PMU main state machine, allowing the chip to enter or exit different low-power modes.

The PMU workflow is shown in Figure [13.4-2](#). The definitions of HP\_SWITCH and LP\_SWITCH are as follows:

- **HP\_SWITCH:** The intermediate state for the HP system transitioning between HP\_ACTIVE and HP\_SLEEP. The hardware completes the control switching of various controllers in this state.
- **LP\_SWITCH:** The intermediate state for the LP system transitioning between HP\_SLEEP and LP\_SLEEP. The hardware completes the control switching of various controllers in this state.

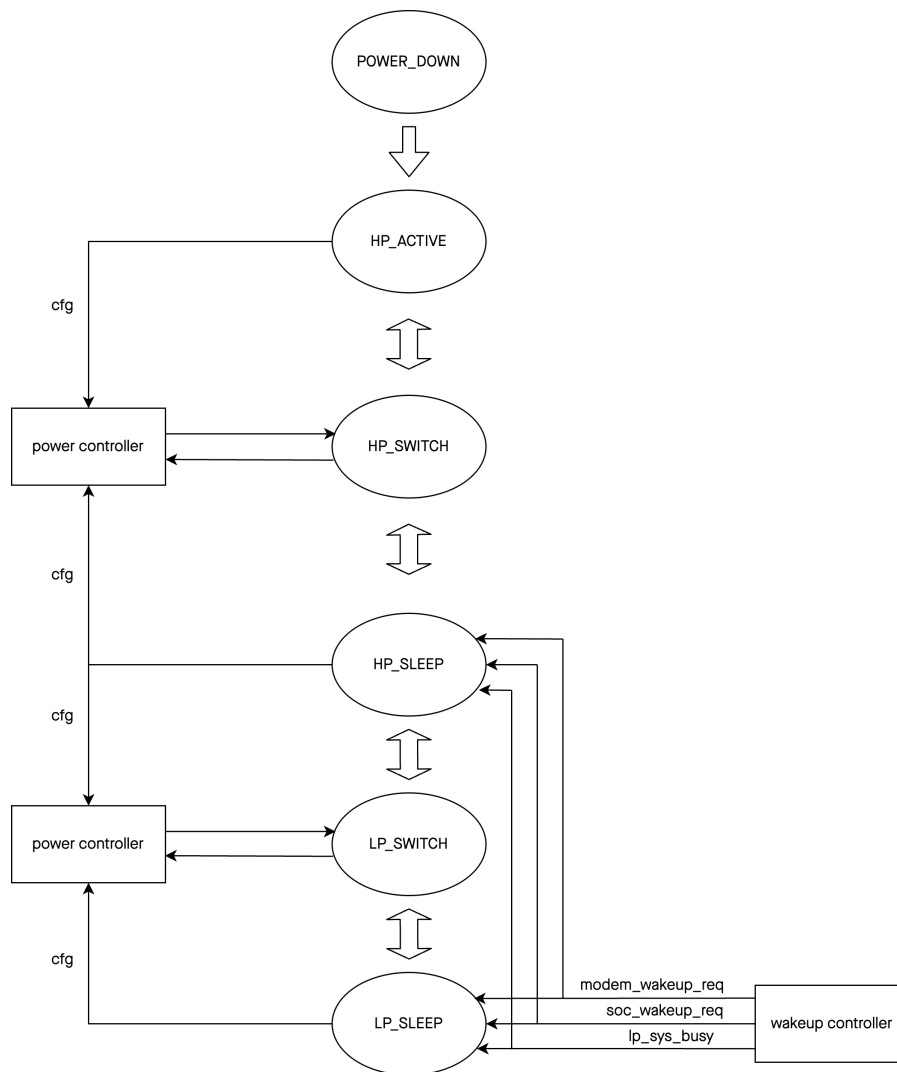

Figure 13.4-2. PMU Workflow

The following sections describe the main parts of PMU.

### 13.4.2.1 PMU Main State Machine

The PMU main state machine receives sleep and wake-up signals, changes the state of power and clock through the power controllers, thereby switching PMU states, and achieving a balance between performance and power consumption of the chip.

The PMU main state machine supports three PMU states, each controlled by different sleep and wake-up signals, supporting software customization of power and clocks. These PMU states allow the software to expand power modes for various application scenarios. The three PMU states are:

- **HP\_ACTIVE:** The circuits on the chip are powered up to a maximum, supporting the HP system and LP system operation.
- **HP\_SLEEP:** The HP system is in sleep, supporting LP peripherals operation.
- **LP\_SLEEP:** The HP system and LP peripherals are in sleep, while the always-on circuits remain operational.

**Note:**

The division of the HP and LP systems is as follows:

- LP system (peripherals): LP RISC-V 32-bit Microprocessor, LP GPIO, LP UART, LP I2C, LP I2S, touch sensor, temperature sensor, LP ADC, LP SPI
- LP system (always-on circuits): PMU, RTC Watchdog Timer, Super Watchdog
- HP system: All peripherals except those belonging to the LP system.

For more details, please refer to [ESP32-P4 Datasheet](#) > *Functional Block Diagram*.

HP\_ACTIVE is the operating state of the HP system, HP\_SLEEP is the sleep state of the HP system, LP\_SLEEP is the sleep state of the LP system. The operating state of the LP system reuses the HP\_SLEEP state and is therefore also referred to as HP\_SLEEP.

- If a module belongs to the HP system, its power up/down can be configured in the HP\_ACTIVE/HP\_SLEEP states. It reuses the HP\_SLEEP state in the LP\_SLEEP state.
- If a module belongs to the LP system, its power up/down can be configured in the HP\_SLEEP/LP\_SLEEP state. It reuses the HP\_SLEEP state in the HP\_ACTIVE state.

Take the HP CPU as an example. The HP CPU belongs to the HP system, so it can be configured to power up/down in the HP\_ACTIVE/HP\_SLEEP states through the following registers and reuse the HP\_SLEEP configurations in LP\_SLEEP.

- HP\_ACTIVE: [PMU\\_HP\\_ACTIVE\\_PD\\_TOP\\_PD\\_EN](#)
- HP\_SLEEP: [PMU\\_HP\\_SLEEP\\_PD\\_TOP\\_PD\\_EN](#)

Similarly, users can configure the power up and down for other power domains in different PMU states. For the configuration registers, please refer to Section 13.8.

**Note:**

In the following text, all such configuration registers are collectively referred to as PMU\_*n1*\_PD\_*POWERDOMAIN*\_PD\_EN, where *n1* represents the three PMU states.

Once the configuration is done, the PMU uses various controllers to make these configurations effective, as described in the following sections.

### 13.4.2.2 Sleep/Wake-up Controller

The sleep/wake-up controller initiates sleep and wake-up requests to the PMU main state machine. ESP32-P4 supports multiple wake-up sources to wake the CPU from different power modes. Table 13.4-1 lists all the wake-up sources.

All the wake-up sources in Table 13.4-1 can wake up both the HP CPU and the LP CPU. Users can configure [PMU\\_WAKEUP\\_ENA](#) to set the target to the HP CPU, and configure [PMU\\_LP\\_CPU\\_WAKEUP\\_EN](#) to set the target to the LP CPU. Configuring both registers simultaneously can wake up both the HP CPU and the LP CPU.

Table 13.4-1. Wake-up Sources

| Bit in <a href="#">PMU_WAKEUP_ENA/PMU_LP_CPU_WAKEUP_EN</a> | Wake-up Sources   | Source Power Domains |
|--|-------------------|----------------------|
| 0  | HP_SDIO           | PD_HP_CNNT           |
| 1  | Software wakeup   | PD_LP_PERI           |
| 2  | HP GPIO           | PD_TOP               |
| 3  | HP USB            | PD_HP_CNNT           |
| 4  | HP UART4          | PD_TOP               |
| 5  | HP UART3          | PD_TOP               |
| 6  | HP UART2          | PD_TOP               |
| 7  | HP UART1          | PD_TOP               |
| 8  | HP UART0          | PD_TOP               |
| 9  | LP GPIO           | PD_LP_PERI           |
| 10   | LP UART           | PD_LP_PERI           |
| 11   | LP TOUCH          | PD_LP_PERI           |
| 12   | EXT IO            | PD_LP_PERI           |
| 13   | RTC_TIMER_TARO    | PD_AON               |
| 14   | BROWN OUT         | PD_AON               |
| 15   | VBAT_UNDERVOLTAGE | PD_AON               |
| 16   | LP CORE EXCEPTION | PD_LP_PERI           |
| 17   | ETM               | PD_TOP               |
| 18   | RTC_TIMER_TAR1    | PD_AON               |
| 19   | LP I2S            | PD_LP_PERI           |

ESP32-P4 provides a hardware mechanism that can reject sleep, meaning if some peripherals are in an un interruptible working state and the HP CPU tries to sleep, the peripherals will send a wake-up signal to prevent the HP CPU from sleeping, thus ensuring the peripherals work normally.

The wake-up sources in Table 13.4-1 can all be configured as events to reject sleep. Users can configure the following registers to implement sleep rejection. The configuration values of [PMU\\_SLEEP\\_REJECT\\_ENA](#) and [PMU\\_SLP\\_REJECT\\_CAUSE\\_REG](#) and the corresponding wake-up sources are the same as shown in Table 13.4-1.

- Enable sleep rejection feature:
  - Set [PMU\\_SLP\\_REJECT\\_EN](#) to 1 to enable the sleep rejection feature.
  - Configure [PMU\\_SLEEP\\_REJECT\\_ENA](#) to select the sleep rejection signal source.
- Read [PMU\\_SLP\\_REJECT\\_CAUSE\\_REG](#) for the source of sleep rejection event.

### 13.4.2.3 Analog Power Controller

The analog power controller controls the power up and down of the analog circuits (including voltage regulators, high-speed clocks, and slow-speed clocks) in the PMU states.

The configuration of the regulators is as follows:

- Configure [PMU\\_n1\\_HP\\_REGULATOR\\_XPD](#) or [PMU\\_n1\\_LP\\_REGULATOR\\_XPD](#) to enable or disable the output voltage of the HP/LP sys regulator in the target PMU state. Turning off the LP sys regulator is not

recommended, as it may cause the PMU itself to power down, resulting in chip malfunction.

The configuration of the high-speed clocks (XTAL\_CLK and PLL clocks) is as follows:

- XTAL\_CLK: Configure [PMU\\_HP\\_SLEEP\\_XPD\\_XTAL](#) to 1 to enable XTAL\_CLK when the chip switches the PMU state to HP\_SLEEP.

Note: To avoid the instability in XTAL\_CLK during startup, users have the option to configure [PMU\\_WAIT\\_XTL\\_STABLE](#) to delay the gate opening for XTAL\_CLK. This delay ensures that the gate opening is enabled after [PMU\\_WAIT\\_XTL\\_STABLE](#) CLK\_DYN\_FAST\_CLK cycles following the power-up of XTAL\_CLK.

- CPLL\_CLK: PMU can enable CPLL\_CLK in different PMU states by configuring [PMU\\_n1\\_XPD\\_PLL\[0\]](#) to 1. For example, configuring [PMU\\_HP\\_ACTIVE\\_XPD\\_PLL\[0\]](#) to 1 enables the CPLL\_CLK clock when the chip is in HP\_ACTIVE state.
- SPLL\_CLK: PMU can enable SPLL\_CLK in different PMU states by configuring [PMU\\_n1\\_XPD\\_PLL\[1\]](#) to 1. For example, configuring [PMU\\_HP\\_ACTIVE\\_XPD\\_PLL\[1\]](#) to 1 enables the SPLL\_CLK clock when the chip is in HP\_ACTIVE state.
- Audio PLL: PMU can enable Audio PLL in different PMU states by configuring [PMU\\_n1\\_XPD\\_PLL\[2\]](#) to 1. For example, configuring [PMU\\_HP\\_ACTIVE\\_XPD\\_PLL\[2\]](#) to 1 enables the Audio PLL clock when the chip is in HP\_ACTIVE state.
- SDIO PLL: PMU can enable SDIO PLL in different PMU states by configuring [PMU\\_n1\\_XPD\\_PLL\[3\]](#) to 1. For example, configuring [PMU\\_HP\\_ACTIVE\\_XPD\\_PLL\[3\]](#) to 1 enables the SDIO PLL clock when the chip is in HP\_ACTIVE state.

Note:

- Before enabling the PLL clocks please ensure that XTAL\_CLK is stable.
- To avoid the instability in the PLL clocks during startup, users have the option to configure [PMU\\_WAIT\\_PLL\\_STABLE](#) to delay the gate opening for the PLL clocks. This delay ensures that the gate opening is enabled after [PMU\\_WAIT\\_PLL\\_STABLE](#) CLK\_DYN\_FAST\_CLK cycles following the power-up of the PLL clocks.

Slow-speed clocks (RC\_FAST\_CLK and XTAL32K\_CLK) operate with low power. The power up and down of the slow-speed clocks in HP\_ACTIVE and HP\_SLEEP states are controlled by [PMU\\_HP\\_SLEEP\\_XPD\\_FOSC\\_CLK](#). In LP\_SLEEP state, the power up and down of the slow-speed clocks are controlled by [PMU\\_LP\\_SLEEP\\_XPD\\_FOSC\\_CLK](#).

#### 13.4.2.4 Digital Power Controller

The digital power controller controls the power up and down of digital power domains in different PMU states. Unlike the analog power controller, the digital power controller does not directly control the regulator but instead controls the power switch connected to the regulator to power up and down the digital power domains.

The LP PD Peripherals domain can only be powered up and down while the PMU state switches between HP\_SLEEP and LP\_SLEEP. The other digital power domains can only be powered up and down while the PMU state switches between HP\_SLEEP and HP\_ACTIVE.

When the chip switches between PMU states, if the power configuration of a power domain in the current

PMU state does not match the power configuration it is about to switch to, then the power up-down process will be activated. Take the power up-to-down process of the CPU power domain as an example. Configure [PMU\\_HP\\_SLEEP\\_PD\\_TOP\\_PD\\_EN](#) to 1 or 0 to power down or up the CPU power domain in HP\_SLEEP. PMU will perform the following configurations:

- Enable the digital isolation unit to ensure that the powered-down modules do not output unstable voltage levels to the powered-up modules. When a power domain loses power, the output of this module will be clamped to a fixed value.
- Enable reset. When the CPU power domain loses power, its global reset signal is set to a reset state, which persists for a period after the CPU power domain is re-powered. This mechanism guarantees a reset-to-release process for the CPU power domain during power-up, effectively mitigating any instability caused by power up-down transitions.

The following explains the power up and down of each digital power domain:

- L2MEM\_GO–G5

Configure [PMU\\_n1\\_PD\\_HP\\_MEM\\_PD\\_EN](#) to power up or down L2MEM\_GO–G5.

- HP\_CNNT

Configure [PMU\\_n1\\_PD\\_CNNT\\_PD\\_EN](#) to power up or down HP\_CNNT.

- Peripherals + ROM + CPU (PD\_TOP)

Configure [PMU\\_n1\\_PD\\_TOP\\_PD\\_EN](#) to power or down PD\_TOP.

When the Peripherals domain is powered down, the following features are configurable:

- Powering down the Peripherals domain may cause instability in GPIOs. This can be addressed by maintaining the state of the GPIOs (excluding the LP GPIOs) through PMU. For example, configuring [PMU\\_HP\\_SLEEP\\_HP\\_PAD\\_HOLD\\_ALL](#) can keep GPIOs in the same state as before Peripherals was powered down in HP\_SLEEP.
- In the HP\_ACTIVE state, Memory Deep-sleep mode is supported under a standard power supply. The memory cannot be read or written in this mode, but data can be retained. Configure [PMU\\_n1\\_HP\\_MEM\\_DSLP](#) to enable this mode.

- LP PD Peripherals

The LP PD Peripherals power domain remains powered up when the chip is in HP\_ACTIVE state. The power state of LP PD Peripherals is configurable only in HP\_SLEEP and LP\_SLEEP states. The LP PD Peripherals power domain has an independent digital power switch, and its power control is not dependent on the power state of other digital power domains.

### 13.4.2.5 Clock Controller

The clock controller mainly controls the high-performance system clocks and LP system clocks when the chip switches between PMU states.

The high-performance system clocks include ROOT\_CLK and high-performance system peripherals clocks. When the chip switches between HP\_ACTIVE and HP\_SLEEP states, PMU can switch, power up/down, and divide the frequency of ROOT\_CLK, as well as power up/down high-performance system peripherals clocks.

- ROOT\_CLK can be controlled as follows:
  - Configure PMU\_*n1*\_SYS\_CLK\_SLP\_SEL to 1 to indicate that when the chip enters the corresponding PMU state, the clock source is controlled by PMU.
  - Configure PMU\_*n1*\_ICG\_SYS\_CLOCK\_EN to 0 to disable ROOT\_CLK in the corresponding PMU state.
  - Configure PMU\_*n1*\_DIG\_SYS\_CLK\_SEL to select the clock source after the chip enters the corresponding PMU state. For details, please refer to Chapter 9 *Reset and Clock* > Table 9.2-1.
- High-performance system peripheral clocks can be controlled as follows:
  - Configure PMU\_*n1*\_ICG\_SLP\_SEL to 1 so that the clock gating in the target state is controlled by PMU. Configure this register to 0 so that the clock gating is controlled by PCR registers.
  - Configure PMU\_*n1*\_DIG\_ICG\_FUNC\_EN to power up/down the function clock in the target PMU state. For detailed configuration please see Table 13.4-2.

**Table 13.4-2. HP System Peripherals' Function Clocks**

| Bit in PMU_ <i>n1</i> _DIG_ICG_FUNC_EN | Clock              |
|--|--------------------|
| bit 0                                  | HP_CPU0_CLK        |
| bit 1                                  | HP_CPU1_CLK        |
| bit 2                                  | HP_CPU0_CLIC_CLK   |
| bit 3                                  | HP_CPU1_CLIC_CLK   |
| bit 4                                  | MISC_CPU_CLK       |
| bit 5                                  | MISC_SYS_CLK       |
| bit 6                                  | ICM_CPU_CLK        |
| bit 7                                  | ICM_SYS_CLK        |
| bit 8                                  | ICM_MEM_CLK        |
| bit 9                                  | ICM_APB_CLK        |
| bit 10                                 | SPM_CPU_CLK        |
| bit 11                                 | L2MEM_MEM_CLK      |
| bit 12                                 | L2MEM_SYS_CLK      |
| bit 13                                 | L1CACHE_CPU_CLK    |
| bit 14                                 | L1CACHE_D_CPU_CLK  |
| bit 15                                 | L1CACHE_IO_CPU_CLK |
| bit 16                                 | L1CACHE_I1_CPU_CLK |
| bit 17                                 | L1CACHE_MEM_CLK    |
| bit 18                                 | L1CACHE_D_MEM_CLK  |
| bit 19                                 | L1CACHE_IO_MEM_CLK |
| bit 20                                 | L1CACHE_I1_MEM_CLK |
| bit 21                                 | L2CACHE_MEM_CLK    |
| bit 22                                 | L2CACHE_SYS_CLK    |
| bit 23                                 | REGDMA_SYS_CLK     |
| bit 24                                 | HP_CLKRST_APB_CLK  |
| bit 25                                 | SYSREG_APB_CLK     |
| bit 26                                 | INTRMTX_CLK        |
| bit 27                                 | N/A                |

| PMU_ <i>n1</i> _DIG_ICG_FUNC_EN Bit | Clock |
|-------------------------------------|-------|
| bit 28                              | N/A   |
| bit 29                              | N/A   |
| bit 30                              | N/A   |
| bit 31                              | N/A   |

The LP system clocks are mainly used in the low-power system and include the following clocks:

- LP\_SLOW\_CLK
- LP\_FAST\_CLK
- LP\_DYN\_SLOW\_CLK
- LP\_DYN\_FAST\_CLK
- XTAL\_D2\_CLK

The clock frequency of LP\_DYN\_FAST\_CLK is controlled by hardware as follows, depending on the PMU state (and cannot be changed by the user):

- LP\_SLEEP: The LP\_DYN\_FAST\_CLK frequency is the same as LP\_SLOW\_CLK.
- HP\_ACTIVE, HP\_SLEEP: The LP\_DYN\_FAST\_CLK frequency is the same as LP\_FAST\_CLK.

#### 13.4.2.6 Backup Controller

ESP32-P4 has a Retention DMA module that can transfer data between memory and peripherals when the chip switches between PMU states. In this way, the data is backed up when the power domain is powered down and restored when the power domain is powered up again.

Data transfer is implemented in the Peripherals power domain. PMU only generates relevant control signals. It is important to note that the data transfer control registers are directional, as unlike other control registers, these control behaviors are determined by both the original PMU state and the target PMU state.

For example, the control registers for transitioning from HP\_ACTIVE to HP\_SLEEP and from HP\_SLEEP to HP\_ACTIVE are different. The possible PMU state switches are listed below, collectively represented by *n2* in the register names:

- HP\_SLEEP2ACTIVE
- HP\_ACTIVE2SLEEP

The following section introduces how PMU controls the Retention DMA:

- Enable data transfer: Configure PMU\_*n2*\_BACKUP\_EN to 1 to enable data transfer when the corresponding PMU state switch is performed.
- Enable corresponding clocks: Before data transfer starts, configure PMU\_*n2*\_BACKUP\_CLK\_SEL to select the clock source of the Retention DMA, and configure PMU\_*n1*\_BACKUP\_ICG\_FUNC\_EN to enable the clock.

After the data transfer is completed, the value of PMU\_*n1*\_BACKUP\_ICG\_FUNC\_EN is determined by the configuration of PMU\_*n1*\_DIG\_ICG\_FUNC\_EN in the target PMU state.

- Configure data transfer direction: Configure the highest bit of PMU\_*n2*\_BACKUP\_MODE:

- 1: From peripheral to memory
- 0: From memory to peripheral
- Select linked list pointer: Configure the lower two bits of PMU\_*n2*\_BACKUP\_MODE to select the linked list pointer, specifically:
  - 0: PAU\_LINK\_ADDR\_0
  - 1: PAU\_LINK\_ADDR\_1
  - 2: PAU\_LINK\_ADDR\_2
  - 3: PAU\_LINK\_ADDR\_3

### 13.4.2.7 System Controller

The system controller controls some functional modules when the chip switches PMU states, to achieve stable and low-power chip performance. Specifically, the system controller supports:

- **Pausing the watchdog function:** Configuring PMU\_*n1*\_DIG\_PAUSE\_WDT to 1 disables the RTC watchdog timer (RWDT) function when the chip switches to the corresponding target PMU state. Note that if this register is configured to 0 in any sleep mode, the watchdog function is not disabled, and RWDT will reset as the CPU does not feed the watchdog.
- **Switching GPIO to sleep mode,** where the configuration of the GPIO holds. Consider a GPIO pin working in low-drive mode as an input and a wake-up pin. Setting PMU\_*n1*\_HP\_PAD\_HOLD\_ALL to 1 latches the current configuration of the GPIO pin as the sleep configuration when the chip transitions to the corresponding PMU state. For more information on the hold function of GPIO, please refer to Chapter 8 [GPIO Matrix and IO MUX](#) > Section 8.9.
- **Disabling UART wake-up function:** Configuring PMU\_*n1*\_UART\_WAKEUP\_EN to 0 disables the four UART wake-up modes in the corresponding PMU state. For more information on UART wake-up modes, please refer to Chapter 37 [UART Controller \(UART\)](#).
- **Pausing CPU:** Setting PMU\_*n1*\_DIG\_CPU\_STALL to 1 suspends the CPU in the corresponding PMU state.

### 13.4.2.8 Battery Power Controller

As shown in Figure 13.4-1, the low-power system regulator can be powered by VDD\_BAT (battery) or VDD\_ANA (analog). PMU\_*n1*\_VDDBAT\_MODE controls whether to enable the battery power. When PMU\_*n1*\_VDDBAT\_MODE is 0, the battery power is not enabled, and the low-power system regulator is powered by VDD\_ANA and can be used in Active mode or Light-sleep0/1 modes. When PMU\_*n1*\_VDDBAT\_MODE is 1, the battery power is enabled and can be used in Deep-sleep mode, where the main power, including VDD\_ANA, is cut off, and only the LP AON & PMU power domains are powered up.

### 13.4.2.9 Output Regulator Control

As shown in Figure 13.4-1, ESP32-P4 has four output regulators:

- VDDO\_FLASH (VO1), typically used for on-chip flash voltage regulation
- VDDO\_PSRAM (VO2), typically used for on-chip PSRAM voltage regulation
- VDDO\_3 (VO3) and VDDO\_4 (VO4), which convert the input VDD\_LDO (typically 3.3 V) into the voltages needed by peripherals such as flash, PSRAM, MIPI, and SDIO.

The regulators support the following features:

- **Supports LDO mode and bypass mode.** LDO mode supports an output of 0.5 V – 2.7 V, while bypass mode outputs the voltage of VDD\_LDO. Mode selection is controlled by a hardware state machine or a register, with the control authority managed by a register. The flash regulator (VO1) also supports eFuse control.
- The mode control for VO1 is shown in Figure 13.4-3. In the figure, TIEH\_SEL on the right being 0 selects LDO mode; being 1 selects bypass mode.

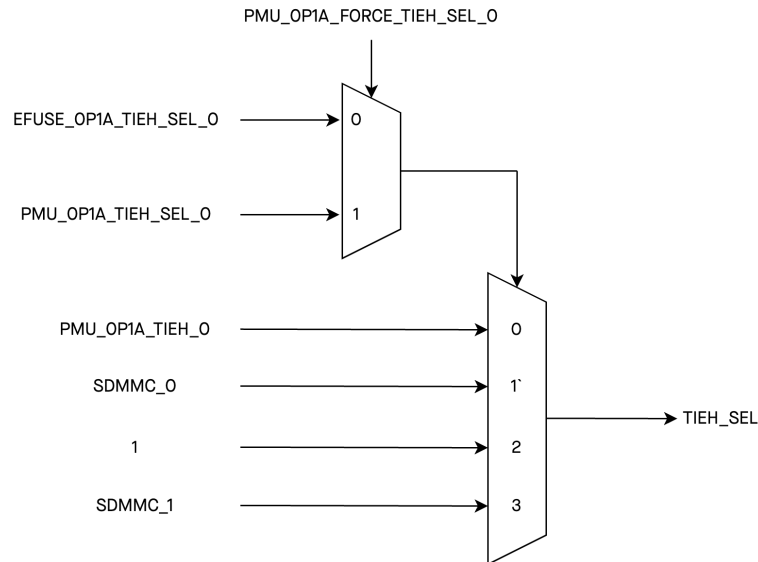

Figure 13.4-3. VO1 Mode Control

- The mode control for VO2/3/4 is shown in Figure 13.4-4. In the figure, TIEH\_SEL on the right being 0 selects LDO mode; being 1 selects bypass mode.

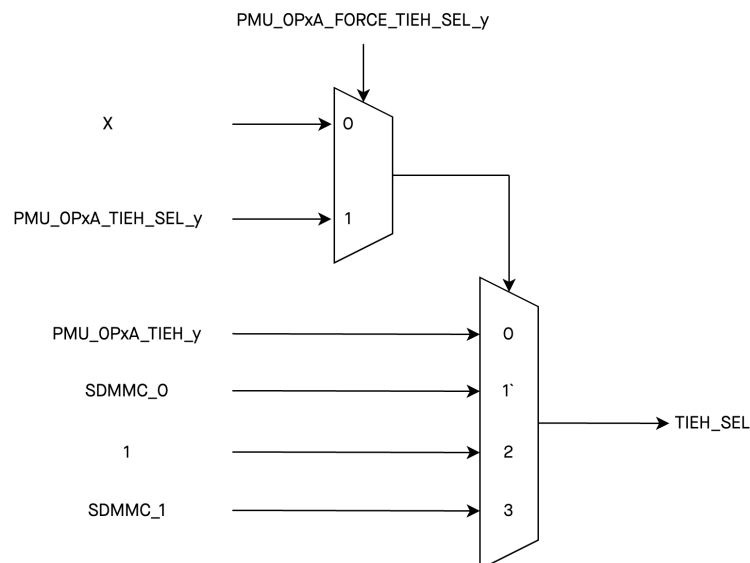

Figure 13.4-4. VO2/3/4 Mode Control

**Table 13.4-3. VO2/3/4 Registers**

| Regulators | PMU_OPxA_FORCE_TIEH_SEL_y                 | PMU_OPxA_TIEH_SEL_y                 | PMU_OPxA_TIEH_y                 |
|------------|---|-------------------------------------|---------------------------------|
| VO2        | <a href="#">PMU_OP1A_FORCE_TIEH_SEL_1</a> | <a href="#">PMU_OP1A_TIEH_SEL_1</a> | <a href="#">PMU_OP1A_TIEH_1</a> |
| VO3        | <a href="#">PMU_OP2A_FORCE_TIEH_SEL_0</a> | <a href="#">PMU_OP2A_TIEH_SEL_0</a> | <a href="#">PMU_OP2A_TIEH_0</a> |
| VO4        | <a href="#">PMU_OP2A_FORCE_TIEH_SEL_1</a> | <a href="#">PMU_OP2A_TIEH_SEL_1</a> | <a href="#">PMU_OP2A_TIEH_1</a> |

- **Supports switch control.** Only the flash voltage regulator (VO1) supports power control by the PMU state machine, the other regulators only support power control by software. The regulator is enabled when the register in Table 13.4-4 is set to 1; otherwise, the regulator is disabled.

**Table 13.4-4. Regulator Power Control**

| Regulator | Power Control                  |
|-----------|--------------------------------|
| VO1       | PMU_01_REGULATOR_VO1_XPD       |
| VO2       | <a href="#">PMU_OP1A_XPD_1</a> |
| VO3       | <a href="#">PMU_OP2A_XPD_0</a> |
| VO4       | <a href="#">PMU_OP2A_XPD_1</a> |

- **Over current protection:** Before powering up the regulators, users have the option to enable the over current protection function to prevent excessive transient current that may damage the capacitor. After the capacitor charging is complete, the over current protection should be disabled. The capacitor charging time depends on the load capacitance and voltage. The calculation formula is:  $T_{ms} = C_F \times V_V / 50$ . Table 13.4-5 provides the over current protection enable register; when the register is set to 1, the function is enabled; otherwise, it is disabled.

**Table 13.4-5. Over Current Protection Control**

| Regulators | Over Current Protection Control                  |
|------------|--|
| VO1        | FSM or <a href="#">PMU_ANA_OP1A_EN_CUR_LIM_0</a> |
| VO2        | <a href="#">PMU_ANA_OP1A_EN_CUR_LIM_1</a>        |
| VO3        | <a href="#">PMU_ANA_OP2A_EN_CUR_LIM_0</a>        |
| VO4        | <a href="#">PMU_ANA_OP2A_EN_CUR_LIM_1</a>        |

Due to the long power-up time, a waiting counter is provided for each regulator. Once the regulator is powered up, the counter is triggered and starts counting. The counter has two stages, and each stage triggers different interrupts. Typically, the waiting value for the first stage can be configured as the over-current protection value (counter target 1), and the second stage can be configured as the waiting stabilization value (counter target 2). The configuration of the counter is shown in the table below:

**Table 13.4-6. Regulator Waiting Counter**

| Regulators | Counter Target 1                        | Counter Target 2                        |
|------------|---|---|
| VO1        | <a href="#">PMU_OP1A_TARGET0_0[6:0]</a> | <a href="#">PMU_OP1A_TARGET1_0[7:0]</a> |
| VO2        | <a href="#">PMU_OP1A_TARGET0_1[7:0]</a> | <a href="#">PMU_OP1A_TARGET1_1[7:0]</a> |
| VO3        | <a href="#">PMU_OP2A_TARGET0_0[7:0]</a> | <a href="#">PMU_OP2A_TARGET1_0[7:0]</a> |
| VO4        | <a href="#">PMU_OP2A_TARGET0_1[7:0]</a> | <a href="#">PMU_OP2A_TARGET1_1[7:0]</a> |

**Note:**

1. The bit 7 of [PMU\\_OP1A\\_TARGETO\\_0](#) clears the counter. Setting bit 7 to 1 resets the counter.
2. The counter clock is derived from LP\_DYN\_SLOW\_CLK, which is divided by a factor of 16.

## 13.5 Power Modes

ESP32-P4 has three configurable PMU states. Based on the PMU states, the chip has defined four power modes for common application scenarios, as shown in Table 13.5-1.

**Table 13.5-1. Preset Power Modes**

| Power Modes  | Power Domains   |                      |     |        |             |          |        |
|--------------|-----------------|----------------------|-----|--------|-------------|----------|--------|
|              | LP<br>always-on | LP PD<br>peripherals | TOP | HPCNNT | RC_FAST_CLK | XTAL_CLK | PLL    |
| Active       | ON              | ON                   | ON  | ON     | ON          | ON       | ON     |
| Light-sleep0 | ON              | ON                   | ON  | ON     | ON/OFF      | ON/OFF   | ON/OFF |
| Light-sleep1 | ON              | ON/OFF               | OFF | ON     | ON/OFF      | ON/OFF   | ON/OFF |
| Deep-sleep   | ON              | OFF                  | OFF | OFF    | OFF         | OFF      | OFF    |

**Note:**

1. For power consumption data, please refer to [ESP32-P4 Datasheet](#) > Section *Current Consumption*.
2. For supported wake-up sources, please refer to Table 13.4-1.

## 13.6 Event Task Matrix Feature

The low-power management system on ESP32-P4 supports the Event Task Matrix (ETM) function, which allows the low-power management system's ETM tasks to be triggered by any peripherals' ETM events, or the low-power management system's ETM events to trigger any peripherals' ETM tasks. This section introduces the ETM tasks and events related to the low-power management system. For more information, please refer to Chapter 12 [Event Task Matrix \(ETM\)](#).

The low-power management system can receive the following ETM tasks:

- PMU\_TASK\_SLEEP\_REQ: Triggers PMU's sleep process.

The low-power management system can generate the following ETM events:

- PMU\_EVT\_SLEEP\_WAKEUP: Indicates that PMU is woken up to the HP\_ACTIVE state.

## 13.7 Interrupts

ESP32-P4's low-power management system can generate the following interrupt signals:

- PMU\_INTR
- PMU\_LP\_INT

Among these interrupt signals, PMU\_INTR is sent to the [Interrupt Matrix](#), while PMU\_LP\_INT is sent to the LP CPU.

The interrupt signals are generated by the internal interrupt sources of each module, specifically:

PMU\_INTR:

- PMU\_SOC\_WAKEUP\_INT: Triggered when the chip is woken up to the HP\_ACTIVE state.
- PMU\_SOC\_SLEEP\_REJECT\_INT: Triggered when a sleep-rejection source rejects a sleep request.
- PMU\_SW\_INT: Triggered when LP CPU is used as a wake-up source and wakes up the chip to HP\_ACTIVE state.
- PMU\_SDIO\_IDLE\_INT: Triggered when SDIO is in idle state.
- PMU\_LP\_CPU\_EXC\_INT: Triggered when there are LP CPU exceptions.
- PMU\_OP2A\_CNT\_TARGET1\_REACH\_1\_INT: Triggered when VO4 regulator's waiting counter target 1 reaches timeout.
- PMU\_OP2A\_CNT\_TARGET0\_REACH\_1\_INT: Triggered when VO4 regulator's waiting counter target 0 reaches timeout.
- PMU\_OP2A\_CNT\_TARGET1\_REACH\_0\_INT: Triggered when VO3 regulator's waiting counter target 1 reaches timeout.
- PMU\_OP2A\_CNT\_TARGET0\_REACH\_0\_INT: Triggered when VO3 regulator's waiting counter target 0 reaches timeout.
- PMU\_OP1A\_CNT\_TARGET1\_REACH\_1\_INT: Triggered when VO2 regulator's waiting counter target 1 reaches timeout.
- PMU\_OP1A\_CNT\_TARGET0\_REACH\_1\_INT: Triggered when VO2 regulator's waiting counter target 0 reaches timeout.
- PMU\_OP1A\_CNT\_TARGET1\_REACH\_0\_INT: Triggered when VO1 regulator's waiting counter target 1 reaches timeout.
- PMU\_OP1A\_CNT\_TARGET0\_REACH\_0\_INT: Triggered when VO1 regulator's waiting counter target 0 reaches timeout.

PMU\_LP\_INT:

- PMU\_LP\_CPU\_SLEEP\_REJECT\_INT: Triggered when the LP sleep request is rejected.
- PMU\_HP\_SW\_TRIGGER\_INT: Triggered when HP CPU wakes up LP CPU.
- PMU\_ACTIVE\_SWITCH\_SLEEP\_START\_INT: Triggered when the PMU state starts to switch from HP\_ACTIVE to HP\_SLEEP.
- PMU\_SLEEP\_SWITCH\_ACTIVE\_START\_INT: Triggered when the PMU state starts to switch from HP\_SLEEP to HP\_ACTIVE.
- PMU\_ACTIVE\_SWITCH\_SLEEP\_END\_INT: Triggered when the PMU state finishes switching from HP\_ACTIVE to HP\_SLEEP.
- PMU\_SLEEP\_SWITCH\_ACTIVE\_END\_INT: Triggered when the PMU state finishes switching from HP\_SLEEP to HP\_ACTIVE.

- PMU\_LP\_CPU\_WAKEUP\_INT: Triggered when LP CPU is woken up.
- PMU\_OP2A\_CNT\_TARGET1\_REACH\_1\_LP\_INT: Triggered when VO4 regulator's waiting counter target 1 reaches timeout.
- PMU\_OP2A\_CNT\_TARGET0\_REACH\_1\_LP\_INT: Triggered when VO4 regulator's waiting counter target 0 reaches timeout.
- PMU\_OP2A\_CNT\_TARGET1\_REACH\_0\_LP\_INT: Triggered when VO3 regulator's waiting counter target 1 reaches timeout.
- PMU\_OP2A\_CNT\_TARGET0\_REACH\_0\_LP\_INT: Triggered when VO3 regulator's waiting counter target 0 reaches timeout.
- PMU\_OP1A\_CNT\_TARGET1\_REACH\_1\_LP\_INT: Triggered when VO2 regulator's waiting counter target 1 reaches timeout.
- PMU\_OP1A\_CNT\_TARGET0\_REACH\_1\_LP\_INT: Triggered when VO2 regulator's waiting counter target 0 reaches timeout.
- PMU\_OP1A\_CNT\_TARGET1\_REACH\_0\_LP\_INT: Triggered when VO1 regulator's waiting counter target 1 reaches timeout.
- PMU\_OP1A\_CNT\_TARGET0\_REACH\_0\_LP\_INT: Triggered when VO1 regulator's waiting counter target 0 reaches timeout.

Each interrupt source can be configured by a common set of registers that are described in Section [Interrupt Configuration Registers](#). The specific registers can be found in Section [13.8 Register Summary](#).

## 13.8 Register Summary

The addresses in this section are relative to the PMU base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name  | Description   | Address | Access |
|---|---|---------|--------|
| <b>Configuration Registers</b>                  |   |         |        |
| <a href="#">PMU_HP_ACTIVE_DIG_POWER_REG</a>     | Digital power domain control register in HP_ACTIVE state                  | 0x0000  | R/W    |
| <a href="#">PMU_HP_ACTIVE_ICG_HP_FUNC_REG</a>   | HP system peripheral's function clock control register in HP_ACTIVE state | 0x0004  | R/W    |
| <a href="#">PMU_HP_ACTIVE_HP_SYS_CNTL_REG</a>   | System control register in HP_ACTIVE state                                | 0x0010  | R/W    |
| <a href="#">PMU_HP_ACTIVE_HP_CK_POWER_REG</a>   | Clock source power control register in HP_ACTIVE state                    | 0x0014  | R/W    |
| <a href="#">PMU_HP_ACTIVE_BIAS_REG</a>          | BIAS control register in HP_ACTIVE state                                  | 0x0018  | R/W    |
| <a href="#">PMU_HP_ACTIVE_BACKUP_REG</a>        | Backup module control register in HP_ACTIVE state                         | 0x001C  | R/W    |
| <a href="#">PMU_HP_ACTIVE_BACKUP_CLK_REG</a>    | Backup module's function clock control register in HP_ACTIVE state        | 0x0020  | R/W    |
| <a href="#">PMU_HP_ACTIVE_SYSCLK_REG</a>        | System clock control register in HP_ACTIVE state                          | 0x0024  | R/W    |
| <a href="#">PMU_HP_ACTIVE_HP_REGULATORO_REG</a> | Regulator power control register in HP_ACTIVE state                       | 0x0028  | varies |

## 13.9 Registers

The addresses in this section are relative to the PMU base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section *Programming Reserved Register Field*.

### Register 13.1. PMU HP ACTIVE DIG POWER REG (0x0000)

[illegible]

|  |  |
|--|--|
| <b>PMU_HP_ACTIVE_DCDC_SWITCH_PD_EN</b> | Configures whether to cut off the power from external DCDC in HP_ACTIVE state.<br>0: Do not cut off<br>1: Cut off<br>(R/W) |
|--|--|

**PMU\_HP\_ACTIVE\_HP\_MEM\_DSLP** Configures whether to put L2MEM\_G0-G5 into Deep-sleep mode in HP\_ACTIVE state.

0: Do not put L2MEM\_G0-G5 into Deep-sleep

1: Put L2MEM\_G0-G5 into Deep-sleep

(R/W)

**PMU\_HP\_ACTIVE\_PD\_HP\_MEM\_PD\_EN** Configures whether to power down L2MEM\_GO-G5 in HP\_ACTIVE state.

0: Power up

1: Power down

(R/W)

**PMU\_HP\_ACTIVE\_PD\_CNNT\_PD\_EN** Configures whether to power down HP\_CNNT in HP\_ACTIVE state.

0: Power up

1: Power down

(R/W)

|                                   |   |
|-----------------------------------|---|
| <b>PMU_HP_ACTIVE_PD_TOP_PD_EN</b> | Configures whether to power down PD_TOP power domain in HP_ACTIVE state.<br>0: Power up<br>1: Power down<br>(R/W) |
|-----------------------------------|---|

Register 13.2. PMU\_HP\_ACTIVE\_ICG\_HP\_FUNC\_REG (0x0004)

**PMU\_HP\_ACTIVE\_DIG\_ICG\_FUNC\_EN** Configures whether to enable HP system peripheral's function clock in HP\_ACTIVE state. For detailed configuration please see Table 13.4-2.

0: Disable

1: Enable

(R/W)

### Register 13.3. PMU\_HP\_ACTIVE\_HP\_SYS\_CNTL\_REG (0x0010)

Diagram illustrating the PMU\_CTL register structure. The register is 32 bits wide, with bits 31 down to 23 labeled as (reserved). Bits 22 down to 0 are labeled with various PMU control signals: PMU\_HP\_ACTIVE\_DIG\_CPU\_STALL, PMU\_HP\_ACTIVE\_DIG\_PAUSE\_WDT, PMU\_HP\_ACTIVE\_DIG\_PAD\_SLP\_SEL, PMU\_HP\_ACTIVE\_LP\_PAD\_HOLD\_ALL, and PMU\_HP\_ACTIVE\_UART\_WAKEUP\_EN. A 'Reset' label is at the bottom right.

**PMU\_HP\_ACTIVE\_UART\_WAKEUP\_EN** Configures whether to enable UART wake up function in HP\_ACTIVE state.

0: Disable wake-up function

## 1: Enable wake-up function

(R/W)

**PMU\_HP\_ACTIVE\_LP\_PAD\_HOLD\_ALL** Configures whether to hold LP GPIO's configuration in HP\_ACTIVE state.

0: Do not hold

1: Hold

(R/W)

**PMU\_HP\_ACTIVE\_HP\_PAD\_HOLD\_ALL** Configures whether to hold GPIO's configuration in HP\_ACTIVE state.

0: Do not hold

1: Hold

(R/W)

**PMU\_HP\_ACTIVE\_DIG\_PAD\_SLP\_SEL** Configures whether to use Light-sleep mode configuration for GPIO in HP\_ACTIVE state.

0: Use normal configuration

1: Use Light-sleep mode configuration. For details please refer to Chapter 8 *GPIO Matrix and IO MUX* > Section 8.8 *Pin Functions in Light-sleep*.

(R/W)

**PMU\_HP\_ACTIVE\_DIG\_PAUSE\_WDT** Configures whether to pause watchdog in HP\_ACTIVE state.

0: Do not pause

1: Pause

(R/W)

**PMU\_HP\_ACTIVE\_DIG\_CPU\_STALL** Configures whether to stall the CPU in HP\_ACTIVE state.

0: Do not stall

1: Stall

(R/W)

#### Register 13.4. PMU\_HP\_ACTIVE\_HP\_CK\_POWER\_REG (0x0014)

[illegible]

**PMU\_HP\_ACTIVE\_I2C\_ISO\_EN** Configure whether to power up ANALOG\_I2C in HP\_ACTIVE state.

0: Power down

1: Power up

(R/W)

**PMU\_HP\_ACTIVE\_I2C\_RETENTION** Configures whether to enable ANALOG\_I2C retention status in HP ACTIVE state.

0: Disable

1: Enable

(R/W)

**PMU\_HP\_ACTIVE\_XPD\_PLL\_I2C** Configures whether to enable PLL I2C controllers in HP\_ACTIVE state. Each bit controls a PLL I2C register group.

0: Disable

1: Enable

(R/W)

**PMU\_HP\_ACTIVE\_XPD\_PLL** Configures whether to enable the analog power domains in HP system in HP\_ACTIVE state. Bit 0 controls CPLL\_CLK, bit 1 controls SPPL\_CLK, bit 2 controls Audio PLL, bit 3 controls SDIO PLL.

0: Disable

1: Enable

(R/W)

Register 13.5. PMU\_HP\_ACTIVE\_BIAS\_REG (0x0018)

**PMU\_HP\_ACTIVE\_DCM\_VSET** Regulates the DCDC voltage in HP\_ACTIVE state. (R/W)

**PMU\_HP\_ACTIVE\_DCM\_MODE** Configures whether to enable DCDC status in HP\_ACTIVE state.

- 0: Disable
- 1: Enable
- 2, 3: Reserved

(R/W)

### Register 13.6. PMU\_HP\_ACTIVE\_BACKUP\_REG (0x001C)

[illegible]

**PMU\_HP\_SLEEP2ACTIVE\_BACKUP\_CLK\_SEL** Configures the backup module's function clock source when PMU state switches from HP\_SLEEP to HP\_ACTIVE.

0: Select XTAL

1: Select PLL CLK

2: Select RC FAST CLK

3: Invalid value

(R/W)

**PMU\_HP\_SLEEP2ACTIVE\_BACKUP\_MODE** Configures the backup direction and link list when PMU state switches switch from HP\_SLEEP to HP\_ACTIVE.

Highest bit:

0: From peripheral to memory

1: From memory to peripheral

Lower two bits:

0: PAU\_LINK\_ADDR\_0

1: PAU\_LINK\_ADDR\_1

2: PAU\_LINK\_ADDR\_2

3: PAU\_LINK\_ADDR\_3

(R/W)

**PMU\_HP\_SLEEP2ACTIVE\_BACKUP\_EN** Configures whether to enable the backup flow when PMU state switches from HP\_SLEEP to HP\_ACTIVE.

0: Disable backup

### 1: Enable backup

(R/W)

Register 13.7. PMU\_HP\_ACTIVE\_BACKUP\_CLK\_REG (0x0020)

**PMU\_HP\_ACTIVE\_BACKUP\_ICG\_FUNC\_EN** Configures whether to enable each peripheral's function clock when the target state is HP\_ACTIVE. For details, please refer to Table 13.4-2.

0: Disable

1: Enable

(R/W)

### Register 13.8. PMU\_HP\_ACTIVE\_SYSCLK\_REG (0x0024)

[illegible]

**PMU\_HP\_ACTIVE\_ICG\_SYS\_CLOCK\_EN** Configures whether to enable ROOT\_CLK in HP\_ACTIVE state.

0: Disable

1: Enable

(R/W)

**PMU\_HP\_ACTIVE\_SYS\_CLK\_SLP\_SEL** Configures whether to allow PMU to control clock source in HP ACTIVE state.

0: Controlled by PCR registers

1: Controlled by PMU

(R/W)

**PMU\_HP\_ACTIVE\_ICG\_SLP\_SEL** Configures whether to allow PMU to control the clock gating in HP ACTIVE state.

0: Controlled by PCR registers

1: Controlled by PMU

(R/W)

**PMU\_HP\_ACTIVE\_DIG\_SYS\_CLK\_SEL** Configures the source of ROOT\_CLK in HP\_ACTIVE state.

O: XTAL

1: PLL CLK

2: RC\_FAST\_CLK

3: Invalid value

(R/W)

### Register 13.9. PMU\_HP\_ACTIVE\_HP\_REGULATOR0\_REG (0x0028)

|                                  |    |    |    |            |    |    |    |                                 |    |    |    |            |   |   |   |                                |   |    |   |            |   |   |   |                    |   |   |   |                              |   |   |   |            |    |   |   |                  |   |       |  |            |  |  |  |                  |  |  |  |            |  |  |  |
|----------------------------------|----|----|----|------------|----|----|----|---------------------------------|----|----|----|------------|---|---|---|--------------------------------|---|----|---|------------|---|---|---|--------------------|---|---|---|------------------------------|---|---|---|------------|----|---|---|------------------|---|-------|--|------------|--|--|--|------------------|--|--|--|------------|--|--|--|
| PMU_HP_ACTIVE_HP_REGULATOR_DBIAS |    |    |    | (reserved) |    |    |    | PMU_HP_ACTIVE_REGULATOR_VO1_XPD |    |    |    | (reserved) |   |   |   | PMU_HP_ACTIVE_HP_REGULATOR_XPD |   |    |   | (reserved) |   |   |   | PMU_DIG_DBIAS_INIT |   |   |   | PMU_DIG_REGULATORO_DBIAS_SEL |   |   |   | (reserved) |    |   |   | PMU_HP_DBIAS_VOL |   |       |  | (reserved) |  |  |  | PMU_LP_DBIAS_VOL |  |  |  | (reserved) |  |  |  |
| 31                               | 27 | 26 | 23 | 22         | 21 | 19 | 18 | 17                              | 16 | 15 | 14 | 13         | 9 | 8 | 4 | 3                              | 0 | 24 | 0 | 0          | 0 | 0 | 1 | 0                  | 0 | 0 | 1 | 0                            | 0 | 0 | 1 | 24         | 24 | 0 | 0 | 0                | 0 | Reset |  |            |  |  |  |                  |  |  |  |            |  |  |  |

**PMU\_LP\_DBIAS\_VOL** Indicates the current voltage of the LP system regulator. (RO)

**PMU\_HP\_DBIAS\_VOL** Indicates the current voltage of the HP system regulator. (RO)

**PMU\_DIG\_REGULATORO\_DBIAS\_SEL** Configures which of the following regulates the HP system regulator voltage.

0: Regulated by Hardware automatically

## 1: Regulated by Software

(R/W)

**PMU\_DIG\_DBIAS\_INIT** Initializes the PVT voltage configurations. (WT)

**PMU\_HP\_ACTIVE\_HP\_REGULATOR\_XPD** Configures whether to enable the HP sys regulator in HP ACTIVE state.

0: Disable the HP sys regulator

### 1: Enable the HP sys regulator

(R/W)

**PMU\_HP\_ACTIVE\_REGULATOR\_VO1\_XPD** Configures whether to enable VO1 regulator in HP\_ACTIVE state.

0: Disable

1: Enable

(R/W)

**PMU\_HP\_ACTIVE\_HP\_REGULATOR\_DBIAS** Regulates the voltage of the HP sys regulator in HP\_ACTIVE state. The higher the value, the higher the voltage. (R/W)

PMU\_HP\_ACTIVE\_XPD\_XTAL

(reserved)

[illegible]

(R/W)

### Register 13.11. PMU\_HP\_SLEEP\_DIG\_POWER\_REG (0x0068)

[illegible]

**PMU\_HP\_SLEEP\_DCDC\_SWITCH\_PD\_EN** Configures whether to cut off the power from external DCDC in HP SLEEP state.

0: Do not cut off

1: Cut off

(R/W)

**PMU\_HP\_SLEEP\_HP\_MEM\_DSLP** Configures whether to put L2MEM\_G0-G5 into Deep-sleep mode in HP\_SLEEP state.

0: Do not put L2MEM\_G0-G5 into Deep-sleep

1: Put L2MEM\_G0-G5 into Deep-sleep

(R/W)

**PMU\_HP\_SLEEP\_PD\_HP\_MEM\_PD\_EN** Configures whether to power down L2MEM\_G0-G5 in HP SLEEP state.

0: Power up

1: Power down

(R/W)

**PMU\_HP\_SLEEP\_PD\_CNNT\_PD\_EN** Configures whether to power down HP\_CNNT in HP\_SLEEP state.

0: Power up

1: Power down

(R/W)

**PMU\_HP\_SLEEP\_PD\_TOP\_PD\_EN** Configures whether to power down PD\_TOP power domain in HP SLEEP state.

0: Power up

1: Power down

(R/W)

Register 13.12. PMU\_HP\_SLEEP\_ICG\_HP\_FUNC\_REG (0x006C)

**PMU\_HP\_SLEEP\_DIG\_ICG\_FUNC\_EN** Configures whether to enable HP system peripheral's function clock in HP\_SLEEP state. For detailed configuration please see Table 13.4-2.

0: Disable

1: Enable

(R/W)

### Register 13.13. PMU\_HP\_SLEEP\_HP\_SYS\_CNTL\_REG (0x0078)

[illegible]

**PMU\_HP\_SLEEP\_UART\_WAKEUP\_EN** Configures whether to enable UART wake up function in HP SLEEP state.

0: Disable wake-up function

### 1: Enable wake-up function

(R/W)

**PMU\_HP\_SLEEP\_LP\_PAD\_HOLD\_ALL** Configures whether to hold LP GPIO's configuration in HP SLEEP state.

0: Do not hold

1: Hold

(R/W)

**PMU\_HP\_SLEEP\_HP\_PAD\_HOLD\_ALL** Configures whether to hold GPIO's configuration in HP SLEEP state.

0: Do not hold

1: Hold

(R/W)

**PMU\_HP\_SLEEP\_DIG\_PAD\_SLP\_SEL** Configures whether to use Light-sleep mode configuration for GPIO in HP\_SLEEP state.

0: Use normal configuration

1: Use Light-sleep mode configuration. For details please refer to Chapter 8 *GPIO Matrix and IO MUX* > Section 8.8 *Pin Functions in Light-sleep*.

(R/W)

**PMU\_HP\_SLEEP\_DIG\_PAUSE\_WDT** Configures whether to pause watchdog in HP\_SLEEP state.

0: Do not pause

1: Pause

(R/W)

**PMU\_HP\_SLEEP\_DIG\_CPU\_STALL** Configures whether to stall the CPU in HP\_SLEEP state.

0: Do not stall

1: Stall

(R/W)

### Register 13.14. PMU\_HP\_SLEEP\_HP\_CK\_POWER\_REG (0x007C)

[illegible]

**PMU\_HP\_SLEEP\_I2C\_ISO\_EN** Configure whether to power up ANALOG\_I2C in HP\_SLEEP state.

0: Power down

1: Power up

(R/W)

**PMU\_HP\_SLEEP\_I2C\_RETENTION** Configures whether to enable ANALOG\_I2C retention status in HP SLEEP state.

0: Disable

1: Enable

(R/W)

**PMU\_HP\_SLEEP\_XPD\_PLL\_I2C** Configures whether to enable PLL I2C controllers in HP\_SLEEP state. Each bit controls a PLL I2C register group.

0: Disable

1: Enable

(R/W)

**PMU\_HP\_SLEEP\_XPD\_PLL** Configures whether to enable the analog power domains in HP system in HP\_SLEEP state. Bit 0 controls CPLL\_CLK, bit 1 controls SPPLL\_CLK, bit 2 controls Audio PLL, bit 3 controls SDIO PLL.

0: Disable

1: Enable

(R/W)

Register 13.15. PMU\_HP\_SLEEP\_BIAS\_REG (0x0080)

PMU\_HP\_SLEEP\_DCM\_VSET   Regulates the DCDC voltage in HP\_SLEEP state. (R/W)

PMU\_HP\_SLEEP\_DCM\_MODE   Configures whether to enable DCDC status in HP\_SLEEP state.

0: Disable  
1: Enable  
2, 3: Reserved  
(R/W)

**Register 13.16. PMU\_HP\_SLEEP\_BACKUP\_REG (0x0084)**

|   |    |    |    |   |    |    |    |  |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |       |
|---|----|----|----|---|----|----|----|--|----|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|-------|
| PMU_HP_ACTIVE2SLEEP_BACKUP_EN<br>(reserved) |    |    |    | PMU_HP_ACTIVE2SLEEP_BACKUP_MODE<br>(reserved) |    |    |    | PMU_HP_ACTIVE2SLEEP_BACKUP_CLK_SEL<br>(reserved) |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |       |

**PMU\_HP\_ACTIVE2SLEEP\_BACKUP\_CLK\_SEL** Configures the backup module function clock source when PMU state switches from HP\_ACTIVE to HP\_SLEEP.

0: Select XTAL

1: Select PLL\_CLK

2: Select RC\_FAST\_CLK

3: Invalid value

(R/W)

**PMU\_HP\_ACTIVE2SLEEP\_BACKUP\_MODE** Configures the backup direction and link list when PMU state switches from HP\_ACTIVE to HP\_SLEEP.

Highest bit:

0: From memory to peripheral

1: From peripheral to memory

Lower two bits:

0: PAU\_LINK\_ADDR\_0

1: PAU\_LINK\_ADDR\_1

2: PAU\_LINK\_ADDR\_2

3: PAU\_LINK\_ADDR\_3

(R/W)

**PMU\_HP\_ACTIVE2SLEEP\_BACKUP\_EN** Configures whether to enable the backup flow when PMU state switches from HP\_ACTIVE to HP\_SLEEP.

0: Disable backup

1: Enable backup

(R/W)

Register 13.17. PMU\_HP\_SLEEP\_BACKUP\_CLK\_REG (0x0088)

**PMU\_HP\_SLEEP\_BACKUP\_ICG\_FUNC\_EN** Configures whether to enable each peripheral's function clock when the target state is HP\_SLEEP. For details, please refer to Table 13.4-2.

0: Disable

1: Enable

(R/W)

### Register 13.18. PMU\_HP\_SLEEP\_SYSCLK\_REG (0x008C)

Diagram illustrating the PMU\_HP\_SLEEP\_ICG\_SYS\_CLK\_SEL register structure. The register is 32 bits wide. Bits 31, 30, 29, and 28 are labeled PMU\_HP\_SLEEP\_ICG\_SYS\_CLK\_SEL. Bit 27 is labeled PMU\_HP\_SLEEP\_ICG\_SYS\_CLK\_SEL. Bit 26 is labeled PMU\_HP\_SLEEP\_ICG\_SYS\_CLK\_SEL. Bits 25 through 0 are labeled (reserved).

**PMU\_HP\_SLEEP\_ICG\_SYS\_CLOCK\_EN** Configures whether to enable ROOT\_CLK in HP\_SLEEP state.

0: Disable

1: Enable

(R/W)

**PMU\_HP\_SLEEP\_SYS\_CLK\_SLP\_SEL** Configures whether to allow PMU to control the clock source in HP\_SLEEP state.

0: Controlled by PCR registers

1: Controlled by PMU

(R/W)

**PMU\_HP\_SLEEP\_ICG\_SLP\_SEL** Configures whether to allow PMU to control the clock gating in HP SLEEP state.

0: Controlled by PCR registers

1: Controlled by PMU

(R/W)

**PMU\_HP\_SLEEP\_DIG\_SYS\_CLK\_SEL** Configures the source of ROOT\_CLK in HP\_SLEEP state.

O: XTAL

1: PLL\_CLK

2: RC\_FAST\_CLK

3: Invalid value

(R/W)

Register 13.19. PMU\_HP\_SLEEP\_HP\_REGULATORO\_REG (0x0090)

**PMU\_UPDATE\_DIG\_ICG\_SWITCH** Immediately updates function clock gating status. (WT)

**PMU\_TIE\_LOW\_ICG\_SLP\_SEL** Configures whether to disable PMU control of function clock.

0: No effect

1: Disable

(WT)

**PMU\_TIE\_HIGH\_ICG\_SLP\_SEL** Configures whether to enable PMU control of function clock.

0: No effect

1: Enable

(WT)

**PMU\_UPDATE\_DIG\_SYS\_CLK\_SEL** Immediately updates system clock.

0: No effect

1: Updates the configurations of SYS\_CLK\_SEL in the current PMU state to the application side.

(WT)

**PMU\_PAD\_SLP\_SEL** Indicates whether the current GPIO function uses sleep configurations.

0: No

1: Yes

(RO)

**PMU\_LP\_PAD\_HOLD\_ALL** Indicates whether the LP PAD is in the HOLD status.

0: No

1: Yes

(RO)

**PMU\_HP\_PAD\_HOLD\_ALL** Represents whether the HP PAD is in the HOLD status.

0: No

1: Yes

(RO)

**PMU\_TIE\_HIGH\_PAD\_SLP\_SEL** Immediately configures GPIO function to use sleep configurations.

(WT)

**PMU\_TIE\_LOW\_PAD\_SLP\_SEL** Immediately releases GPIO function from using sleep configuration.

(WT)

**PMU\_TIE\_HIGH\_LP\_PAD\_HOLD\_ALL** Immediately configure LP PAD to enter HOLD state. (WT)

**PMU\_TIE\_LOW\_LP\_PAD\_HOLD\_ALL** Immediately releases LP PAD from HOLD state. (WT)

**PMU\_TIE\_HIGH\_HP\_PAD\_HOLD\_ALL** Immediately configures HP PAD to enter HOLD state. (WT)

**PMU\_TIE\_LOW\_HP\_PAD\_HOLD\_ALL** Immediately releases HP PAD from HOLD state. (WT)

**Register 13.33. PMU\_POWER\_CK\_WAIT\_CNTL\_REG (0x011C)**

**PMU\_WAIT\_XTL\_STABLE** Configures the wait time for enabling XTAL global clock gating after the XTAL power supply is enabled. The unit is LP\_DYN\_FAST\_CLK. (R/W)

**PMU\_WAIT\_PLL\_STABLE** Configures the wait time for enabling PLL global clock gating after the PLL power supply is enabled. The unit is LP\_DYN\_FAST\_CLK. (R/W)

**Register 13.34. PMU\_SLP\_WAKEUP\_CNTL0\_REG (0x0120)**

**PMU\_SLEEP\_REQ** Configures whether to switch the PMU state to HP\_SLEEP or LP\_SLEEP.  
 0: Do not switch  
 1: Switch to HP\_SLEEP or LP\_SLEEP, depending on the state of the LP CPU.  
 (WT)

**Register 13.35. PMU\_SLP\_WAKEUP\_CNTL1\_REG (0x0124)**

**PMU\_SLEEP\_REJECT\_ENA** Configures the sleep rejection source. For the mapping between values and sources please refer to Table 13.4-1. (R/W)

**PMU\_SLP\_REJECT\_EN** Configures whether to enable sleep rejection function.  
 0: Disable  
 1: Enable  
 (R/W)

### Register 13.36. PMU\_SLP\_WAKEUP\_CNTL2\_REG (0x0128)

**PMU\_WAKEUP\_ENA** Configures wake-up source. For the mapping between values and sources please refer to Table 13.4-1. (R/W)

### Register 13.37. PMU\_SLP\_WAKEUP\_CNTL3\_REG (0x012C)

**PMU\_LP\_MIN\_SLP\_VAL** Configures the minimum sleep time to enter LP\_SLEEP. The unit is LP\_DYN\_SLOW\_CLK. (R/W)

**PMU\_HP\_MIN\_SLP\_VAL** Configures the minimum sleep time to enter HP\_SLEEP. The unit is LP\_DYN\_SLOW\_CLK. (R/W)

**PMU\_SLEEP\_PRT\_SEL** Configures the minimum sleep time mode.  
0, 1, 3: Reserved  
2: Protects both LP\_SLEEP and HP\_SLEEP simultaneously  
(R/W)

### Register 13.38. PMU\_SLP\_WAKEUP\_CNTL4\_REG (0x0130)

**PMU\_SLP\_REJECT\_CAUSE\_CLR** Write 1 to clear **PMU\_REJECT\_CAUSE**. (WT)

### Register 13.39. PMU\_SLP\_WAKEUP\_STATUS0\_REG (0x0144)

Diagram illustrating the structure of the PMU\_WakeupCause register:

- Bit 31: (reserved)
- Bit 0: Reset

**PMU\_WAKEUP\_CAUSE** Indicates the wake-up source. For the mapping between values and sources please refer to Table 13.4-1. (RO)

### Register 13.40. PMU\_SLP\_WAKEUP\_STATUS1\_REG (0x0148)

|    |    |       |
|----|----|-------|
| 31 | 30 | 0     |
| 0  | 0  | Reset |

**PMU\_REJECT\_CAUSE** Indicates the wake-up rejection source. For the mapping between values and sources please refer to Table 13.4-1. (RO)

### Register 13.41. PMU\_HP\_CK\_CNTL\_REG (0x0154)

|                                 |    |    |                          |   |                          |
|---------------------------------|----|----|--------------------------|---|--------------------------|
| 31                              | 16 | 15 | 8                        | 7 | 0                        |
| (reserved)                      |    |    | PMU_SWITCH_ICG_ONTL_WAIT |   | PMU_MODIFY_ICG_ONTL_WAIT |
| 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 |    |    | 10                       |   | 10                       |
| Reset                           |    |    |                          |   |                          |

**PMU\_MODIFY\_ICG\_CNTL\_WAIT** Configures the wait time for modifying the functional module clock gating. The unit is LP\_DYN\_FAST\_CLK. (R/W)

**PMU\_SWITCH\_ICG\_CNTL\_WAIT** Configures the wait time for switching the functional module clock gating. The unit is LP\_DYN\_FAST\_CLK. (R/W)

### Register 13.42. PMU\_RF\_PWC\_REG (0x015C)

[illegible]

**PMU\_MSPI\_PHY\_XPD** Configures whether to enable MSPI PHY.

0: Disable

1: Enable

(R/W)

**PMU\_SDIO\_PLL\_XPD** Configures whether to enable SDIO PLL.

0: Disable

1: Enable

(R/W)

**PMU\_PERIF\_I2C\_RSTB** Configures whether to enable reset for PERI I2C.

0: Reset

1: Release

(R/W)

**PMU\_XPD\_PERIF\_I2C** Configures whether to enable the power for PERI ADC.

0: Disable

1: Enable

(R/W)

### Register 13.44. PMU\_HP\_INT\_ST\_REG (0x0168)

[illegible]

**PMU\_OP1A\_CNT\_TARGET0\_REACH\_O\_HP\_INT\_ST** The masked interrupt status of [PMU\\_OP1A\\_CNT\\_TARGET0\\_REACH\\_O\\_INT](#). (RO)

**PMU\_OP1A\_CNT\_TARGET1\_REACH\_O\_HP\_INT\_ST** The masked interrupt status of [PMU\\_OP1A\\_CNT\\_TARGET1\\_REACH\\_O\\_INT](#). (RO)

**PMU\_OP1A\_CNT\_TARGET0\_REACH\_1\_HP\_INT\_ST** The masked interrupt status of [PMU\\_OP1A\\_CNT\\_TARGET0\\_REACH\\_1\\_INT](#). (RO)

**PMU\_OP1A\_CNT\_TARGET1\_REACH\_1\_HP\_INT\_ST** The masked interrupt status of [PMU\\_OP1A\\_CNT\\_TARGET1\\_REACH\\_1\\_INT](#). (RO)

**PMU\_OP2A\_CNT\_TARGET0\_REACH\_O\_HP\_INT\_ST** The masked interrupt status of [PMU\\_OP2A\\_CNT\\_TARGET0\\_REACH\\_O\\_INT](#). (RO)

**PMU\_OP2A\_CNT\_TARGET1\_REACH\_O\_HP\_INT\_ST** The masked interrupt status of [PMU\\_OP2A\\_CNT\\_TARGET1\\_REACH\\_O\\_INT](#). (RO)

**PMU\_OP2A\_CNT\_TARGET0\_REACH\_1\_HP\_INT\_ST** The masked interrupt status of [PMU\\_OP2A\\_CNT\\_TARGET0\\_REACH\\_1\\_INT](#). (RO)

**PMU\_OP2A\_CNT\_TARGET1\_REACH\_1\_HP\_INT\_ST** The masked interrupt status of [PMU\\_OP2A\\_CNT\\_TARGET1\\_REACH\\_1\\_INT](#). (RO)

**PMU\_LP\_CPU\_EXC\_INT\_ST** The masked interrupt status of **PMU\_LP\_CPU\_EXC\_INT**. (RO)

**PMU\_SDIO\_IDLE\_INT\_ST** The masked interrupt status of **PMU\_SDIO\_IDLE\_INT**. (RO)

**PMU\_SW\_INT\_ST** The masked interrupt status of [PMU\\_SW\\_INT](#). (RO)

**PMU\_SOC\_SLEEP\_REJECT\_INT\_ST** The masked interrupt status of [PMU\\_SOC\\_SLEEP\\_REJECT\\_INT](#).  
(RO)

**PMU\_SOC\_WAKEUP\_INT\_ST** The masked interrupt status of [PMU\\_SOC\\_WAKEUP\\_INT](#). (RO)

**PMU\_OP2A\_CNT\_TARGETO\_REACH\_O\_LP\_INT\_RAW** The raw interrupt status of [PMU\\_OP2A\\_CNT\\_TARGETO\\_REACH\\_O\\_LP\\_INT](#). (R/WTC/SS)

**PMU\_OP2A\_CNT\_TARGET1\_REACH\_O\_LP\_INT\_RAW** The raw interrupt status of [PMU\\_OP2A\\_CNT\\_TARGET1\\_REACH\\_O\\_LP\\_INT](#). (R/WTC/SS)

**PMU\_OP2A\_CNT\_TARGETO\_REACH\_1\_LP\_INT\_RAW** The raw interrupt status of [PMU\\_OP2A\\_CNT\\_TARGETO\\_REACH\\_1\\_LP\\_INT](#). (R/WTC/SS)

PMU\_OP2A\_CNT\_TARGET1\_REACH\_1\_LP\_INT\_RAW The raw interrupt status of PMU\_OP2A\_CNT\_TARGET1\_REACH\_1\_LP\_INT. (R/WTC/SS)

**PMU\_LP\_CPU\_WAKEUP\_INT\_RAW** The raw interrupt status of **PMU\_LP\_CPU\_WAKEUP\_INT**.  
(R/WTC/SS)

**PMU\_SLEEP\_SWITCH\_ACTIVE\_END\_INT\_RAW** The raw interrupt status of [PMU\\_SLEEP\\_SWITCH\\_ACTIVE\\_END\\_INT](#). (R/WTC/SS)

**PMU\_ACTIVE\_SWITCH\_SLEEP\_END\_INT\_RAW** The raw interrupt status of  
PMU\_ACTIVE\_SWITCH\_SLEEP\_END\_INT. (R/WTC/SS)

**PMU\_SLEEP\_SWITCH\_ACTIVE\_START\_INT\_RAW** The raw interrupt status of  
PMU\_SLEEP\_SWITCH\_ACTIVE\_START\_INT. (R/WTC/SS)

Continued on the next page...

## Register 13.47. PMU\_LP\_INT\_RAW\_REG (0x0174)

Continued from the previous page...

**PMU\_ACTIVE\_SWITCH\_SLEEP\_START\_INT\_RAW** The raw interrupt status of [PMU\\_ACTIVE\\_SWITCH\\_SLEEP\\_START\\_INT](#). (R/WTC/SS)

**PMU\_HP\_SW\_TRIGGER\_INT\_RAW** The raw interrupt status of [PMU\\_HP\\_SW\\_TRIGGER\\_INT](#). (R/WTC/SS)

## Register 13.48. PMU\_LP\_INT\_ST\_REG (0x0178)

Continued from the previous page...

**PMU\_ACTIVE\_SWITCH\_SLEEP\_START\_INT\_ST** The masked interrupt status of [PMU\\_ACTIVE\\_SWITCH\\_SLEEP\\_START\\_INT](#). (RO)

**PMU\_HP\_SW\_TRIGGER\_INT\_ST** The masked interrupt status of [PMU\\_HP\\_SW\\_TRIGGER\\_INT](#). (RO)

## Register 13.49. PMU\_LP\_INT\_ENA\_REG (0x017C)

Continued from the previous page...

PMU\_ACTIVE\_SWITCH\_SLEEP\_START\_INT\_ENA Write 1 to enable  
[PMU\\_ACTIVE\\_SWITCH\\_SLEEP\\_START\\_INT](#). (R/W)

PMU\_HP\_SW\_TRIGGER\_INT\_ENA Write 1 to enable [PMU\\_HP\\_SW\\_TRIGGER\\_INT](#). (R/W)

**Register 13.50. PMU\_LP\_INT\_CLR\_REG (0x0180)**

Continued from the previous page...

**PMU\_ACTIVE\_SWITCH\_SLEEP\_START\_INT\_CLR** Write 1 to clear [PMU\\_ACTIVE\\_SWITCH\\_SLEEP\\_START\\_INT](#).  
(WT)

**PMU\_HP\_SW\_TRIGGER\_INT\_CLR** Write 1 to clear [PMU\\_HP\\_SW\\_TRIGGER\\_INT](#). (WT)

**Register 13.51. PMU\_LP\_CPU\_PWRO\_REG (0x0184)**

|                               |    |    |      |                              |  |  |  |  |  |  |   |                        |   |   |   |   |   |   |   |                      |   |   |       |

**PMU\_LP\_CPU\_WAITI\_RDY** Indicates whether the LP CPU is in the waiti state.

0: Does not enter the state

1: Enters the state

(RO)

**PMU\_LP\_CPU\_STALL\_RDY** Indicates whether the LP CPU is in the stall state.

0: Does not enter the state

1: Enters the state

(RO)

**PMU\_LP\_CPU\_FORCE\_STALL** Configures the LP CPU to enter the stall state.

0: Does not enter the state

1: Enters the state

(R/W)

**PMU\_LP\_CPU\_SLP\_WAITI\_FLAG\_EN** Configures whether the LP CPU needs to enter the waiti state when entering sleep mode.

0: Does not enter the state

1: Enters the state

(R/W)

**PMU\_LP\_CPU\_SLP\_STALL\_FLAG\_EN** Configures whether the LP CPU needs to enter the stall state when entering sleep mode.

0: Does not enter the state

1: Enters the state

(R/W)

**PMU\_LP\_CPU\_SLP\_STALL\_WAIT** Configures the time to wait for the stall to take effect after enabling stall state when the LP CPU enters sleep mode. The unit is LP\_DYN\_FAST\_CLK. (R/W)

**PMU\_LP\_CPU\_SLP\_STALL\_EN** Configures whether to pause the LP CPU in sleep mode.

0: Do not pause

1: Pause

(R/W)

Continued on the next page...

Register 13.51. PMU\_LP\_CPU\_PWRO\_REG (0x0184)

Continued from the previous page...

**PMU\_LP\_CPU\_SLP\_RESET\_EN** Configures whether to reset the LP CPU in sleep mode.

- 0: Do not reset
  - 1: Reset
- (R/W)

**PMU\_LP\_CPU\_SLP\_BYPASS\_INTR\_EN** Configures whether to enable interrupt signals for the LP CPU in sleep mode.

- 0: Disable interrupt signals
  - 1: Enable interrupt signals
- (R/W)

Register 13.52. PMU\_LP\_CPU\_PWR1\_REG (0x0188)

**PMU\_LP\_CPU\_SLEEP\_REQ** Configures whether the LP CPU enters sleep.

- 0: Does not enter sleep
  - 1: Enters sleep
- (WT)

Register 13.53. PMU\_LP\_CPU\_PWR2\_REG (0x018C)

**PMU\_LP\_CPU\_WAKEUP\_EN** Configures the wake-up source for LP CPU. For details please refer to Table 13.4-1 *Wake-up Sources*. (R/W)

Register 13.54. PMU\_LP\_CPU\_PWR3\_REG (0x0190)

**PMU\_LP\_CPU\_WAKEUP\_CAUSE** Indicates the wake-up cause of LP CPU. (RO)

Register 13.55. PMU\_LP\_CPU\_PWR4\_REG (0x0194)

**PMU\_LP\_CPU\_REJECT\_EN** Configures whether to enable sleep rejection function for the LP CPU.

0: Disable

1: Enable

(R/W)

Register 13.56. PMU\_LP\_CPU\_PWR5\_REG (0x0198)

**PMU\_LP\_CPU\_REJECT\_CAUSE** Indicates the sleep rejection cause of LP CPU. (RO)

### Register 13.57. PMU\_HP\_LP\_CPU\_COMM\_REG (0x019C)

Diagram illustrating the structure of the PMU\_HP\_TRIGGER\_LP register. The register is 32 bits wide, with bits 31 and 30 labeled PMU\_HP\_TRIGGER\_LP and PMU\_LP\_TRIGGER\_HP respectively. Bit 29 is labeled (reserved). The remaining bits (0-28) are labeled 0. A Reset signal is shown at the bottom right.

**PMU\_LP\_TRIGGER\_HP** When the LP CPU sets this register to 1, the chip is woken up. (WT)

**PMU\_HP\_TRIGGER\_LP** When the HP CPU sets this register to 1, the LP CPU is woken up. (WT)

### Register 13.58. PMU\_EXT\_LDO\_PO\_OP1A\_REG (0x01B8)

[illegible]

**PMU\_OP1A\_FORCE\_TIEH\_SEL\_0** Configures which of the following controls the mode selection for V01 regulator.

1: Mode selection is controlled by `PMU_OP1A_TIEH_SEL_0`

0: Mode selection is controlled by eFuse

(R/W)

PMU\_OP1A\_TIEH\_SEL\_0 Configures mode for VO1.

0: Mode is controlled by PMU\_OP1A\_TIEH\_0.

1: Mode is controlled by SDMMC\_0

## 2: Bypass mode

3: Mode is controlled by SDMMC\_1

(R/W)

PMU\_OP1A\_TIEH\_0 Configures mode for V01.

0: LDO mode

### 1: Bypass mode

(R/W)

**PMU\_OP1A\_TARGET1\_0** Configures the timeout for stage 2 of the VO1 regulator wait counter, with the unit being a 16 division of LP\_DYN\_SLOW\_CLK. (R/W)

**PMU\_OP1A\_TARGETO\_0** Configures the timeout for stage 1 of the VO1 regulator wait counter, with the unit being a 16 division of LP\_DYN\_SLOW\_CLK. (R/W)

### Register 13.59. PMU\_EXT\_LDO\_PO\_OP1A\_ANA\_REG (0x01BC)

**PMU\_ANA\_OP1A\_MUL\_0** Configures the MUL, where the output voltage of the regulator is  $MUL \times V_{ref}$ .

0-7: MUL ranges from 1 to 2.75, with a step of 0.25.  
(R/W)

**PMU\_ANA\_OP1A\_EN\_VDET\_0** Configures whether to enable VO1 voltage detection.

0: Do not enable  
1: Enable  
(R/W)

**PMU\_ANA\_OP1A\_EN\_CUR\_LIM\_0** Configures whether to enable over current protection for VO1.

0: Do not enable  
1: Enable  
(R/W)

**PMU\_ANA\_OP1A\_DREF\_O** Configures the LDO Vref, where the output voltage of the regulator is  $MUL \times V_{ref}$ .

0-8:  $V_{ref} = 0.5\text{ V} - 0.9\text{ V}$ , with a step of 50 mV  
9-15:  $V_{ref} = 1.0\text{ V} - 1.6\text{ V}$ , with a step of 100 mV  
(R/W)

### Register 13.60. PMU\_EXT\_LDO\_PO\_OP2A\_REG (0x01C0)

[illegible]

**PMU\_OP2A\_FORCE\_TIEH\_SEL\_0** Configures which of the following controls the mode selection for VO3 regulator.

- 1: Mode selection is controlled by PMU\_OP2A\_TIEH\_SEL\_0
- 1: Mode selection is controlled by SDMMC\_0
- 2: Bypass mode
- 3: Mode selection is controlled by SDMMC\_1
- (R/W)

**PMU\_OP2A\_XPD\_0** Configures whether software enables V03 regulator.

- 0: Disable  
1: Enable  
(R/W)

**PMU\_OP2A\_TIEH\_SEL\_0** Configures mode for VO3.

- 0: Mode is controlled by PMU\_OP2A\_TIEH\_O.  
1: Mode is controlled by SDMMC\_0  
2: Bypass mode  
3: Mode is controlled by SDMMC\_1  
(R/W)

PMU\_OP2A\_TIEH\_0 Configures mode for VO3.

- 0: LDO mode  
1: Bypass mode  
(R/W)

**PMU\_OP2A\_TARGET1\_0** Configures the timeout for stage 2 of the VO3 regulator wait counter, with the unit being a 16 division of LP\_DYN\_SLOW\_CLK. (R/W)

**PMU\_OP2A\_TARGET0\_0** Configures the timeout for stage 1 of the VO3 regulator wait counter, with the unit being a 16 division of LP\_DYN\_SLOW\_CLK. (R/W)

### Register 13.61. PMU\_EXT\_LDO\_PO\_OP2A\_ANA\_REG (0x01C4)

Diagram illustrating the structure of the PMU\_Ana\_Op2A register (32 bits):

- Bit 31: Reset value (0)
- Bits 28-27: PMU\_Ana\_Op2A\_Dref\_O (0)
- Bits 26-25: PMU\_Ana\_Op2A\_En\_Cur\_Lim\_O (0x2)
- Bits 24-0: PMU\_Ana\_Op2A\_En\_Vdet\_O (0xb)
- Bits 23-22: (reserved)

**PMU\_ANA\_OP2A\_MUL\_0** Configures the MUL, where the output voltage of the regulator is  $MUL \times V_{ref}$ .

0-7: MUL ranges from 1 to 2.75, with a step of 0.25.

(R/W)

**PMU\_ANA\_OP2A\_EN\_VDET\_0** Configures whether to enable VO3 voltage detection.

0: Do not enable

1: Enable

(R/W)

**PMU\_ANA\_OP2A\_EN\_CUR\_LIM\_0** Configures whether to enable over current protection for V03.

0: Do not enable

1: Enable

(R/W)

**PMU\_ANA\_OP2A\_DREF\_0** Configures the LDO Vref, where the output voltage of the regulator is  $MUL \times V_{ref}$ .

0-8:  $V_{ref} = 0.5 \text{ V} - 0.9 \text{ V}$ , with a step of  $50 \text{ mV}$

9-15:  $V_{ref} = 1.0 \text{ V} - 1.6 \text{ V}$ , with a step of  $100 \text{ mV}$

(R/W)

### Register 13.62. PMU\_EXT\_LDO\_P1\_OP1A\_REG (0x01D0)

[illegible]

**PMU\_OP1A\_FORCE\_TIEH\_SEL\_1** Configures which of the following controls the mode selection for VO2 regulator.

- 1: Mode selection is controlled by PMU\_OP1A\_TIEH\_SEL\_1
- 1: Mode selection is controlled by SDMMC\_0
- 2: Bypass mode
- 3: Mode selection is controlled by SDMMC\_1
- (R/W)

**PMU\_OP1A\_XPD\_1** Configures whether software enables VO2 regulator.

- 0: Disable  
1: Enable  
(R/W)

PMU\_OP1A\_TIEH\_SEL\_1 Configures mode for VO2.

- 0: Mode is controlled by [PMU\\_OP1A\\_TIEH\\_1](#).  
 1: Mode is controlled by SDMMC\_0  
 2: Bypass mode  
 3: Mode is controlled by SDMMC\_1  
 (R/W)

PMU\_OP1A\_TIEH\_1 Configures mode for V02.

- 0: LDO mode  
1: Bypass mode  
(R/W)

**PMU\_OP1A\_TARGET1\_1** Configures the timeout for stage 2 of the VO2 regulator wait counter, with the unit being a 16 division of LP\_DYN\_SLOW\_CLK. (R/W)

**PMU\_OP1A\_TARGET0\_1** Configures the timeout for stage 1 of the VO2 regulator wait counter, with the unit being a 16 division of LP\_DYN\_SLOW\_CLK. (R/W)

### Register 13.63. PMU\_EXT\_LDO\_P1\_OP1A\_ANA\_REG (0x01D4)

Diagram illustrating the structure of the PMU\_Ana\_Op1A register (32 bits total):

- Bits 31-24: PMU\_Ana\_Op1A\_DREF\_1
- Bits 23-16: PMU\_Ana\_Op1A\_EN\_CUR\_LIM\_1
- Bits 15-8: PMU\_Ana\_Op1A\_EN\_VDET\_1
- Bits 7-0: PMU\_Ana\_Op1A\_MUL\_1 (reserved)

**PMU\_ANA\_OP1A\_MUL\_1** Configures the MUL, where the output voltage of the regulator is  $MUL \times V_{ref}$ .

0-7: MUL ranges from 1 to 2.75, with a step of 0.25.

(R/W)

**PMU\_ANA\_OP1A\_EN\_VDET\_1** Configures whether to enable VO2 voltage detection.

0: Do not enable

1: Enable

(R/W)

**PMU\_ANA\_OP1A\_EN\_CUR\_LIM\_1** Configures whether to enable over current protection for V02.

0: Do not enable

1: Enable

(R/W)

**PMU\_ANA\_OP1A\_DREF\_1** Configures the LDO Vref, where the output voltage of the regulator is MUL × Vref.

0-8:  $V_{ref} = 0.5 \text{ V} - 0.9 \text{ V}$ , with a step of  $50 \text{ mV}$

9-15:  $V_{ref} = 1.0\text{ V} - 1.6\text{ V}$ , with a step of  $100\text{ mV}$

(R/W)

**Register 13.64. PMU\_EXT\_LDO\_P1\_OP2A\_REG (0x01D8)**

|          |      |                    |  |  |  |  |  |  |  |  |  |      |                    |    |  |  |  |  |  |  |  |  |   |                 |    |    |    |          |   |   |   |                     |   |   |   |                |   |   |   |                           |   |   |       |            |  |  |  |

**PMU\_OP2A\_FORCE\_TIEH\_SEL\_1** Configures which of the following controls the mode selection for VO4 regulator.

- 1: Mode selection is controlled by [PMU\\_OP2A\\_TIEH\\_SEL\\_1](#)
  - 1: Mode selection is controlled by SDMMC\_0
  - 2: Bypass mode
  - 3: Mode selection is controlled by SDMMC\_1
- (R/W)

**PMU\_OP2A\_XPD\_1** Configures whether software enables VO4 regulator.

- 0: Disable
  - 1: Enable
- (R/W)

**PMU\_OP2A\_TIEH\_SEL\_1** Configures mode for VO4.

- 0: Mode is controlled by [PMU\\_OP2A\\_TIEH\\_1](#).
  - 1: Mode is controlled by SDMMC\_0
  - 2: Bypass mode
  - 3: Mode is controlled by SDMMC\_1
- (R/W)

**PMU\_OP2A\_TIEH\_1** Configures mode for VO4.

- 0: LDO mode
  - 1: Bypass mode
- (R/W)

**PMU\_OP2A\_TARGET1\_1** Configures the timeout for stage 2 of the VO4 regulator wait counter, with the unit being a 16 division of LP\_DYN\_SLOW\_CLK. (R/W)

**PMU\_OP2A\_TARGET0\_1** Configures the timeout for stage 1 of the VO4 regulator wait counter, with the unit being a 16 division of LP\_DYN\_SLOW\_CLK. (R/W)

### Register 13.65. PMU\_EXT\_LDO\_P1\_OP2A\_ANA\_REG (0x01DC)

**PMU\_ANA\_OP2A\_MUL\_1** Configures the MUL, where the output voltage of the regulator is  $MUL \times V_{ref}$ .

0-7: MUL ranges from 1 to 2.75, with a step of 0.25.

(R/W)

**PMU\_ANA\_OP2A\_EN\_VDET\_1** Configures whether to enable VO4 voltage detection.

0: Do not enable

1: Enable

(R/W)

**PMU\_ANA\_OP2A\_EN\_CUR\_LIM\_1** Configures whether to enable over current protection for VO4.

0: Do not enable

1: Enable

(R/W)

**PMU\_ANA\_OP2A\_DREF\_1** Configures the LDO Vref, where the output voltage of the regulator is  $MUL \times V_{ref}$ .

0-8:  $V_{ref} = 0.5 \text{ V} - 0.9 \text{ V}$ , with a step of 50 mV

9-15:  $V_{ref} = 1.0\text{ V} - 1.6\text{ V}$ , with a step of  $100\text{ mV}$

(R/W)

### Register 13.66. PMU\_EXT\_WAKEUP\_LV\_REG (0x01E8)

**PMU\_EXT\_WAKEUP\_LV** Configures the wake level for EXT wake-up.

0: Low level wake-up

1: High level wake-up

(R/W)

**Register 13.67. PMU\_EXT\_WAKEUP\_SEL\_REG (0x01EC)**

**PMU\_EXT\_WAKEUP\_SEL** Configures whether to enable EXT wake-up.

0: Disable

1: Enable

(R/W)

**Register 13.68. PMU\_EXT\_WAKEUP\_ST\_REG (0x01F0)**

**PMU\_EXT\_WAKEUP\_STATUS** Gets the GPIO number for wake-up. 0 corresponds to GPIO0, 1 corresponds to GPIO1, and so on. (RO)

**Register 13.69. PMU\_EXT\_WAKEUP\_CNTL\_REG (0x01F4)**

**PMU\_EXT\_WAKEUP\_STATUS\_CLR** Clears the wake-up records. (R/W)

**PMU\_EXT\_WAKEUP\_FILTER** Configures whether to enable the wake-up filter.

0: Disable

1: Enable

(R/W)

**Register 13.70. PMU\_SDIO\_WAKEUP\_CNTL\_REG (0x01F8)**

|            |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

**PMU\_PMU\_DATE** Version control register. (R/W)

**PMU\_CLK\_EN** Force enables the automatic clock gating of the register. (R/W)

## Chapter 14

## System Timer

### 14.1 Overview

ESP32-P4 provides a 52-bit system timer, which can be used to generate tick interrupts for the operating system, or be used as a general timer to generate periodic interrupts or one-time interrupts.

### 14.2 Features

The system timer has the following features:

- Two 52-bit counters and three 52-bit comparators
- Software accessing registers clocked by APB\_CLK
- CNT\_CLK used for counting, with an average frequency of 16 MHz in two counting cycles
- 40 MHz XTAL\_CLK as the clock source of CNT\_CLK
- 52-bit alarm values (t) and 26-bit alarm periods ( $\delta t$ )
- Two modes to generate alarms:
  - Target mode: only a one-time alarm is generated based on the alarm value (t)
  - Period mode: periodic alarms are generated based on the alarm period ( $\delta t$ )
- Three comparators generating three independent interrupts based on configured alarm value (t) or alarm period ( $\delta t$ )
- Software configuring the reference count value. For example, the system timer is able to load back the sleep time recorded by RTC timer via software after Light-sleep
- Able to stall or continue running when CPU stalls or enters the on-chip-debugging mode
- Alarm for Event Task Matrix (ETM) event

## 14.3 System Timer Structure

The timer consists of two counters: UNIT0 and UNIT1. The count values can be monitored by three comparators, COMP0, COMP1, and COMP2. See the timer block diagram in Figure 14.3-1.

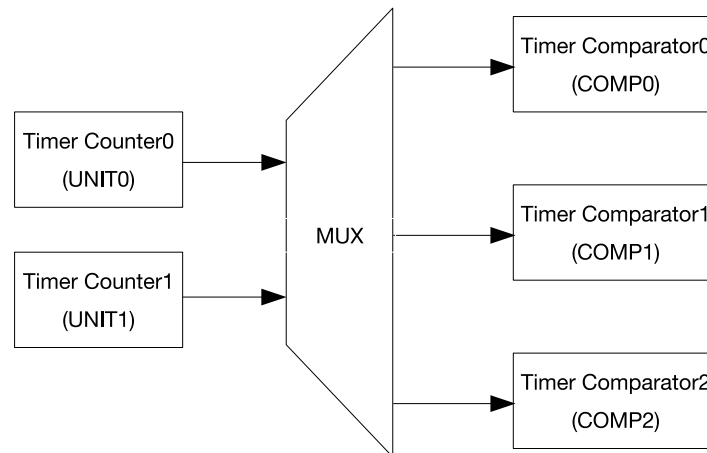

Figure 14.3-1. System Timer Structure

## 14.4 Clock Source Selection

The counters and comparators use XTAL\_CLK or RC\_FAST\_CLK as the clock sources. The clock source can be selected by configuring field HP\_SYS\_CLKRST\_REG\_SYSTIMER\_CLK\_SRC\_SEL in register [HP\\_SYS\\_CLKRST\\_PERI\\_CLK\\_CTRL21\\_REG](#). After XTAL\_CLK is scaled by 2.5, a counter clock signal CNT\_CLK is generated with a frequency of  $f_{XTAL\_CLK}/2.5$ . The average clock frequency of CNT\_CLK is 16 MHz, as shown in Figure 14.5-1. The timer counter is incremented by  $1/16\ \mu s$  on each CNT\_CLK cycle.

Software operation such as configuring registers is clocked by APB\_CLK. For more information about APB\_CLK, see Chapter 9 [Reset and Clock](#).

The following two bits of system registers are also used to control the system timer:

- Set HP\_SYS\_CLKRST\_REG\_SYSTIMER\_APB\_CLK\_EN in register [HP\\_SYS\\_CLKRST\\_SOC\\_CLK\\_CTRL2\\_REG](#) to enable APB\_CLK signal to the system timer.
- Set HP\_SYS\_CLKRST\_REG\_RST\_EN\_SYSTIMER in register [HP\\_SYS\\_CLKRST\\_HP\\_RST\\_EN1\\_REG](#) to reset the system timer.

Note that if the timer is reset, its registers will be restored to their default values. For more information, please refer to Chapter 9 [Reset and Clock](#).

## 14.5 Functional Description

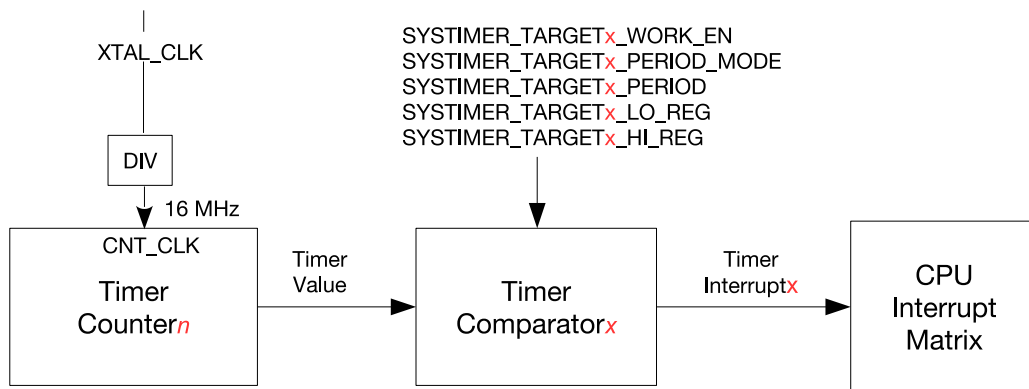

Figure 14.5-1. System Timer Alarm Generation

Figure 14.5-1 shows the procedure to generate alarm in system timer. In this process, one timer counter and one timer comparator are used. An alarm interrupt will be generated accordingly based on the comparison result in the comparator.

### 14.5.1 Counter

The system timer has two 52-bit timer counters, shown as UNIT $n$  ( $n = 0$  or  $1$ ). Their counting clock source is a 16 MHz clock, i.e., CNT\_CLK. Whether UNIT $n$  works or not is controlled by three bits in register SYSTIMER\_CONF\_REG:

- SYSTIMER\_TIMER\_UNIT $n$ \_WORK\_EN: set this bit to enable the counter UNIT $n$  in the system timer.
- SYSTIMER\_TIMER\_UNIT $n$ \_CORE0\_STALL\_EN: if this bit is set, the counter UNIT $n$  stops when CPU0 is stalled. The counter continues its counting after the CPU resumes.
- SYSTIMER\_TIMER\_UNIT $n$ \_CORE1\_STALL\_EN: if this bit is set, the counter UNIT $n$  stops when CPU1 is stalled. The counter continues its counting after the CPU resumes.

The configuration of the bits to control the counter UNIT $n$  is shown below, assuming that CPU is stalled.

Table 14.5-1. UNIT $n$  Configuration Bits

| SYSTIMER_TIMER_UNIT $n$ _WORK_EN | SYSTIMER_TIMER_UNIT $n$ _CORE0_STALL_EN | SYSTIMER_TIMER_UNIT $n$ _CORE1_STALL_EN | Counter UNIT $n$   |
|----------------------------------|---|---|--|
| 0                                | x <sup>*</sup>                          | x <sup>*</sup>                          | Not at work  |
| 1                                | 1                                       | x                                       | Stop counting, but will continue its counting after the CPU0 resumes |
| 1                                | x                                       | 1                                       | Stop counting, but will continue its counting after the CPU1 resumes |
| 1                                | 0                                       | 0                                       | Keep counting  |

<sup>\*</sup> x: Don't-care.

When the counter UNIT $n$  is at work, the count value is incremented on each counting cycle. When the counter UNIT $n$  is stopped, the count value stops increasing and keeps unchanged.

The lower 32 and higher 20 bits of the initial count value are loaded from the registers SYSTIMER\_TIMER\_UNIT $n$ \_LOAD\_LO and SYSTIMER\_TIMER\_UNIT $n$ \_LOAD\_HI. Writing 1 to the bit SYSTIMER\_TIMER\_UNIT $n$ \_LOAD will trigger a reload event, and the current count value will be changed immediately. If UNIT $n$  is at work, the counter will continue to count up from the new reloaded value.

Writing 1 to SYSTIMER\_TIMER\_UNIT $n$ \_UPDATE will trigger an update event. The lower 32 and higher 20 bits of the current count value will be locked into the registers SYSTIMER\_TIMER\_UNIT $n$ \_VALUE\_LO and SYSTIMER\_TIMER\_UNIT $n$ \_VALUE\_HI, and then SYSTIMER\_TIMER\_UNIT $n$ \_VALUE\_VALID is asserted. Before the next update event, the values of SYSTIMER\_TIMER\_UNIT $n$ \_VALUE\_LO and SYSTIMER\_TIMER\_UNIT $n$ \_VALUE\_HI remain unchanged.

## 14.5.2 Comparator and Alarm

The system timer has three 52-bit comparators, shown as COMP $x$  ( $x = 0, 1, \text{ or } 2$ ). The comparators can generate independent interrupts based on different alarm values ( $t$ ) or alarm periods ( $\delta t$ ).

Configure SYSTIMER\_TARGET $x$ \_PERIOD\_MODE to choose from the two alarm modes for each COMP $x$ :

- 1: period mode
- 0: target mode

In period mode, the alarm period ( $\delta t$ ) is provided by the register SYSTIMER\_TARGET $x$ \_PERIOD. Assuming that current count value is  $t_1$ , when it reaches  $(t_1 + \delta t)$ , an alarm interrupt will be generated. When the count value reaches  $(t_1 + 2 * \delta t)$ , another alarm interrupt also will be generated. By such way, periodic alarms are generated.

In target mode, the lower 32 bits and higher 20 bits of the alarm value ( $t$ ) are provided by SYSTIMER\_TIMER\_TARGET $x$ \_LO and SYSTIMER\_TIMER\_TARGET $x$ \_HI. Assuming that current count value is  $t_2$  ( $t_2 \leq t$ ), an alarm interrupt will be generated when the count value reaches the alarm value ( $t$ ). Unlike in period mode, only one alarm interrupt is generated in target mode.

SYSTIMER\_TARGET $x$ \_TIMER\_UNIT\_SEL is used to choose the count value from which timer counter to be compared to generate alarms:

- 1: Use the count value from UNIT1
- 0: Use the count value from UNIT0

Finally, set SYSTIMER\_TARGET $x$ \_WORK\_EN and COMP $x$  starts to compare the count value:

- In target mode, COMP $x$  compares it with the alarm value ( $t$ ).
- In period mode, COMP $x$  compares it with the alarm period ( $t_1 + n * \delta t$ ).

An alarm is generated when the count value equals to the alarm value ( $t$ ) in target mode or to the start value +  $n * \text{alarm period } \delta t$  ( $n = 1, 2, 3 \dots$ ) in period mode. But if the alarm value ( $t$ ) set in registers is less than the current count value, i.e., the target has already passed, when the current count value is larger than the alarm value ( $t$ ) within a range ( $0 \sim 2^{51} - 1$ ), an alarm interrupt will also be generated immediately. No matter in target mode or period mode, the low 32 bits and high 20 bits of the real alarm value can always be read from SYSTIMER\_TARGET $x$ \_LO\_RO and SYSTIMER\_TARGET $x$ \_HI\_RO. The alarm trigger point and the relationship between current count value  $t_c$  and the alarm value  $t_t$  are shown below.

Table 14.5-2. Trigger Point

| Relationship Between $t_c$ and $t_t$   | Trigger Point   |
|--|---|
| $t_c - t_t \leq 0$   | $t_c = t_t$ , an alarm is triggered.  |
| $0 \leq t_c - t_t < 2^{51} - 1$<br>( $t_c < 2^{51}$ and $t_t < 2^{51}$ ,<br>or $t_c \geq 2^{51}$ and $t_t \geq 2^{51}$ ) | An alarm is triggered immediately.  |
| $t_c - t_t \geq 2^{51} - 1$  | $t_c$ overflows after counting to its maximum value 52'hffffffffffff, and then starts counting up from 0. When its value reaches $t_t$ , an alarm is triggered. |

### 14.5.3 Event Task Matrix

The system timer on ESP32-P4 supports the Event Task Matrix (ETM) function, which allows the system timer's ETM tasks to be triggered by any peripherals' ETM events, or system timer's ETM events to trigger any peripherals' ETM tasks. This section introduces the ETM tasks and events related to the system timer. For more information, please refer to Chapter 12 [Event Task Matrix \(ETM\)](#).

The system timer can generate the following ETM event:

- SYSTIMER\_EVT\_CNT\_CMP $x$ : Indicates the alarm events generated by COMP $x$ .

When [SYSTIMER\\_ETM\\_EN](#) is set to 1, the alarm events can trigger the ETM event.

### 14.5.4 Synchronization Operation

The frequency of the clock used for software configuration is different from that of the clock driving the timer counters and comparators. Therefore, synchronization is required for configuring some registers. The steps are as follows:

1. Software writes specific values to configuration fields. See the first column in Table 14.5-3.
2. Software writes 1 to corresponding bits to start synchronization. See the second column in Table 14.5-3.

Table 14.5-3. Synchronization Operation for Configuration Registers

| Configuration Fields  | Synchronization Enable Bit    |
|---|-------------------------------|
| SYSTIMER_TIMER_UNIT $n$ _LOAD_LO<br>SYSTIMER_TIMER_UNIT $n$ _LOAD_HI                          | SYSTIMER_TIMER_UNIT $n$ _LOAD |
| SYSTIMER_TARGET $x$ _PERIOD<br>SYSTIMER_TIMER_TARGET $x$ _HI<br>SYSTIMER_TIMER_TARGET $x$ _LO | SYSTIMER_TIMER_COMP $x$ _LOAD |

The frequency of the clock used for software reading is different from that of the clock driving the timer counters and comparators. Therefore, synchronization is also needed for reading some registers. The steps are as follows:

1. Software writes specific values to the updating register [SYSTIMER\\_TIMER\\_UNIT \$n\$ \\_UPDATE](#).

2. Software reads the corresponding bit `SYSTIMER_TIMER_UNIT $n$ _VALUE_VALID` to be valid to confirm synchronization is done.
3. Software reads the corresponding status registers `SYSTIMER_TIMER_UNIT $n$ _VALUE_HI` and `SYSTIMER_TIMER_UNIT $n$ _VALUE_LO`.

## 14.6 Interrupts

ESP32-P4's system timer can generate the following interrupt signals that will be sent to the [Interrupt Matrix](#).

- SYSTIMER\_TARGET0\_INT
- SYSTIMER\_TARGET1\_INT
- SYSTIMER\_TARGET2\_INT

There are several internal interrupt sources from the system timer that can generate the above interrupt signals. The interrupt sources from the system timer are listed with their trigger conditions and the resulted interrupt signals in Table 14.6-1.

Table 14.6-1. System Timer's Internal Interrupt Sources

| Internal Interrupt Source | Trigger Condition | Interrupt Signal     |
|---------------------------|-------------------|----------------------|
| SYSTIMER_INT0             | When COMPO alarms | SYSTIMER_TARGET0_INT |
| SYSTIMER_INT1             | When COMP1 alarms | SYSTIMER_TARGET1_INT |
| SYSTIMER_INT2             | When COMP2 alarms | SYSTIMER_TARGET2_INT |

The above interrupts are level-type alarm interrupts. The interrupt signal is asserted high when the comparator starts to alarm. Until the software clears the interrupt, it remains high. To enable interrupts, set the bit `SYSTIMER_TARGET $x$ _INT_ENA`.

**Note:**

For definitions of *interrupt*, *interrupt signal*, *interrupt source*, and their correlations, please refer to Chapter 11 [Interrupt Matrix](#) > Section 11.2 [Interrupt Terminology in ESP32-P4](#).

Each interrupt source can be configured by a common set of registers that are described in Section [Interrupt Configuration Registers](#). The specific registers can be found in Section 14.8 [Register Summary](#).

## 14.7 Programming Procedure

When configuring COMP $x$  and UNIT $n$ , please ensure the corresponding COMP and UNIT are at work.

### 14.7.1 Read Current Count Value

1. Set `SYSTIMER_TIMER_UNIT $n$ _UPDATE` to fill the current count value of COMP $x$  into `SYSTIMER_TIMER_UNIT $n$ _VALUE_HI` and `SYSTIMER_TIMER_UNIT $n$ _VALUE_LO`.

2. Poll the reading of `SYSTIMER_TIMER_UNIT $n$ _VALUE_VALID` till it is 1. Then, user can read the count value from `SYSTIMER_TIMER_UNIT $n$ _VALUE_HI` and `SYSTIMER_TIMER_UNIT $n$ _VALUE_LO`.
3. Read the lower 32 bits and higher 20 bits from `SYSTIMER_TIMER_UNIT $n$ _VALUE_LO` and `SYSTIMER_TIMER_UNIT $n$ _VALUE_HI` respectively.

## 14.7.2 Configure a One-Time Alarm in Target Mode

1. Set `SYSTIMER_TARGET $x$ _TIMER_UNIT_SEL` to select the counter (UNIT $0$  or UNIT $1$ ) used for comparison with COMP $x$ .
2. Read the current count value with reference to Section 14.7.1. This value will be used to calculate the alarm value (t) in Step 4.
3. Clear `SYSTIMER_TARGET $x$ _PERIOD_MODE` to enable target mode.
4. Set an alarm value (t), and fill its lower 32 bits into `SYSTIMER_TIMER_TARGET $x$ _LO`, and the higher 20 bits into `SYSTIMER_TIMER_TARGET $x$ _HI`.
5. Set `SYSTIMER_TIMER_COMP $x$ _LOAD` to synchronize the alarm value (t) to COMP $x$ , i.e., load the alarm value (t) to the COMP $x$ .
6. Set `SYSTIMER_TARGET $x$ _WORK_EN` to enable the selected COMP $x$ . COMP $x$  starts comparing the count value with the alarm value (t).
7. Set `SYSTIMER_TARGET $x$ _INT_ENA` to enable the timer interrupt. When UNIT $n$  reaches the alarm value (t), a `SYSTIMER_TARGET $x$ _INT` interrupt is triggered.

## 14.7.3 Configure Periodic Alarms in Period Mode

1. Set `SYSTIMER_TARGET $x$ _TIMER_UNIT_SEL` to select the counter (UNIT $0$  or UNIT $1$ ) used for comparison with COMP $x$ .
2. Set an alarm period ( $\delta t$ ), and fill it into `SYSTIMER_TARGET $x$ _PERIOD`.
3. Set `SYSTIMER_TIMER_COMP $x$ _LOAD` to synchronize the alarm period ( $\delta t$ ) to COMP $x$ , i.e., load the alarm period ( $\delta t$ ) to COMP $x$ .
4. Clear and then set `SYSTIMER_TARGET $x$ _PERIOD_MODE` to configure COMP $x$  into period mode.
5. Set `SYSTIMER_TARGET $x$ _WORK_EN` to enable the selected COMP $x$ . COMP $x$  starts comparing the count value with the sum of (start value +  $n \cdot \delta t$ ) ( $n = 1, 2, 3, \dots$ ).
6. Set `SYSTIMER_TARGET $x$ _INT_ENA` to enable the timer interrupt. A `SYSTIMER_TARGET $x$ _INT` interrupt is triggered when UNIT $n$  reaches start value +  $n \cdot \delta t$  ( $n = 1, 2, 3, \dots$ ) set in Step 2.

## 14.7.4 Update After Light-sleep

1. Configure RTC timer before the chip goes to Light-sleep mode, to record the exact sleep time. For more information, see Chapter 13 *Low-Power Management*.
2. Read the sleep time from the RTC timer when the chip wakes up from Light-sleep mode.
3. Read the current count value of system timer, see Section 14.7.1.

4. Convert the time value recorded by RTC timer from the clock cycles based on RTC\_SLOW\_CLK to that based on 16 MHz CNT\_CLK. For example, if the frequency of RTC\_SLOW\_CLK is 32 kHz, the recorded RTC timer value should be converted by multiplying by 500.
5. Add the converted RTC value to the current count value of system timer:
  - Fill the new value into SYSTIMER\_TIMER\_UNIT $n$ \_LOAD\_LO (low 32 bits) and SYSTIMER\_TIMER\_UNIT $n$ \_LOAD\_HI (high 20 bits).
  - Set SYSTIMER\_TIMER\_UNIT $n$ \_LOAD to load the new timer value into the system timer. By such way, the system timer is updated.

## 14.8 Register Summary

The addresses in this section are relative to system timer base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name   | Description                                     | Address | Access    |
|--|---|---------|-----------|
| <b>Clock Control Register</b>                          |   |         |           |
| <a href="#">SYSTIMER_CONF_REG</a>                      | Configure system timer clock                    | 0x0000  | R/W       |
| <b>UNIT0 Control and Configuration Registers</b>       |   |         |           |
| <a href="#">SYSTIMER_UNIT0_OP_REG</a>                  | Read UNIT0 value to registers                   | 0x0004  | varies    |
| <a href="#">SYSTIMER_UNIT0_LOAD_HI_REG</a>             | High 20 bits to be loaded to UNIT0              | 0x000C  | R/W       |
| <a href="#">SYSTIMER_UNIT0_LOAD_LO_REG</a>             | Low 32 bits to be loaded to UNIT0               | 0x0010  | R/W       |
| <a href="#">SYSTIMER_UNIT0_VALUE_HI_REG</a>            | UNIT0 value, high 20 bits                       | 0x0040  | RO        |
| <a href="#">SYSTIMER_UNIT0_VALUE_LO_REG</a>            | UNIT0 value, low 32 bits                        | 0x0044  | RO        |
| <a href="#">SYSTIMER_UNIT0_LOAD_REG</a>                | UNIT0 synchronization register                  | 0x005C  | WT        |
| <b>UNIT1 Control and Configuration Registers</b>       |   |         |           |
| <a href="#">SYSTIMER_UNIT1_OP_REG</a>                  | Read UNIT1 value to registers                   | 0x0008  | varies    |
| <a href="#">SYSTIMER_UNIT1_LOAD_HI_REG</a>             | High 20 bits to be loaded to UNIT1              | 0x0014  | R/W       |
| <a href="#">SYSTIMER_UNIT1_LOAD_LO_REG</a>             | Low 32 bits to be loaded to UNIT1               | 0x0018  | R/W       |
| <a href="#">SYSTIMER_UNIT1_VALUE_HI_REG</a>            | UNIT1 value, high 20 bits                       | 0x0048  | RO        |
| <a href="#">SYSTIMER_UNIT1_VALUE_LO_REG</a>            | UNIT1 value, low 32 bits                        | 0x004C  | RO        |
| <a href="#">SYSTIMER_UNIT1_LOAD_REG</a>                | UNIT1 synchronization register                  | 0x0060  | WT        |
| <b>Comparator0 Control and Configuration Registers</b> |   |         |           |
| <a href="#">SYSTIMER_TARGET0_HI_REG</a>                | Alarm value to be loaded to COMPO, high 20 bits | 0x001C  | R/W       |

## 14.9 Registers

The addresses in this section are relative to system timer base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

### Register 14.1. SYSTIMER\_CONF\_REG (0x0000)

[illegible]

**SYSTIMER\_ETM\_EN** Configures whether to enable generation of ETM events.

0: Disable

1: Enable

(R/W)

**SYSTIMER\_TARGET2\_WORK\_EN** Configures whether to enable COMP2.

0: Disable

1: Enable

(R/W)

**SYSTIMER\_TARGET1\_WORK\_EN** Configures whether to enable COMP1. See details in [SYSTIMER\\_TARGET2\\_WORK\\_EN](#). (R/W)

**SYSTIMER\_TARGET0\_WORK\_EN** Configures whether to enable COMPO. See details in [SYSTIMER\\_TARGET2\\_WORK\\_EN](#). (R/W)

**SYSTIMER\_TIMER\_UNIT1\_CORE1\_STALL\_EN** Configures whether UNIT1 is stalled when CORE1 is stalled.

0: UNIT1 is not stalled.

1: UNIT1 is stalled.

(R/W)

**SYSTIMER\_TIMER\_UNIT1\_CORE0\_STALL\_EN** Configures whether UNIT1 is stalled when CORE0 is stalled. See details in [SYSTIMER\\_TIMER\\_UNIT1\\_CORE1\\_STALL\\_EN](#). (R/W)

**SYSTIMER\_TIMER\_UNIT0\_CORE1\_STALL\_EN** Configures whether UNIT0 is stalled when CORE1 is stalled. See details in [SYSTIMER\\_TIMER\\_UNIT1\\_CORE1\\_STALL\\_EN](#). (R/W)

**SYSTIMER\_TIMER\_UNIT0\_CORE0\_STALL\_EN** Configures whether UNIT0 is stalled when CORE0 is stalled. See details in [SYSTIMER\\_TIMER\\_UNIT1\\_CORE1\\_STALL\\_EN](#). (R/W)

Continued on the next page...

### Register 14.1. SYSTIMER\_CONF\_REG (0x0000)

Continued from the previous page...

**SYSTIMER\_TIMER\_UNIT1\_WORK\_EN** Configures whether to enable UNIT1.

0: Disable

1: Enable

(R/W)

**SYSTIMER\_TIMER\_UNITO\_WORK\_EN** Configures whether to enable UNITO.

0: Disable

1: Enable

(R/W)

**SYSTIMER\_CLK\_EN** Configures register clock gating.

0: Only enable needed clock for register read or write operations.

1: Register clock is always enabled for read and write operations.

(R/W)

### Register 14.2. SYSTIMER\_UNIT0\_OP\_REG (0x0004)

**SYSTIMER\_TIMER\_UNITO\_VALUE\_VALID** Represents whether UNITO value is synchronized and valid.

0: UNIT0 value is neither synchronized nor valid

1: UNIT0 value is synchronized and valid

(R/SS/WTC)

**SYSTIMER\_TIMER\_UNITO\_UPDATE** Configures whether to update timer UNITO, i.e., reads the UNITO count value to **SYSTIMER\_TIMER\_UNITO\_VALUE\_HI** and **SYSTIMER\_TIMER\_UNITO\_VALUE\_LO**.

0: No effect

1: Update timer UNITO

(WT)

Register 14.3. SYSTIMER\_UNITO\_LOAD\_HI\_REG (0x000C)

**SYSTIMER\_TIMER\_UNITO\_LOAD\_HI** Configures the value to be loaded to UNITO, high 20 bits. (R/W)

Register 14.4. SYSTIMER\_UNITO\_LOAD\_LO\_REG (0x0010)

**SYSTIMER\_TIMER\_UNITO\_LOAD\_LO** Configures the value to be loaded to UNITO, low 32 bits. (R/W)

Register 14.5. SYSTIMER\_UNITO\_VALUE\_HI\_REG (0x0040)

**SYSTIMER\_TIMER\_UNITO\_VALUE\_HI** Represents UNITO read value, high 20 bits. (RO)

### Register 14.6. SYSTIMER\_UNIT0\_VALUE\_LO\_REG (0x0044)

**SYSTIMER\_TIMER\_UNIT0\_VALUE\_LO** Represents UNIT0 read value, low 32 bits. (RO)

### Register 14.7. SYSTIMER\_UNIT0\_LOAD\_REG (0x005C)

**SYSTIMER\_TIMER\_UNITO\_LOAD** Configures whether to reload the value of UNITO, i.e., reloads the values of **SYSTIMER\_TIMER\_UNITO\_VALUE\_HI** and **SYSTIMER\_TIMER\_UNITO\_VALUE\_LO** to UNITO.

0: No effect

1: Reload the value of UNIT0

(WT)

### Register 14.8. SYSTIMER\_UNIT1\_OP\_REG (0x0008)

**SYSTIMER\_TIMER\_UNIT1\_VALUE\_VALID** Represents UNIT1 value is synchronized and valid.  
(R/SS/WTC)

**SYSTIMER\_TIMER\_UNIT1\_UPDATE** Configures whether to update timer UNIT1, i.e., reads the UNIT1 count value to [SYSTIMER\\_TIMER\\_UNIT1\\_VALUE\\_HI](#) and [SYSTIMER\\_TIMER\\_UNIT1\\_VALUE\\_LO](#).

0: No effect

1: Update timer UNIT1

(WT)

### Register 14.9. SYSTIMER\_UNIT1\_LOAD\_HI\_REG (0x0014)

**SYSTIMER\_TIMER\_UNIT1\_LOAD\_HI** Configures the value to be loaded to UNIT1, high 20 bits. (R/W)

Register 14.10. SYSTIMER\_UNIT1\_LOAD\_LO\_REG (0x0018)

**SYSTIMER\_TIMER\_UNIT1\_LOAD\_LO** Configures the value to be loaded to UNIT1, low 32 bits. (R/W)

Register 14.11. SYSTIMER\_UNIT1\_VALUE\_HI\_REG (0x0048)

**SYSTIMER\_TIMER\_UNIT1\_VALUE\_HI** Represents UNIT1 read value, high 20 bits. (RO)

Register 14.12. SYSTIMER\_UNIT1\_VALUE\_LO\_REG (0x004C)

**SYSTIMER\_TIMER\_UNIT1\_VALUE\_LO** Represents UNIT1 read value, low 32 bits. (RO)

### Register 14.13. SYSTIMER\_UNIT1\_LOAD\_REG (0x0060)

Diagram of the SYSTIMER\_TIMER\_LOAD register structure:

- Bit 31: (reserved)
- Bits 31-1: (reserved)
- Bit 0: SYSTIMER\_TIMER\_UNIT1\_LOAD
- Reset value: 0

**SYSTIMER\_TIMER\_UNIT1\_LOAD** Configures whether to reload the value of UNIT1, i.e., reload the values of [SYSTIMER\\_TIMER\\_UNIT1\\_VALUE\\_HI](#) and [SYSTIMER\\_TIMER\\_UNIT1\\_VALUE\\_LO](#) to UNIT1.

0: No effect

1: Reload the value of UNIT1

(WT)

#### Register 14.14. SYSTIMER\_TARGETO\_HI\_REG (0x001C)

Diagram illustrating the structure of the SYSTIMER\_TMR register:

- Bits 31 to 20: (reserved)
- Bits 19 to 0: SYSTIMER\_TIMER\_TARGET0\_HI

The register is shown as a horizontal bar with bit positions 31, 20, 19, and 0 marked. The reserved field contains 12 zeros. The SYSTIMER\_TIMER\_TARGET0\_HI field contains a single zero in bit 19 and zeros in bits 18-0.

**SYSTIMER\_TIMER\_TARGETO\_HI** Configures the alarm value to be loaded to COMPO, high 20 bits.

(R/W)

### Register 14.15. SYSTIMER\_TARGET0\_LO\_REG (0x0020)

31 0

Reset

SYSTIMER\_TMR\_TARGET0\_LO

**SYSTIMER\_TIMER\_TARGETO\_LO** Configures the alarm value to be loaded to COMPO, low 32 bits.

(R/W)

Register 14.16. SYSTIMER\_TARGETO\_CONF\_REG (0x0034)

|    |  |  |    |  |  |    |  |  |    |  |  |    |  |  |         |  |  |
|----|--|--|----|--|--|----|--|--|----|--|--|----|--|--|---------|--|--|
| 31 |  |  | 30 |  |  | 29 |  |  | 26 |  |  | 25 |  |  | 0       |  |  |
|    |  |  |    |  |  |    |  |  |    |  |  |    |  |  |         |  |  |
| 0  |  |  | 0  |  |  | 0  |  |  | 0  |  |  | 0  |  |  | 0x00000 |  |  |
|    |  |  |    |  |  |    |  |  |    |  |  |    |  |  |         |  |  |

SYSTIMER\_TARGETO\_TIMER\_UNIT\_SEL

SYSTIMER\_TARGETO\_PERIOD\_MODE

(reserved)

SYSTIMER\_TARGETO\_PERIOD

Reset

- SYSTIMER\_TARGETO\_PERIOD** Configures COMPO alarm period. (R/W)
- SYSTIMER\_TARGETO\_PERIOD\_MODE** Selects the two alarm modes for COMPO.

0: Target mode

1: Period mode

(R/W)
- SYSTIMER\_TARGETO\_TIMER\_UNIT\_SEL** Chooses the count value for comparison with COMPO.

0: Use the count value from UNIT0

1: Use the count value from UNIT1

(R/W)

Register 14.17. SYSTIMER\_COMPO\_LOAD\_REG (0x0050)

|    |  |  |   |  |  |   |  |  |
|----|--|--|---|--|--|---|--|--|
| 31 |  |  | 1 |  |  | 0 |  |  |
|    |  |  |   |  |  |   |  |  |
| 0  |  |  | 0 |  |  | 0 |  |  |
|    |  |  |   |  |  |   |  |  |

(reserved)

SYSTIMER\_TIMER\_COMPO\_LOAD

Reset

- SYSTIMER\_TIMER\_COMPO\_LOAD** Configures whether to enable COMPO synchronization, i.e., reload the alarm value/period to COMPO.

0: No effect

1: Enable COMPO synchronization

(WT)

Register 14.18. SYSTIMER\_TARGET1\_HI\_REG (0x0024)

|            |   |   |   |   |   |   |   |   |   |   |    |                           |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |       |
|------------|---|---|---|---|---|---|---|---|---|---|----|---------------------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|-------|
| (reserved) |   |   |   |   |   |   |   |   |   |   |    | SYSTIMER_TIMER_TARGET1_HI |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |       |
| 31         |   |   |   |   |   |   |   |   |   |   | 20 | 0                         |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |       |
| 0          | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0  | 0                         |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | Reset |

**SYSTIMER\_TIMER\_TARGET1\_HI** Configures the alarm value to be loaded to COMP1, high 20 bits.  
(R/W)

Register 14.19. SYSTIMER\_TARGET1\_LO\_REG (0x0028)

|                           |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |
|---------------------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|---|
| SYSTIMER_TIMER_TARGET1_LO |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |
| 31                        |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |
| 0                         |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |
| Reset                     |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |

**SYSTIMER\_TIMER\_TARGET1\_LO** Configures the alarm value to be loaded to COMP1, low 32 bits.  
(R/W)

Register 14.20. SYSTIMER\_TARGET1\_CONF\_REG (0x0038)

## Chapter 15

### Timer Group (TIMG)

#### 15.1 Overview

General-purpose timers can be used to precisely time an interval, trigger an interrupt after a particular interval (periodically and aperiodically), or act as a hardware clock. As shown in Figure 15.1-1, the ESP32-P4 chip contains two timer groups, namely timer group 0 and timer group 1 (hereinafter referred to as TIMG $n$ , where  $n$  can be 0 or 1). Each timer group consists of two general-purpose timers (hereinafter referred to as T $x$ , where  $x$  can be 0 or 1) and one Main System Watchdog Timer (MWDT). The general-purpose timer is based on a 16-bit prescaler and a 54-bit auto-reload-capable up-down counter.

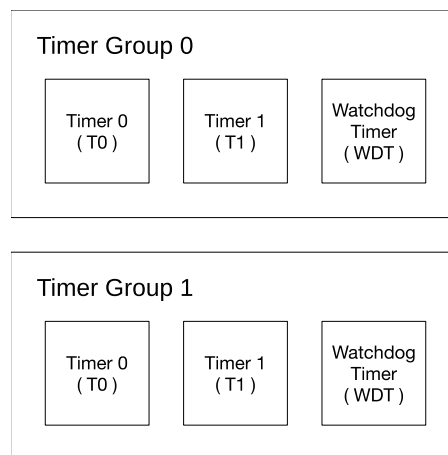

Figure 15.1-1. Timer Group Overview

Note that while the Main System Watchdog Timer registers are described in this chapter, their functional description is included in Chapter 16 [Watchdog Timers \(WDT\)](#). Therefore, the term “timer” within this chapter refers to the general-purpose timer.

#### 15.2 Features

The timer’s features are summarized as follows:

- A 54-bit time-base counter programmable to incrementing or decrementing
- Three clock sources: PLL\_F80M\_CLK or XTAL\_CLK or RC\_FAST\_CLK
- A 16-bit clock prescaler, from 2 to 65536
- Able to read real-time value of the time-base counter
- Able to halt and resume the time-base counter

- Programmable alarm generation
- Timer value reload — Auto-reload at alarm or software-controlled instant reload
- Calculate clock frequency — Calculate the measured frequency of the clock, which can be called TIMGO\_CALI\_CLK, based on the crystal clock
- Level interrupt generation
- Support several ETM tasks and events

## 15.3 Functional Description

Figure 15.3-1 shows Timer Tx in timer group TIMGn. Tx contains a 16-bit integer divider as a prescaler, a timer-based counter, and a comparator for alarm generation.

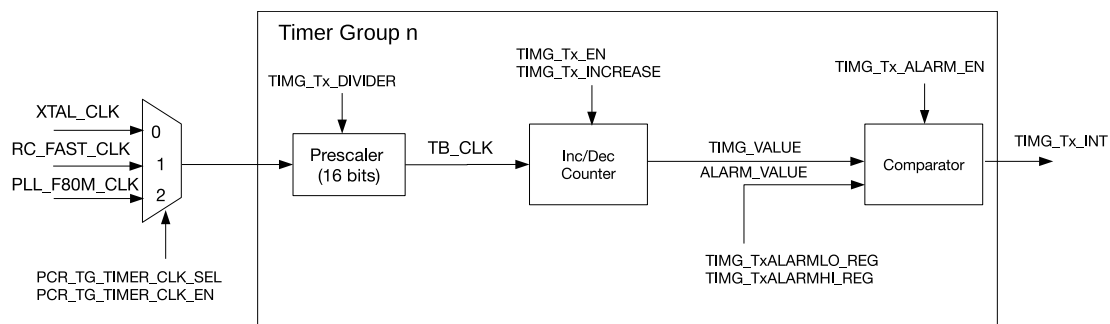

Figure 15.3-1. Timer Group Architecture

### 15.3.1 16-bit Prescaler and Clock Selection

Take the Timer Tx in timer group TIMGn as an example:

- The timer can select its clock source by setting the HP\_SYS\_CLKRST\_TIMERGRPn\_Tx\_SRC\_SEL field of the HP\_SYS\_CLKRST\_PERI\_CLK\_CTRL20\_REG register or the HP\_SYS\_CLKRST\_PERI\_CLK\_CTRL21\_REG register. When the field is 0, XTAL\_CLK is selected; when the field is 1, RC\_FAST\_CLK is selected and when the field is 2, PLL\_F80M\_CLK is selected.
- The selected clock can be switched on by setting HP\_SYS\_CLKRST\_TIMERGRPn\_Tx\_CLK\_EN field of the HP\_SYS\_CLKRST\_PERI\_CLK\_CTRL20\_REG register or the HP\_SYS\_CLKRST\_PERI\_CLK\_CTRL21\_REG register to 1 and switched off by setting it to 0. The clock is then divided by a 16-bit prescaler to generate the time-base counter clock (TB\_CLK) used by the time-base counter. The divisor of the prescaler can be configured through the TIMG\_Tx\_DIVIDER field.

TIMG\_Tx\_DIVIDER field can be configured as 0 ~ 65535 for a divisor range of 2 ~ 65536. To be more specific, when TIMG\_Tx\_DIVIDER is configured as:

- 0: the divisor is 65536
- 1: the divisor is 2
- 2: the divisor is also 2
- 3 ~ 65535: the divisor is 3 ~ 65535

To modify the 16-bit prescaler, please first configure the `TIMG_Tx_DIVIDER` field, and then set `TIMG_Tx_DIVCNT_RST` to 1. Meanwhile, the timer must be disabled (i.e., `TIMG_Tx_EN` should be cleared). Otherwise, the result can be unpredictable.

### 15.3.2 54-bit Time-base Counter

The 54-bit time-base counter is based on `TB_CLK` and can be configured to increment or decrement via the `TIMG_Tx_INCREASE` field. The time-base counter can be enabled or disabled by setting or clearing the `TIMG_Tx_EN` field, respectively. When enabled, the time-base counter increments or decrements on each cycle of `TB_CLK`. When disabled, the time-base counter is essentially frozen. Note that the `TIMG_Tx_INCREASE` field can be changed no matter whether `TIMG_Tx_EN` is set or not, and this will cause the time-base counter to change direction instantly.

To read the 54-bit value of the time-base counter, the timer value must be latched to two registers before being read by the CPU (due to the CPU being 32-bit). By writing any value to the `TIMG_TxUPDATE_REG`, the current value of the 54-bit timer starts to be latched into the `TIMG_TxLO_REG` and `TIMG_TxHI_REG` registers containing the lower 32-bits and higher 22-bits, respectively. When `TIMG_TxUPDATE_REG` is cleared by hardware, it indicates the latch operation has been completed and current timer value can be read from the `TIMG_TxLO_REG` and `TIMG_TxHI_REG` registers. `TIMG_TxLO_REG` and `TIMG_TxHI_REG` registers will remain unchanged for the CPU to read in its own time until `TIMG_TxUPDATE_REG` is written to again.

### 15.3.3 Alarm Generation

A timer can be configured to trigger an alarm when the timer's current value matches the alarm value. An alarm will cause an interrupt to occur and (optionally) an automatic reload of the timer's current value (see Section 15.3.4).

The 54-bit alarm value is configured using `TIMG_TxALARMLO_REG` and `TIMG_TxALARMHI_REG`, which represent the lower 32-bits and higher 22-bits of the alarm value, respectively. However, the configured alarm value is ineffective until the alarm is enabled by setting the `TIMG_Tx_ALARM_EN` field. To avoid alarm being enabled "too late" (i.e., the timer value has already passed the alarm value when the alarm is enabled), the hardware will trigger the alarm immediately if the current timer value is:

- higher than the alarm value (within a defined range) when the up-down counter increments
- lower than the alarm value (within a defined range) when the up-down counter decrements

Table 15.3-1 and Table 15.3-2 show the relationship between the current value of the timer, the alarm value, and when an alarm is triggered. The current time value and the alarm value are defined as follows:

- `TIMG_VALUE` = {`TIMG_TxHI_REG`, `TIMG_TxLO_REG`}
- `ALARM_VALUE` = {`TIMG_TxALARMHI_REG`, `TIMG_TxALARMLO_REG`}

Table 15.3-1. Alarm Generation When Up-Down Counter Increments

| Scenario | Range  | Alarm   |
|----------|--|---|
| 1        | $\text{ALARM\_VALUE} - \text{TIMG\_VALUE} > 2^{53}$        | Triggered   |
| 2        | $0 < \text{ALARM\_VALUE} - \text{TIMG\_VALUE} \leq 2^{53}$ | Triggered when the up-down counter counts TIMG_VALUE up to ALARM_VALUE  |
| 3        | $0 \leq \text{TIMG\_VALUE} - \text{ALARM\_VALUE} < 2^{53}$ | Triggered   |
| 4        | $\text{TIMG\_VALUE} - \text{ALARM\_VALUE} \geq 2^{53}$     | Triggered when the up-down counter restarts counting up from 0 after reaching the timer's maximum value and counts TIMG_VALUE up to ALARM_VALUE |

Table 15.3-2. Alarm Generation When Up-Down Counter Decrements

| Scenario | Range  | Alarm   |
|----------|--|---|
| 5        | $\text{TIMG\_VALUE} - \text{ALARM\_VALUE} > 2^{53}$        | Triggered   |
| 6        | $0 < \text{TIMG\_VALUE} - \text{ALARM\_VALUE} \leq 2^{53}$ | Triggered when the up-down counter counts TIMG_VALUE down to ALARM_VALUE  |
| 7        | $0 \leq \text{ALARM\_VALUE} - \text{TIMG\_VALUE} < 2^{53}$ | Triggered   |
| 8        | $\text{ALARM\_VALUE} - \text{TIMG\_VALUE} \geq 2^{53}$     | Triggered when the up-down counter restarts counting down from the timer's maximum value after reaching the minimum value and counts TIMG_VALUE down to ALARM_VALUE |

When an alarm occurs, the [TIMG\\_Tx\\_ALARM\\_EN](#) field is automatically cleared and no alarm will occur again until the [TIMG\\_Tx\\_ALARM\\_EN](#) is set next time.

### 15.3.4 Timer Reload

A timer is reloaded when a timer's current value is overwritten with a reload value stored in the [TIMG\\_Tx\\_LOAD\\_LO](#) and [TIMG\\_Tx\\_LOAD\\_HI](#) fields that correspond to the lower 32-bits and higher 22-bits of the timer's new value, respectively. However, writing a reload value to [TIMG\\_Tx\\_LOAD\\_LO](#) and [TIMG\\_Tx\\_LOAD\\_HI](#) will not cause the timer's current value to change. Instead, the reload value is ignored by the timer until a reload event occurs. A reload event can be triggered either by a software instant reload or an auto-reload at alarm.

A software instant reload is triggered by the CPU writing any value to [TIMG\\_TxLOAD\\_REG](#), which causes the timer's current value to be instantly reloaded. If [TIMG\\_Tx\\_EN](#) is set, the timer will continue incrementing or decrementing from the new value. In this case if [TIMG\\_Tx\\_ALARM\\_EN](#) is set, the timer will still trigger alarms in scenarios listed in Table 15.3-1 and 15.3-2. If [TIMG\\_Tx\\_EN](#) is cleared, the timer will remain frozen at the new value until counting is re-enabled.

An auto-reload at alarm will cause a timer reload when an alarm occurs, thus allowing the timer to continue incrementing or decrementing from the reload value. This is generally useful for resetting the timer's value when using periodic alarms. To enable auto-reload at alarm, the [TIMG\\_Tx\\_AUTORELOAD](#) field should be set. If not enabled, the timer's value will continue to increment or decrement past the alarm value after an alarm.

### 15.3.5 Event Task Matrix Feature

The TIMG<sub>n</sub> on ESP32-P4 supports the Event Task Matrix (ETM) function, which allows TIMG<sub>n</sub>'s ETM tasks to be triggered by any peripherals' ETM events, or TIMG<sub>n</sub>'s ETM events to trigger any peripherals' ETM tasks. This section introduces the ETM tasks and events related to TIMG<sub>n</sub>. For more information, please refer to [Chapter 12 Event Task Matrix \(ETM\)](#).

TIMG<sub>n</sub> can receive the following ETM tasks:

- TGO\_TASK\_CNT\_START\_TIMER0: When triggered, it will enable the time-base counter.
- TG1\_TASK\_CNT\_START\_TIMER0: When triggered, it will enable the time-base counter.
- TGO\_TASK\_CNT\_STOP\_TIMER0: When triggered, it will disable the time-base counter.
- TG1\_TASK\_CNT\_STOP\_TIMER0: When triggered, it will disable the time-base counter.

**Note:**

The above two ETM tasks have the same function as the APB configuration [TIMG\\_TO\\_EN](#). When these operations occur at the same time, the priority of each operation from high to low is as follows:

1. TGO\_TASK\_CNT\_START\_TIMER0 and TG1\_TASK\_CNT\_START\_TIMER0: When triggered, it will enable the time-base counter;
2. TGO\_TASK\_CNT\_STOP\_TIMER0 and TG1\_TASK\_CNT\_STOP\_TIMER0: When triggered, it will disable the time-base counter;
3. APB configuration [TIMG\\_TO\\_EN](#): Enable or disable the time-base counter.

- TGO\_TASK\_ALARM\_START\_TIMER0: When triggered, it will enable the alarm generation.
- TG1\_TASK\_ALARM\_START\_TIMER0: When triggered, it will enable the alarm generation.

**Note:**

Alarm generation can also be enabled through APB method configuring [TIMG\\_TO\\_ALARM\\_EN](#) and hardware events. When these operations occur at the same time, the priority of each operation from high to low is as follows:

1. TGO\_TASK\_ALARM\_START\_TIMER0 and TG1\_TASK\_ALARM\_START\_TIMER0: When triggered, it will enable the alarm generation;
2. Alarm events: When triggered, it will disable the alarm generation;
3. APB configuration [TIMG\\_TO\\_ALARM\\_EN](#): Enable or disable the alarm generation.

- TGO\_TASK\_CNT\_CAP\_TIMER0: When triggered, it will update the current counter value to the [TIMG\\_TOLO\\_REG](#) and [TIMG\\_TOHI\\_REG](#) registers.
- TG1\_TASK\_CNT\_CAP\_TIMER0: When triggered, it will update the current counter value to the [TIMG\\_TOLO\\_REG](#) and [TIMG\\_TOHI\\_REG](#) registers.
- TGO\_TASK\_CNT\_RELOAD\_TIMER0: When triggered, it will overwrite the current counter value with the reload value stored in [TIMG\\_TO\\_LOAD\\_LO](#) and [TIMG\\_TO\\_LOAD\\_HI](#).
- TG1\_TASK\_CNT\_RELOAD\_TIMER0: When triggered, it will overwrite the current counter value with the

reload value stored in [TIMG\\_TO\\_LOAD\\_LO](#) and [TIMG\\_TO\\_LOAD\\_HI](#).

TIMG $n$  can generate the following ETM events:

- TGO\_EVT\_CNT\_CMP\_TIMER0: Indicates the interrupt event of T0 in TIMG0.
- TG1\_EVT\_CNT\_CMP\_TIMER0: Indicates the interrupt event of T0 in TIMG1.

**Note:**

All the ETM tasks and events of TIMG $n$  will not take effect until the [TIMG \$n\$ \\_ETM\\_EN](#) is set to 1.

In practical applications, timer groups' ETM events can trigger their own ETM tasks.

For example, TGO\_TASK\_ALARM\_START\_TIMER0 and TG1\_TASK\_ALARM\_START\_TIMER0 can be triggered respectively by TGO\_EVT\_CNT\_CMP\_TIMER0 and TG1\_EVT\_CNT\_CMP\_TIMER0 to realize periodic alarm. For configuration steps, please refer to [15.4.4 Timer as Periodic Alarm by ETM](#).

### 15.3.6 RTC\_SLOW\_CLK Frequency Calculation

Using XTAL\_CLK as a reference, it is possible to calculate the frequency of clock sources for RTC\_SLOW\_CLK (i.e., RC\_SLOW\_CLK, RC\_FAST\_DIV\_CLK, and XTAL32K\_CLK) as follows:

1. Start periodic or one-shot frequency calculation (see Section [15.4.5](#) for details);
2. Once receiving the signal to start calculation, the counter of XTAL\_CLK and the counter of RTC\_SLOW\_CLK begin to work at the same time. When the counter of RTC\_SLOW\_CLK counts to CO, the two counters stop counting simultaneously;
3. Assume the value of XTAL\_CLK's counter is C1, and the frequency of RTC\_SLOW\_CLK would be calculated as:  $f_{rtc} = \frac{C0 \times f_{XTAL\_CLK}}{C1}$

### 15.3.7 Interrupts

ESP32-P4's TIMG $n$  can generate the following interrupt signal(s) that will be sent to the [Interrupt Matrix](#).

- TG $n$ \_Tx\_INT
- TG $n$ \_WDT\_INT

There are several internal interrupt sources from TIMG $n$  that can generate the above interrupt signal(s). The interrupt sources from TIMG $n$  are listed with their trigger conditions and the resulted interrupt signal(s) in Table [15.3-3](#).

**Table 15.3-3. TIMG $n$ 's Internal Interrupt Sources**

| Internal Interrupt Source | Trigger Condition        | Interrupt Signal   |
|---------------------------|--------------------------|--------------------|
| TIMG_T $x$ _INT           | Alarm generated by T $x$ | TG $n$ _T $x$ _INT |
| TIMG_WDT_INT              | Alarm generated by WDT   | TG $n$ _WDT_INT    |

**Note:**

For definitions of *interrupt*, *interrupt signal*, *interrupt source*, and their correlations, please refer to Chapter [11 Interrupt Matrix](#) > Section [11.2 Interrupt Terminology in ESP32-P4](#).

Each interrupt source can be configured by a common set of registers that are described in Section [Interrupt Configuration Registers](#). The specific registers can be found in Section [15.5 Register Summary](#).

## 15.4 Configuration and Usage

### 15.4.1 Timer as a Simple Clock

1. Configure the time-base counter
  - Select clock source by configuring the HP\_SYS\_CLKRST\_TIMERGRPO\_TGRT\_CLK\_SRC\_SEL field of the HP\_SYS\_CLKRST\_PERI\_CLK\_CTRL21\_REG register.
  - Configure the 16-bit prescaler by setting [TIMG\\_Tx\\_DIVIDER](#).
  - Configure the timer direction by setting or clearing [TIMG\\_Tx\\_INCREASE](#).
  - Set the timer's starting value by writing the starting value to [TIMG\\_Tx\\_LOAD\\_LO](#) and [TIMG\\_Tx\\_LOAD\\_HI](#), then reloading it into the timer by writing any value to [TIMG\\_TxLOAD\\_REG](#).
2. Start the timer by setting [TIMG\\_Tx\\_EN](#).
3. Get the timer's current value.
  - Write any value to [TIMG\\_TxUPDATE\\_REG](#) to latch the timer's current value.
  - Wait until [TIMG\\_TxUPDATE\\_REG](#) is cleared by hardware.
  - Read the latched timer value from [TIMG\\_TxLO\\_REG](#) and [TIMG\\_TxHI\\_REG](#).

### 15.4.2 Timer as One-shot Alarm

1. Configure the time-base counter following step 1 of Section [15.4.1](#).
2. Configure the alarm.
  - Configure the alarm value by setting [TIMG\\_TxALARMLO\\_REG](#) and [TIMG\\_TxALARMHI\\_REG](#).
  - Enable interrupt by setting [TIMG\\_Tx\\_INT\\_ENA](#).
3. Disable auto reload by clearing [TIMG\\_Tx\\_AUTORELOAD](#).
4. Start the alarm by setting [TIMG\\_Tx\\_ALARM\\_EN](#).
5. Handle the alarm interrupt.
  - Clear the interrupt by setting the timer's corresponding bit in [TIMG\\_Tx\\_INT\\_CLR](#).
  - Disable the timer by clearing [TIMG\\_Tx\\_EN](#).

### 15.4.3 Timer as Periodic Alarm by APB

1. Configure the time-base counter following step 1 in Section [15.4.1](#).
2. Configure the alarm following step 2 in Section [15.4.2](#).
3. Enable auto reload by setting [TIMG\\_Tx\\_AUTORELOAD](#) and configure the reload value via [TIMG\\_Tx\\_LOAD\\_LO](#) and [TIMG\\_Tx\\_LOAD\\_HI](#).

4. Start the alarm by setting [TIMG\\_Tx\\_ALARM\\_EN](#).
5. Handle the alarm interrupt (repeat on each alarm iteration).
  - Clear the interrupt by setting the timer's corresponding bit in [TIMG\\_Tx\\_INT\\_CLR](#).
  - If the next alarm requires a new alarm value and reload value (i.e., different alarm interval per iteration), then [TIMG\\_TxALARMLO\\_REG](#), [TIMG\\_TxALARMHI\\_REG](#), [TIMG\\_Tx\\_LOAD\\_LO](#), and [TIMG\\_Tx\\_LOAD\\_HI](#) should be reconfigured as needed. Otherwise, the aforementioned registers should remain unchanged.
  - Re-enable the alarm by setting [TIMG\\_Tx\\_ALARM\\_EN](#).
6. Stop the timer (on final alarm iteration).
  - Clear the interrupt by setting the timer's corresponding bit in [TIMG\\_Tx\\_INT\\_CLR](#).
  - Disable the timer by clearing [TIMG\\_Tx\\_EN](#).

#### 15.4.4 Timer as Periodic Alarm by ETM

1. Enable the ETM module's clock
2. Map ETM event to ETM task (which means using the event to trigger the task)
  - If [TIMG\\_TO\\_AUTORELOAD](#) is set to 1, map TGO\_EVT\_CNT\_CMP\_TIMER0 and TG1\_EVT\_CNT\_CMP\_TIMER0 to the TGO\_TASK\_ALARM\_START\_TIMER0 and TG1\_TASK\_ALARM\_START\_TIMER0 respectively by one ETM channel.
  - If [TIMG\\_TO\\_AUTORELOAD](#) is set to 0, in addition to mapping TGO\_EVT\_CNT\_CMP\_TIMER0 and TG1\_EVT\_CNT\_CMP\_TIMER0 to the TGO\_TASK\_ALARM\_START\_TIMER0 and TG1\_TASK\_ALARM\_START\_TIMER0, the TGO\_EVT\_CNT\_CMP\_TIMER0 and TG1\_EVT\_CNT\_CMP\_TIMER0 should also be mapped to TGO\_TASK\_CNT\_RELOAD\_TIMER0 and TG1\_TASK\_CNT\_RELOAD\_TIMER0 by another ETM channel.
3. Choose to enable the one or two ETM channels.
4. Set [TIMER\\_ETM\\_EN](#) to 1 to enable timer group's ETM events and tasks.
5. Configure the time-base counter following step 1 in Section [15.4.1](#).
6. Configure the alarm following step 2 in Section [15.4.2](#).
7. Configure the reload value via [TIMG\\_TO\\_LOAD\\_LO](#) and [TIMG\\_TO\\_LOAD\\_HI](#).
8. Handle the TGO\_EVT\_CNT\_CMP\_TIMER0 and TG1\_EVT\_CNT\_CMP\_TIMER0.
  - When alarm generates, the TGO\_EVT\_CNT\_CMP\_TIMER0 and TG1\_EVT\_CNT\_CMP\_TIMER0 also generate, and the alarm generation will be disabled by the alarm.
  - If [TIMG\\_TO\\_AUTORELOAD](#) is 1, the current counter value is overwritten by the reloaded value. The alarm generation will be reopened by TGO\_TASK\_ALARM\_START\_TIMER0 and TG1\_TASK\_ALARM\_START\_TIMER0.
  - If [TIMG\\_TO\\_AUTORELOAD](#) is 0, the current counter value is overwritten by the reloaded value because of the TGO\_TASK\_CNT\_RELOAD\_TIMER0 and TG1\_TASK\_CNT\_RELOAD\_TIMER0. The alarm generation will be reopened by TGO\_TASK\_ALARM\_START\_TIMER0 and TG1\_TASK\_ALARM\_START\_TIMER0.

9. Stop the timer (on final alarm iteration).

- Disable the ETM channels used to map timer group's event and task
- Set `TIMER_ETM_EN` to 0.
- Clear the interrupt by setting the timer's corresponding bit in `TIMG_TO_INT_CLR`.
- Disable the timer by clearing `TIMG_TO_EN`.

### 15.4.5 RTC\_SLOW\_CLK Frequency Calculation

1. One-shot frequency calculation

- Configure `HP_SYS_CLKRST_TIMERGRPO_TGRT_CLK_EN` to enable clock gate of `TIMG0_CALI_CLK`.
- Configure `HP_SYS_CLKRST_TIMERGRPO_TGRT_CLK_SRC_SEL` to select one clock as the clock source of `TIMG0_CALI_CLK`.
- Configure `HP_SYS_CLKRST_TIMERGRPO_TGRT_CLK_DIV_NUM` to output `TIMG0_CALI_CLK` after integer prescaler.
- Configure the time of calculation via `TIMG_RTC_CALI_MAX`.
- Select one-shot frequency calculation by clearing `TIMG_RTC_CALI_START_CYCLING`, and enable the two counters via `TIMG_RTC_CALI_START`.
- Once `TIMG_RTC_CALI_RDY` becomes 1, read `TIMG_RTC_CALI_VALUE` to get the value of `XTAL_CLK`'s counter, and calculate the frequency of `RTC_SLOW_CLK` according to the formula in Section 15.3.6.

2. Periodic frequency calculation

- Select the clock whose frequency is to be calculated (clock source of `RTC_SLOW_CLK`) via `HP_SYS_CLKRST_TIMERGRPO_TGRT_CLK_SRC_SEL`, and configure the time of calculation via `TIMG_RTC_CALI_MAX`.
- Select periodic frequency calculation by enabling `TIMG_RTC_CALI_START_CYCLING`.
- When `TIMG_RTC_CALI_CYCLING_DATA_VLD` is 1, `TIMG_RTC_CALI_VALUE` is valid.

3. Timeout

If the counter of `RTC_SLOW_CLK` cannot finish counting in `TIMG_RTC_CALI_TIMEOUT_RST_CNT` cycles, `TIMG_RTC_CALI_TIMEOUT` will be set to indicate a timeout.

## 15.5 Register Summary

The addresses in this section are relative to Timer Group base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name  | Description   | Address | Access |
|---|---|---------|--------|
| <b>T0 Control and configuration registers</b>       |   |         |        |
| <a href="#">TIMG_TOCONFIG_REG</a>                   | Timer 0 configuration register  | 0x0000  | varies |
| <a href="#">TIMG_TOLO_REG</a>                       | Timer 0 current value, low 32 bits  | 0x0004  | RO     |
| <a href="#">TIMG_TOHI_REG</a>                       | Timer 0 current value, high 22 bits   | 0x0008  | RO     |
| <a href="#">TIMG_TOUUPDATE_REG</a>                  | Write to copy current timer value to <a href="#">TIMG_TOLO_REG</a> or <a href="#">TIMG_TOHI_REG</a> | 0x000C  | R/W/SC |
| <a href="#">TIMG_TOALARMLO_REG</a>                  | Timer 0 alarm value, low 32 bits  | 0x0010  | R/W    |
| <a href="#">TIMG_TOALARMHI_REG</a>                  | Timer 0 alarm value, high 22 bits   | 0x0014  | R/W    |
| <a href="#">TIMG_TOLOADLO_REG</a>                   | Timer 0 reload value, low 32 bits   | 0x0018  | R/W    |
| <a href="#">TIMG_TOLOADHI_REG</a>                   | Timer 0 reload value, high 22 bits  | 0x001C  | R/W    |
| <a href="#">TIMG_TOLOAD_REG</a>                     | Write to reload timer from <a href="#">TIMG_TOLOADLO_REG</a> or <a href="#">TIMG_TOLOADHI_REG</a>   | 0x0020  | WT     |
| <b>T1 Control and configuration registers</b>       |   |         |        |
| <a href="#">TIMG_T1CONFIG_REG</a>                   | Timer 1 configuration register  | 0x0024  | varies |

## 15.6 Registers

The addresses in this section are relative to Timer Group base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section [Programming Reserved Register Field](#).

**Register 15.1. TIMG\_T<sub>x</sub>CONFIG\_REG (x: 0-1) (0x0000+0x24\*x)**

|   |    |    |    |                              |  |  |  |  |  |  |  |  |    |    |   |            |   |   |   |
|---|----|----|----|------------------------------|--|--|--|--|--|--|--|--|----|----|---|------------|---|---|---|
| TIMG_T <sub>x</sub> _EN<br>TIMG_T <sub>x</sub> _INCREASE<br>TIMG_T <sub>x</sub> _AUTORELOAD |    |    |    | TIMG_T <sub>x</sub> _DIVIDER |  |  |  |  |  |  |  | TIMG_T <sub>x</sub> _DIVCNT_RST<br>(reserved)<br>TIMG_T <sub>x</sub> _ALARM_EN |    |    |   | (reserved) |   |   |   |
| 31  | 30 | 29 | 28 | 13                           |  |  |  |  |  |  |  | 12   | 11 | 10 | 9 | 0          |   |   |   |
| 0   | 1  | 1  |    | 0x01                         |  |  |  |  |  |  |  | 0  | 0  | 0  | 0 | 0          | 0 | 0 | 0 |

Reset

**TIMG\_T<sub>x</sub>\_ALARM\_EN** Configures whether to enable Timer T<sub>x</sub> alarm function. This bit will be automatically cleared once an alarm occurs.

0: Disable

1: Enable

(R/W/SC)

**TIMG\_T<sub>x</sub>\_DIVCNT\_RST** Configures to reset Timer T<sub>x</sub>'s clock divider counter.

0: No effect

1: Reset

(WT)

**TIMG\_T<sub>x</sub>\_DIVIDER** Represents Timer x clock (T<sub>x</sub>\_clk) prescaler value. (R/W)

**TIMG\_T<sub>x</sub>\_AUTORELOAD** Configures to enable Timer T<sub>x</sub> auto-reload function at the time of alarm.

0: No effect

1: Enable

(R/W)

**TIMG\_T<sub>x</sub>\_INCREASE** Configures the counting direction of Timer T<sub>x</sub> time-base counter.

0: Decrement

1: Increment

(R/W)

**TIMG\_T<sub>x</sub>\_EN** Configures whether to enable Timer T<sub>x</sub> time-base counter.

0: Disable

1: Enable

(R/W/SS/SC)

**Register 15.2. TIMG\_T<sub>x</sub>LO\_REG (x: 0-1) (0x0004+0x24\*x)**

|            |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |
|------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|---|
| TIMG_Tx_LO |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |
| 31         |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |
| 0x000000   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |
| Reset      |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |

**TIMG\_T<sub>x</sub>LO** Represents the low 32 bits of the time-base counter of Timer T<sub>x</sub>. Valid only after writing to **TIMG\_T<sub>x</sub>UPDATE\_REG**.  
 Measurement unit: T<sub>x</sub>\_clk.  
 (RO)

**Register 15.3. TIMG\_T<sub>x</sub>HI\_REG (x: 0-1) (0x0008+0x24\*x)**

|                     |  |  |  |  |  |  |  |  |  |  |            |  |  |  |  |  |  |  |  |  |  |    |  |  |  |  |  |  |  |  |  |  |       |  |  |  |  |  |  |  |  |  |  |   |
|---------------------|--|--|--|--|--|--|--|--|--|--|------------|--|--|--|--|--|--|--|--|--|--|----|--|--|--|--|--|--|--|--|--|--|-------|--|--|--|--|--|--|--|--|--|--|---|
| (reserved)          |  |  |  |  |  |  |  |  |  |  | TIMG_TO_HI |  |  |  |  |  |  |  |  |  |  |    |  |  |  |  |  |  |  |  |  |  |       |  |  |  |  |  |  |  |  |  |  |   |
| 31                  |  |  |  |  |  |  |  |  |  |  | 22         |  |  |  |  |  |  |  |  |  |  | 21 |  |  |  |  |  |  |  |  |  |  |       |  |  |  |  |  |  |  |  |  |  | 0 |
| 0 0 0 0 0 0 0 0 0 0 |  |  |  |  |  |  |  |  |  |  | 0x0000     |  |  |  |  |  |  |  |  |  |  |    |  |  |  |  |  |  |  |  |  |  | Reset |  |  |  |  |  |  |  |  |  |  |   |

**TIMG\_T<sub>x</sub>HI** Represents the high 22 bits of the time-base counter of Timer T<sub>x</sub>. Valid only after writing to **TIMG\_T<sub>x</sub>UPDATE\_REG**.  
 Measurement unit: T<sub>x</sub>\_clk.  
 (RO)

**Register 15.4. TIMG\_T<sub>x</sub>UPDATE\_REG (x: 0-1) (0x000C+0x24\*x)**

|                            |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |
|----------------------------|----|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| TIMG_T <sub>x</sub> UPDATE |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |
| 31                         | 30 |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |
| 0                          | 0  | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| Reset                      |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |

**TIMG\_T<sub>x</sub>UPDATE** Configures to latch the counter value.  
 0: Latch  
 1: Latch  
 (R/W/SC)

**Register 15.5. TIMG\_T<sub>x</sub>ALARMLO\_REG (x: 0-1) (0x0010+0x24\*x)**

|                               |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |
|-------------------------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|---|
| TIMG_T <sub>x</sub> _ALARM_LO |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |
| 31                            |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |
| 0x000000                      |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |
| Reset                         |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |

**TIMG\_T<sub>x</sub>\_ALARM\_LO** Configures the low 32 bits of Timer T<sub>x</sub> alarm trigger time-base counter value.

Valid only when **TIMG\_T<sub>x</sub>\_ALARM\_EN** is 1.

Measurement unit: T<sub>x</sub>\_clk.

(R/W)

**Register 15.6. TIMG\_T<sub>x</sub>ALARMHI\_REG (x: 0-1) (0x0014+0x24\*x)**

**TIMG\_WDT\_APPCPU\_RESET\_EN** Configures whether to mask the APP CPU reset generated by MWDT. Valid only when write protection is disabled.

0: Mask

1: Unmask

(R/W)

**TIMG\_WDT\_PROCPU\_RESET\_EN** Configures whether to mask the PRO CPU reset generated by MWDT. Valid only when write protection is disabled.

0: Mask

1: Unmask

(R/W)

**TIMG\_WDT\_FLASHBOOT\_MOD\_EN** Configures whether to enable flash boot protection.

0: Disable

1: Enable

(R/W)

**TIMG\_WDT\_SYS\_RESET\_LENGTH** Configures the system reset signal length. Valid only when write protection is disabled.

Measurement unit: mwdt\_clk.

0: 100 ns

4: 500 ns

1: 200 ns

5: 800 ns

2: 300 ns

6: 1.6  $\mu$ s

3: 400 ns

7: 3.2  $\mu$ s

(R/W)

**Register 15.10. TIMG\_WDTCONFIG0\_REG (0x0048)**

Continued from the previous page...

**TIMG\_WDT\_CPU\_RESET\_LENGTH** Configures the CPU reset signal length. Valid only when write protection is disabled.

Measurement unit: mwdt\_clk.

|           |                |
|-----------|----------------|
| 0: 100 ns | 4: 500 ns      |
| 1: 200 ns | 5: 800 ns      |
| 2: 300 ns | 6: 1.6 $\mu$ s |
| 3: 400 ns | 7: 3.2 $\mu$ s |

(R/W)

**TIMG\_WDT\_CONF\_UPDATE\_EN** Configures to update the WDT configuration registers.

0: No effect

1: Update

(WT)

**TIMG\_WDT\_STG3** Configures the timeout action of stage 3. Valid only when write protection is disabled.

0: No effect

1: Interrupt

2: Reset CPU

3: Reset system

(R/W)

**TIMG\_WDT\_STG2** Configures the timeout action of stage 2. Valid only when write protection is disabled.

0: No effect

1: Interrupt

2: Reset CPU

3: Reset system

(R/W)

**TIMG\_WDT\_STG1** Configures the timeout action of stage 1. Valid only when write protection is disabled.

0: No effect

1: Interrupt

2: Reset CPU

3: Reset system

(R/W)

Continued on the next page...

**Register 15.10. TIMG\_WDTCONFIGO\_REG (0x0048)**

Continued from the previous page...

**TIMG\_WDT\_STGO** Configures the timeout action of stage 0. Valid only when write protection is disabled.

0: No effect

1: Interrupt

2: Reset CPU

3: Reset system

(R/W)

**TIMG\_WDT\_EN** Configures whether or not to enable the MWDT. Valid only when write protection is disabled.

0: Disable

1: Enable

(R/W)

### Register 15.11. TIMG\_WDTCONFIG1\_REG (0x004C)

[illegible]

**TIMG\_WDT\_DIVCNT\_RST** Configures whether to reset WDT's clock divider counter.

0: No effect

1: Reset

(WT)

**TIMG\_WDT\_CLK\_PRESCALE** Configures MWDAT clock prescaler value. Valid only when write protection is disabled.

MWDT clock period = 12.5 ns \*TIMG\_WDT\_CLK\_PRESCALE. (R/W)

### Register 15.12. TIMG\_WDTCONFIG2\_REG (0x0050)

**TIMG\_WDT\_STGO\_HOLD** Configures the stage 0 timeout value. Valid only when write protection is disabled.

Measurement unit: mwdt\_clk.

(R/W)

**Register 15.13. TIMG\_WDTCONFIG3\_REG (0x0054)**

**TIMG\_WDT\_STG1\_HOLD** Configures the stage 1 timeout value. Valid only when write protection is disabled.

Measurement unit: mwdt\_clk.

(R/W)

**Register 15.14. TIMG\_WDTCONFIG4\_REG (0x0058)**

**TIMG\_WDT\_STG2\_HOLD** Configures the stage 2 timeout value. Valid only when write protection is disabled.

Measurement unit: mwdt\_clk.

(R/W)

**Register 15.15. TIMG\_WDTCONFIG5\_REG (0x005C)**

**TIMG\_WDT\_STG3\_HOLD** Configures the stage 3 timeout value. Valid only when write protection is disabled.

Measurement unit: mwdt\_clk.

(R/W)

Register 15.16. TIMG\_WDTFEED\_REG (0x0060)

**TIMG\_WDT\_FEED** Write any value to feed the MWDT. Valid only when write protection is disabled. (WT)

Register 15.17. TIMG\_WDTWPROTECT\_REG (0x0064)

**TIMG\_WDT\_WKEY** Configures a different value than its reset value to enable write protection. (R/W)

Register 15.18. TIMG\_RTCCALICFG\_REG (0x0068)

|                     |      |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                   |    |    |    |    |    |   |   |   |   |   |   |   |   |   |   |                                 |   |   |   |   |       |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

**TIMG\_RTC\_CALI\_START\_CYCLING** Configures the frequency calculation mode.

- 0: One-shot frequency calculation
- 1: Periodic frequency calculation.

(R/W)

**TIMG\_RTC\_CALI\_RDY** Represents whether one-shot frequency calculation is done.

- 0: Not done
- 1: Done

(RO)

**TIMG\_RTC\_CALI\_MAX** Configures the time to calculate RTC slow clock’s frequency.

Measurement unit: XTAL\_CLK.

(R/W)

**TIMG\_RTC\_CALI\_START** Configures whether to enable one-shot frequency calculation.

- 0: Disable
- 1: Enable

(R/W)

Register 15.19. TIMG\_RTCCALICFG1\_REG (0x006C)

|                     |  |  |  |  |  |  |   |   |   |            |   |   |   |                                |  |  |  |

**TIMG\_RTC\_CALI\_TIMEOUT** Represents whether RTC frequency calculation is timeout.

0: No timeout

1: Timeout

(RO)

**TIMG\_RTC\_CALI\_TIMEOUT\_RST\_CNT** Configures the cycles that reset frequency calculation timeout.

Measurement unit: XTAL\_CLK.

(R/W)

**TIMG\_RTC\_CALI\_TIMEOUT\_THRES** Configures the threshold value for the RTC frequency calculation timer. If the timer's value exceeds this threshold, a timeout is triggered.

Measurement unit: XTAL\_CLK.

(R/W)

Register 15.21. TIMG\_INT\_ENA\_TIMERS\_REG (0x0070)

**TIMG\_CLK\_EN** Configures whether to enable gate clock signal for registers.

0: Force clock on for registers

1: Support clock only when registers are read or written to by software.

(R/W)

## Chapter 16

# Watchdog Timers (WDT)

## 16.1 Overview

Watchdog timers are hardware timers used to detect and recover from malfunctions. They must be periodically fed (reset) to prevent a timeout. A system/software that is behaving unexpectedly (e.g., is stuck in a software loop or in overdue events) will fail to feed the watchdog, thus the watchdog timer will time out and trigger an interrupt or reset, directing the system to a known state for exception handling or a restart. Therefore, watchdog timers are useful for detecting and handling erroneous system/software behavior.

As shown in Figure 16.1-1, ESP32-P4 contains three digital watchdog timers: one in each of the two timer groups in Chapter 15 *Timer Group (TIMG)* (called Main System Watchdog Timers, or MWDT) and one in the LP system (called the RTC Watchdog Timer, or RWDT). Each digital watchdog timer allows for four separately configurable stages, and each stage can be programmed to take one action upon timeout, unless the watchdog is fed or disabled. MWDT supports three timeout actions: interrupt, HP CPU reset, and HP core reset, while RWDT supports four timeout actions: interrupt, HP CPU reset, HP core reset, and system reset (see details in Section 16.2.2.2 *Stages and Timeout Actions*). A timeout value can be set for each stage individually.

In SPI Boot mode, RWDT and the MWDT in timer group 0 are enabled automatically in order to detect errors that may occur during the flash boot process and facilitate recovery.

ESP32-P4 also has one analog watchdog timer: Super watchdog (SWD). It is an ultra-low-power circuit in analog domain that helps to prevent the system from operating in a sub-optimal state and resets the system if required.

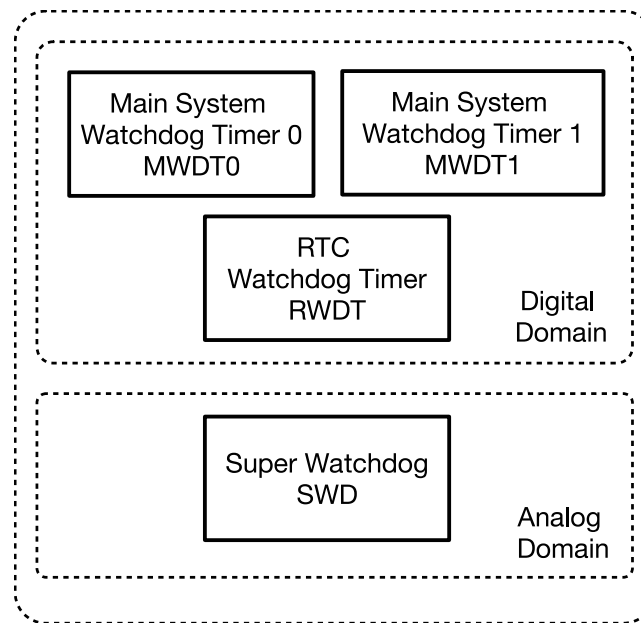

Figure 16.1-1. Watchdog Timers Overview

Note that while this chapter provides the functional descriptions of the watchdog timer's, MWDT register descriptions are detailed in Chapter 15 *Timer Group (TIMG)*, and the RWDT and SWD register descriptions are detailed in Section 16.5 *Register Summary*.

## 16.2 Digital Watchdog Timers

### 16.2.1 Features

Watchdog timers have the following features:

- Four stages, each with a separately programmable timeout value and timeout action
- Timeout actions:
  - MWDT: interrupt, HP CPU reset, HP core reset
  - RWDT: interrupt, HP CPU reset, HP core reset, system reset
- Flash boot protection under SPI Boot mode at stage 0:
  - MWDT0: HP core reset upon timeout
  - RWDT: system reset upon timeout
- Write protection that makes WDT register read only unless unlocked
- 32-bit timeout counter
- Clock source:
  - MWDT: PLL\_F80M\_CLK, RC\_FAST\_CLK or XTAL\_CLK
  - RWDT: LP\_DYN\_SLOW\_CLK

## 16.2.2 Functional Description

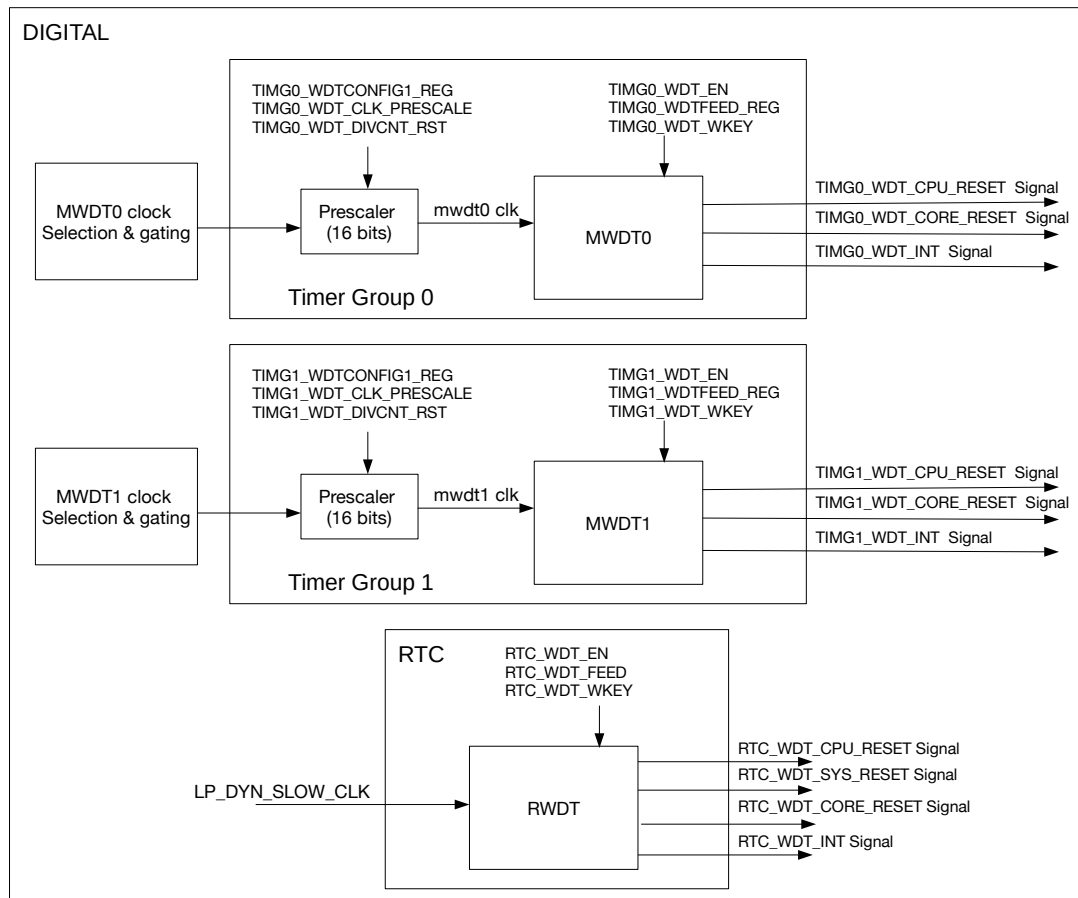

Figure 16.2-1. Digital Watchdog Timers in ESP32-P4

Figure 16.2-1 shows the three watchdog timers in ESP32-P4 digital systems.

### 16.2.2.1 Clock Source and 32-Bit Counter

At the core of each watchdog timer is a 32-bit counter.

Take MWDTO as an example:

- MWDTO can select between the `PLL_F80M_CLK`, `RC_FAST_CLK` or `XTAL_CLK` (external) clock as its clock source by setting the `HP_SYS_TIMERGRPO_WDT_SRC_SEL` field of the `HP_SYS_CLKRST_PERI_CLK_CTRL20_REG` register.
- The selected clock is switched on by setting `HP_SYS_TIMERGRPO_WDT_CLK_EN` field of the `HP_SYS_CLKRST_PERI_CLK_CTRL20_REG` register to 1 and switched off by setting it to 0. Then the selected clock is divided by a 16-bit configurable prescaler. See more details in Table 9.2-1 of Chapter 9.
- The 16-bit prescaler for MWDT is configured via the `TIMG_WDT_CLK_PRESCALE` field of `TIMG_WDTCONFIG1_REG`. When `TIMG_WDT_DIVCNT_RST` field is set, the prescaler is reset and it can be re-configured at once.

In contrast, the clock source of RWDT is derived directly from `LP_DYN_SLOW_CLK` (see details in Chapter 9

*Reset and Clock*).

MWDT and RWDT are enabled by setting the [TIMG\\_WDT\\_EN](#) and [RTC\\_WDT\\_EN](#) fields respectively. When enabled, the 32-bit counters of the watchdog will increment on each source clock cycle until the timeout value of the current stage is reached (i.e., timeout of the current stage). When this occurs, the current counter value is reset to zero and the next stage will become active. If a watchdog timer is fed by software, the timer will return to stage 0 and reset its counter value to zero. Software can feed a watchdog timer by writing any value to [TIMG\\_WDTFEED\\_REG](#) for MDWT and by writing 1 to [RTC\\_WDT\\_FEED](#) for RWDT.

### 16.2.2.2 Stages and Timeout Actions

Timer stages allow for a timer to have a series of different timeout values and corresponding timeout action. When one stage times out, the timeout action is triggered, the counter value is reset to zero, and the next stage becomes active.

MWDT/RWDT offers four stages (referred to as stages 0 to 3). The watchdog timers will progress through each stage in a loop (i.e., from stage 0 to 3, then back to stage 0).

Timeout values of each stage for MWDT are configured in [TIMG\\_WDTCONFIG<sub>i</sub>\\_REG](#) (where *i* ranges from 2 to 5), whilst timeout values for RWDT are configured using [RTC\\_WDT\\_STG<sub>j</sub>\\_HOLD](#) field (where *j* ranges from 0 to 3).

Please note that the timeout value of stage 0 for RWDT ( $Thold_0$ ) is determined by the combination of the [EFUSE\\_WDT\\_DELAY\\_SEL](#) field of eFuse register [EFUSE\\_RD\\_REPEAT\\_DATA0\\_REG](#) and [RTC\\_WDT\\_STG0\\_HOLD](#) field. The relationship is as follows:

$$T_{hold0} = \text{RTC\_WDT\_STG0\_HOLD} \ll (\text{EFUSE\_WDT\_DELAY\_SEL} + 1)$$

where  $\ll$  is a left-shift operator. For example, if [RTC\\_WDT\\_STG0\\_HOLD](#) is configured as 100 and [EFUSE\\_WDT\\_DELAY\\_SEL](#) is 1, the  $Thold_0$  will be 400 cycles.

Upon the timeout of each stage, one of the following timeout actions will be executed:

**Table 16.2-1. Timeout Actions**

| Timeout Action | Description  |
|----------------|--|
| Interrupt      | Trigger an interrupt   |
| HP CPU reset   | Reset the HP CPU0 and HP CPU1  |
| HP core reset  | HP core reset resets HP CPU0, HP CPI1, HP peripherals, HP GPIO, etc. |
| System reset   | Reset the whole digital system, including the LP system.             |
| Disabled       | No effect on the system  |

For MWDT, the timeout action of all stages is configured in [TIMG\\_WDTCONFIG0\\_REG](#). Likewise for RWDT, the timeout action is configured in [RTC\\_WDT\\_CONFIG0\\_REG](#).

### 16.2.2.3 Write Protection

Watchdog timers are critical to detecting and handling erroneous system/software behavior, thus should not be disabled easily (e.g., due to a misplaced register write). Therefore, MWDT and RWDT incorporate a write

protection mechanism that prevent the watchdogs from being disabled or tampered with due to an accidental write.

The write protection mechanism is implemented using a write-key field for each timer ([TIMG\\_WDT\\_WKEY](#) for MWDT, [RTC\\_WDT\\_WKEY](#) for RWDT). The value 0x50D83AA1 must be written to the watchdog timer's write-key field before any other register of the same watchdog timer can be changed. Any attempts to write to a watchdog timer's registers (other than the write-key field itself) whilst the write-key field's value is not 0x50D83AA1 will be ignored. The recommended procedure for accessing a watchdog timer is as follows:

1. Disable the write protection by writing the value 0x50D83AA1 to the timer's write-key field.
2. Make the required modification of the watchdog such as feeding or changing its configuration.
3. Re-enable write protection by writing any value other than 0x50D83AA1 to the timer's write-key field.

#### 16.2.2.4 Flash Boot Protection

Under the SPI boot mode, MWDT0 as well as RWDT, are automatically enabled. Stage 0 for the enabled MWDT0 is automatically configured as HP core reset action upon timeout, known as HP core reset. Likewise, stage 0 for RWDT is configured to system reset, which resets the main system and RTC when it times out. After SPI booting, [TIMG\\_WDT\\_FLASHBOOT\\_MOD\\_EN](#) and [RTC\\_WDT\\_FLASHBOOT\\_MOD\\_EN](#) should be cleared to stop the flash boot protection procedure for both MWDT0 and RWDT respectively. After this, MWDT0 and RWDT can be configured by software.

## 16.3 Super Watchdog

Super watchdog (SWD) is an ultra-low-power circuit in analog domain that helps to prevent the system from operating in a sub-optimal state and resets the system (system reset) if required. SWD contains a watchdog circuit that needs to be fed for at least once during its timeout period, which is slightly less than one second. About 100 ms before watchdog timeout, it will also send out a WD\_INTR signal as a request to remind the system to feed the watchdog.

If the system doesn't respond to SWD feed request and watchdog finally times out, SWD will generate a system level signal SWD\_RSTB to reset whole digital circuits on the chip (system reset) .

The source of the clock for SWD is constant and can not be selected.

### 16.3.1 Features

SWD has the following features:

- Ultra-low power
- Interrupt to indicate that the SWD is about to time out
- Various dedicated methods for software to feed SWD, which enables SWD to monitor the working state of the whole operating system

### 16.3.2 Super Watchdog Controller

### 16.3.2.1 Structure

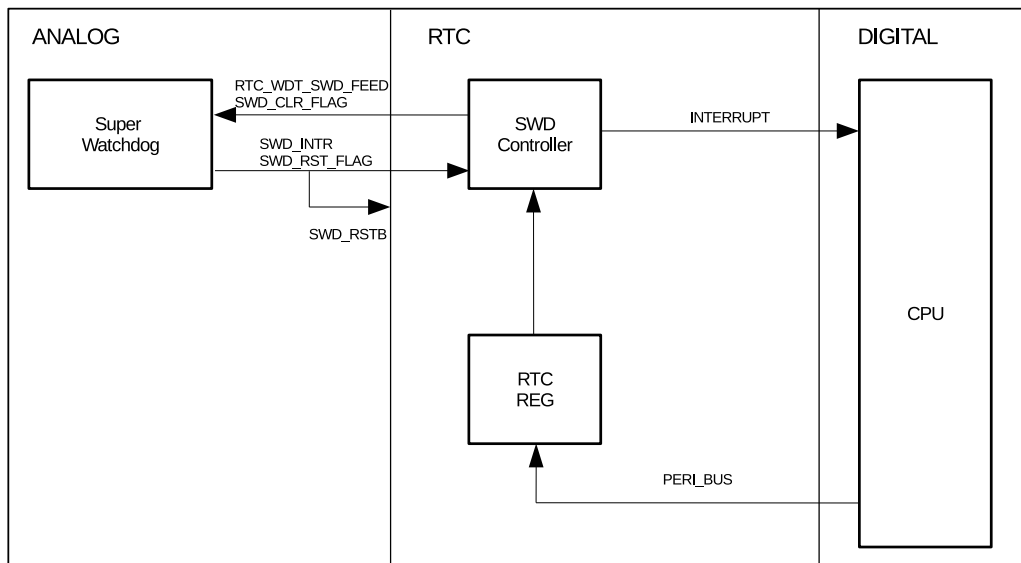

Figure 16.3-1. Super Watchdog Controller Structure

### 16.3.2.2 Workflow

In normal state:

- SWD controller receives feed request from SWD.
- SWD controller can send an interrupt to main CPU.
- Main CPU can feed SWD directly by setting [RTC\\_WDT\\_SWD\\_FEED](#).
- When trying to feed SWD, CPU needs to disable SWD controller's write protection by writing 0x50D83AA1 to [RTC\\_WDT\\_SWD\\_WKEY](#). This prevents SWD from being fed by mistake when the system is operating in sub-optimal state.
- If setting [RTC\\_WDT\\_SWD\\_AUTO\\_FEED\\_EN](#) to 1, SWD controller can also feed SWD itself without any interaction with CPU.

After reset:

- Check `LP_AONCLKRST_LPCORE_RESET_CAUSE[4:0]` for the cause of HP CPU reset.  
If `LP_AONCLKRST_LPCORE_RESET_CAUSE[4:0] == 0x12`, it indicates that the cause is SWD reset.
- Set [RTC\\_WDT\\_SWD\\_RST\\_FLAG\\_CLR](#) to clear the SWD reset flag.

## 16.4 Interrupts

For watchdog timer interrupts, please refer to Section [15.3.7 Interrupts](#) in Chapter [15 Timer Group \(TIMG\)](#).

## 16.5 Register Summary

The addresses in this section are relative to RTC\_WDT base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name                                     | Description                                     | Address | Access   |
|--|---|---------|----------|
| <b>configuration register</b>            |   |         |          |
| <a href="#">RTC_WDT_CONFIG0_REG</a>      | Configure the RWDT operation                    | 0x0000  | R/W      |

| Reset            |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |

**RTC\_WDT\_SWD\_WKEY** Configure this field to lock or unlock SWD's configuration registers.  
0x50D83AA1: unlock the SWD configuration register.  
Others value: lock the SWD configuration register which can't be modified by the software.  
(R/W)

Register 16.10. RTC\_WDT\_INT\_RAW\_REG (0x0024)

|  |    |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |       |
|--|----|----|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|-------|
| RTC_WDT_SWDT_INT_RAW<br>RTC_WDT_RWDT_INT_RAW<br>(reserved) |    |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |       |
| 31   | 30 | 29 |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   | 0     |
| 0  | 0  | 0  | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | Reset |

**RTC\_WDT\_SWDT\_INT\_RAW** Represents the SWD whether or not has generated timeout interrupt.  
0: No  
1: Yes  
(R/WTC/SS)

**RTC\_WDT\_RWDT\_INT\_RAW** Represents the RWDT whether or not generates timeout interrupt.  
0: No  
1: Yes  
(R/WTC/SS)

### Register 16.11. RTC\_WDT\_INT\_ST\_REG (0x0028)

[illegible]

**RTC\_WDT\_SWDT\_INT\_ST** Represents the SWD whether or not has generated and sent timeout interrupt to CPU.

0: No

1: Yes

(RO)

**RTC\_WDT\_RWDT\_INT\_ST** Represents the RWDT whether or not generates and sends timeout interrupt to CPU.

0: No

1: Yes

(RO)

### Register 16.12. RTC\_WDT\_INT\_ENA\_REG (0x002C)

Diagram of the 32-bit RWDW register structure:

- Bit 31: RTC\_WDT\_SWDT\_INT\_ENA
- Bit 30: RTC\_WDT\_SWDT\_INT\_ENA
- Bits 29-0: (reserved)
- Bit 0: Reset

**RTC\_WDT\_SWDT\_INT\_ENA** Configure whether or not to enable the SWD to send timeout interrupt.

0: Disable

1: Enable

(R/W)

**RTC\_WDT\_RWDT\_INT\_ENA** Configure whether or not to enable the RWDT to send timeout interrupt.

0: Disable

1: Enable

(R/W)

Register 16.13. RTC\_WDT\_INT\_CLR\_REG (0x0030)

**RTC\_WDT\_SWDT\_INT\_CLR** Configure whether to clear the timeout interrupt signal sent by SWD to CPU.  
0: No  
1: Yes  
(WT)

**RTC\_WDT\_RWDT\_INT\_CLR** Configure whether to clear the timeout interrupt signal sent by RWDT to CPU.  
0: No  
1: Yes  
(WT)

Register 16.14. RTC\_WDT\_DATE\_REG (0x03FC)

**RTC\_WDT\_DATE** Version control register. (R/W)  
**RTC\_WDT\_CLK\_EN** Reserved. (R/W)

## Chapter 17

### RTC Timer

#### 17.1 Introduction

RTC Timer is an important module for implementing low power management of ESP32-P4. Based on a 48-bit readable counter, RTC Timer is mainly used as a system timer in low power mode when the timer peripheral in the HP system is unavailable. It also allows for configuring timer interrupts and logging the time when specific events happen in the system. The supported events are described in the [17.3 Functional Description](#).

#### 17.2 Feature List

RTC Timer has the following features:

- 48-bit counter
- Time logging when one of the following events happens:
  - HP system reset
  - CPU enters stall state
  - CPU exits stall state
  - Crystal powers up
  - Crystal powers down
- Time logging through register configuration
- Occurrence time cached of the most recent two specific events
- Generation of interrupts at target times, which are configurable. It is also possible to configure two target times simultaneously.
- Uninterrupted operation during any reset or sleep mode, except for power-on reset of LP system.

#### 17.3 Functional Description

- 48-bit counter
  - The implementation of the RTC Timer is based on a 48-bit counter, driven by the RC\_SLOW\_CLK in the AlwaysOn power domain. It uses continuous loop counting (except during LP system reset), and an overflow interrupt is generated when the 48-bit counter overflows.
- Log the occurrence time of specific events
  - RTC Timer supports logging the occurrence time of three types of events:

- \* HP system reset
  - \* CPU enters or exits stall state
  - \* Crystal powers up or down
- The above three types of events have their own independent configuration registers. When the configuration registers are enabled, if the corresponding events occur, the hardware pulse generated will trigger the RTC Timer to log the current time. The corresponding configuration registers are shown in the table below.

**Table 17.3-1. Configure RTC Timer to Log the Occurrence Time of Specific Events**

| Configuration Register                         | Description  |
|--|--|
| <a href="#">RTC_TIMER_MAIN_TIMER_SYS_RST</a>   | Enable the RTC Timer to log the time of system reset.                              |
| <a href="#">RTC_TIMER_MAIN_TIMER_SYS_STALL</a> | Enable the RTC Timer to log the time when the CPU enters or exits the stall state. |
| <a href="#">RTC_TIMER_MAIN_TIMER_XTAL_OFF</a>  | Enable the RTC Timer to log the time when the crystal powers up or down.           |

- Log the current time through software configuration.
  - In addition to the above three specific events that can trigger the RTC Timer to log the time, the RTC Timer can also record the current time through the configuration register [RTC\\_TIMER\\_MAIN\\_TIMER\\_UPDATE](#).
  - A pulse signal will be generated by configuring the [RTC\\_TIMER\\_MAIN\\_TIMER\\_UPDATE](#), which will trigger the RTC Timer to record the current time.
- Generate counting interrupts at target times
  - RTC Timer supports configuring two target times simultaneously, referred to as target time 0 and target time 1. When the timer reaches target time 0, it will trigger the [RTC\\_TIMER\\_CMPO\\_INT](#) interrupt. Similarly, when the timer reaches Target Moment 1, it will trigger the [RTC\\_TIMER\\_CMP1\\_INT](#) interrupt.
  - Configure the target times through the registers below:

**Table 17.3-2. Target times Configuration**

| Configuration Register                                      | Description   |
|---|---|
| <a href="#">RTC_TIMER_MAIN_TIMER_TAR_EN<math>n</math></a>   | $n = 0$ or $1$ , enable target time configuration.              |
| <a href="#">RTC_TIMER_MAIN_TIMER_TAR_LOW<math>n</math></a>  | $n = 0$ or $1$ , configure the low 32 bits of the target time.  |
| <a href="#">RTC_TIMER_MAIN_TIMER_TAR_HIGH<math>n</math></a> | $n = 0$ or $1$ , configure the high 16 bits of the target time. |

- Read the time cached in the RTC Timer
  - There are two sets of registers used to cache the occurrence time of specific events, namely register group 0 and register group 1.
  - Register group 0 includes register [RTC\\_TIMER\\_MAIN\\_BUFO\\_LOW\\_REG](#) and [RTC\\_TIMER\\_MAIN\\_BUF1\\_HIGH\\_REG](#) which are used to cache the count value of the RTC Timer under the current trigger.

- Register group 1 includes register [RTC\\_TIMER\\_MAIN\\_BUF1\\_LOW\\_REG](#) and [RTC\\_TIMER\\_MAIN\\_BUF1\\_HIGH\\_REG](#), which are used to cache the count value of the RTC Timer from the last trigger.
- On a new trigger, the record from the previous trigger will be moved from register group 0 to register group 1 (and the previous record in register group 1 will be overwritten), and the record of this trigger will be stored in register group 0. Therefore, only the last two triggers can be logged at any time.

## 17.4 Event Task Matrix Feature

The RTC Timer on ESP32-P4 supports the Event Task Matrix (ETM) function, which allows RTC Timer's ETM tasks to be triggered by any peripherals' ETM events, or RTC Timer's ETM events to trigger any peripherals' ETM tasks. This section introduces the ETM tasks and events related to RTC Timer. For more information, please refer to Chapter [12 Event Task Matrix \(ETM\)](#).

RTC Timer doesn't receive any ETM tasks:

RTC Timer can generate the following ETM events:

- [RTC\\_EVT\\_CMP](#): Indicate that the RTC Timer reaches the target time 0 configured by [RTC\\_TIMER\\_MAIN\\_TIMER\\_TAR\\_LOW0](#) and [RTC\\_TIMER\\_MAIN\\_TIMER\\_TAR\\_HIGH0](#).
- [RTC\\_EVT\\_OVF](#): Indicate the 48-bit counter overflow.
- [RTC\\_EVT\\_TICK](#): Indicates the event that occurs when the RTC timer increments by 1.

## 17.5 Interrupts

ESP32-P4's RTC Timer can generate the following interrupt signal(s) that will be sent to the [Interrupt Matrix](#).

- [LP\\_TIMER\\_REG\\_O\\_INTR](#)
- [LP\\_TIMER\\_REG\\_1\\_INTR](#)

There are several internal interrupt sources from RTC Timer that can generate the above interrupt signal(s). The interrupt sources from RTC Timer are listed with their trigger conditions and the resulted interrupt signal(s) in Table [17.5-1](#).

**Table 17.5-1. RTC Timer's Internal Interrupt Sources**

| Internal Interrupt Source              | Trigger Condition                   | Interrupt Signal   |
|--|-------------------------------------|--|
| <a href="#">RTC_TIMER_CMPO_INT</a>     | RTC Timer reaches the target time 0 | <a href="#">LP_TIMER_REG_O_INTR</a>  |
| <a href="#">RTC_TIMER_CMP1_INT</a>     | RTC Timer reaches the target time 1 | <a href="#">LP_TIMER_REG_1_INTR</a>  |
| <a href="#">RTC_TIMER_OVERFLOW_INT</a> | 48-bit counter overflow             | <a href="#">LP_TIMER_REG_O_INTR</a><br><a href="#">LP_TIMER_REG_1_INTR</a> |

**Note:**

For definitions of *interrupt*, *interrupt signal*, *interrupt source*, and their correlations, please refer to Chapter [11 Interrupt Matrix](#) > Section [11.2 Interrupt Terminology in ESP32-P4](#).

Each interrupt source can be configured by a common set of registers that are described in Section [Interrupt Configuration Registers](#). The specific registers can be found in Section [17.6 Register Summary](#).

## 17.6 Register Summary

The addresses in this section are relative to RTC Timer base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name   | Description  | Address | Access |
|--|--|---------|--------|
| <b>Configuration Registers</b>               |  |         |        |
| <a href="#">RTC_TIMER_TARO_LOW_REG</a>       | Configure the low 32 bits of the target time 0                                 | 0x0000  | R/W    |
| <a href="#">RTC_TIMER_TARO_HIGH_REG</a>      | Configure the high 16 bits of the target time 0                                | 0x0004  | varies |
| <a href="#">RTC_TIMER_TAR1_LOW_REG</a>       | Configure the low 32 bits of the target time 1                                 | 0x0008  | R/W    |
| <a href="#">RTC_TIMER_TAR1_HIGH_REG</a>      | Configure the high 16 bits of the target time 1                                | 0x000C  | varies |
| <a href="#">RTC_TIMER_UPDATE_REG</a>         | Configure to enable the RTC Timer to latch current value                       | 0x0010  | varies |
| <a href="#">RTC_TIMER_MAIN_BUFO_LOW_REG</a>  | The low 32 bits of the cached value 0 in RTC Timer                             | 0x0014  | RO     |
| <a href="#">RTC_TIMER_MAIN_BUFO_HIGH_REG</a> | The high 16 bits of the cached value 0 in RTC Timer                            | 0x0018  | RO     |
| <a href="#">RTC_TIMER_MAIN_BUF1_LOW_REG</a>  | The low 32 bits of the cached value 1 in RTC Timer                             | 0x001C  | RO     |
| <a href="#">RTC_TIMER_MAIN_BUF1_HIGH_REG</a> | The high 16 bits of the cached value 1 in RTC Timer                            | 0x0020  | RO     |
| <b>Interrupt Registers</b>                   |  |         |        |
| <a href="#">RTC_TIMER_INT_RAW_REG</a>        | The interrupt raw status register for the RTC Timer reaching the target time 0 | 0x0028  | RO     |
| <a href="#">RTC_TIMER_INT_ST_REG</a>         | The interrupt status register for the RTC Timer reaching the target time 0     | 0x002C  | RO     |
| <a href="#">RTC_TIMER_INT_ENA_REG</a>        | The interrupt enable register for the RTC Timer reaching the target time 0     | 0x0030  | R/W    |
| <a href="#">RTC_TIMER_INT_CLR_REG</a>        | The interrupt clear register for the RTC Timer reaching the target time 0      | 0x0034  | WO     |
| <a href="#">RTC_TIMER_LP_INT_RAW_REG</a>     | The interrupt raw status register for RTC Timer reaching the target time 1     | 0x0038  | RO     |
| <a href="#">RTC_TIMER_LP_INT_ST_REG</a>      | The interrupt status register for the RTC Timer reaching the target time 1     | 0x003C  | RO     |
| <a href="#">RTC_TIMER_LP_INT_ENA_REG</a>     | The interrupt enable register for the RTC Timer reaching the target time 1     | 0x0040  | R/W    |
| <a href="#">RTC_TIMER_LP_INT_CLR_REG</a>     | The interrupt clear register for the RTC Timer reaching the target time 1      | 0x0044  | WO     |
| <b>Version Register</b>                      |  |         |        |
| <a href="#">RTC_TIMER_DATE_REG</a>           | Version control register   | 0x03FC  | R/W    |

## 17.7 Registers

The addresses in this section are relative to RTC Timer base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section [Programming Reserved Register Field](#).

Register 17.1. RTC\_TIMER\_TARO\_LOW\_REG (0x0000)

**RTC\_TIMER\_MAIN\_TIMER\_TAR\_LOWO** Configure the low 32 bits of the target time 0 of the RTC Timer. (R/W)

Register 17.2. RTC\_TIMER\_TARO\_HIGH\_REG (0x0004)

**RTC\_TIMER\_MAIN\_TIMER\_TAR\_HIGHO** Configure the high 16 bits of the target time 0. (R/W)

**RTC\_TIMER\_MAIN\_TIMER\_TAR\_ENO** Configure to enable the target time 0 of the RTC Timer. (WO)

Register 17.3. RTC\_TIMER\_TAR1\_LOW\_REG (0x0008)

**RTC\_TIMER\_MAIN\_TIMER\_TAR\_LOW1** Configure the low 32 bits of the target time 1. (R/W)

Register 17.4. RTC\_TIMER\_TAR1\_HIGH\_REG (0x000C)

**RTC\_TIMER\_MAIN\_TIMER\_TAR\_HIGH1** Configure the high 16 bits of the target time 1. (R/W)

**RTC\_TIMER\_MAIN\_TIMER\_TAR\_EN1** Configure to enable the target time 1 of the RTC Timer. (WO)

### Register 17.5. RTC\_TIMER\_UPDATE\_REG (0x0010)

Diagram of the 32-bit register structure for `RTC_TIMER_MAIN_TIMER_SYS_RST`:

- Bits 31-24: `RTC_TIMER_MAIN_TIMER_SYS_RST`
- Bits 23-16: `RTC_TIMER_MAIN_TIMER_SYS_STALL`
- Bits 15-8: `RTC_TIMER_MAIN_TIMER_XTAL_OFF`
- Bits 7-0: `RTC_TIMER_MAIN_TIMER_UPDATE`

The register is shown as a single large '0', indicating it is a read-only register. A 'Reset' label is present at the bottom right.

**RTC\_TIMER\_MAIN\_TIMER\_UPDATE** Configure to log the current time through software configuration. (WO)

**RTC\_TIMER\_MAIN\_TIMER\_XTAL\_OFF** Configure to enable RTC Timer to log the time when the crystal powers up or down. (R/W)

**RTC\_TIMER\_MAIN\_TIMER\_SYS\_STALL** Configure to enable the RTC Timer to log the time when the CPU enters or exits the stall state. (R/W)

|                                     |   |
|-------------------------------------|---|
| <b>RTC_TIMER_MAIN_TIMER_SYS_RST</b> | Configure to enable RTC Timer to log the time of system reset.<br>(R/W) |
|-------------------------------------|---|

### Register 17.6. RTC\_TIMER\_MAIN\_BUFO\_LOW\_REG (0x0014)

31

RTC\_TIMER\_MAIN\_TIMER\_BUFO\_LOW

0

Reset

**RTC\_TIMER\_MAIN\_TIMER\_BUFO\_LOW** Represent the low 32 bits of the cached value 0 in RTC Timer. (RO)

Register 17.7. RTC\_TIMER\_MAIN\_BUFO\_HIGH\_REG (0x0018)

|            |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |                                |    |   |  |  |  |  |  |  |  |  |  |  |  |  |       |
|------------|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|--------------------------------|----|---|--|--|--|--|--|--|--|--|--|--|--|--|-------|
| (reserved) |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   | RTC_TIMER_MAIN_TIMER_BUFO_HIGH |    |   |  |  |  |  |  |  |  |  |  |  |  |  |       |

**RTC\_TIMER\_MAIN\_TIMER\_BUF1\_HIGH** Represent the high 16 bits of the cached value 1 in RTC Timer. (RO)

## Register 17.10. RTC\_TIMER\_INT\_RAW\_REG (0x0028)

**RTC\_TIMER\_OVERFLOW\_RAW** The interrupt raw status for the 48-bit counter overflow. (RO)

**RTC\_TIMER\_MAIN\_TIMER\_INT\_RAW** The interrupt raw status for the RTC Timer reaching the target time 0. (RO)

## Register 17.11. RTC\_TIMER\_INT\_ST\_REG (0x002C)

**RTC\_TIMER\_OVERFLOW\_ST** The interrupt status for the 48-bit counter overflow. (RO)

**RTC\_TIMER\_MAIN\_TIMER\_INT\_ST** The interrupt status for the RTC Timer reaching the target time 0. (RO)

## Register 17.12. RTC\_TIMER\_INT\_ENA\_REG (0x0030)

**RTC\_TIMER\_OVERFLOW\_ENA** Configure to enable the interrupt for 48-bit counter overflow. (R/W)

**RTC\_TIMER\_MAIN\_TIMER\_INT\_ENA** Configure to enable the interrupt for the RTC Timer reaching the target time 0. (R/W)

## Register 17.13. RTC\_TIMER\_INT\_CLR\_REG (0x0034)

**RTC\_TIMER\_OVERFLOW\_CLR** Configure to clear the interrupt for 48-bit counter overflow. (WO)

**RTC\_TIMER\_MAIN\_TIMER\_INT\_CLR** Configure to clear the interrupt for the RTC Timer reaching the target time 0. (WO)

### Register 17.14. RTC\_TIMER\_LP\_INT\_RAW\_REG (0x0038)

Diagram of the RTC\_TIMER\_MAIN\_TIMER\_LP\_INT\_RAW register. The register is 32 bits wide, with bits 31 and 30 labeled 'RTC\_TIMER\_MAIN\_TIMER\_LP\_INT\_RAW' and bit 29 labeled 'RTC\_TIMER\_MAIN\_TIMER\_OVERFLOW\_LP\_INT\_RAW'. The remaining bits (0-28) are labeled '(reserved)'. The register is shown as a horizontal bar with a 'Reset' button on the right.

**RTC\_TIMER\_MAIN\_TIMER\_OVERFLOW\_LP\_INT\_RAW** The interrupt raw status for the 48-bit counter overflow. (RO)

**RTC\_TIMER\_MAIN\_TIMER\_LP\_INT\_RAW** The interrupt raw status for the RTC Timer reaching the target time 1.(RO)

### Register 17.15. RTC\_TIMER\_LP\_INT\_ST\_REG (0x003C)

Diagram illustrating the structure of the RTC\_CR register (32 bits):

- Bit 31: RTC\_TIMER\_MAIN\_TIMER\_LP\_INT\_ST
- Bit 30: RTC\_TIMER\_MAIN\_TIMER\_OVERFLOW\_LP\_INT\_ST
- Bits 29-0: (reserved)

The register is shown as a horizontal bar with bit positions 31, 30, and 29 marked at the left end, and a '0' at the right end. Below the bar, the bits are shown as a sequence of 0s and 1s, with the last bit being 0.

Register 17.16. RTC\_TIMER\_LP\_INT\_ENA\_REG (0x0040)

**RTC\_TIMER\_MAIN\_TIMER\_OVERFLOW\_LP\_INT\_ENA** Configure to enable the interrupt for the 48-bit counter overflow. (R/W)

**RTC\_TIMER\_MAIN\_TIMER\_LP\_INT\_ENA** Configure to enable the interrupt for the RTC Timer reaching the target time 1. (R/W)

Register 17.17. RTC\_TIMER\_LP\_INT\_CLR\_REG (0x0044)

**RTC\_TIMER\_MAIN\_TIMER\_OVERFLOW\_LP\_INT\_CLR** Configure to clear the interrupt for 48-bit counter overflow. (WO)

**RTC\_TIMER\_MAIN\_TIMER\_LP\_INT\_CLR** Configure to clear the interrupt for the RTC Timer reaching the target time 1. (WO)

Register 17.18. RTC\_TIMER\_DATE\_REG (0x03FC)

- RTC\_TIMER\_DATE** Version control register. (R/W)
- RTC\_TIMER\_CLK\_EN** Configure to enable the register read/write clock. (R/W)

## Chapter 18

### Permission Control (PMS)

#### 18.1 Overview

The permission control of ESP32-P4 consists of two parts: PMP (Physical Memory Protection) and APM (Access Permission Management).

PMP is located inside the HP CPUs and can control the HP CPUs' access to all address spaces. APM is an access permission management module located at the bus port, which can manage the permissions for the CPU (HP CPU0/1, LP CPU) to access the registers of all on-chip peripherals (see HP CPU PERI, HP PERI, and LP PERI in Table 18.1-1) and part of internal and external memory. The APM can also manage DMA masters like VDMA, USB OTG 2.0, to access parts of internal and external memory.

The APM module compares the configurable address range or the fixed address range, the access permissions of each address range, and the information carried on the bus like master ID, security mode, access address, access type, etc, to determine whether the access is allowed. With APM, users can precisely control the access of all masters to the memory and peripheral registers.

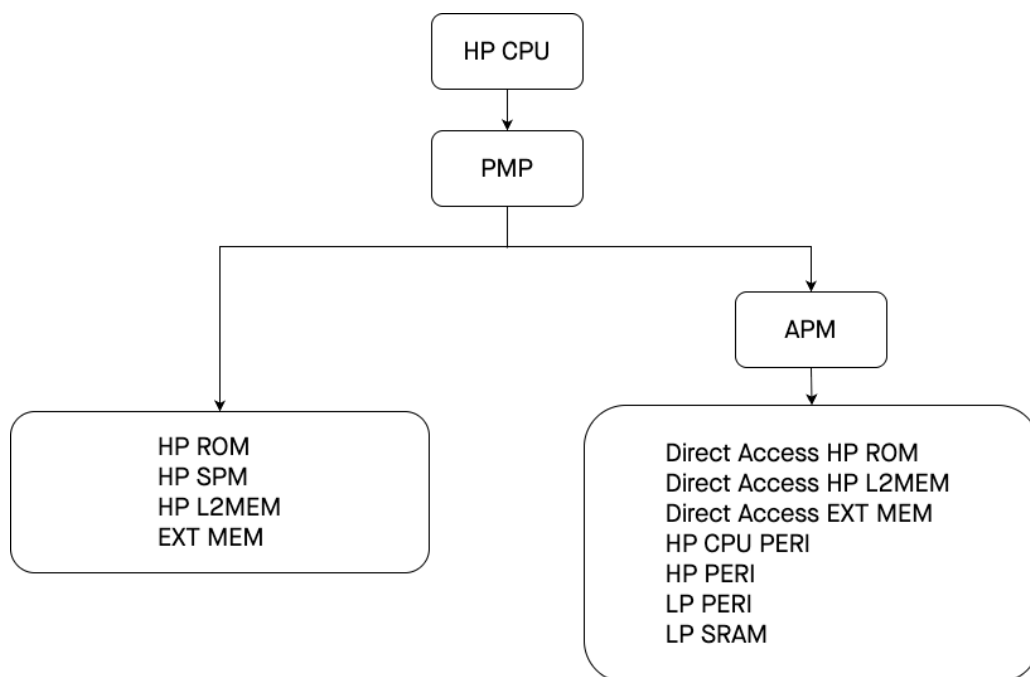

The distribution of management areas by PMP and APM is shown in Table 18.1-1. For HP CPU0/1, the control relationship between PMP and APM is shown in Figure 18.1-1.

**Table 18.1-1. Management Areas by PMP and APM**

| Master<br>Slave                     | HP CPU0      | HP CPU1      | LP CPU | DMA Masters <sup>1</sup> |
|-------------------------------------|--------------|--------------|--------|--------------------------|
| HP ROM <sup>2</sup>                 | PMP          | PMP          | HP APM | DMA APM                  |
| HP SPM                              | PMP          | PMP          | N/A    | N/A                      |
| HP L2MEM <sup>2</sup>               | PMP          | PMP          | HP APM | DMA APM                  |
| EXT MEM <sup>2</sup>                | PMP          | PMP          | HP APM | DMA APM                  |
| Direct Access HP ROM <sup>3</sup>   | PMP + HP APM | PMP + HP APM | N/A    | N/A                      |
| Direct Access HP L2MEM <sup>3</sup> | PMP + HP APM | PMP + HP APM | N/A    | N/A                      |
| Direct Access EXT MEM <sup>3</sup>  | PMP + HP APM | PMP + HP APM | N/A    | N/A                      |
| HP CPU PERI <sup>4</sup>            | PMP + HP APM | PMP + HP APM | HP APM | N/A                      |
| HP PERI <sup>5</sup>                | PMP + HP APM | PMP + HP APM | HP APM | N/A                      |
| LP PERI <sup>6</sup>                | PMP + LP APM | PMP + LP APM | LP APM | N/A                      |
| LP ROM                              | N/A          | N/A          | N/A    | N/A                      |
| LP SRAM                             | PMP + LP APM | PMP + LP APM | N/A    | N/A                      |

- <sup>1</sup> DMA masters that support DMA transfers, such as VDMA, USB 2.0 OTG, MEM\_MONITOR, etc.
- <sup>2</sup>
- HP ROM (0x4FC0\_0000 - 0x4FC1\_FFFF)
  - HP L2MEM (0x4FF0\_0000 - 0x4FFB\_FFFF)
  - EXT MEM, including external flash (0x4000\_0000 - 0x43FF\_FFFF) and external RAM (0x4800\_0000 - 0x4BFF\_FFFF)
- <sup>3</sup> “Direct access” means HP CPU0/1 accesses internal and external memory mapped into the following address spaces without going through the cache:
- HP ROM (0x8FC0\_0000 - 0x8FC1\_FFFF)
  - HP L2MEM (0x8FF0\_0000 - 0x8FFB\_FFFF)
  - EXT MEM, including external flash (0x8000\_0000 - 0x83FF\_FFFF) and external RAM (0x8800\_0000 - 0x8BFF\_FFFF)
- <sup>4</sup> HP CPU peripheral registers (0x3FF0\_0000 - 0x3FF1\_FFFF)
- <sup>5</sup> HP system peripheral registers (0x5000\_0000 - 0x500F\_FFFF)
- <sup>6</sup> LP system peripheral registers (0x5011\_0000 - 0x5012\_FFFF)
- <sup>7</sup> As can be seen from the table, APM includes HP APM, LP APM, and DMA APM, which will be described in the following sections.

**Figure 18.1-1. PMP-APM Management Relation**

The diagram illustrates that when the HP CPUs access HP ROM, HP SPM, HP L2MEM, and EXT MEM, the access paths are solely managed by PMP. On the other hand, when the HP CPUs access the peripheral registers, HP ROM, HP L2MEM, and EXT MEM without going through the cache, the access paths are controlled by both PMP and APM. If the PMP check fails, the APM permission control will not be triggered.

PMP-related registers are located inside the HP CPUs and can be read or configured with special instructions. For how to configure PMP, please refer to Chapter 1 [High-Performance CPU \[to be added later\]](#) > 1.2 [Physical Memory Protection \[to be added later\]](#).

The following sections will provide a detailed introduction to the features, functions, and configurations of the APM module. When referring to HP CPU0/1, accessing HP ROM/HP L2MEM/EXT MEM always means direct access to HP ROM/HP L2MEM/EXT MEM.

## 18.2 Features

The APM module has the following features:

- Up to 32 configurable address ranges for each DMA master
- Access permission management for each CPU core to access internal memory, external memory, and peripheral registers
- Support for interrupts
- Support for exception information record

## 18.3 Functional Description

### 18.3.1 Architecture

The APM module contains three parts and five register modules as follows:

- **DMA APM**, containing register group [HP\\_DMA\\_PMS\\_REG](#), responsible for:
  - configuring up to 32 address regions for DMA masters
  - managing the access permission to each address region for each DMA master
- **HP APM**, containing register groups [HP\\_PERI\\_PMS\\_REG](#) and [LP2HP\\_PERI\\_PMS\\_REG](#), responsible for managing the access permissions to peripheral registers (HP CPU PERI, HP PERI), internal memory (HP ROM, HP L2MEM), and external memory (EXT MEM) in the HP system, specifically,
  - managing the access permissions for HP CPU0/1 in user mode to access all the above-mentioned slaves
  - managing the access permissions for HP CPU0/1 in machine mode to access all the above-mentioned slaves
  - managing the access permissions for LP CPU in machine mode to access all the above-mentioned slaves
- **LP APM**, containing register groups [LP\\_PERI\\_PMS\\_REG](#) and [HP2LP\\_PERI\\_PMS\\_REG](#), responsible for managing the access permissions to peripheral registers (LP PERI) and internal memory (LP SRAM) in the LP system, specifically,
  - managing the access permissions for HP CPU0/1 in user mode to access LP PERI and LP SRAM
  - managing the access permissions for HP CPU0/1 in machine mode to access LP PERI and LP SRAM
  - managing the access permissions for LP CPU in machine mode to access LP PERI

Figure [18.3-1](#) shows the access paths managed by APM and the corresponding register groups.

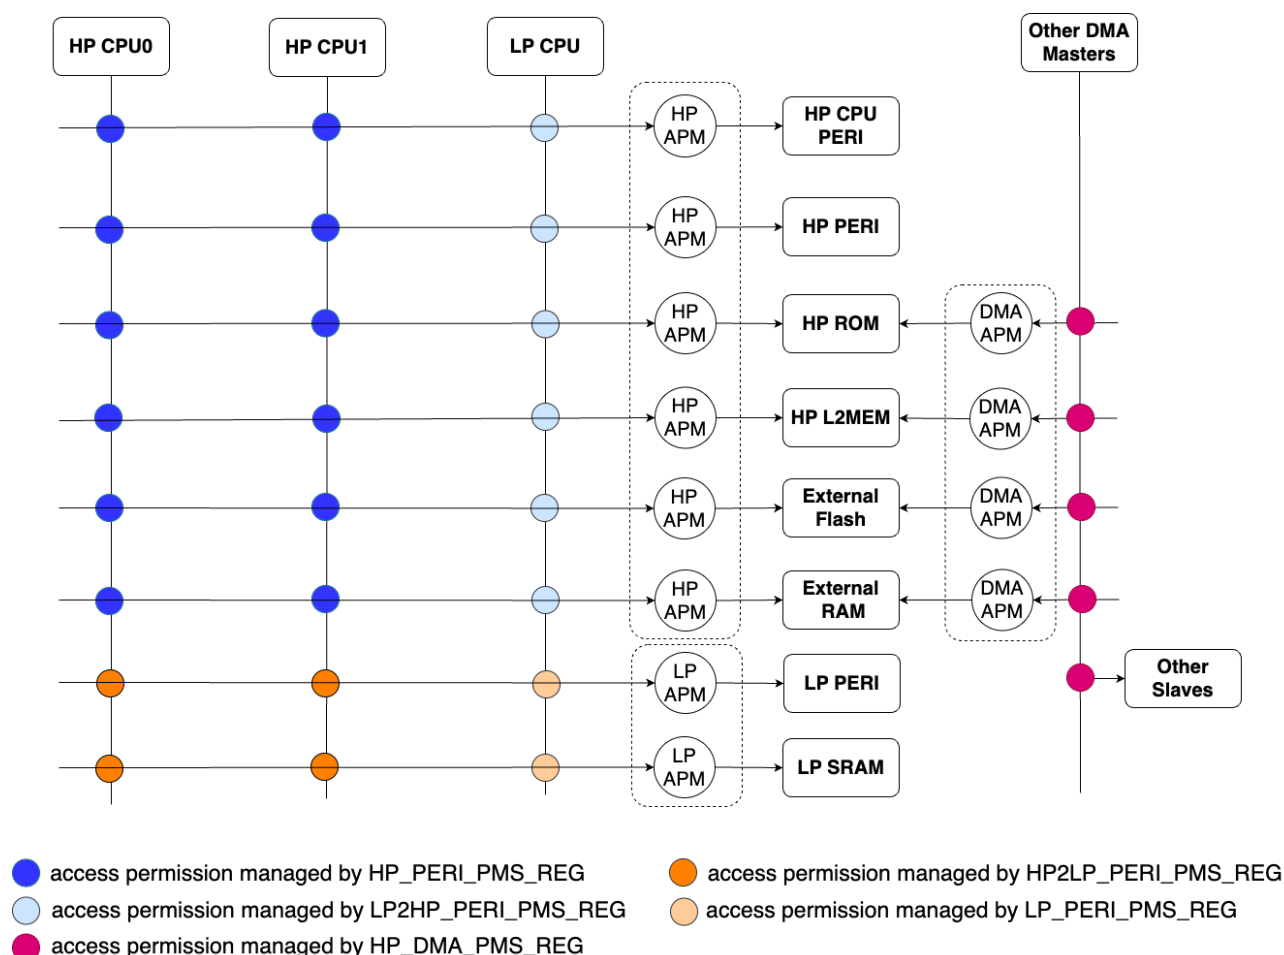

Figure 18.3-1. APM Architecture

**Note:**

- For register group names “HP2LP” and “LP2HP”, the “HP” refers to HP CPU0/1, and “LP” refers to LP CPU.
- From Table 18.1-1, it can be seen that HP CPU and LP CPU access different address spaces of HP ROM, HP L2MEM, external flash, and external RAM. For HP CPU0/1, HP APM manages their direct access to internal and external memory without going through the cache.
- LP\_PERI\_PMS\_REG includes two additional configurable address ranges for HP APM and LP APM to manage the access permissions to peripheral registers, including HP CPU PERI, HP PERI, and LP PERI.

## 18.3.2 Address Ranges and Permissions Management

APM manages address ranges, which can be fixed or configurable. DMA APM can manage up to 32 configurable address ranges. In addition to the fixed address ranges, HP APM and LP APM can also manage in total two configurable address ranges.

### 18.3.2.1 Address Ranges Managed by HP APM and LP APM

In the access paths controlled by HP APM and LP APM, the internal memory and external memory use fixed address ranges for access control, while peripheral registers not only support fixed address ranges permission control but also support two configurable address ranges.

- Fixed address ranges
  - The fixed address ranges are the valid address spaces of peripheral registers, internal memory, and external memory. See the table notes under Table 18.1-1 for the address ranges of internal and external memory. Refer to Chapter 6 *System and Memory* > Table 6.3-2 for the address ranges of each peripheral.
  - To manage access to the fixed address ranges, please refer to Figure 18.3-1 for the access paths and their corresponding register groups.
- Configurable Address Range
  - APM can configure two address ranges with `PMS_PERI_REGION $n$ _LOW_REG` and `PMS_PERI_REGION $n$ _HIGH_REG` ( $n = 0 \sim 1$ ) in `LP_PERI_PMS_REG`. These two configurable address ranges can be used by HP CPUs and LP CPU to access all on-chip peripheral registers (HP CPU PERI, HP PERI, LP PERI).
  - The access permissions are managed by `PMS_PERI_REGION_PMS_REG` in `LP_PERI_PMS_REG`.

When managing access permissions to peripheral registers, the permission management for the configurable address range should precede that of the fixed address range. Specifically:

- If the access address is within the configurable address range, then APM will check if this access is permitted to access the configurable address range.
  - If permitted, APM will continue to check if the access is permitted to the fixed address range.
  - If not permitted, the access will be denied and skip the permission check to the fixed address range.
- If the access address is outside the configurable address range, then it will skip the configurable address range check, but will continue to the fixed address range check.
- The management of configurable address ranges is a supplement to the management of fixed address ranges. For example, users can configure access permissions for a fixed address range, and deny access to two configurable ranges within the fixed range, resulting in a fixed address range containing two access-disabled address ranges.

### 18.3.2.2 Address Ranges Managed by DMA APM

The register group `HP_DMA_PMS_REG` provides 32 sets of registers (`PMS_DMA_REGION $n$ _LOW_REG` ~ `PMS_DMA_REGION $n$ _HIGH_REG`,  $n = 0 \sim 31$ ) to configure address ranges for DMA masters to access. Note that since the address must be aligned to 4K bytes, the lowest 12 bits are set to 0.

`HP_DMA_PMS_REG` provides separate read and write permissions for each DMA master to access each address range.

## 18.4 Programming Procedure

As HP CPUs can work in either user mode or machine mode, HP APM and LP APM grant specific access permissions for each work mode. Therefore, users need to configure the work mode for HP CPUs first in order for the HP CPUs to access internal memory, external memory, and peripheral registers.

Since LP CPU only supports machine mode, HP APM and LP APM grant access permissions for the machine mode of LP CPU.

DMA masters can access slaves regardless of the CPUs' work mode. DMA APM provides separate read and write permissions for each DMA master.

### 18.4.1 Configuring Access Permissions for HP CPU0/1

The configuration process for HP CPU0/1 accessing internal memory, external memory, or peripheral registers is as follows:

1. Configure user mode or machine mode for HP CPU0/1. For how to configure the work mode, please refer to RISC-V Instruction Set Manual, Volume II: Privileged Architecture, Version 1.10.
2. If accessing peripheral registers, two additional address ranges can be configured, please refer to Section 18.3.2 for details.
3. Configure access permissions:
  - Configure the access permissions to internal memory (HP L2MEM and HP ROM), external memory (External RAM and flash), and peripheral registers (HP PERI and HP CPU PERI) in the HP system through `HP_PERI_PMS_REG`:
    - Configure the permission of HP CPU $n$  accessing the `MODULE_NAME` module in `MODE_NAME` mode using `PMS_CORE $n$ _MODE_NAME_MODULE_NAME_ALLOW`, for example `PMS_CORE $n$ _MM_PSRAM_ALLOW`.
  - Configure the access permissions to LP SRAM and LP PERI through `HP2LP_PERI_PMS_REG`:
    - Configure the permission of HP CPU $n$  accessing the `MODULE_NAME` module in `MODE_NAME` mode using `PMS_HP_CORE $n$ _MODE_NAME_MODULE_NAME_ALLOW`, for example `PMS_HP_CORE $n$ _MM_LP_SYSREG_ALLOW`.

### 18.4.2 Configuring Access Permissions for LP CPU

LP CPU only supports machine mode. The configuration process for LP CPU accessing internal memory, external memory, or peripheral registers is as follows:

1. If accessing peripheral registers, two additional address ranges can be configured, please refer to Section 18.3.2 for details.
2. Configure access permissions:
  - Configure the access permissions to internal memory (HP L2MEM and HP ROM), external memory (External RAM and flash), and peripheral registers (HP PERI and HP CPU PERI) in the HP system through `LP2HP_PERI_PMS_REG`:
    - Configure the permission of LP CPU accessing the `MODULE_NAME` module in machine mode using `PMS_LP_MM_MODULE_NAME_ALLOW`, for example `PMS_LP_MM_PSRAM_ALLOW`.
  - Configure the access permissions to peripheral registers (LP PERI) in the LP system through `LP_PERI_PMS_REG`:
    - Configure the permission of LP CPU accessing the `MODULE_NAME` module in machine mode using `PMS_LP_MM_MODULE_NAME_ALLOW`, for example `PMS_LP_MM_LP_SYSREG_ALLOW`.

### 18.4.3 Configuring Access Permission for DMA Masters

The configuration process for DMA masters accessing internal memory, external memory, and other address spaces is as follows:

1. Configure the address ranges accessible to all DMA masters:
  - Configure the high 20 bits of the starting address of region *n* using `PMS_DMA_REGIONn_LOW_REG`.
  - Configure the high 20 bits of the ending address of region *n* using `PMS_DMA_REGIONn_HIGH_REG`.
2. Configure the read and write permissions for each DMA master (*DMA\_MASTER*) to access each address range:
  - Configure the read permissions using `PMS_DMA_MASTER_PMS_R_REG`, such as `PMS_DMA_GMAC_PMS_R_REG`.
  - Configure the write permissions using `PMS_DMA_MASTER_PMS_W_REG`, such as `PMS_DMA_GMAC_PMS_W_REG`.

## 18.5 Illegal Access and Interrupts

When the APM module manages access paths, it parses the information carried on the bus (e.g., master ID, access direction (read or write), access address, and working mode) and then determines the access permission. When the APM module confirms that the access lacks permission, ESP32-P4 will consider it as an unauthorized access and will take the following actions:

- Reject the access request and provide an error response.
- HP APM will trigger `ICM_SYS_REG_INT` interrupt signal.
- DMA APM will trigger `ICM_SYS_REG_INT` interrupt signal.
- LP APM will trigger `LP_SYSREG_INT` interrupt signal.

These interrupt signals are generated by the internal interrupt sources of the APM module. Table 18.5-1 lists the internal interrupt sources, interrupt trigger conditions, and the generated interrupt signals.

**Table 18.5-1. APM Internal Interrupt Sources**

| Internal Interrupt Source | Trigger Condition   | Interrupt Signal |
|---------------------------|---|------------------|
| ICM_CPU_ADDRHOLE_INTR     | Triggered when HP APM detects unauthorized access; or when DMA APM detects unauthorized access from high-speed USB 2.0 OTG, full-speed USB 2.0 OTG, EMAC, SDMMC, Trace0/1, GDMA-AHB, L2MEM Monitor, or SPM Monitor. | ICM_SYS_REG_INT  |
| ICM_SYS_ADDRHOLE_INTR     | Triggered when DMA APM detects unauthorized access from VDMA, GDMA-AXI, 2D-DMA, or H264 DMA.  | ICM_SYS_REG_INT  |
| LP_ADDRHOLE_INTR          | Triggered when LP APM detects unauthorized access.  | LP_SYSREG_INTR   |

APM automatically records relevant information about illegal accesses, including master ID, access direction (read or write), access address, illegal access flags, etc. All this information can be retrieved from the relevant registers described in Chapter 3 *System Registers [to be added later]*.

## 18.6 Register Summary

### 18.6.1 HP\_DMA\_PMS\_REG

The addresses in this section are relative to the HP\_DMA\_PMS base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name                                     | Description                                  | Address | Access |
|--|--|---------|--------|
| <b>Version Control Registers</b>         |  |         |        |
| <a href="#">PMS_DMA_DATE_REG</a>         | Version control register                     | 0x0000  | R/W    |

## 18.6.2 HP\_PERI\_PMS\_REG

The addresses in this section are relative to the HP\_PERI\_PMS base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name  | Description  | Address | Access |
|---|--|---------|--------|
| <b>Version Control Registers</b>                  |  |         |        |
| <a href="#">PMS_HP_PERI_PMS_DATE_REG</a>          | Version control register                                 | 0x0000  | R/W    |

### 18.6.3 LP2HP\_PERI\_PMS\_REG

The addresses in this section are relative to the LP2HP\_PERI\_PMS base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name  | Description   | Address | Access |
|---|---|---------|--------|
| <b>Version Control Registers</b>              |   |         |        |
| <a href="#">PMS_LP2HP_PERI_PMS_DATE_REG</a>   | Version control register                                    | 0x0000  | R/W    |
| <b>Clock Gating Registers</b>                 |   |         |        |
| <a href="#">PMS_LP2HP_PERI_PMS_CLK_EN_REG</a> | Clock gating register                                       | 0x0004  | R/W    |
| <b>LP CPU Permission Control Registers</b>    |   |         |        |
| <a href="#">PMS_LP_MM_PMS_REG0_REG</a>        | Permission control register0 for the LP CPU in machine mode | 0x0008  | R/W    |
| <a href="#">PMS_LP_MM_PMS_REG1_REG</a>        | Permission control register1 for the LP CPU in machine mode | 0x0030  | R/W    |
| <a href="#">PMS_LP_MM_PMS_REG2_REG</a>        | Permission control register2 for the LP CPU in machine mode | 0x00A4  | R/W    |
| <a href="#">PMS_LP_MM_PMS_REG3_REG</a>        | Permission control register3 for the LP CPU in machine mode | 0x011C  | R/W    |

### 18.6.4 LP\_PERI\_PMS\_REG

The addresses in this section are relative to the LP\_PERI\_PMS base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name  | Description   | Address | Access |
|---|---|---------|--------|
| <b>Version Control Registers</b>                          |   |         |        |
| <a href="#">PMS_LP_PERI_PMS_DATE_REG</a>                  | Version control register                                | 0x0000  | R/W    |
| <b>Clock Gating Registers</b>                             |   |         |        |
| <a href="#">PMS_LP_PERI_PMS_CLK_EN_REG</a>                | Clock gating register                                   | 0x0004  | R/W    |
| <b>LP CPU Permission Control Registers</b>                |   |         |        |
| <a href="#">PMS_LP_MM_LP_PERI_PMS_REG0_REG</a>            | Permission control register0 for LP CPU in machine mode | 0x0008  | R/W    |
| <b>Configurable Address Range Configuration Registers</b> |   |         |        |
| <a href="#">PMS_PERI_REGION0_LOW_REG</a>                  | Region0 start address configuration register            | 0x000C  | R/W    |
| <a href="#">PMS_PERI_REGION0_HIGH_REG</a>                 | Region0 end address configuration register              | 0x0010  | R/W    |
| <a href="#">PMS_PERI_REGION1_LOW_REG</a>                  | Region1 start address configuration register            | 0x0014  | R/W    |
| <a href="#">PMS_PERI_REGION1_HIGH_REG</a>                 | Region1 end address configuration register              | 0x0018  | R/W    |

### 18.6.5 HP2LP\_PERI\_PMS\_REG

The addresses in this section are relative to the HP2LP\_PERI\_PMS base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name  | Description  | Address | Access |
|---|--|---------|--------|
| <b>Version Control Registers</b>              |  |         |        |
| <a href="#">PMS_HP2LP_PERI_PMS_DATE_REG</a>   | Version control register                                 | 0x0000  | R/W    |
| <b>Clock Gating Registers</b>                 |  |         |        |
| <a href="#">PMS_HP2LP_PERI_PMS_CLK_EN_REG</a> | Clock gating register                                    | 0x0004  | R/W    |
| <b>HP CPU Permission Control Registers</b>    |  |         |        |
| <a href="#">PMS_HP_CORE0_MM_PMS_REGO_REG</a>  | Permission control register0 for HP CPU0 in machine mode | 0x0008  | R/W    |
| <a href="#">PMS_HP_CORE0_UM_PMS_REGO_REG</a>  | Permission control register0 for HP CPU0 in user mode    | 0x000C  | R/W    |
| <a href="#">PMS_HP_CORE1_MM_PMS_REGO_REG</a>  | Permission control register0 for HP CPU1 in machine mode | 0x0010  | R/W    |
| <a href="#">PMS_HP_CORE1_UM_PMS_REGO_REG</a>  | Permission control register0 for HP CPU1 in user mode    | 0x0014  | R/W    |

## 18.7 Registers

### 18.7.1 HP\_DMA\_PMS\_REG

The addresses in this section are relative to the HP\_DMA\_PMS base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section [Programming Reserved Register Field](#).

Register 18.1. PMS\_DMA\_DATE\_REG (0x0000)

|                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|-----------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|
| PMS_DMA_DATE    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| 310             |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| 0x20230314Reset |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

**PMS\_DMA\_DATE** Version control register. (R/W)

Register 18.2. PMS\_DMA\_CLK\_EN\_REG (0x0004)

|   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                |   |       |
|---|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|----------------|---|-------|
| (reserved)  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | PMS_DMA_CLK_EN |   |       |
| 31  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 1              | 0 |       |
| 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                | 1 | Reset |

**PMS\_DMA\_CLK\_EN** Configures whether to keep the clock always on.

0: Enable automatic clock gating.

1: Keep the clock always on.

(R/W)

Register 18.3. PMS\_DMA\_REGION $n$ \_LOW\_REG ( $n$ : 0-31) (0x0008+0x8\* $n$ )

|                                  |  |  |  |  |  |  |  |  |  |  |  |                                   |    |  |  |  |  |  |  |  |  |  |  |  |  |  |       |  |   |
|----------------------------------|--|--|--|--|--|--|--|--|--|--|--|-----------------------------------|----|--|--|--|--|--|--|--|--|--|--|--|--|--|-------|--|---|
| PMS_DMA_REGION <sub>n</sub> _LOW |  |  |  |  |  |  |  |  |  |  |  | (reserved)                        |    |  |  |  |  |  |  |  |  |  |  |  |  |  |       |  |   |
| 31                               |  |  |  |  |  |  |  |  |  |  |  | 12                                | 11 |  |  |  |  |  |  |  |  |  |  |  |  |  |       |  | 0 |
| 0x000                            |  |  |  |  |  |  |  |  |  |  |  | 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 |    |  |  |  |  |  |  |  |  |  |  |  |  |  | Reset |  |   |

**PMS\_DMA\_REGION $n$ \_LOW** Configures the high 20 bits of the start address for region $n$ . (R/W)

**Register 18.4. PMS\_DMA\_REGION $n$ \_HIGH\_REG ( $n$ : 0-31) (0x000C+0x8\* $n$ )**

**PMS\_DMA\_REGION $n$ \_HIGH** Configures the high 20 bits of the end address for region $n$ . (R/W)

**Register 18.5. PMS\_DMA\_GDMA\_CH $n$ \_R\_PMS\_REG ( $n$ : 0-3) (0x0108+0x8\* $n$ )**

**PMS\_DMA\_GDMA\_CH $n$ \_R\_PMS** Configures the permission for GDMA ch $n$  to read 32 address regions. Bit 0 corresponds to region0, and so on.

0: Disable read permission.

1: Enable read permission.

(R/W)

**Register 18.6. PMS\_DMA\_GDMA\_CH $n$ \_W\_PMS\_REG ( $n$ : 0-3) (0x010C+0x8\* $n$ )**

**PMS\_DMA\_GDMA\_CH $n$ \_W\_PMS** Configures the permission for GDMA ch $n$  to write 32 address regions. Bit 0 corresponds to region0, and so on.

0: Disable write permission.

1: Enable write permission.

(R/W)

**Register 18.7. PMS\_DMA\_AHB\_PDMA\_ADC\_R\_PMS\_REG (0x0128)**

**PMS\_DMA\_AHB\_PDMA\_ADC\_R\_PMS** Configures GDMA-AHB permission to read 32 address ranges requested by ADC. Bit 0 corresponds to region0, and so on.

0: Disable read permission.

1: Enable read permission.

(R/W)

**Register 18.8. PMS\_DMA\_AHB\_PDMA\_ADC\_W\_PMS\_REG (0x012C)**

**PMS\_DMA\_AHB\_PDMA\_ADC\_W\_PMS** Configures GDMA-AHB permission to write 32 address ranges requested by ADC. Bit 0 corresponds to region0, and so on.

0: Disable write permission.

1: Enable write permission.

(R/W)

Register 18.9. PMS\_DMA\_AHB\_PDMA\_I2SO\_R\_PMS\_REG (0x0130)

**PMS\_DMA\_AHB\_PDMA\_I2SO\_R\_PMS** Configures GDMA-AHB permission to read 32 address ranges requested by I2SO. Bit 0 corresponds to region0, and so on.

0: Disable read permission.

1: Enable read permission.

(R/W)

Register 18.10. PMS\_DMA\_AHB\_PDMA\_I2SO\_W\_PMS\_REG (0x0134)

**PMS\_DMA\_AHB\_PDMA\_I2SO\_W\_PMS** Configures GDMA-AHB permission to write 32 address ranges requested by I2SO. Bit 0 corresponds to region0, and so on.

0: Disable write permission.

1: Enable write permission.

(R/W)

Register 18.11. PMS\_DMA\_AHB\_PDMA\_I2S1\_R\_PMS\_REG (0x0138)

**PMS\_DMA\_AHB\_PDMA\_I2S1\_R\_PMS** Configures GDMA-AHB permission to read 32 address ranges requested by I2S1. Bit 0 corresponds to region0, and so on.

- 0: Disable read permission.
- 1: Enable read permission.

(R/W)

Register 18.12. PMS\_DMA\_AHB\_PDMA\_I2S1\_W\_PMS\_REG (0x013C)

**PMS\_DMA\_AHB\_PDMA\_I2S1\_W\_PMS** Configures GDMA-AHB permission to write 32 address ranges requested by I2S1. Bit 0 corresponds to region0, and so on.

- 0: Disable write permission.
- 1: Enable write permission.

(R/W)

Register 18.13. PMS\_DMA\_AHB\_PDMA\_I2S2\_R\_PMS\_REG (0x0140)

**PMS\_DMA\_AHB\_PDMA\_I2S2\_R\_PMS** Configures GDMA-AHB permission to read 32 address ranges requested by I2S2. Bit 0 corresponds to region0, and so on.

- 0: Disable read permission.
- 1: Enable read permission.

(R/W)

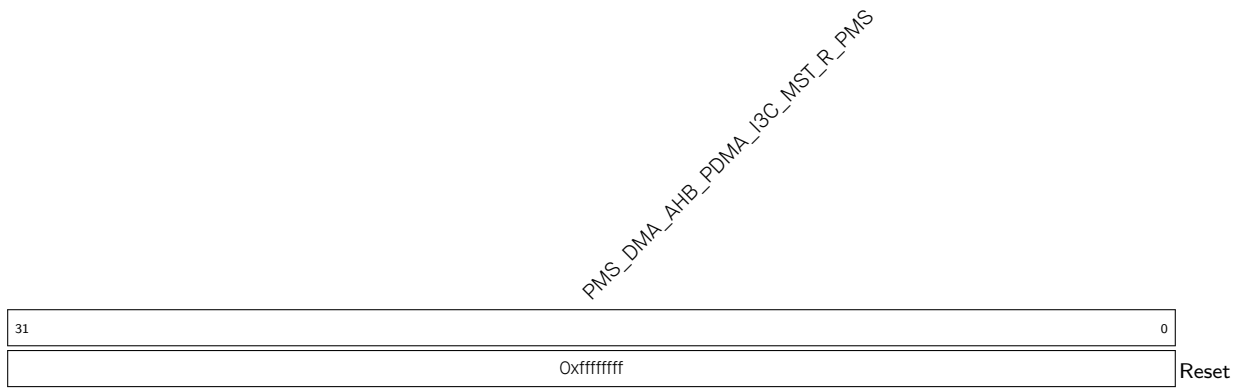

Register 18.14. PMS\_DMA\_AHB\_PDMA\_I2S2\_W\_PMS\_REG (0x0144)

**PMS\_DMA\_AHB\_PDMA\_I2S2\_W\_PMS** Configures GDMA-AHB permission to write 32 address ranges requested by I2S2. Bit 0 corresponds to region0, and so on.

- 0: Disable write permission.
- 1: Enable write permission.

(R/W)

**Register 18.15. PMS\_DMA\_AHB\_PDMA\_I3C\_MST\_R\_PMS\_REG (0x0148)**

**PMS\_DMA\_AHB\_PDMA\_I3C\_MST\_R\_PMS** Configures GDMA-AHB permission to read 32 address ranges requested by I3C master. Bit 0 corresponds to region0, and so on.

0: Disable read permission.

1: Enable read permission.

(R/W)

**Register 18.16. PMS\_DMA\_AHB\_PDMA\_I3C\_MST\_W\_PMS\_REG (0x014C)**

**PMS\_DMA\_AHB\_PDMA\_I3C\_MST\_W\_PMS** Configures GDMA-AHB permission to write 32 address ranges requested by I3C master. Bit 0 corresponds to region0, and so on.

0: Disable write permission.

1: Enable write permission.

(R/W)

Register 18.17. PMS\_DMA\_AHB\_PDMA\_UHCIO\_R\_PMS\_REG (0x0150)

**PMS\_DMA\_AHB\_PDMA\_UHCIO\_R\_PMS** Configures GDMA-AHB permission to read 32 address ranges requested by UHCI. Bit 0 corresponds to region0, and so on.

- 0: Disable read permission.
- 1: Enable read permission.

(R/W)

Register 18.18. PMS\_DMA\_AHB\_PDMA\_UHCIO\_W\_PMS\_REG (0x0154)

**PMS\_DMA\_AHB\_PDMA\_UHCIO\_W\_PMS** Configures GDMA-AHB permission to write 32 address ranges requested by UHCI. Bit 0 corresponds to region0, and so on.

- 0: Disable write permission.
- 1: Enable write permission.

(R/W)

Register 18.19. PMS\_DMA\_AHB\_PDMA\_RMT\_R\_PMS\_REG (0x0158)

**PMS\_DMA\_AHB\_PDMA\_RMT\_R\_PMS** Configures GDMA-AHB permission to read 32 address ranges requested by RMT. Bit 0 corresponds to region0, and so on.

0: Disable read permission.  
1: Enable read permission.

(R/W)

Register 18.20. PMS\_DMA\_AHB\_PDMA\_RMT\_W\_PMS\_REG (0x0170)

**PMS\_DMA\_AHB\_PDMA\_RMT\_W\_PMS** Configures GDMA-AHB permission to write 32 address ranges requested by RMT. Bit 0 corresponds to region0, and so on.

0: Disable write permission.  
1: Enable write permission.

(R/W)

Register 18.21. PMS\_DMA\_AXI\_PDMA\_LCDCAM\_R\_PMS\_REG (0x0174)

**PMS\_DMA\_AXI\_PDMA\_LCDCAM\_R\_PMS** Configures GDMA-AXI permission to read 32 address ranges requested by LCD\_CAM. Bit 0 corresponds to region0, and so on.

0: Disable read permission.

1: Enable read permission.

(R/W)

Register 18.22. PMS\_DMA\_AXI\_PDMA\_LCDCAM\_W\_PMS\_REG (0x0178)

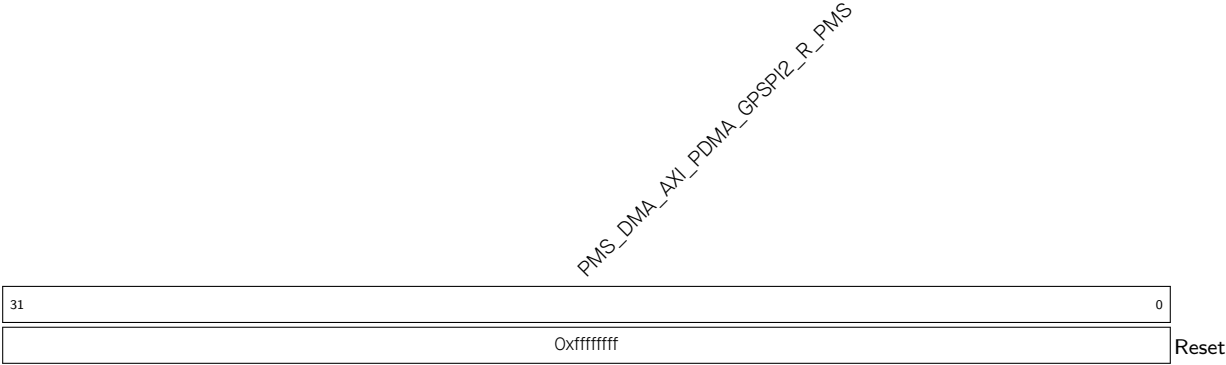

**PMS\_DMA\_AXI\_PDMA\_LCDCAM\_W\_PMS** Configures GDMA-AXI permission to write 32 address ranges requested by LCD\_CAM. Bit 0 corresponds to region0, and so on.

0: Disable write permission.

1: Enable write permission.

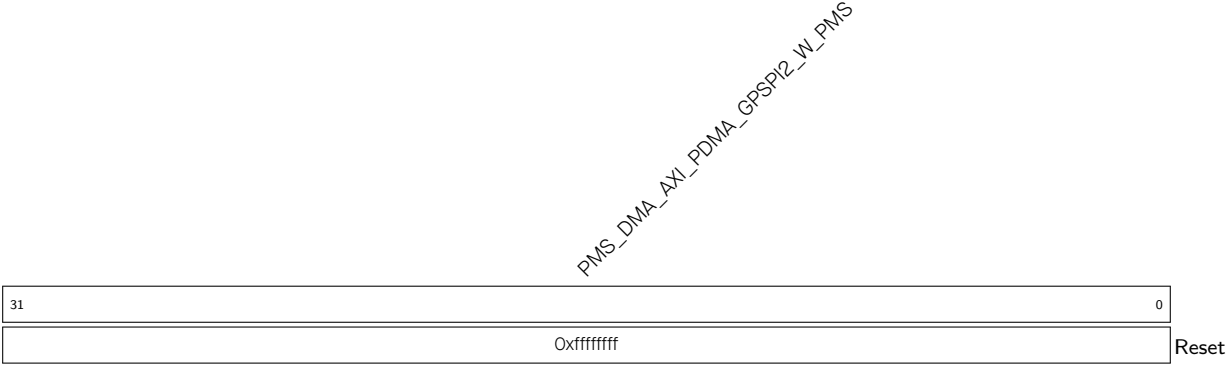

(R/W)

Register 18.23. PMS\_DMA\_AXI\_PDMA\_GPSPI2\_R\_PMS\_REG (0x017C)

**PMS\_DMA\_AXI\_PDMA\_GPSPI2\_R\_PMS** Configures GDMA-AXI permission to read 32 address ranges requested by GP-SPI2. Bit 0 corresponds to region0, and so on.  
0: Disable read permission.  
1: Enable read permission.  
(R/W)

Register 18.24. PMS\_DMA\_AXI\_PDMA\_GPSPI2\_W\_PMS\_REG (0x0180)

**PMS\_DMA\_AXI\_PDMA\_GPSPI2\_W\_PMS** Configures GDMA-AXI permission to write 32 address ranges requested by GP-SPI2. Bit 0 corresponds to region0, and so on.  
0: Disable write permission.  
1: Enable write permission.  
(R/W)

Register 18.25. PMS\_DMA\_AXI\_PDMA\_GPSPI3\_R\_PMS\_REG (0x0184)

**PMS\_DMA\_AXI\_PDMA\_GPSPI3\_R\_PMS** Configures GDMA-AXI permission to read 32 address ranges requested by GP-SPI3. Bit 0 corresponds to region0, and so on.

0: Disable read permission.

1: Enable read permission.

(R/W)

Register 18.26. PMS\_DMA\_AXI\_PDMA\_GPSPI3\_W\_PMS\_REG (0x0188)

**PMS\_DMA\_AXI\_PDMA\_GPSPI3\_W\_PMS** Configures GDMA-AXI permission to write 32 address ranges requested by GP-SPI3. Bit 0 corresponds to region0, and so on.

0: Disable write permission.

1: Enable write permission.

(R/W)

Register 18.27. PMS\_DMA\_AXI\_PDMA\_PARLIO\_R\_PMS\_REG (0x018C)

**PMS\_DMA\_AXI\_PDMA\_PARLIO\_R\_PMS** Configures GDMA-AXI permission to read 32 address ranges requested by PARLIO (Parallel IO Controller). Bit 0 corresponds to region0, and so on.

- 0: Disable read permission.
- 1: Enable read permission.

(R/W)

Register 18.28. PMS\_DMA\_AXI\_PDMA\_PARLIO\_W\_PMS\_REG (0x0190)

**PMS\_DMA\_AXI\_PDMA\_PARLIO\_W\_PMS** Configures GDMA-AXI permission to write 32 address ranges requested by PARLIO. Bit 0 corresponds to region0, and so on.

- 0: Disable write permission.
- 1: Enable write permission.

(R/W)

Register 18.29. PMS\_DMA\_AXI\_PDMA\_AES\_R\_PMS\_REG (0x0194)

**PMS\_DMA\_AXI\_PDMA\_AES\_R\_PMS** Configures GDMA-AXI permission to read 32 address ranges requested by AES. Bit 0 corresponds to region0, and so on.

- 0: Disable read permission.
- 1: Enable read permission.

(R/W)

Register 18.30. PMS\_DMA\_AXI\_PDMA\_AES\_W\_PMS\_REG (0x0198)

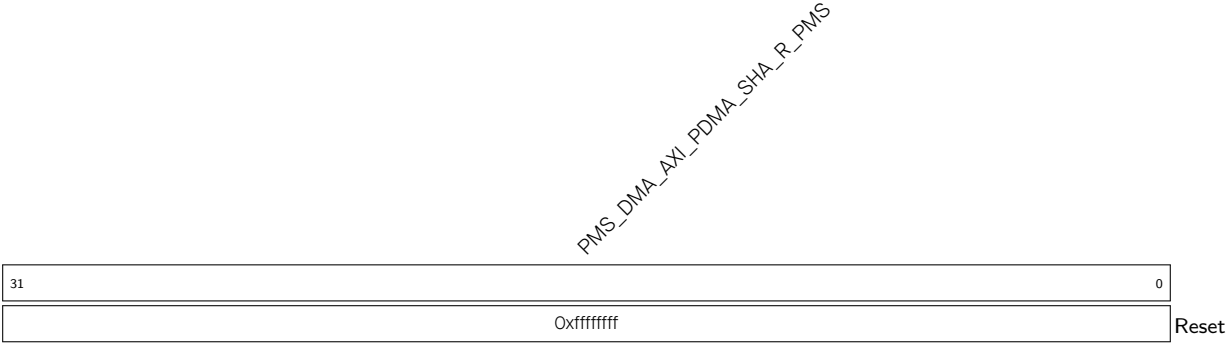

**PMS\_DMA\_AXI\_PDMA\_AES\_W\_PMS** Configures GDMA-AXI permission to write 32 address ranges requested by AES. Bit 0 corresponds to region0, and so on.

- 0: Disable write permission.
- 1: Enable write permission.

(R/W)

Register 18.31. PMS\_DMA\_AXI\_PDMA\_SHA\_R\_PMS\_REG (0x019C)

**PMS\_DMA\_AXI\_PDMA\_SHA\_R\_PMS** Configures GDMA-AXI permission to read 32 address ranges requested by SHA. Bit 0 corresponds to region0, and so on.

- 0: Disable read permission.
- 1: Enable read permission.

(R/W)

Register 18.32. PMS\_DMA\_AXI\_PDMA\_SHA\_W\_PMS\_REG (0x01A0)

**PMS\_DMA\_AXI\_PDMA\_SHA\_W\_PMS** Configures GDMA-AXI permission to write 32 address ranges requested by SHA. Bit 0 corresponds to region0, and so on.

- 0: Disable write permission.
- 1: Enable write permission.

(R/W)

Register 18.33. PMS\_DMA\_DMA2D\_JPEG\_PMS\_R\_REG (0x01A4)

**PMS\_DMA\_DMA2D\_JPEG\_R\_PMS** Configures 2D-DMA permission to read 32 address ranges requested by JPEG. Bit 0 corresponds to region0, and so on.

- 0: Disable read permission.
- 1: Enable read permission.

(R/W)

Register 18.34. PMS\_DMA\_DMA2D\_JPEG\_PMS\_W\_REG (0x01A8)

**PMS\_DMA\_DMA2D\_JPEG\_W\_PMS** Configures 2D-DMA permission to write 32 address ranges requested by JPEG. Bit 0 corresponds to region0, and so on.

- 0: Disable write permission.
- 1: Enable write permission.

(R/W)

**Register 18.35. PMS\_DMA\_USB\_PMS\_R\_REG (0x01AC)**

**PMS\_DMA\_USB\_R\_PMS** Configures read permission for high-speed USB 2.0 OTG to access 32 address ranges. Bit 0 corresponds to region0, and so on.

0: Disable read permission.

1: Enable read permission.

(R/W)

**Register 18.36. PMS\_DMA\_USB\_PMS\_W\_REG (0x01B0)**

**PMS\_DMA\_USB\_W\_PMS** Configures write permission for high-speed USB 2.0 OTG to access 32 address ranges. Bit 0 corresponds to region0, and so on.

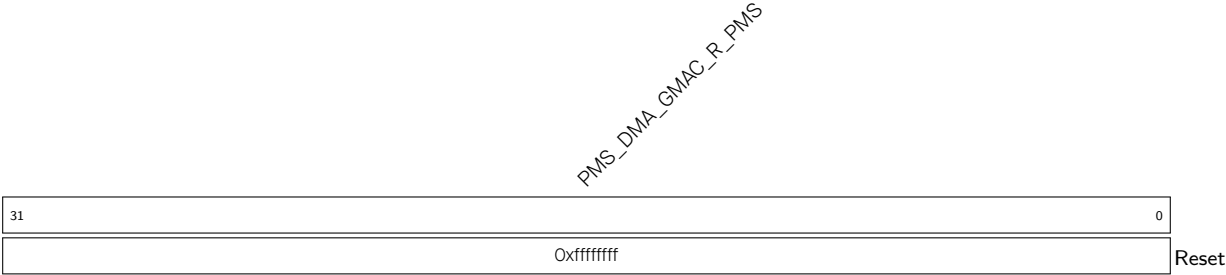

0: Disable write permission.

1: Enable write permission.

(R/W)

Register 18.37. PMS\_DMA\_GMAC\_PMS\_R\_REG (0x01B4)

**PMS\_DMA\_GMAC\_R\_PMS** Configures read permission for EMAC to access 32 address ranges. Bit 0 corresponds to region0, and so on.  
0: Disable read permission.  
1: Enable read permission.  
(R/W)

Register 18.38. PMS\_DMA\_GMAC\_PMS\_W\_REG (0x01B8)

**PMS\_DMA\_GMAC\_W\_PMS** Configures write permission for EMAC to access 32 address ranges. Bit 0 corresponds to region0, and so on.  
0: Disable write permission.  
1: Enable write permission.  
(R/W)

**Register 18.39. PMS\_DMA\_SDMMC\_PMS\_R\_REG (0x01BC)**

**PMS\_DMA\_SDMMC\_R\_PMS** Configures read permission for SDMMC to access 32 address ranges.

Bit 0 corresponds to region0, and so on.

0: Disable read permission.

1: Enable read permission.

(R/W)

**Register 18.40. PMS\_DMA\_SDMMC\_PMS\_W\_REG (0x01C0)**

**PMS\_DMA\_SDMMC\_W\_PMS** Configures write permission for SDMMC to access 32 address ranges. Bit 0 corresponds to region0, and so on.

0: Disable write permission.

1: Enable write permission.

(R/W)

Register 18.41. PMS\_DMA\_USBOTG11\_PMS\_R\_REG (0x01C4)

**PMS\_DMA\_USBOTG11\_R\_PMS** Configures read permission for full-speed USB 2.0 OTG to access 32 address ranges. Bit 0 corresponds to region0, and so on.

0: Disable read permission.

1: Enable read permission.

(R/W)

Register 18.42. PMS\_DMA\_USBOTG11\_PMS\_W\_REG (0x01C8)

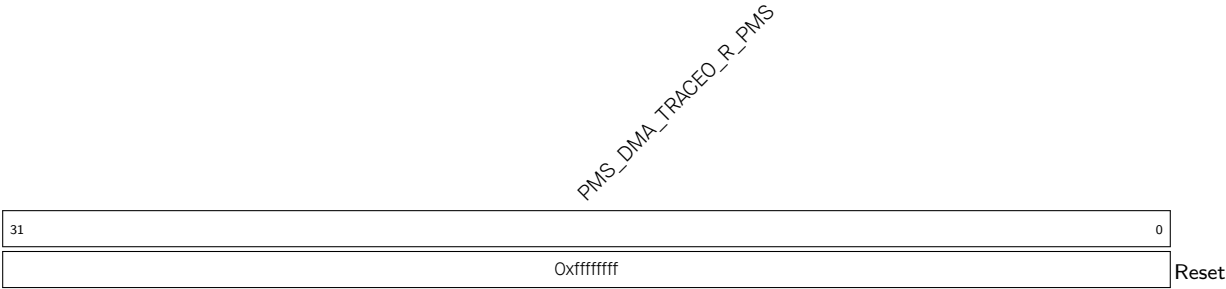

**PMS\_DMA\_USBOTG11\_W\_PMS** Configures write permission for full-speed USB 2.0 OTG to access 32 address ranges. Bit 0 corresponds to region0, and so on.

0: Disable write permission.

1: Enable write permission.

(R/W)

Register 18.43. PMS\_DMA\_TRACE0\_PMS\_R\_REG (0x01CC)

**PMS\_DMA\_TRACE0\_R\_PMS** Configures read permission for TRACE0 to access 32 address ranges.  
Bit 0 corresponds to region0, and so on.  
0: Disable read permission.  
1: Enable read permission.  
(R/W)

Register 18.44. PMS\_DMA\_TRACE0\_PMS\_W\_REG (0x01D0)

**PMS\_DMA\_TRACE0\_W\_PMS** Configures write permission for TRACE0 to access 32 address ranges.  
Bit 0 corresponds to region0, and so on.  
0: Disable write permission.  
1: Enable write permission.  
(R/W)

**Register 18.45. PMS\_DMA\_TRACE1\_PMS\_R\_REG (0x01D4)**

**PMS\_DMA\_TRACE1\_R\_PMS** Configures read permission for TRACE1 to access 32 address ranges.

Bit 0 corresponds to region0, and so on.

0: Disable read permission.

1: Enable read permission.

(R/W)

**Register 18.46. PMS\_DMA\_TRACE1\_PMS\_W\_REG (0x01D8)**

**PMS\_DMA\_TRACE1\_W\_PMS** Configures write permission for TRACE1 to access 32 address ranges.

Bit 0 corresponds to region0, and so on.

0: Disable write permission.

1: Enable write permission.

(R/W)

Register 18.47. PMS\_DMA\_L2MEM\_MON\_PMS\_W\_REG (0x01E0)

**PMS\_DMA\_L2MEM\_MON\_W\_PMS** Configures write permission for L2MEM monitor to access 32 address ranges. Bit 0 corresponds to region0, and so on.

0: Disable write permission.

1: Enable write permission.

(R/W)

Register 18.48. PMS\_DMA\_SPM\_MON\_PMS\_W\_REG (0x01E8)

**PMS\_DMA\_SPM\_MON\_W\_PMS** Configures write permission for SPM monitor to access 32 address ranges. Bit 0 corresponds to region0, and so on.

0: Disable write permission.

1: Enable write permission.

(R/W)

Register 18.49. PMS\_DMA\_H264\_PMS\_R\_REG (0x01FC)

**PMS\_DMA\_H264\_R\_PMS** Configures read permission for H264 DMA to access 32 address ranges.  
Bit 0 corresponds to region0, and so on.  
0: Disable read permission.  
1: Enable read permission.  
(R/W)

Register 18.50. PMS\_DMA\_H264\_PMS\_W\_REG (0x0200)

**PMS\_DMA\_H264\_W\_PMS** Configures write permission for H264 DMA to access 32 address ranges.  
Bit 0 corresponds to region0, and so on.  
0: Disable write permission.  
1: Enable write permission.  
(R/W)

Register 18.51. PMS\_DMA\_DMA2D\_PPA\_PMS\_R\_REG (0x0204)

**PMS\_DMA\_DMA2D\_PPA\_R\_PMS** Configures 2D-DMA permission to read 32 address ranges requested by PPA (Pixel-Processing Accelerator). Bit 0 corresponds to region0, and so on.

- 0: Disable read permission.
- 1: Enable read permission.

(R/W)

Register 18.52. PMS\_DMA\_DMA2D\_PPA\_PMS\_W\_REG (0x0208)

**PMS\_DMA\_DMA2D\_PPA\_W\_PMS** Configures 2D-DMA permission to write 32 address ranges requested by PPA. Bit 0 corresponds to region0, and so on.

- 0: Disable write permission.
- 1: Enable write permission.

(R/W)

Register 18.53. PMS\_DMA\_DMA2D\_DUMMY\_PMS\_R\_REG (0x020C)

**PMS\_DMA\_DMA2D\_DUMMY\_R\_PMS** Configures 2D-DMA permission to read 32 address ranges requested by Dummy. Bit 0 corresponds to region0, and so on.

- 0: Disable read permission.
- 1: Enable read permission.

(R/W)

Register 18.54. PMS\_DMA\_DMA2D\_DUMMY\_PMS\_W\_REG (0x0210)

**PMS\_DMA\_DMA2D\_DUMMY\_W\_PMS** Configures 2D-DMA permission to write 32 address ranges requested by Dummy. Bit 0 corresponds to region0, and so on.

- 0: Disable write permission.
- 1: Enable write permission.

(R/W)

Register 18.55. PMS\_DMA\_AHB\_PDMA\_DUMMY\_R\_PMS\_REG (0x0214)

**PMS\_DMA\_AHB\_PDMA\_DUMMY\_R\_PMS** Configures GDMA-AHB permission to read 32 address ranges requested by Dummy. Bit 0 corresponds to region0, and so on.

- 0: Disable read permission.
- 1: Enable read permission.

(R/W)

Register 18.56. PMS\_DMA\_AHB\_PDMA\_DUMMY\_W\_PMS\_REG (0x0218)

**PMS\_DMA\_AHB\_PDMA\_DUMMY\_W\_PMS** Configures GDMA-AHB permission to write 32 address ranges requested by Dummy. Bit 0 corresponds to region0, and so on.

- 0: Disable write permission.
- 1: Enable write permission.

(R/W)

**Register 18.57. PMS\_DMA\_AXI\_PDMA\_DUMMY\_R\_PMS\_REG (0x021C)**

**PMS\_DMA\_AXI\_PDMA\_DUMMY\_R\_PMS** Configures GDMA-AXI permission to read 32 address ranges requested by Dummy. Bit 0 corresponds to region0, and so on.

0: Disable read permission.

1: Enable read permission.

(R/W)

**Register 18.58. PMS\_DMA\_AXI\_PDMA\_DUMMY\_W\_PMS\_REG (0x0220)**

**PMS\_DMA\_AXI\_PDMA\_DUMMY\_W\_PMS** Configures GDMA-AXI permission to write 32 address ranges requested by Dummy. Bit 0 corresponds to region0, and so on.

0: Disable write permission.

1: Enable write permission.

(R/W)

## 18.7.2 HP\_PERI\_PMS\_REG

The addresses in this section are relative to the HP\_PERI\_PMS base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section [Programming Reserved Register Field](#).

Register 18.59. PMS\_HP\_PERI\_PMS\_DATE\_REG (0x0000)

PMS\_HP\_PERI\_PMS\_DATE Version control register. (R/W)

Register 18.60. PMS\_HP\_PERI\_PMS\_CLK\_EN\_REG (0x0004)

PMS\_HP\_PERI\_PMS\_CLK\_EN Configures whether to keep the clock always on.

- 0: Enable automatic clock gating
- 1: Keep the clock always on

(R/W)

Register 18.61. PMS\_CORE $n$ \_MM\_HP\_PERI\_PMS\_REGO\_REG ( $n$ : 0-1) (0x0008+0x20\* $n$ )

|            |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    |    |   |   |   |   |   |   |   |   |       |   |  |

### 18.7.3 LP2HP\_PERI\_PMS\_REG

The addresses in this section are relative to the LP2HP\_PERI\_PMS base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section [Programming Reserved Register Field](#).

Register 18.69. PMS\_LP2HP\_PERI\_PMS\_DATE\_REG (0x0000)

PMS\_LP2HP\_PERI\_PMS\_DATE Version control register. (R/W)

Register 18.70. PMS\_LP2HP\_PERI\_PMS\_CLK\_EN\_REG (0x0004)

PMS\_LP2HP\_PERI\_PMS\_CLK\_EN Configures whether to keep the clock always on.

- 0: Enable automatic clock gating.
- 1: Keep the clock always on.

(R/W)

Register 18.71. PMS\_LP\_MM\_PMS\_REGO\_REG (0x0008)

## 18.7.4 LP\_PERI\_PMS\_REG

The addresses in this section are relative to the LP\_PERI\_PMS base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section [Programming Reserved Register Field](#).

Register 18.75. PMS\_LP\_PERI\_PMS\_DATE\_REG (0x0000)

PMS\_LP\_PERI\_PMS\_DATE Version control register (R/W)

Register 18.76. PMS\_LP\_PERI\_PMS\_CLK\_EN\_REG (0x0004)

PMS\_LP\_PERI\_PMS\_CLK\_EN Configures whether to keep the clock always on.  
0: Enable automatic clock gating  
1: Keep the clock always on  
(R/W)

**Register 18.77. PMS\_LP\_MM\_LP\_PERI\_PMS\_REGO\_REG (0x0008)**

## Chapter 19

### Debug Assistant

#### 19.1 Overview

Debug Assistant is an auxiliary module that features a set of functions to help locate bugs and issues during software debugging.

#### 19.2 Features

- **Read/write monitoring:** Monitors whether the High-Performance dual-core CPU (HP CPU0 and HP CPU1) bus reads from or writes to a specified memory address space. A detected read or write in the monitored address space will trigger an interrupt.
- **Stack pointer (SP) monitoring:** Monitors whether the SP exceeds the specified address space. A bounds violation will trigger an interrupt.
- **Program counter (PC) logging:** Records the PC value. The developer can get the last PC value at the most recent reset of HP CPU0 or HP CPU1.
- **Bus access logging:** Records the information about bus access. When the HP CPU0, HP CPU1, or the Direct Memory Access controller (DMA) writes a specified value, the Debug Assistant module will record the data type, address of this write operation, and additionally the PC value when the write is performed by HP CPU0 or HP CPU1, and push such information to the HP L2MEM.

#### 19.3 Functional Description

##### 19.3.1 Region Read/Write Monitoring

The Debug Assistant module can monitor reads/writes performed by HP CPU0 bus in a certain address space, i.e., memory region. Whenever the bus reads or writes in the specified address space, an interrupt will be triggered. Please refer to Table 6 in Chapter 1 *High-Performance CPU [to be added later]*. In this chapter, when HP CPU0 bus accesses the data space, it is referred to as the Data bus, and when HP CPU0 bus accesses the AHB peripheral space, it is referred to as the Peripheral bus. The Data bus can monitor two memory regions (assuming they are HP CPU0 region 0 and HP CPU0 region 1, defined by developers' needs) at the same time, and so can Peripheral bus.

This is also the case for HP CPU1.

### 19.3.2 SP Monitoring

The Debug Assistant module can monitor the SP so as to prevent stack overflow or erroneous push/pop in HP CPU0. When the HP CPU0 SP goes below or beyond the lower or upper bound of the HP CPU0 SP monitored region, the module will record the PC pointer and generate an interrupt. The bound is configured by software.

This is also the case for HP CPU1.

### 19.3.3 PC Logging

In some cases, software developers want to know the PC at the last reset of HP CPU0. For instance, when the program is stuck and can only be reset, the developer may want to know where the program got stuck in order to debug. The Debug Assistant module can record the PC at the last reset of HP CPU0, which can be then read for software debugging.

This is also the case for HP CPU1.

### 19.3.4 CPU/DMA Bus Access Logging

The Debug Assistant module can record the information about the HP CPU0 Data bus's, HP CPU1 bus's, and DMA bus's write behaviors in real time. When a write operation occurs in or a specific value is written to a specified address space, the module will record the bus type, the address, PC (only when the write is performed by the HP CPU0 or HP CPU1, will PC be recorded), and other information, and then store the data in the HP L2MEM in a certain format. The specified address range must fall within the permitted memory regions of HP SPM or HP L2MEM.

## 19.4 Interrupts

The following interrupt sources from the Debug Assistant module can generate the interrupt signal ASSIST\_DEBUG\_INT.

- ASSIST\_DEBUG\_CORE\_0\_AREA\_DRAMO\_0\_RD\_INT: Triggered when the HP CPU0 Data bus reads in HP CPU0 region 0.
- ASSIST\_DEBUG\_CORE\_0\_AREA\_DRAMO\_0\_WR\_INT: Triggered when the HP CPU0 Data bus writes in HP CPU0 region 0.
- ASSIST\_DEBUG\_CORE\_0\_AREA\_DRAMO\_1\_RD\_INT: Triggered when the HP CPU0 Data bus reads in HP CPU0 region 1.
- ASSIST\_DEBUG\_CORE\_0\_AREA\_DRAMO\_1\_WR\_INT: Triggered when the HP CPU0 Data bus writes in HP CPU0 region 1.
- ASSIST\_DEBUG\_CORE\_0\_AREA\_PIF\_0\_RD\_INT: Triggered when the HP CPU0 Peripheral bus reads in HP CPU0 region 0.
- ASSIST\_DEBUG\_CORE\_0\_AREA\_PIF\_0\_WR\_INT: Triggered when the HP CPU0 Peripheral bus writes in HP CPU0 region 0.
- ASSIST\_DEBUG\_CORE\_0\_AREA\_PIF\_1\_RD\_INT: Triggered when the HP CPU0 Peripheral bus reads in HP CPU0 region 1.

- ASSIST\_DEBUG\_CORE\_0\_AREA\_PIF\_1\_WR\_INT: Triggered when the HP CPU0 Peripheral bus writes in HP CPU0 region 1.
- ASSIST\_DEBUG\_CORE\_0\_SP\_SPILL\_MIN\_INT: Triggered when the HP CPU0 SP goes below the lower bound of the HP CPU0 SP monitored region.
- ASSIST\_DEBUG\_CORE\_0\_SP\_SPILL\_MAX\_INT: Triggered when the HP CPU0 SP goes beyond the upper bound of the HP CPU0 SP monitored region.
- ASSIST\_DEBUG\_CORE\_1\_AREA\_DRAMO\_0\_RD\_INT: Triggered when the HP CPU1 Data bus reads in HP CPU1 region 0.
- ASSIST\_DEBUG\_CORE\_1\_AREA\_DRAMO\_0\_WR\_INT: Triggered when the HP CPU1 Data bus writes in HP CPU1 region 0.
- ASSIST\_DEBUG\_CORE\_1\_AREA\_DRAMO\_1\_RD\_INT: Triggered when the HP CPU1 Data bus reads in HP CPU1 region 1.
- ASSIST\_DEBUG\_CORE\_1\_AREA\_DRAMO\_1\_WR\_INT: Triggered when the HP CPU1 Data bus writes in HP CPU1 region 1.
- ASSIST\_DEBUG\_CORE\_1\_AREA\_PIF\_0\_RD\_INT: Triggered when the HP CPU1 Peripheral bus reads in HP CPU1 region 0.
- ASSIST\_DEBUG\_CORE\_1\_AREA\_PIF\_0\_WR\_INT: Triggered when the HP CPU1 Peripheral bus writes in HP CPU1 region 0.
- ASSIST\_DEBUG\_CORE\_1\_AREA\_PIF\_1\_RD\_INT: Triggered when the HP CPU1 Peripheral bus reads in HP CPU1 region 1.
- ASSIST\_DEBUG\_CORE\_1\_AREA\_PIF\_1\_WR\_INT: Triggered when the HP CPU1 Peripheral bus writes in HP CPU1 region 1.
- ASSIST\_DEBUG\_CORE\_1\_SP\_SPILL\_MIN\_INT: Triggered when the HP CPU1 SP goes below the lower bound of the HP CPU1 SP monitored region.
- ASSIST\_DEBUG\_CORE\_1\_SP\_SPILL\_MAX\_INT: Triggered when the HP CPU1 SP goes beyond the upper bound of the HP CPU1 SP monitored region.

**Note:**

For definitions of *interrupt*, *interrupt signal*, *interrupt source*, and their correlations, please refer to Chapter [11 Interrupt Matrix](#) > Section [11.2 Interrupt Terminology in ESP32-P4](#).

Each interrupt source can be configured by a common set of registers that are described in Section [Interrupt Configuration Registers](#). The specific registers can be found in Section [19.6 Register Summary](#).

## 19.5 Recommended Operation

### 19.5.1 Region Monitoring and SP Monitoring Configuration

The Debug Assistant module can monitor reads and writes performed by the Data bus and Peripheral bus of HP CPU0 and HP CPU1. Two memory regions on each bus can be monitored at the same time. All the

monitoring modes supported by the Debug Assistant module are listed below:

- Monitoring the read/write operations performed by Data bus
  - HP CPU0 Data bus reads in HP CPU0 region 0
  - HP CPU0 Data bus writes in HP CPU0 region 0
  - HP CPU0 Data bus reads in HP CPU0 region 1
  - HP CPU0 Data bus writes in HP CPU0 region 1
  - HP CPU1 Data bus reads in HP CPU1 region 0
  - HP CPU1 Data bus writes in HP CPU1 region 0
  - HP CPU1 Data bus reads in HP CPU1 region 1
  - HP CPU1 Data bus writes in HP CPU1 region 1
- Monitoring the read/write operations performed by Peripheral bus
  - HP CPU0 Peripheral bus reads in HP CPU0 region 0
  - HP CPU0 Peripheral bus writes in HP CPU0 region 0
  - HP CPU0 Peripheral bus reads in HP CPU0 region 1
  - HP CPU0 Peripheral bus writes in HP CPU0 region 1
  - HP CPU1 Peripheral bus reads in HP CPU1 region 0
  - HP CPU1 Peripheral bus writes in HP CPU1 region 0
  - HP CPU1 Peripheral bus reads in HP CPU1 region 1
  - HP CPU1 Peripheral bus writes in HP CPU1 region 1
- Monitoring SP bounds violations
  - HP CPU0 SP goes beyond the upper bound of the HP CPU0 SP monitored region
  - HP CPU0 SP goes below the lower bound of the HP CPU0 SP monitored region
  - HP CPU1 SP goes beyond the upper bound of the HP CPU1 SP monitored region
  - HP CPU1 SP goes below the lower bound of the HP CPU1 SP monitored region

The configuration process for region monitoring and SP monitoring is as follows:

1. Configure the monitored region and SP bounds.

- Configure HP CPU0 Data bus region 0 with [ASSIST\\_DEBUG\\_CORE\\_0\\_AREA\\_DRAMO\\_0\\_MIN\\_REG](#) and [ASSIST\\_DEBUG\\_CORE\\_0\\_AREA\\_DRAMO\\_0\\_MAX\\_REG](#).
- Configure HP CPU0 Data bus region 1 with [ASSIST\\_DEBUG\\_CORE\\_0\\_AREA\\_DRAMO\\_1\\_MIN\\_REG](#) and [ASSIST\\_DEBUG\\_CORE\\_0\\_AREA\\_DRAMO\\_1\\_MAX\\_REG](#).
- Configure HP CPU0 Peripheral bus region 0 with [ASSIST\\_DEBUG\\_CORE\\_0\\_AREA\\_PIF\\_0\\_MIN\\_REG](#) and [ASSIST\\_DEBUG\\_CORE\\_0\\_AREA\\_PIF\\_0\\_MAX\\_REG](#).
- Configure HP CPU0 Peripheral bus region 1 with [ASSIST\\_DEBUG\\_CORE\\_0\\_AREA\\_PIF\\_1\\_MIN\\_REG](#) and [ASSIST\\_DEBUG\\_CORE\\_0\\_AREA\\_PIF\\_1\\_MAX\\_REG](#).

- Configure HP CPU0 SP bounds with [ASSIST\\_DEBUG\\_CORE\\_0\\_SP\\_MIN\\_REG](#) and [ASSIST\\_DEBUG\\_CORE\\_0\\_SP\\_MAX\\_REG](#).
- Configure HP CPU1 Data bus region 0 with [ASSIST\\_DEBUG\\_CORE\\_1\\_AREA\\_DRAMO\\_0\\_MIN\\_REG](#) and [ASSIST\\_DEBUG\\_CORE\\_1\\_AREA\\_DRAMO\\_0\\_MAX\\_REG](#).
- Configure HP CPU1 Data bus region 1 with [ASSIST\\_DEBUG\\_CORE\\_1\\_AREA\\_DRAMO\\_1\\_MIN\\_REG](#) and [ASSIST\\_DEBUG\\_CORE\\_1\\_AREA\\_DRAMO\\_1\\_MAX\\_REG](#).
- Configure HP CPU1 Peripheral bus region 0 with [ASSIST\\_DEBUG\\_CORE\\_1\\_AREA\\_PIF\\_0\\_MIN\\_REG](#) and [ASSIST\\_DEBUG\\_CORE\\_1\\_AREA\\_PIF\\_0\\_MAX\\_REG](#).
- Configure HP CPU1 Peripheral bus region 1 with [ASSIST\\_DEBUG\\_CORE\\_1\\_AREA\\_PIF\\_1\\_MIN\\_REG](#) and [ASSIST\\_DEBUG\\_CORE\\_1\\_AREA\\_PIF\\_1\\_MAX\\_REG](#).
- Configure HP CPU1 SP bounds with [ASSIST\\_DEBUG\\_CORE\\_1\\_SP\\_MIN\\_REG](#) and [ASSIST\\_DEBUG\\_CORE\\_1\\_SP\\_MAX\\_REG](#).

## 2. Configure interrupts.

- Configure [ASSIST\\_DEBUG\\_CORE\\_0\\_INTR\\_ENA\\_REG](#) or [ASSIST\\_DEBUG\\_CORE\\_1\\_INTR\\_ENA\\_REG](#) to enable the interrupt of a monitoring mode.
- Read [ASSIST\\_DEBUG\\_CORE\\_0\\_INTR\\_RAW\\_REG](#) or [ASSIST\\_DEBUG\\_CORE\\_1\\_INTR\\_RAW\\_REG](#) to get the raw interrupt status of a monitoring mode.
- Configure [ASSIST\\_DEBUG\\_CORE\\_0\\_INTR\\_CLR\\_REG](#) or [ASSIST\\_DEBUG\\_CORE\\_1\\_INTR\\_CLR\\_REG](#) to clear the interrupt of a monitoring mode.

## 3. Configure [ASSIST\\_DEBUG\\_CORE\\_0\\_MONTR\\_ENA\\_REG](#) or [ASSIST\\_DEBUG\\_CORE\\_1\\_MONTR\\_ENA\\_REG](#) to enable the monitoring mode(s). Various monitoring modes can be enabled at the same time.

Assuming that Debug Assistant module needs to monitor whether HP CPU0 Data bus has written to [A ~ B] address space, the user can enable monitoring in either HP CPU0 Data bus region 0 or region 1. The following configuration process is based on region 0:

1. Configure [ASSIST\\_DEBUG\\_CORE\\_0\\_RCD\\_PDEBUGEN](#) to 1 to enable HP CPU0 to update the PC signals to the Debug Assistant module.
2. Configure [ASSIST\\_DEBUG\\_CORE\\_0\\_AREA\\_DRAMO\\_0\\_MIN\\_REG](#) to Address A.
3. Configure [ASSIST\\_DEBUG\\_CORE\\_0\\_AREA\\_DRAMO\\_0\\_MAX\\_REG](#) to Address B.
4. Configure [ASSIST\\_DEBUG\\_CORE\\_0\\_INTR\\_ENA\\_REG](#) bit[1] to enable the interrupt for write operations by HP CPU0 Data bus in region 0.
5. Configure [ASSIST\\_DEBUG\\_CORE\\_0\\_MONTR\\_ENA\\_REG](#) bit[1] to enable monitoring write operations by HP CPU0 Data bus in region 0.
6. Configure interrupt matrix to map [ASSIST\\_DEBUG\\_INTR](#) into HP CPU0/1 interrupt (please refer to Chapter [11 Interrupt Matrix](#)).
7. After the interrupt is triggered:
  - Read [ASSIST\\_DEBUG\\_CORE\\_0\\_INTR\\_RAW\\_REG](#) and [ASSIST\\_DEBUG\\_CORE\\_1\\_INTR\\_RAW\\_REG](#) to learn which operation triggered the interrupt.

- If the interrupt is triggered by HP CPU0 region monitoring, read [ASSIST\\_DEBUG\\_CORE\\_O\\_AREA\\_PC\\_REG](#) for the HP CPU0 PC value, and [ASSIST\\_DEBUG\\_CORE\\_O\\_AREA\\_SP\\_REG](#) for the HP CPU0 SP.
- If the interrupt is triggered by SP monitoring, read [ASSIST\\_DEBUG\\_CORE\\_O\\_SP\\_PC\\_REG](#) for the HP CPU0 PC value.
- Write 1 to the corresponding bits of [ASSIST\\_DEBUG\\_CORE\\_O\\_INTR\\_RAW\\_REG](#) and [ASSIST\\_DEBUG\\_CORE\\_1\\_INTR\\_CLR\\_REG](#) to clear the interrupts.

## 19.5.2 PC Logging Configuration

Configure [ASSIST\\_DEBUG\\_CORE\\_O\\_RCD\\_PDEBUGEN](#) to 1 to enable HP CPU0 to update the PC signals to the Debug Assistant module. If [ASSIST\\_DEBUG\\_CORE\\_O\\_RCD\\_RECORDEN](#) is also configured to 1, [ASSIST\\_DEBUG\\_CORE\\_O\\_RCD\\_PDEBUGPC\\_REG](#) will record the HP CPU0's PC signal and [ASSIST\\_DEBUG\\_CORE\\_O\\_RCD\\_PDEBUGSP\\_REG](#) will record the HP CPU0 SP value. Otherwise, the two registers keep the original values.

When the HP CPU0 resets, [ASSIST\\_DEBUG\\_CORE\\_O\\_RCD\\_EN\\_REG](#) will reset, while [ASSIST\\_DEBUG\\_CORE\\_O\\_RCD\\_PDEBUGPC\\_REG](#) and [ASSIST\\_DEBUG\\_CORE\\_O\\_RCD\\_PDEBUGSP\\_REG](#) will not. Therefore, the two registers will keep the PC value and SP value at the HP CPU0 reset.

This is also the case for HP CPU1.

## 19.5.3 CPU/DMA Bus Access Logging Configuration

### 19.5.3.1 HP CPU0/1 Bus Access Logging Configuration

The configuration process for HP CPU0/1 bus access logging (SPM Monitor) is described below.

1. Configure monitored address space.
  - Configure [SPM\\_MEM\\_MONITOR\\_LOG\\_MIN\\_REG](#) and [SPM\\_MEM\\_MONITOR\\_LOG\\_MAX\\_REG](#) to specify monitored address space. The monitored address space should range from 0x3010\_0000 to 0x3010\_1FFF.
2. Configure the monitoring mode with [SPM\\_MEM\\_MONITOR\\_LOG\\_MODE](#):
  - Write monitoring (whether the bus has write operations)
  - Word monitoring (whether the bus writes a specific word)
  - Halfword monitoring (whether the bus writes a specific halfword)
  - Byte monitoring (whether the bus writes a specific byte)
3. Configure the specific values to be monitored.
  - In word monitoring mode, [SPM\\_MEM\\_MONITOR\\_LOG\\_CHECK\\_DATA\\_REG](#) specifies the monitored word.
  - In halfword monitoring mode, [SPM\\_MEM\\_MONITOR\\_LOG\\_CHECK\\_DATA\\_REG](#)[15:0] specifies the monitored halfword.
  - In byte monitoring mode, [SPM\\_MEM\\_MONITOR\\_LOG\\_CHECK\\_DATA\\_REG](#)[7:0] specifies the monitored byte.

- [SPM\\_MEM\\_MONITOR\\_LOG\\_DATA\\_MASK\\_REG](#) is used to mask the byte specified in [SPM\\_MEM\\_MONITOR\\_LOG\\_CHECK\\_DATA\\_REG](#). A masked byte can be any value. For example, in word monitoring, if [SPM\\_MEM\\_MONITOR\\_LOG\\_CHECK\\_DATA\\_REG](#) is configured to 0x01020304 and [SPM\\_MEM\\_MONITOR\\_LOG\\_DATA\\_MASK\\_REG](#) is configured to 0x1, then any writes of the data matching the 0x010203XX pattern by the bus will be recorded.

#### 4. Configure the storage space for recorded data.

- [SPM\\_MEM\\_MONITOR\\_LOG\\_MEM\\_START\\_REG](#) and [SPM\\_MEM\\_MONITOR\\_LOG\\_MEM\\_END\\_REG](#) specify the storage space for recorded data. The storage space must be in the range of 0x4080\_0000 ~ 0x4087\_FFFF.
- Set [SPM\\_MEM\\_MONITOR\\_LOG\\_MEM\\_ADDR\\_UPDATE\\_REG](#) to update the value in [SPM\\_MEM\\_MONITOR\\_LOG\\_MEM\\_CURRENT\\_ADDR\\_REG](#) to [SPM\\_MEM\\_MONITOR\\_LOG\\_MEM\\_START\\_REG](#).
- Configure the permission for the SPM Monitor function of Debug Assistant module to access the HP L2MEM. Only when the access permission is enabled can the Debug Assistant module access the HP L2MEM. For more information, please refer to [TEE\\_DMA\\_SPM\\_MON\\_PMS\\_W\\_REG](#) and other relevant registers in Chapter 18 *Permission Control (PMS)*.

#### 5. Configure the writing mode for the recorded data: loop mode or non-loop mode.

- In loop mode, writing to the specified address space is performed in loops. When writing reaches the end address, it will return to the starting address and continue, overwriting the previously recorded data. Set [SPM\\_MEM\\_MONITOR\\_LOG\\_MEM\\_LOOP\\_ENABLE](#) to enable loop mode. For example, there are 10 write operations (1 ~ 10) to address space 0 ~ 4 during bus access. After the 5th operation writes to address 4, the 6th operation will start writing from address 0. The 6th to 10th operations will overwrite the previous data written by the 1th to 5th operations.
- In non-loop mode, when writing reaches the end address, it will stop at the end address and dump the remaining data, not overwriting the previously recorded data. Clear [SPM\\_MEM\\_MONITOR\\_LOG\\_MEM\\_LOOP\\_ENABLE](#) to use non-loop mode. For example, there are 10 write operations (1 ~ 10) to address space 0 ~ 4 during bus access. After the 5th operation writes to address 4, the 6th to 10th write operations will stop at address 4 and will not be performed any more. Therefore, the address 0 ~ 4 stores the values written by the 1 ~ 5 operations and the values of the 6 ~ 10 operations are dumped.

#### 6. Configure bus enable registers.

- Enable HP CPU0 or HP CPU1 bus access logging with [SPM\\_MEM\\_MONITOR\\_LOG\\_CORE\\_ENA](#). They can be enabled at the same time.

The Debug Assistant module first writes the recorded data of HP CPU0 or HP CPU1 to the internal buffer A, and then fetches the data from the buffer and writes it to the configured memory space. When the monitored behaviors are triggered continuously, the generated recording packets may fully occupy the buffer, making it unable to take any incoming packets. At this time, the module dumps these incoming packets and buffers a HP CPU LOST packet instead before the buffer reaches its capacity. However, it is only possible to know the bus type of the dumped packets when the HP CPU LOST packet was generated, but not the number of the dumped packets before the generation.

When bus access logging is finished, the recorded data can be read from memory for decoding. The recorded data is in three packet formats, namely HP CPU0 packet (corresponding to HP CPU0 Data bus), HP

CPU1 packet (corresponding to HP CPU1 Data bus), and HP CPU LOST packet. The packet formats are shown in Table 19.5-1 and 19.5-2.

**Table 19.5-1. HP CPU0/1 Packet Format**

| Bit[63:33] | Bit[32]      | Bit[31:3]   | Bit[2:1] | Bit[0]       |
|------------|--------------|-------------|----------|--------------|
| pc_offset  | anchored (1) | addr_offset | format   | anchored (0) |

**Table 19.5-2. HP CPU LOST Packet Format**

| Bit[31:7] | Bit[6:3]    | Bit[2:1] | Bit[0]       |
|-----------|-------------|----------|--------------|
| reserved  | lost_source | format   | anchored (0) |

It can be seen from the data packet formats that the size of the HP CPU0/1 packet is 64 bits and that of the HP CPU LOST packet is 32 bits. These packets contain the following fields:

- **format** – the packet type. 0: HP CPU0 packet; 1: HP CPU1 packet; 2: HP CPU LOST packet; 3: Reserved.
- **pc\_offset** - the offset of the HP CPU0/1 PC register at the time of access. Actual PC = pc\_offset + 0x0000\_0000.
- **addr\_offset** - the address offset of a write operation. Actual address = addr\_offset + [SPM\\_MEM\\_MONITOR\\_LOG\\_MIN\\_REG](#)[31:4], 4'h0.
- **lost\_source** - the dumped packets when the HP CPU LOST packet was generated.
  - Bit[4:3]: 0 indicates HP CPU0 packets were not dumped. 3 indicates HP CPU0 packets were dumped. Other values are reserved.
  - Bit[6:5]: 0 indicates HP CPU1 packets were not dumped. 3 indicates HP CPU1 packets were dumped. Other values are reserved.
- **anchored** - the location of the 32 bits in the data packet. 0: Lower 32 bits. 1: Higher 32 bits.

The internal buffer of the module is 32 bits wide. When the HP CPU0 and HP CPU1 bus access loggings are both enabled and the record data is generated at the same time, the HP CPU0 data packets are first buffered, then the HP CPU1 packets. The Debug Assistant will automatically fetch the buffered data and store it in 32-bit data width into the specified memory space.

In loop mode, data looping several times in the storage memory may cause residual data, which can interfere with packet parsing. For example, the lower 32 bits of a HP CPU0/1 packet are overwritten, thus making its higher 32 bits residual data. Therefore, users need to filter out the possible residual data in order to determine the starting position of the first valid packet with [SPM\\_MEM\\_MONITOR\\_LOG\\_MEM\\_CURRENT\\_ADDR\\_REG](#). Once the starting position of the packet is identified, check the anchored bit value of the packet. If it is 0, the data will be retained. If it is 1, it will be dumped.

The process of packet parsing is described below:

- Determine whether there is a data overflow with [SPM\\_MEM\\_MONITOR\\_LOG\\_MEM\\_FULL\\_FLAG](#).
  - If no, the address space to read is [SPM\\_MEM\\_MONITOR\\_LOG\\_MEM\\_START\\_REG](#) ~ [SPM\\_MEM\\_MONITOR\\_LOG\\_MEM\\_CURRENT\\_ADDR\\_REG](#) - 4.

- If yes and the loop mode is enabled, the address space is  
`SPM_MEM_MONITOR_LOG_MEM_CURRENT_ADDR_REG ~`  
`SPM_MEM_MONITOR_LOG_MEM_END_REG` and `SPM_MEM_MONITOR_LOG_MEM_START_REG ~`  
`SPM_MEM_MONITOR_LOG_MEM_CURRENT_ADDR_REG - 4`.
- If yes and loop mode is not enabled, the address space is  
`SPM_MEM_MONITOR_LOG_MEM_START_REG ~ SPM_MEM_MONITOR_LOG_MEM_END_REG`.

- Read and parse data from the starting address. Read 32 bits each time.

After packet parsing is completed, clear the `SPM_MEM_MONITOR_LOG_MEM_FULL_FLAG` flag bit by setting `SPM_MEM_MONITOR_CLR_LOG_MEM_FULL_FLAG`.

### 19.5.3.2 DMA Bus Access Logging Configuration

The Debug Assistant module supports a total of four DMA bus channel groups, DMA\_0, DMA\_1, DMA\_2, and DMA\_3 channel groups. DMA\_0 and DMA\_1 channel groups are reserved and cannot be used. The DMA bus for the DMA\_2 channel group is the bus on which the AXI matrix accesses the HP L2MEM. The DMA bus for the DMA\_3 channel group is the bus on which the AHB matrix accesses the HP L2MEM. For more information, see Chapter 6 *System and Memory* > Section 6.3.2. The configuration process for DMA bus access logging (L2MEM Monitor) is described below.

1. Configure monitored address space.
  - Configure `L2_MEM_MONITOR_LOG_MIN_REG` and `L2_MEM_MONITOR_LOG_MAX_REG` to specify monitored address space. The monitored address space should range from `0x4FF0_0000` to `0x4FFB_FFFF` or from `0x8FF0_0000` to `0x8FFB_FFFF`.
2. Configure the monitoring mode with `L2_MEM_MONITOR_LOG_MODE`:
  - Write monitoring (whether the bus has write operations)
  - Word monitoring (whether the bus writes a specific word)
  - Halfword monitoring (whether the bus writes a specific halfword)
  - Byte monitoring (whether the bus writes a specific byte)
3. Configure the specific values to be monitored.
  - In word monitoring mode, `L2_MEM_MONITOR_LOG_CHECK_DATA_REG` specifies the monitored word.
  - In halfword monitoring mode, `L2_MEM_MONITOR_LOG_CHECK_DATA_REG[15:0]` specifies the monitored halfword.
  - In byte monitoring mode, `L2_MEM_MONITOR_LOG_CHECK_DATA_REG[7:0]` specifies the monitored byte.
  - `L2_MEM_MONITOR_LOG_DATA_MASK_REG` is used to mask the byte specified in `L2_MEM_MONITOR_LOG_CHECK_DATA_REG`. A masked byte can be any value. For example, in word monitoring, if `L2_MEM_MONITOR_LOG_CHECK_DATA_REG` is configured to `0x01020304` and `L2_MEM_MONITOR_LOG_DATA_MASK_REG` is configured to `0x1`, then any writes of the data matching the `0x010203XX` pattern by the bus will be recorded.
4. Configure the storage space for recorded data.

- [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_START\\_REG](#) and [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_END\\_REG](#) specify the storage space for recorded data. The storage space must be in the range of 0x4080\_0000 ~ 0x4087\_FFFF.
- Set [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_ADDR\\_UPDATE\\_REG](#) to update the value in [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_CURRENT\\_ADDR\\_REG](#) to [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_START\\_REG](#).
- Configure the permission for the L2MEM Monitor function of Debug Assistant module to access the HP L2MEM. Only when the access permission is enabled can the Debug Assistant module access the HP L2MEM. For more information, please refer to [TEE\\_DMA\\_L2MEM\\_MON\\_PMS\\_W\\_REG](#) and other relevant registers in Chapter 18 *Permission Control (PMS)*.

5. Configure the writing mode for the recorded data: loop mode or non-loop mode.

- In loop mode, writing to the specified address space is performed in loops. When writing reaches the end address, it will return to the starting address and continue, overwriting the previously recorded data. Set [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_LOOP\\_ENABLE](#) to enable loop mode. For example, there are 10 write operations (1 ~ 10) to address space 0 ~ 4 during bus access. After the 5th operation writes to address 4, the 6th operation will start writing from address 0. The 6th to 10th operations will overwrite the previous data written by the 1th to 5th operations.
- In non-loop mode, when writing reaches the end address, it will stop at the end address and dump the remaining data, not overwriting the previously recorded data. Clear [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_LOOP\\_ENABLE](#) to use non-loop mode. For example, there are 10 write operations (1 ~ 10) to address space 0 ~ 4 during bus access. After the 5th operation writes to address 4, the 6th to 10th write operations will stop at address 4 and will not be performed any more. Therefore, the address 0 ~ 4 stores the values written by the 1 ~ 5 operations and the values of the 6 ~ 10 operations are dumped.
- See the example in [19.5.3.1](#) > step 5.

6. Configure bus enable registers.

- Enable DMA\_2 and DMA\_3 channel groups bus access logging with [L2\\_MEM\\_MONITOR\\_LOG\\_DMA\\_2\\_ENA](#) and [L2\\_MEM\\_MONITOR\\_LOG\\_DMA\\_3\\_ENA](#) respectively. They can be enabled at the same time.

The Debug Assistant module first writes the DMA recorded data to the internal buffer B, and then fetches the data from the buffer and writes it to the configured memory space. When the monitored behaviors are triggered continuously, the generated recording packets may fully occupy the buffer, making it unable to take any incoming packets. At this time, the module dumps these incoming packets and buffers a DMA LOST packet instead before the buffer reaches its capacity. However, it is only possible to know the bus type of the dumped packets when the DMA LOST packet was generated, but not the number of the dumped packets before the generation.

When bus access logging is finished, the recorded data can be read from memory for decoding. The recorded data is in three packet formats, namely DMA\_2 packet (corresponding to DMA\_2 Data bus), DMA\_3 packet (corresponding to DMA\_3 Data bus), and DMA LOST packet. The packet formats are shown in Table [19.5-3](#), [19.5-4](#), and [19.5-5](#).

Table 19.5-3. DMA\_2 Packet Format

| Bit[31:9]    | Bit[8:4] | Bit[3:1] | Bit[0]       |
|--------------|----------|----------|--------------|
| addr_offset0 | reserved | format   | anchored (0) |

Table 19.5-4. DMA\_3 Packet Format

| Bit[31:9]    | Bit[8:4] | Bit[3:1] | Bit[0]       |
|--------------|----------|----------|--------------|
| addr_offset1 | reserved | format   | anchored (0) |

Table 19.5-5. DMA LOST Packet Format

| Bit[31:10] | Bit[9:8]    | Bit[7:4] | Bit[3:1] | Bit[0]       |
|------------|-------------|----------|----------|--------------|
| reserved   | lost_source | reserved | format   | anchored (0) |

It can be seen from the data packet formats that the size of the DMA\_2, DMA\_3, and DMA LOST packet is 32 bits. These packets contain the following fields:

- **format** – the packet type. 4: DMA\_2 packet; 5: DMA\_3 packet; 6: DMA LOST packet; other values: Reserved.
- **addr\_offset0** - the address offset of a write operation. Actual address = addr\_offset0 + [L2\\_MEM\\_MONITOR\\_LOG\\_MIN\\_REG](#)[31:5], 5'h0.
- **addr\_offset1** - the address offset of a write operation. Actual address = addr\_offset1 + [L2\\_MEM\\_MONITOR\\_LOG\\_MIN\\_REG](#)[31:2], 2'h0.
- **lost\_source** - the dumped packets when the DMA LOST packet was generated.
  - Bit[8]: 0 indicates DMA\_2 packets were not dumped. 1 indicates DMA\_2 packets were dumped.
  - Bit[9]: 0 indicates DMA\_3 packets were not dumped. 1 indicates DMA\_3 packets were dumped.
- **anchored** - the location of the 32 bits in the data packet. 0: Lower 32 bits. 1: Higher 32 bits.

The internal buffer of the module is 32 bits wide. When the bus access loggings of DMA\_2 and DMA\_3 channel groups are both enabled and the record data is generated at the same time, the DMA\_2 data packets are first buffered, then the DMA\_3 packets. The Debug Assistant will automatically fetch the buffered data and store it in 32-bit data width into the specified memory space.

The process of packet parsing is described below:

- Determine whether there is a data overflow with [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_FULL\\_FLAG](#).
  - If no, the address space to read is [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_START\\_REG](#) ~ [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_CURRENT\\_ADDR\\_REG](#) - 4.
  - If yes and the loop mode is enabled, the address space is [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_CURRENT\\_ADDR\\_REG](#) ~ [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_END\\_REG](#) and [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_START\\_REG](#) ~ [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_CURRENT\\_ADDR\\_REG](#) - 4.
  - If yes and loop mode is not enabled, the address space is [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_START\\_REG](#) ~ [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_END\\_REG](#).

- Read and parse data from the starting address. Read 32 bits each time.

After packet parsing is completed, clear the [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_FULL\\_FLAG](#) flag bit by setting [L2\\_MEM\\_MONITOR\\_CLR\\_LOG\\_MEM\\_FULL\\_FLAG](#).

## 19.6 Register Summary

The addresses of **HP CPU bus logging configuration registers** (see 19.6.1) in this section are relative to the **SPM Monitor** base address. The addresses of **DMA bus logging configuration registers** (see 19.6.2) in this section are relative to the **L2MEM Monitor** base address. The addresses of other registers (see 19.6.3) are relative to the **Bus Monitor** base address. All base addresses are provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

### 19.6.1 HP CPU Bus Logging Configuration Register Summary

| Name   | Description  | Address | Access |
|--|--|---------|--------|
| <b>HP CPU bus logging configuration registers</b>        |  |         |        |
| <a href="#">SPM_MEM_MONITOR_LOG_SETTING_REG</a>          | Configures bus access logging  | 0x0000  | R/W    |
| <a href="#">SPM_MEM_MONITOR_LOG_CHECK_DATA_REG</a>       | Configures monitored data in bus access logging                                      | 0x0008  | R/W    |
| <a href="#">SPM_MEM_MONITOR_LOG_DATA_MASK_REG</a>        | Configures masked data in bus access logging   | 0x000C  | R/W    |
| <a href="#">SPM_MEM_MONITOR_LOG_MIN_REG</a>              | Configures monitored address space in bus access logging                             | 0x0010  | R/W    |

### 19.6.2 DMA Bus Logging Configuration Register Summary

| Name   | Description | Address | Access |
|--|-------------|---------|--------|
| <b>DMA bus logging configuration registers</b> |             |         |        |

| Name  | Description  | Address | Access |
|---|--|---------|--------|
| <a href="#">L2_MEM_MONITOR_LOG_SETTING_REG</a>          | Configures bus access logging  | 0x0000  | R/W    |
| <a href="#">L2_MEM_MONITOR_LOG_SETTING1_REG</a>         | Configures bus access logging  | 0x0004  | R/W    |
| <a href="#">L2_MEM_MONITOR_LOG_CHECK_DATA_REG</a>       | Configures monitored data in bus access logging                                      | 0x0008  | R/W    |
| <a href="#">L2_MEM_MONITOR_LOG_DATA_MASK_REG</a>        | Configures masked data in bus access logging   | 0x000C  | R/W    |
| <a href="#">L2_MEM_MONITOR_LOG_MIN_REG</a>              | Configures monitored address space in bus access logging                             | 0x0010  | R/W    |
| <a href="#">L2_MEM_MONITOR_LOG_MAX_REG</a>              | Configures monitored address space in bus access logging                             | 0x0014  | R/W    |
| <a href="#">L2_MEM_MONITOR_LOG_MEM_START_REG</a>        | Configures the starting address of the memory for recorded data                      | 0x0018  | R/W    |
| <a href="#">L2_MEM_MONITOR_LOG_MEM_END_REG</a>          | Configures the end address of the memory for recorded data                           | 0x001C  | R/W    |
| <a href="#">L2_MEM_MONITOR_LOG_MEM_CURRENT_ADDR_REG</a> | Represents the address for the next write  | 0x0020  | RO     |
| <a href="#">L2_MEM_MONITOR_LOG_MEM_ADDR_UPDATE_REG</a>  | Updates the address for the next write to the starting address for the recorded data | 0x0024  | WT     |
| <a href="#">L2_MEM_MONITOR_LOG_MEM_FULL_FLAG_REG</a>    | Represents the logging overflow status   | 0x0028  | varies |
| <b>Clock control register</b>                           |  |         |        |
| <a href="#">L2_MEM_MONITOR_CLOCK_GATE_REG</a>           | Clock control register   | 0x002C  | R/W    |
| <b>Version control register</b>                         |  |         |        |
| <a href="#">L2_MEM_MONITOR_DATE_REG</a>                 | Version control register   | 0x03FC  | R/W    |

### 19.6.3 Summary of Other Registers

| Name   | Description  | Address | Access |
|--|--|---------|--------|
| <b>Monitor configuration registers</b>                   |  |         |        |
| <a href="#">ASSIST_DEBUG_CORE_O_MONTR_ENA_REG</a>        | Configures whether to enable HP CPU0 monitoring                              | 0x0000  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_O_AREA_DRAMO_O_MIN_REG</a> | Configures the lower bound address of region 0 monitored on HP CPU0 Data bus | 0x0010  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_O_AREA_DRAMO_O_MAX_REG</a> | Configures the upper bound address of region 0 monitored on HP CPU0 Data bus | 0x0014  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_O_AREA_DRAMO_1_MIN_REG</a> | Configures the lower bound address of region 1 monitored on HP CPU0 Data bus | 0x0018  | R/W    |

| Name   | Description  | Address | Access |
|--|--|---------|--------|
| <a href="#">ASSIST_DEBUG_CORE_O_AREA_DRAMO_1_MAX_REG</a> | Configures the upper bound address of region 1 monitored on HP CPU0 Data bus       | 0x001C  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_O_AREA_PIF_O_MIN_REG</a>   | Configures the lower bound address of region 0 monitored on HP CPU0 Peripheral bus | 0x0020  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_O_AREA_PIF_O_MAX_REG</a>   | Configures the upper bound address of region 0 monitored on HP CPU0 Peripheral bus | 0x0024  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_O_AREA_PIF_1_MIN_REG</a>   | Configures the lower bound address of region 1 monitored on HP CPU0 Peripheral bus | 0x0028  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_O_AREA_PIF_1_MAX_REG</a>   | Configures the upper bound address of region 1 monitored on HP CPU0 Peripheral bus | 0x002C  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_O_AREA_PC_REG</a>          | Represents the PC status under HP CPU0 region monitoring                           | 0x0030  | RO     |
| <a href="#">ASSIST_DEBUG_CORE_O_AREA_SP_REG</a>          | Represents the SP status under HP CPU0 region monitoring                           | 0x0034  | RO     |
| <a href="#">ASSIST_DEBUG_CORE_O_SP_MIN_REG</a>           | Configures the lower bound address of the HP CPU0 SP monitored region              | 0x0038  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_O_SP_MAX_REG</a>           | Configures the upper bound address of the HP CPU0 SP monitored region              | 0x003C  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_O_SP_PC_REG</a>            | Represents the PC status under HP CPU0 SP monitoring                               | 0x0040  | RO     |
| <a href="#">ASSIST_DEBUG_CORE_1_MONTR_ENA_REG</a>        | Configures whether to enable HP CPU1 monitoring                                    | 0x0080  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_1_AREA_DRAMO_O_MIN_REG</a> | Configures the lower bound address of region 0 monitored on HP CPU1 Data bus       | 0x0090  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_1_AREA_DRAMO_O_MAX_REG</a> | Configures the upper bound address of region 0 monitored on HP CPU1 Data bus       | 0x0094  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_1_AREA_DRAMO_1_MIN_REG</a> | Configures the lower bound address of region 1 monitored on HP CPU1 Data bus       | 0x0098  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_1_AREA_DRAMO_1_MAX_REG</a> | Configures the upper bound address of region 1 monitored on HP CPU1 Data bus       | 0x009C  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_1_AREA_PIF_O_MIN_REG</a>   | Configures the lower bound address of region 0 monitored on HP CPU1 Peripheral bus | 0x00A0  | R/W    |

| Name  | Description  | Address | Access |
|---|--|---------|--------|
| <a href="#">ASSIST_DEBUG_CORE_1_AREA_PIF_0_MAX_REG</a>          | Configures the upper bound address of region 0 monitored on HP CPU1 Peripheral bus | 0x00A4  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_1_AREA_PIF_1_MIN_REG</a>          | Configures the lower bound address of region 1 monitored on HP CPU1 Peripheral bus | 0x00A8  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_1_AREA_PIF_1_MAX_REG</a>          | Configures the upper bound address of region 1 monitored on HP CPU1 Peripheral bus | 0x00AC  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_1_AREA_PC_REG</a>                 | Represents the PC status under HP CPU1 region monitoring                           | 0x00B0  | RO     |
| <a href="#">ASSIST_DEBUG_CORE_1_AREA_SP_REG</a>                 | Represents the SP status under HP CPU1 region monitoring                           | 0x00B4  | RO     |
| <a href="#">ASSIST_DEBUG_CORE_1_SP_MIN_REG</a>                  | Configures the lower bound address of the HP CPU1 SP monitored region              | 0x00B8  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_1_SP_MAX_REG</a>                  | Configures the upper bound address of the HP CPU1 SP monitored region              | 0x00BC  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_1_SP_PC_REG</a>                   | Represents the PC status under HP CPU1 SP monitoring                               | 0x00C0  | RO     |
| <b>Interrupt configuration registers</b>                        |  |         |        |
| <a href="#">ASSIST_DEBUG_CORE_0_INTR_RAW_REG</a>                | HP CPU0 raw interrupt status register  | 0x0004  | RO     |
| <a href="#">ASSIST_DEBUG_CORE_0_INTR_ENA_REG</a>                | HP CPU0 interrupt enable register  | 0x0008  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_0_INTR_CLR_REG</a>                | HP CPU0 interrupt clear register   | 0x000C  | WT     |
| <a href="#">ASSIST_DEBUG_CORE_1_INTR_RAW_REG</a>                | HP CPU1 raw interrupt status register  | 0x0084  | RO     |
| <a href="#">ASSIST_DEBUG_CORE_1_INTR_ENA_REG</a>                | HP CPU1 interrupt enable register  | 0x0088  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_1_INTR_CLR_REG</a>                | HP CPU1 interrupt clear register   | 0x008C  | WT     |
| <b>PC logging configuration register</b>                        |  |         |        |
| <a href="#">ASSIST_DEBUG_CORE_0_RCD_EN_REG</a>                  | HP CPU0 PC logging enable register   | 0x0044  | R/W    |
| <a href="#">ASSIST_DEBUG_CORE_1_RCD_EN_REG</a>                  | HP CPU1 PC logging enable register   | 0x00C4  | R/W    |
| <b>PC logging status registers</b>                              |  |         |        |
| <a href="#">ASSIST_DEBUG_CORE_0_RCD_PDEBUGPC_REG</a>            | HP CPU0 PC logging register  | 0x0048  | RO     |
| <a href="#">ASSIST_DEBUG_CORE_0_RCD_PDEBUGSP_REG</a>            | HP CPU0 SP logging register  | 0x004C  | RO     |
| <a href="#">ASSIST_DEBUG_CORE_1_RCD_PDEBUGPC_REG</a>            | HP CPU1 PC logging register  | 0x00C8  | RO     |
| <a href="#">ASSIST_DEBUG_CORE_1_RCD_PDEBUGSP_REG</a>            | HP CPU1 SP logging register  | 0x00CC  | RO     |
| <b>CPU status registers</b>                                     |  |         |        |
| <a href="#">ASSIST_DEBUG_CORE_0_LASTPC_BEFORE_EXCEPTION_REG</a> | PC of the last command before HP CPU0 enters exception                             | 0x0070  | RO     |

| Name  | Description  | Address | Access |
|---|--|---------|--------|
| <a href="#">ASSIST_DEBUG_CORE_0_DEBUG_MODE_REG</a>              | HP CPU0 debug mode status register                     | 0x0074  | RO     |
| <a href="#">ASSIST_DEBUG_CORE_1_LASTPC_BEFORE_EXCEPTION_REG</a> | PC of the last command before HP CPU1 enters exception | 0x00F0  | RO     |
| <a href="#">ASSIST_DEBUG_CORE_1_DEBUG_MODE_REG</a>              | HP CPU1 debug mode status register                     | 0x00F4  | RO     |

| <a href="#">ASSIST_DEBUG_DATE_REG</a>                           | Version control register                               | 0x03FC  | R/W    |

Register 19.1. SPM\_MEM\_MONITOR\_LOG\_SETTING\_REG (0x0000)

Continued from the previous page...

**SPM\_MEM\_MONITOR\_LOG\_CORE\_ENA** Configures whether to enable HP CPU0 or HP CPU1 bus access logging.

bit[0]: Configures whether to enable HP CPU0 bus access logging.

0: Disable

1: Enable

bit[1]: Configures whether to enable HP CPU1 bus access logging.

0: Disable

1: Enable

(R/W)

Register 19.2. SPM\_MEM\_MONITOR\_LOG\_CHECK\_DATA\_REG (0x0008)

**SPM\_MEM\_MONITOR\_LOG\_CHECK\_DATA** Configures the data to be monitored during bus access-  
ing. (R/W)

Register 19.3. SPM\_MEM\_MONITOR\_LOG\_DATA\_MASK\_REG (0x000C)

**SPM\_MEM\_MONITOR\_LOG\_DATA\_MASK** Configures which byte(s) in [SPM\\_MEM\\_MONITOR\\_LOG\\_CHECK\\_DATA\\_REG](#) to mask.

bit[0]: Configures whether to mask the least significant byte of [SPM\\_MEM\\_MONITOR\\_LOG\\_CHECK\\_DATA\\_REG](#).

0: Not mask

1: Mask

bit[1]: Configures whether to mask the second least significant byte of [SPM\\_MEM\\_MONITOR\\_LOG\\_CHECK\\_DATA\\_REG](#).

0: Not mask

1: Mask

bit[2]: Configures whether to mask the second most significant byte of [SPM\\_MEM\\_MONITOR\\_LOG\\_CHECK\\_DATA\\_REG](#).

0: Not mask

1: Mask

bit[3]: Configures whether to mask the most significant byte of [SPM\\_MEM\\_MONITOR\\_LOG\\_CHECK\\_DATA\\_REG](#).

0: Not mask

1: Mask

(R/W)

Register 19.4. SPM\_MEM\_MONITOR\_LOG\_MIN\_REG (0x0010)

**SPM\_MEM\_MONITOR\_LOG\_MIN** Configures the lower bound address of the monitored address space. (R/W)

Register 19.5. SPM\_MEM\_MONITOR\_LOG\_MAX\_REG (0x0014)

**SPM\_MEM\_MONITOR\_LOG\_MAX** Configures the upper bound address of the monitored address space. (R/W)

Register 19.6. SPM\_MEM\_MONITOR\_LOG\_MEM\_START\_REG (0x0018)

**SPM\_MEM\_MONITOR\_LOG\_MEM\_START** Configures the starting address of the storage space for recorded data. (R/W)

Register 19.7. SPM\_MEM\_MONITOR\_LOG\_MEM\_END\_REG (0x001C)

**SPM\_MEM\_MONITOR\_LOG\_MEM\_END** Configures the ending address of the storage space for recorded data. (R/W)

Register 19.8. SPM\_MEM\_MONITOR\_LOG\_MEM\_CURRENT\_ADDR\_REG (0x0020)

`SPM_MEM_MONITOR_LOG_MEM_CURRENT_ADDR` Represents the address of the next write.  
(RO)

Register 19.9. SPM\_MEM\_MONITOR\_LOG\_MEM\_ADDR\_UPDATE\_REG (0x0024)

`SPM_MEM_MONITOR_LOG_MEM_ADDR_UPDATE` Configures whether to update the value in `SPM_MEM_MONITOR_LOG_MEM_START_REG` to `SPM_MEM_MONITOR_LOG_MEM_CURRENT_ADDR_REG`.  
1: Update  
0: Not update  
(WT)

Register 19.10. SPM\_MEM\_MONITOR\_LOG\_MEM\_FULL\_FLAG\_REG (0x0028)

**SPM\_MEM\_MONITOR\_LOG\_MEM\_FULL\_FLAG** Represents whether data overflows the storage space.

0: Not overflow

1: Overflow

(RO)

**SPM\_MEM\_MONITOR\_CLR\_LOG\_MEM\_FULL\_FLAG** Configures whether to clear the [SPM\\_MEM\\_MONITOR\\_LOG\\_MEM\\_FULL\\_FLAG](#) flag bit.

0: Not clear (default)

1: Clear

(WT)

Register 19.11. SPMMEM\_MONITOR\_CLOCK\_GATE\_REG (0x002C)

**SPM\_MEM\_MONITOR\_CLK\_EN** Configures whether to enable the register clock gating.

0: Disable

1: Enable

(R/W)

Register 19.12. SPM\_MEM\_MONITOR\_DATE\_REG (0x03FC)

SPM\_MEM\_MONITOR\_DATE   Version control register. (R/W)

19.7.2   DMA Bus Logging Configuration Registers

Register 19.13. L2\_MEM\_MONITOR\_LOG\_SETTING\_REG (0x0000)

**L2\_MEM\_MONITOR\_LOG\_MODE**   Configures monitoring modes.

bit[0]: Configures write monitoring.

- 0: Disable
- 1: Enable

bit[1]: Configures word monitoring.

- 0: Disable
- 1: Enable

bit[2]: Configures halfword monitoring.

- 0: Disable
- 1: Enable

bit[3]: Configures byte monitoring.

- 0: Disable
  - 1: Enable
- (R/W)

**L2\_MEM\_MONITOR\_LOG\_MEM\_LOOP\_ENABLE**   Configures the writing mode for recorded data.

- 1: Loop mode
  - 0: Non-loop mode
- (R/W)

Register 19.14. L2\_MEM\_MONITOR\_LOG\_SETTING1\_REG (0x0004)

**L2\_MEM\_MONITOR\_LOG\_DMA\_2\_ENA** Configures whether to enable DMA\_2 bus access logging.

- 0: Disable
- 1: Enable

(R/W)

**L2\_MEM\_MONITOR\_LOG\_DMA\_3\_ENA** Configures whether to enable DMA\_3 bus access logging.

- 0: Disable
- 1: Enable

(R/W)

Register 19.15. L2\_MEM\_MONITOR\_LOG\_CHECK\_DATA\_REG (0x0008)

**L2\_MEM\_MONITOR\_LOG\_CHECK\_DATA** Configures the data to be monitored during bus access-  
ing. (R/W)

Register 19.16. L2\_MEM\_MONITOR\_LOG\_DATA\_MASK\_REG (0x000C)

**L2\_MEM\_MONITOR\_LOG\_DATA\_MASK** Configures which byte(s) in [L2\\_MEM\\_MONITOR\\_LOG\\_CHECK\\_DATA\\_REG](#) to mask.

bit[0]: Configures whether to mask the least significant byte of [L2\\_MEM\\_MONITOR\\_LOG\\_CHECK\\_DATA\\_REG](#).

0: Not mask

1: Mask

bit[1]: Configures whether to mask the second least significant byte of [L2\\_MEM\\_MONITOR\\_LOG\\_CHECK\\_DATA\\_REG](#).

0: Not mask

1: Mask

bit[2]: Configures whether to mask the second most significant byte of [L2\\_MEM\\_MONITOR\\_LOG\\_CHECK\\_DATA\\_REG](#).

0: Not mask

1: Mask

bit[3]: Configures whether to mask the most significant byte of [L2\\_MEM\\_MONITOR\\_LOG\\_CHECK\\_DATA\\_REG](#).

0: Not mask

1: Mask

(R/W)

Register 19.17. L2\_MEM\_MONITOR\_LOG\_MIN\_REG (0x0010)

**L2\_MEM\_MONITOR\_LOG\_MIN** Configures the lower bound address of the monitored address space. (R/W)

Register 19.18. L2\_MEM\_MONITOR\_LOG\_MAX\_REG (0x0014)

**L2\_MEM\_MONITOR\_LOG\_MAX** Configures the upper bound address of the monitored address space. (R/W)

Register 19.19. L2\_MEM\_MONITOR\_LOG\_MEM\_START\_REG (0x0018)

**L2\_MEM\_MONITOR\_LOG\_MEM\_START** Configures the starting address of the storage space for recorded data. (R/W)

Register 19.20. L2\_MEM\_MONITOR\_LOG\_MEM\_END\_REG (0x001C)

**L2\_MEM\_MONITOR\_LOG\_MEM\_END** Configures the ending address of the storage space for recorded data. (R/W)

Register 19.21. L2\_MEM\_MONITOR\_LOG\_MEM\_CURRENT\_ADDR\_REG (0x0020)

**L2\_MEM\_MONITOR\_LOG\_MEM\_CURRENT\_ADDR** Represents the address of the next write. (RO)

### Register 19.22. L2\_MEM\_MONITOR\_LOG\_MEM\_ADDR\_UPDATE\_REG (0x0024)

**L2\_MEM\_MONITOR\_LOG\_MEM\_ADDR\_UPDATE** Configures whether to update the value in **L2\_MEM\_MONITOR\_LOG\_MEM\_START\_REG** to **L2\_MEM\_MONITOR\_LOG\_MEM\_CURRENT\_ADDR\_REG**.

1: Update

0: Not update (default)

(WT)

Register 19.23. L2\_MEM\_MONITOR\_LOG\_MEM\_FULL\_FLAG\_REG (0x0028)

**L2\_MEM\_MONITOR\_LOG\_MEM\_FULL\_FLAG** Represents whether data overflows the storage space.

0: Not overflow

1: Overflow

(RO)

**L2\_MEM\_MONITOR\_CLR\_LOG\_MEM\_FULL\_FLAG** Configures whether to clear the [L2\\_MEM\\_MONITOR\\_LOG\\_MEM\\_FULL\\_FLAG](#) flag bit.

0: Not clear (default)

1: Clear

(WT)

Register 19.24. L2\_MEM\_MONITOR\_CLOCK\_GATE\_REG (0x002C)

**L2\_MEM\_MONITOR\_CLK\_EN** Configures whether to enable the register clock gating.

0: Disable

1: Enable

(R/W)

Register 19.25. L2\_MEM\_MONITOR\_DATE\_REG (0x03FC)

L2\_MEM\_MONITOR\_DATE   Version control register. (R/W)

19.7.3 Other Registers

Register 19.26. ASSIST\_DEBUG\_CORE\_O\_MONTR\_ENA\_REG (0x0000)

**ASSIST\_DEBUG\_CORE\_O\_AREA\_DRAMO\_0\_RD\_ENA** Configures whether to monitor read operations in HP CPU0 region 0 by the HP CPU0 Data bus.

0: Not monitor

1: Monitor

(R/W)

**ASSIST\_DEBUG\_CORE\_O\_AREA\_DRAMO\_0\_WR\_ENA** Configures whether to monitor write operations in HP CPU0 region 0 by the HP CPU0 Data bus.

0: Not monitor

1: Monitor

(R/W)

**ASSIST\_DEBUG\_CORE\_O\_AREA\_DRAMO\_1\_RD\_ENA** Configures whether to monitor read operations in HP CPU0 region 1 by the HP CPU0 Data bus.

0: Not monitor

1: Monitor

(R/W)

**ASSIST\_DEBUG\_CORE\_O\_AREA\_DRAMO\_1\_WR\_ENA** Configures whether to monitor write operations in HP CPU0 region 1 by the HP CPU0 Data bus.

0: Not monitor

1: Monitor

(R/W)

**ASSIST\_DEBUG\_CORE\_O\_AREA\_PIF\_0\_RD\_ENA** Configures whether to monitor read operations in region 0 by the Peripheral bus.

0: Not monitor

1: Monitor

(R/W)

Continued from the previous page...

**ASSIST\_DEBUG\_CORE\_O\_AREA\_PIF\_0\_WR\_ENA** Configures whether to monitor write operations in HP CPU0 region 0 by the HP CPU0 Peripheral bus.

0: Not monitor

1: Monitor

(R/W)

**ASSIST\_DEBUG\_CORE\_O\_AREA\_PIF\_1\_RD\_ENA** Configures whether to monitor read operations in HP CPU0 region 1 by the HP CPU0 Peripheral bus.

0: Not monitor

1: Monitor

(R/W)

**ASSIST\_DEBUG\_CORE\_O\_AREA\_PIF\_1\_WR\_ENA** Configures whether to monitor write operations in HP CPU0 region 1 by the HP CPU0 Peripheral bus.

0: Not monitor

1: Monitor

(R/W)

**ASSIST\_DEBUG\_CORE\_O\_SP\_SPILL\_MIN\_ENA** Configures whether to monitor HP CPU0 SP going below the lower bound address of HP CPU0 SP monitored region.

0: Not monitor

1: Monitor

(R/W)

**ASSIST\_DEBUG\_CORE\_O\_SP\_SPILL\_MAX\_ENA** Configures whether to monitor HP CPU0 SP going beyond the upper bound address of HP CPU0 SP monitored region.

0: Not monitor

1: Monitor

(R/W)

Register 19.27. ASSIST\_DEBUG\_CORE\_O\_AREA\_DRAMO\_O\_MIN\_REG (0x0010)

**ASSIST\_DEBUG\_CORE\_O\_AREA\_DRAMO\_O\_MIN** Configures the lower bound address of HP CPU0 Data bus region 0. (R/W)

Register 19.28. ASSIST\_DEBUG\_CORE\_O\_AREA\_DRAMO\_O\_MAX\_REG (0x0014)

**ASSIST\_DEBUG\_CORE\_O\_AREA\_DRAMO\_O\_MAX** Configures the upper bound address of HP CPU0 Data bus region 0. (R/W)

Register 19.29. ASSIST\_DEBUG\_CORE\_O\_AREA\_DRAMO\_1\_MIN\_REG (0x0018)

**ASSIST\_DEBUG\_CORE\_O\_AREA\_DRAMO\_1\_MIN** Configures the lower bound address of HP CPU0 Data bus region 1. (R/W)

Register 19.30. ASSIST\_DEBUG\_CORE\_O\_AREA\_DRAMO\_1\_MAX\_REG (0x001C)

**ASSIST\_DEBUG\_CORE\_O\_AREA\_DRAMO\_1\_MAX** Configures the upper bound address of HP CPU0 Data bus region 1. (R/W)

Register 19.31. ASSIST\_DEBUG\_CORE\_O\_AREA\_PIF\_O\_MIN\_REG (0x0020)

**ASSIST\_DEBUG\_CORE\_O\_AREA\_PIF\_O\_MIN** Configures the lower bound address of HP CPU0 Peripheral bus region O. (R/W)

Register 19.32. ASSIST\_DEBUG\_CORE\_O\_AREA\_PIF\_O\_MAX\_REG (0x0024)

**ASSIST\_DEBUG\_CORE\_O\_AREA\_PIF\_O\_MAX** Configures the upper bound address of HP CPU0 Peripheral bus region O. (R/W)

Register 19.33. ASSIST\_DEBUG\_CORE\_O\_AREA\_PIF\_1\_MIN\_REG (0x0028)

**ASSIST\_DEBUG\_CORE\_O\_AREA\_PIF\_1\_MIN** Configures the lower bound address of HP CPU0 Peripheral bus region 1. (R/W)

Register 19.34. ASSIST\_DEBUG\_CORE\_O\_AREA\_PIF\_1\_MAX\_REG (0x002C)

**ASSIST\_DEBUG\_CORE\_O\_AREA\_PIF\_1\_MAX** Configures the upper bound address of HP CPU0 Peripheral bus region 1. (R/W)

Register 19.35. ASSIST\_DEBUG\_CORE\_O\_AREA\_PC\_REG (0x0030)

**ASSIST\_DEBUG\_CORE\_O\_AREA\_PC** Represents the HP CPU0 PC value when an interrupt is triggered during region monitoring. (RO)

Register 19.36. ASSIST\_DEBUG\_CORE\_O\_AREA\_SP\_REG (0x0034)

**ASSIST\_DEBUG\_CORE\_O\_AREA\_SP** Represents the HP CPU0 SP value when an interrupt is triggered during region monitoring. (RO)

Register 19.37. ASSIST\_DEBUG\_CORE\_O\_SP\_MIN\_REG (0x0038)

**ASSIST\_DEBUG\_CORE\_O\_SP\_MIN** Configures the lower bound address of the HP CPU0 SP monitored region. (R/W)

Register 19.38. ASSIST\_DEBUG\_CORE\_O\_SP\_MAX\_REG (0x003C)

**ASSIST\_DEBUG\_CORE\_O\_SP\_MAX** Configures the upper bound address of the HP CPU0 SP monitored region. (R/W)

Register 19.39. ASSIST\_DEBUG\_CORE\_0\_SP\_PC\_REG (0x0040)

**ASSIST\_DEBUG\_CORE\_0\_SP\_PC** Represents the HP CPU0 PC value during SP monitoring. (RO)

Register 19.40. ASSIST\_DEBUG\_CORE\_O\_INTR\_RAW\_REG (0x0004)

Register 19.43. ASSIST\_DEBUG\_CORE\_O\_RCD\_EN\_REG (0x0044)

**ASSIST\_DEBUG\_CORE\_O\_RCD\_RECORDEN** Configures whether to enable HP CPU0 PC logging.

0: Disable

1: [ASSIST\\_DEBUG\\_CORE\\_O\\_RCD\\_PDEBUGPC\\_REG](#) starts to record HP CPU0 PC in real time (R/W)

**ASSIST\_DEBUG\_CORE\_O\_RCD\_PDEBUGEN** Configures whether to enable HP CPU0 debugging.

0: Disable

1: HP CPU0 outputs HP CPU0 PC (R/W)

Register 19.44. ASSIST\_DEBUG\_CORE\_O\_RCD\_PDEBUGPC\_REG (0x0048)

**ASSIST\_DEBUG\_CORE\_O\_RCD\_PDEBUGPC** Represents the PC value at HP CPU0 reset. (RO)

Register 19.45. ASSIST\_DEBUG\_CORE\_O\_RCD\_PDEBUGSP\_REG (0x004C)

**ASSIST\_DEBUG\_CORE\_O\_RCD\_PDEBUGSP** Represents the HP CPU0 SP. (RO)

Register 19.46. ASSIST\_DEBUG\_CORE\_O\_LASTPC\_BEFORE\_EXCEPTION\_REG (0x0070)

**ASSIST\_DEBUG\_CORE\_O\_LASTPC\_BEFORE\_EXC** Represents the HP CPU0 PC of the last command before the HP CPU0 enters exception. (RO)

Register 19.47. ASSIST\_DEBUG\_CORE\_O\_DEBUG\_MODE\_REG (0x0074)

**ASSIST\_DEBUG\_CORE\_O\_DEBUG\_MODE**   Represents whether HP CPU0 is in debugging mode.

1: In debugging mode

0: Not in debugging mode

(RO)

**ASSIST\_DEBUG\_CORE\_O\_DEBUG\_MODULE\_ACTIVE**   Represents the status of the HP CPU0 debug module.

1: Active status

Other: Inactive status

(RO)

Register 19.48. ASSIST\_DEBUG\_CORE\_1\_MONTR\_ENA\_REG (0x0080)

Continued from the previous page...

**ASSIST\_DEBUG\_CORE\_1\_AREA\_PIF\_0\_WR\_ENA** Configures whether to monitor write operations in HP CPU1 region 0 by the HP CPU1 Peripheral bus.

0: Not monitor

1: Monitor

(R/W)

**ASSIST\_DEBUG\_CORE\_1\_AREA\_PIF\_1\_RD\_ENA** Configures whether to monitor read operations in HP CPU1 region 1 by the HP CPU1 Peripheral bus.

0: Not monitor

1: Monitor

(R/W)

**ASSIST\_DEBUG\_CORE\_1\_AREA\_PIF\_1\_WR\_ENA** Configures whether to monitor write operations in HP CPU1 region 1 by the HP CPU1 Peripheral bus.

0: Not monitor

1: Monitor

(R/W)

**ASSIST\_DEBUG\_CORE\_1\_SP\_SPILL\_MIN\_ENA** Configures whether to monitor HP CPU1 SP going below the lower bound address of HP CPU1 SP monitored region.

0: Not monitor

1: Monitor

(R/W)

**ASSIST\_DEBUG\_CORE\_1\_SP\_SPILL\_MAX\_ENA** Configures whether to monitor HP CPU1 SP going beyond the upper bound address of HP CPU1 SP monitored region.

0: Not monitor

1: Monitor

(R/W)

Register 19.49. ASSIST\_DEBUG\_CORE\_1\_AREA\_DRAMO\_O\_MIN\_REG (0x0090)

**ASSIST\_DEBUG\_CORE\_1\_AREA\_DRAMO\_O\_MIN** Configures the lower bound address of HP CPU1 Data bus region 0. (R/W)

Register 19.50. ASSIST\_DEBUG\_CORE\_1\_AREA\_DRAMO\_O\_MAX\_REG (0x0094)

**ASSIST\_DEBUG\_CORE\_1\_AREA\_DRAMO\_O\_MAX** Configures the upper bound address of HP CPU1 Data bus region 0. (R/W)

Register 19.51. ASSIST\_DEBUG\_CORE\_1\_AREA\_DRAMO\_1\_MIN\_REG (0x0098)

**ASSIST\_DEBUG\_CORE\_1\_AREA\_DRAMO\_1\_MIN** Configures the lower bound address of HP CPU1 Data bus region 1. (R/W)

Register 19.52. ASSIST\_DEBUG\_CORE\_1\_AREA\_DRAMO\_1\_MAX\_REG (0x009C)

**ASSIST\_DEBUG\_CORE\_1\_AREA\_DRAMO\_1\_MAX** Configures the upper bound address of HP CPU1 Data bus region 1. (R/W)

Register 19.53. ASSIST\_DEBUG\_CORE\_1\_AREA\_PIF\_O\_MIN\_REG (0x00A0)

**ASSIST\_DEBUG\_CORE\_1\_AREA\_PIF\_O\_MIN** Configures the lower bound address of HP CPU1 Peripheral bus region 0. (R/W)

Register 19.54. ASSIST\_DEBUG\_CORE\_1\_AREA\_PIF\_O\_MAX\_REG (0x00A4)

**ASSIST\_DEBUG\_CORE\_1\_AREA\_PIF\_O\_MAX** Configures the upper bound address of HP CPU1 Peripheral bus region 0. (R/W)

Register 19.55. ASSIST\_DEBUG\_CORE\_1\_AREA\_PIF\_1\_MIN\_REG (0x00A8)

**ASSIST\_DEBUG\_CORE\_1\_AREA\_PIF\_1\_MIN** Configures the lower bound address of HP CPU1 Peripheral bus region 1. (R/W)

Register 19.56. ASSIST\_DEBUG\_CORE\_1\_AREA\_PIF\_1\_MAX\_REG (0x00AC)

**ASSIST\_DEBUG\_CORE\_1\_AREA\_PIF\_1\_MAX** Configures the upper bound address of HP CPU1 Peripheral bus region 1. (R/W)

Register 19.57. ASSIST\_DEBUG\_CORE\_1\_AREA\_PC\_REG (0x00B0)

**ASSIST\_DEBUG\_CORE\_1\_AREA\_PC** Represents the HP CPU1 PC value when an interrupt is triggered during region monitoring. (RO)

Register 19.58. ASSIST\_DEBUG\_CORE\_1\_AREA\_SP\_REG (0x00B4)

**ASSIST\_DEBUG\_CORE\_1\_AREA\_SP** Represents the HP CPU1 SP value when an interrupt is triggered during region monitoring. (RO)

Register 19.59. ASSIST\_DEBUG\_CORE\_1\_SP\_MIN\_REG (0x00B8)

**ASSIST\_DEBUG\_CORE\_1\_SP\_MIN** Configures the lower bound address of the HP CPU1 SP monitored region. (R/W)

Register 19.60. ASSIST\_DEBUG\_CORE\_1\_SP\_MAX\_REG (0x00BC)

**ASSIST\_DEBUG\_CORE\_1\_SP\_MAX** Configures the upper bound address of the HP CPU1 SP monitored region. (R/W)

Register 19.61. ASSIST\_DEBUG\_CORE\_1\_SP\_PC\_REG (0x00C0)

**ASSIST\_DEBUG\_CORE\_1\_SP\_PC** Represents the HP CPU1 PC value during SP monitoring. (RO)

Register 19.62. ASSIST\_DEBUG\_CORE\_1\_INTR\_RAW\_REG (0x0084)

Register 19.65. ASSIST\_DEBUG\_CORE\_1\_RCD\_EN\_REG (0x00C4)

**ASSIST\_DEBUG\_CORE\_1\_RCD\_RECORDEN** Configures whether to enable HP CPU1 PC logging.  
0: Disable  
1: [ASSIST\\_DEBUG\\_CORE\\_1\\_RCD\\_PDEBUGPC\\_REG](#) starts to record HP CPU1 PC in real time (R/W)

**ASSIST\_DEBUG\_CORE\_1\_RCD\_PDEBUGEN** Configures whether to enable HP CPU1 debugging.  
0: Disable  
1: HP CPU1 outputs HP CPU1 PC (R/W)

Register 19.66. ASSIST\_DEBUG\_CORE\_1\_RCD\_PDEBUGPC\_REG (0x00C8)

**ASSIST\_DEBUG\_CORE\_1\_RCD\_PDEBUGPC** Represents the PC value at HP CPU1 reset. (RO)

Register 19.67. ASSIST\_DEBUG\_CORE\_1\_RCD\_PDEBUGSP\_REG (0x00CC)

**ASSIST\_DEBUG\_CORE\_1\_RCD\_PDEBUGSP**   Represents the HP CPU1 SP. (RO)

Register 19.68. ASSIST\_DEBUG\_CORE\_1\_LASTPC\_BEFORE\_EXCEPTION\_REG (0x00F0)

**ASSIST\_DEBUG\_CORE\_1\_LASTPC\_BEFORE\_EXC**   Represents the HP CPU1 PC of the last command before the HP CPU1 enters exception. (RO)

Register 19.69. ASSIST\_DEBUG\_CORE\_1\_DEBUG\_MODE\_REG (0x00F4)

**ASSIST\_DEBUG\_CORE\_1\_DEBUG\_MODE** Represents whether HP CPU1 is in debugging mode.

- 1: In debugging mode
- 0: Not in debugging mode

(RO)

**ASSIST\_DEBUG\_CORE\_1\_DEBUG\_MODULE\_ACTIVE** Represents the status of the HP CPU1 debug module.

- 1: Active status
- Other: Inactive status

(RO)

Register 19.70. ASSIST\_DEBUG\_CLOCK\_GATE\_REG (0x0108)

**ASSIST\_DEBUG\_CLK\_EN** Configures whether to enable the register clock gating.

- 0: Disable
- 1: Enable

(R/W)

Register 19.71. ASSIST\_DEBUG\_DATE\_REG (0x03FC)

|            |    |   |   |                   |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |       |

**ASSIST\_DEBUG\_DATE**   Version control register. (R/W)

## Chapter 20

### LP Mailbox

#### 20.1 Overview

ESP32-P4 integrates an LP Mailbox module which provides an efficient inter-core communication mechanism between the LP CPU and HP CPU0/1. The LP Mailbox module comprises of sixteen 32-bit message registers that the LP CPU and HP CPU0/1 can use to store and exchange message. Inter-core communication between LP CPU and HP CPU0/1 is achieved through an interrupt mechanism implemented within the LP Mailbox module.

#### 20.2 Features

ESP32-P4 LP Mailbox has the following features:

- Sixteen 32-bit message registers for inter-core communication
- LP CPU external interrupt signal: [MB\\_LP\\_INTR](#)
- HP CPU<sub>x</sub> (<sub>x</sub>: 0 ~ 1) external interrupt signal: [MB\\_HP\\_INTR](#)

## 20.3 Functional Description

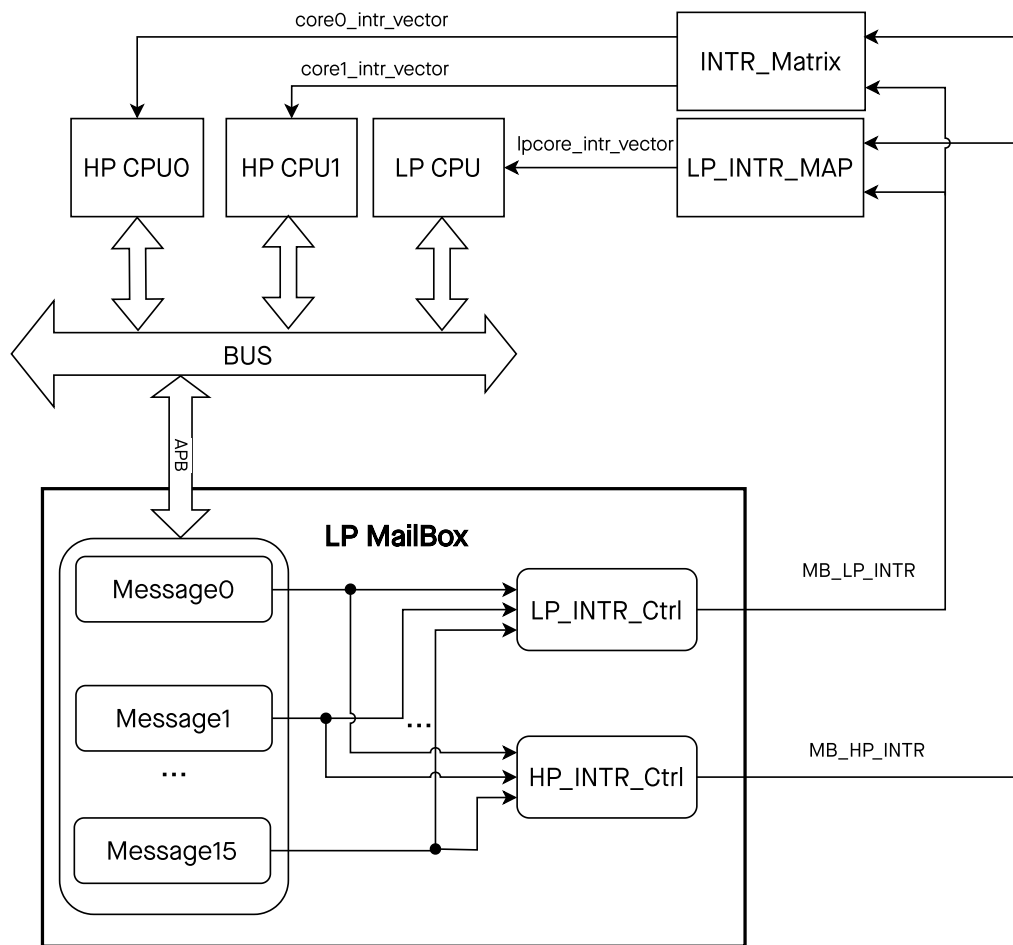

Figure 20.3-1. LP Mailbox Block Diagram

### 20.3.1 Message Registers

The LP Mailbox provides sixteen 32-bit message registers in total, denoted as [MB\\_MESSAGE\\_0\\_REG](#) ~ [MB\\_MESSAGE\\_15\\_REG](#), for caching inter-core communication messages. Both LP CPU and HP CPU0/1 can read and write these message registers to pass or retrieve message.

Read and write message registers is done through the APB bus, using APB\_CLK, which is the only one clock in LP Mailbox. For more information about the clock, please refer to Chapter 9 [Reset and Clock](#).

### 20.3.2 Interrupts

ESP32-P4 LP Mailbox can generate the following external interrupt signals:

- MB\_LP\_INTR
- MB\_HP\_INTR

MB\_LP\_INTR is directly mapped to LP CPU (see [Low-Power CPU](#)), and MB\_HP\_INTR can be mapped to HP CPU0/1 through the [Interrupt Matrix](#). These interrupt signals are generated by internal interrupt sources of the

LP Mailbox module. Table 20.3-1 lists the internal interrupt sources, interrupt trigger conditions, and generated interrupt signals of the LP Mailbox.

**Table 20.3-1. LP Mailbox's Internal Interrupt Sources**

| Internal Interrupt Source | Trigger Condition                  | Interrupt Signal |
|---------------------------|------------------------------------|------------------|
| MB_HP_ <i>m</i> _INT      | Write to MB_MESSAGE_ <i>m</i> _REG | MB_HP_INTR       |
| MB_LP_ <i>n</i> _INT      | Write to MB_MESSAGE_ <i>n</i> _REG | MB_LP_INTR       |

**Note:**

- *m* and *n* can be 0 ~ 15.
- MB\_HP\_INTR can also serve as an external interrupt source for LP CPU and be mapped to LP CPU by LP\_INTR\_MAP as illustrated in Figure 20.3-1. For more information about LP\_INTR\_MAP, please refer to Chapter 2 *Low-Power CPU*.
- MB\_LP\_INTR can also serve as an external interrupt source for HP CPU<sub>x</sub> and can be mapped to HP CPU<sub>x</sub> through the *Interrupt Matrix*.
- When the LP Mailbox is required to assign different interrupt sources for HP CPU0 and HP CPU1, it can map MB\_HP\_INTR and MB\_LP\_INTR independently to HP CPU0 and HP CPU1 using the *Interrupt Matrix*.

### 20.3.3 Inter-Core Communication

When communication is required between LP CPU and HP CPU<sub>x</sub>, subset of or all message registers in the LP Mailbox can be utilized to share message as needed. The synchronization of message can be achieved through the corresponding interrupts. During communication, software must ensure that only the sender is allowed to write to the message registers to prevent data corruption.

- Example of initiating communication from HP CPU0 to LP CPU using MB\_MESSAGE\_*n*\_REG:
  - Set MB\_LP\_*n*\_INT\_ENA to enable the MB\_LP\_*n*\_INT interrupt.
  - HP CPU0 writes to MB\_MASSEGE\_*n*\_REG, caching shared message.
  - LP CPU checks MB\_LP\_INT\_ST\_REG interrupt status register, finding the MB\_LP\_*n*\_ST status bit set.
  - LP CPU reads MB\_MASSEGE\_*n*\_REG to retrieve shared message.
- Example of initiating communication from LP CPU to HP CPU0:
  - Set MB\_HP\_*m*\_INT\_ENA to enable the MB\_HP\_*m*\_INT interrupt.
  - Configure the *Interrupt Matrix* to map MB\_HP\_INTR to HP CPU0. See Chapter 11 *Interrupt Matrix*.
  - LP CPU writes to MB\_MASSEGE\_*m*\_REG, caching shared messages.
  - HP CPU0 checks the MB\_HP\_INT\_ST\_REG interrupt status register, finding the MB\_HP\_*m*\_ST status bit set.
  - HP CPU0 reads MB\_MASSEGE\_*m*\_REG to retrieve shared messages.

## 20.4 Register Summary

The addresses in this section are relative to LP Mailbox base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name                              | Description            | Address | Access |
|-----------------------------------|------------------------|---------|--------|
| <b>Configuration Registers</b>    |                        |         |        |
| <a href="#">MB_MASSEGE_0_REG</a>  | Message register 0     | 0x0000  | R/W    |
| <a href="#">MB_MASSEGE_1_REG</a>  | Message register 1     | 0x0004  | R/W    |
| <a href="#">MB_MASSEGE_2_REG</a>  | Message register 2     | 0x0008  | R/W    |
| <a href="#">MB_MASSEGE_3_REG</a>  | Message register 3     | 0x000C  | R/W    |
| <a href="#">MB_MASSEGE_4_REG</a>  | Message register 4     | 0x0010  | R/W    |
| <a href="#">MB_MASSEGE_5_REG</a>  | Message register 5     | 0x0014  | R/W    |
| <a href="#">MB_MASSEGE_6_REG</a>  | Message register 6     | 0x0018  | R/W    |
| <a href="#">MB_MASSEGE_7_REG</a>  | Message register 7     | 0x001C  | R/W    |
| <a href="#">MB_MASSEGE_8_REG</a>  | Message register 8     | 0x0020  | R/W    |
| <a href="#">MB_MASSEGE_9_REG</a>  | Message register 9     | 0x0024  | R/W    |
| <a href="#">MB_MASSEGE_10_REG</a> | Message register 10    | 0x0028  | R/W    |
| <a href="#">MB_MASSEGE_11_REG</a> | Message register 11    | 0x002C  | R/W    |
| <a href="#">MB_MASSEGE_12_REG</a> | Message register 12    | 0x0030  | R/W    |
| <a href="#">MB_MASSEGE_13_REG</a> | Message register 13    | 0x0034  | R/W    |
| <a href="#">MB_MASSEGE_14_REG</a> | Message register 14    | 0x0038  | R/W    |
| <a href="#">MB_MASSEGE_15_REG</a> | Message register 15    | 0x003C  | R/W    |
| <a href="#">MB_REG_CLK_EN_REG</a> | Clock gate register    | 0x0060  | R/W    |
| <b>Interrupt Registers</b>        |                        |         |        |
| <a href="#">MB_LP_INT_RAW_REG</a> | MB_LP_INTR raw bits    | 0x0040  | RO     |
| <a href="#">MB_LP_INT_ST_REG</a>  | MB_LP_INTR status bits | 0x0044  | RO     |
| <a href="#">MB_LP_INT_ENA_REG</a> | MB_LP_INTR enable bits | 0x0048  | R/W    |
| <a href="#">MB_LP_INT_CLR_REG</a> | MB_LP_INTR clear bits  | 0x004C  | WO     |
| <a href="#">MB_HP_INT_RAW_REG</a> | MB_HP_INTR raw bits    | 0x0050  | RO     |
| <a href="#">MB_HP_INT_ST_REG</a>  | MB_HP_INTR status bits | 0x0054  | RO     |
| <a href="#">MB_HP_INT_ENA_REG</a> | MB_HP_INTR enable bits | 0x0058  | R/W    |
| <a href="#">MB_HP_INT_CLR_REG</a> | MB_HP_INTR clear bits  | 0x005C  | WO     |

## 20.5 Registers

The addresses in this section are relative to LP Mailbox base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section *Programming Reserved Register Field*.

## Register 20.1. MB\_MASSEGE\_O\_REG (0x0000)

**MB\_MASSEGE\_O** Message register 0. (R/W)

## Register 20.2. MB\_MASSEGE\_1\_REG (0x0004)

**MB\_MASSEGE\_1** Message register 1. (R/W)

## Register 20.3. MB\_MASSEGE\_2\_REG (0x0008)

**MB\_MASSEGE\_2** Message register 2. (R/W)

## Register 20.4. MB\_MASSEGE\_3\_REG (0x000C)

**MB\_MASSEGE\_3** Message register 3. (R/W)

## Register 20.5. MB\_MASSEGE\_4\_REG (0x0010)

**MB\_MASSEGE\_4** Message register 4. (R/W)

## Register 20.6. MB\_MASSEGE\_5\_REG (0x0014)

**MB\_MASSEGE\_5** Message register 5. (R/W)

## Register 20.7. MB\_MASSEGE\_6\_REG (0x0018)

**MB\_MASSEGE\_6** Message register 6. (R/W)

## Register 20.8. MB\_MASSEGE\_7\_REG (0x001C)

**MB\_MASSEGE\_7** Message register 7. (R/W)

Register 20.9. MB\_MASSEGE\_8\_REG (0x0020)

**MB\_MASSEGE\_8** Message register 8. (R/W)

Register 20.10. MB\_MASSEGE\_9\_REG (0x0024)

**MB\_MASSEGE\_9** Message register 9. (R/W)

Register 20.11. MB\_MASSEGE\_10\_REG (0x0028)

**MB\_MASSEGE\_10** Message register 10. (R/W)

Register 20.12. MB\_MASSEGE\_11\_REG (0x002C)

**MB\_MASSEGE\_11** Message register 11. (R/W)

**Register 20.13. MB\_MASSEGE\_12\_REG (0x0030)****MB\_MASSEGE\_12** Message register 12. (R/W)**Register 20.14. MB\_MASSEGE\_13\_REG (0x0034)****MB\_MASSEGE\_13** Message register 13. (R/W)**Register 20.15. MB\_MASSEGE\_14\_REG (0x0038)****MB\_MASSEGE\_14** Message register 14. (R/W)**Register 20.16. MB\_MASSEGE\_15\_REG (0x003C)****MB\_MASSEGE\_15** Message register 15. (R/W)

Register 20.17. MB\_REG\_CLK\_EN\_REG (0x0060)

**MB\_REG\_CLK\_EN** Configures register clock gating.

- 1: Register clock is always enabled for read and write operations.
- 0: Only enable clock for register read or write operations.

(R/W)

Register 20.18. MB\_LP\_INT\_RAW\_REG (0x0040)

## Chapter 21

### Brown-out Detector

#### 21.1 Introduction

The brown-out detector of ESP32-P4 monitors the voltage levels of pins VDD\_ANA and VDD\_BAT. If the voltage on these pins drops below the predefined threshold (defaulting to 2.7 V), the detector triggers signals to shut down certain power-consuming blocks (e.g., flash), ensuring that the digital module has sufficient time to save and transfer important data.

#### 21.2 Feature List

- Two monitored sources
  - Monitors the voltage level of pin VDD\_ANA, which supplies power to the analog circuit.
  - Monitors the voltage level of pin VDD\_BAT, which connects the external battery to the chip.
- Two configurable monitoring modes
  - Mode 0: The brown-out detector triggers interrupts when the brown-out counter reaches the predefined threshold and selects the reset mode according to the configuration.
  - Mode 1: The brown-out detector triggers a system reset when the voltage falls below the threshold.
- Configurable voltage-monitoring thresholds and noise tolerance
- Configurable handling modes for under-voltage events

## 21.3 Architectural Overview

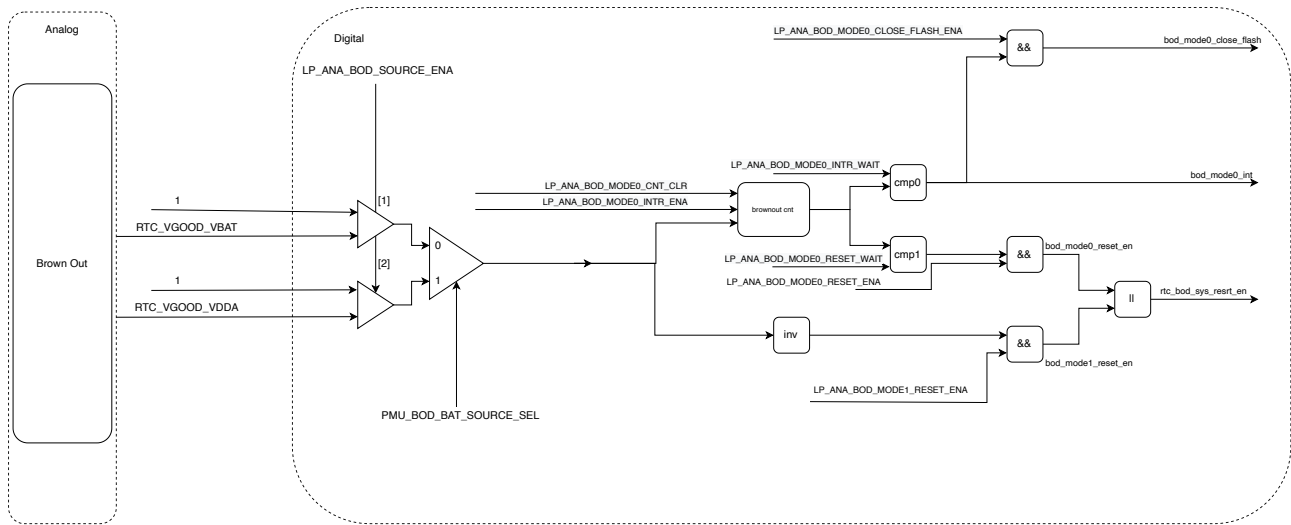

Figure 21.3-1. Brown-out Detector Overview

- Source selection for detection: The brown-out detector can select which power source to monitor by configuring `LP_ANA_BOD_SOURCE_ENA`. `RTC_VGOOD_VBAT` indicates the detection result of `VDD_BAT`, and `RTC_VGOOD_VDDA` indicates the detection result of `VDD_ANA`.
- Brown-out detector (Brown Out): An analog circuit designed to monitor the voltage of power pins and generate brown-out signals. It compares the voltage with the predefined threshold. When the voltage falls below this threshold, the detector outputs brown-out signals.
- Brown-out counter (brownout cnt): A counter used for filtering voltage noise on the detected power pins. When the brown-out signal is received, the counter starts counting based on the clock source `LP_DYN_FAST_CLK`. If the brown-out signal ceases during the counting process, the counter resets to 0. This counter can be cleared by configuring `LP_ANA_BOD_MODE0_CNT_CLR`.
- Interrupt comparator (cmp0): The comparator generates interrupts by comparing the counter value with the threshold. When the counter value exceeds the threshold, the comparator generates the interrupt signal `bod_mode0_int`. If `LP_ANA_BOD_MODE0_CLOSE_FLASH_ENA` is enabled, `bod_mode0_close_flash` will be triggered, causing flash to enter the SUSPEND state.
- Reset comparator (cmp1): The comparator triggers reset signals by comparing the counter value with the threshold. When the counter value exceeds the threshold, the comparator triggers reset signals.

## 21.4 Functional Description

- Monitored sources
  - `VDD_ANA`: Power pin for the analog circuit, supporting both Mode 0 and Mode 1.
  - `VDD_BAT`: Power pin connected to the battery, supporting both Mode 0 and Mode 1. In addition, it supports two configurable voltage thresholds:
    - \* `VBAT_BOD`: Used for brown-out detection of `VDD_BAT`

\* VBAT\_CHARGER: Indicates whether the battery connected to VDD\_BAT needs charging.

These thresholds trigger different interrupts.

- Monitoring modes

There are two monitoring modes based on the way the brown-out detector handles the brown-out signal:

- Mode 0: When Mode 0 is enabled, the brown-out counter starts counting after detecting a brown-out signal. Interrupt and reset signals are generated when the counter reaches the thresholds defined by [LP\\_ANA\\_BOD\\_MODE0\\_RESET\\_WAIT](#) and [LP\\_ANA\\_BOD\\_MODE0\\_INTR\\_WAIT](#), respectively. This helps filter out noise on the monitored pins. Configure [LP\\_ANA\\_BOD\\_MODE0\\_RESET\\_SEL](#) to select the reset options:

- \* 0: Reset the chip.

- \* 1: Reset the system.

- Mode 1: Mode 1 is the default mode, which resets the system immediately upon detecting under-voltage.

- Voltage-monitoring thresholds

The voltage-monitoring threshold is configured in the analog circuit by the analog I2C master. The threshold configuration registers are as follows. BIAS is the slave of the analog I2C master. The address of BIAS is 0x6a. REGXX indicates the register address of BIAS, and [x:x] indicates the bits of this register.

- BIAS\_OR\_DREFL\_VBAT (REG08[7:5]): threshold for releasing the under-voltage state of VDD\_BAT
- BIAS\_OR\_DREFH\_VBAT (REG08[4:2]): under-voltage threshold of VDD\_BAT
- BIAS\_OR\_DREFL\_VDDA (REG09[7:5]): threshold for releasing the under-voltage state of VDD\_ANA
- BIAS\_OR\_DREFH\_VDDA (REG09[4:2]): under-voltage threshold of VDD\_ANA
- BIAS\_OR\_DREFL\_VBAT\_CHARGER (REG10[7:5]): threshold for releasing the under-voltage state of battery connected to VDD\_BAT
- BIAS\_OR\_DREFH\_VBAT\_CHARGER (REG10[4:2]): under-voltage threshold of battery connected to VDD\_BAT

The relationship between the threshold configuration and voltage is:

- 0: 2.52 V
- 1: 2.57 V
- 2: 2.63 V
- 3: 2.68 V
- 4: 2.74 V
- 5: 2.78 V
- 6: 2.83 V
- 7: 2.89 V

- Voltage-monitoring filter

A dedicated glitch filter is used to process the detection results of VDD\_BAT, as shown in the figure below.

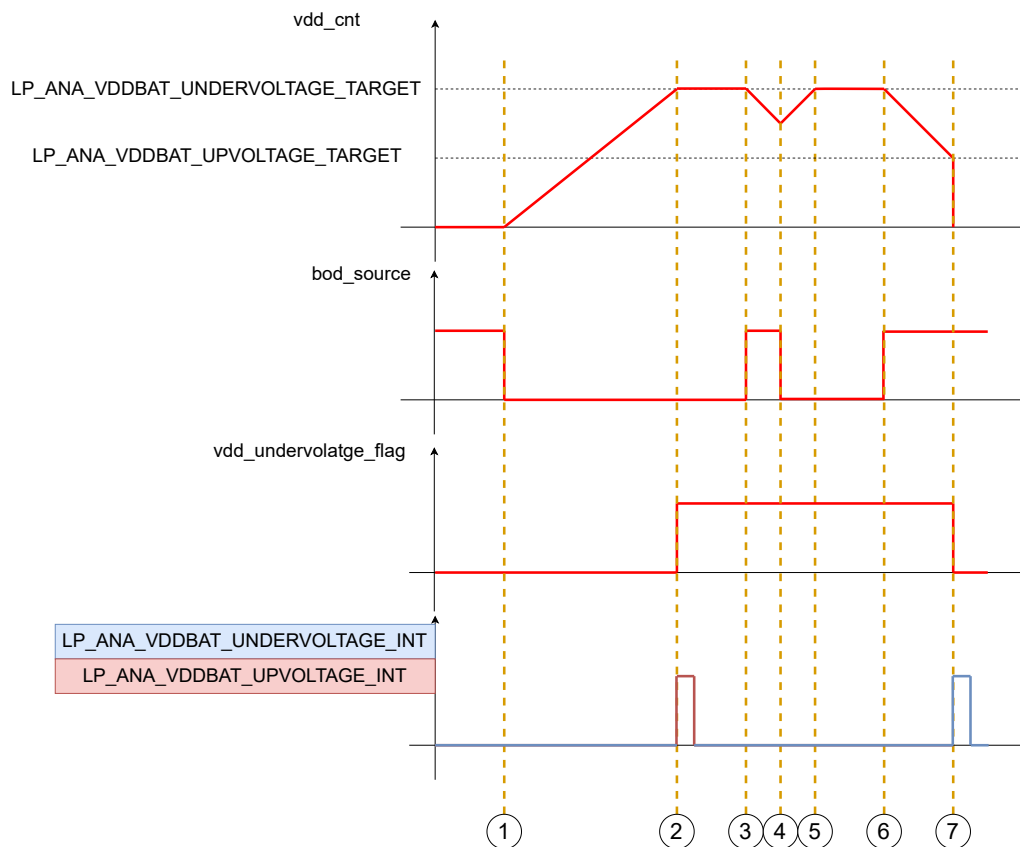

Figure 21.4-1. Structure of Brown-out Detector

- vdd\_cnt: the value of the brown-out counter.
- bod\_source: the monitored source, which is VDD\_BAT in the figure.
- vdd\_undervoltage\_flag: the under-voltage flag.
- Stage 0 ~ 1: When bod\_source is 1, it indicates the voltage is normal, and the brown-out counter (vdd\_cnt) remains 0.
- Stage 1 ~ 2: When bod\_source is 0, it indicates under-voltage happens, and the brown-out counter will start to count. When the counter value reaches the corresponding threshold, vdd\_undervoltage\_flag will be set to 1, and the interrupt is generated.
- Stage 2 ~ 3: When vdd\_undervoltage\_flag is 1, the brown-out counter will stop counting, and stabilize at LP\_ANA\_VDDBAT\_UNDERVOLTAGE\_TARGET.
- Stage 3 ~ 4 ~ 5: When bod\_source changes back to 0 for a short period, the value in the brown-out counter will decrease. However, as the value does not reach to LP\_ANA\_VDDBAT\_UPVOLTAGE\_TARGET, vdd\_undervoltage\_flag will not be toggled.
- Stage 6 ~ 7: After bod\_source remains 0 for a certain period, i.e., the counter value decreases to LP\_ANA\_VDDBAT\_UPVOLTAGE\_TARGET, vdd\_undervoltage\_flag is reset to 0. Then the counter is cleared to 0.

## 21.5 Interrupts

ESP32-P4's brown-out detector can generate the following interrupt and send it to [Interrupt Matrix](#).

- LP\_ANAPERI\_INT

The interrupt is generated by the internal interrupt sources of the brown-out detector.

- LP\_ANA\_VDDBAT\_CHARGE\_UPVOLTAGE\_INT: Triggered when the voltage of VDD\_BAT increases to the predefined charging threshold.
- LP\_ANA\_VDDBAT\_CHARGE\_UNDERVOLTAGE\_INT: Triggered when the voltage of VDD\_BAT decreases to the predefined charging threshold.
- LP\_ANA\_VDDBAT\_UPVOLTAGE\_INT: Triggered when the voltage of VDD\_BAT increases to the predefined brown-out threshold.
- LP\_ANA\_VDDBAT\_UNDERVOLTAGE\_INT: Triggered when the voltage of VDD\_BAT reduces to the predefined brown-out threshold.
- LP\_ANA\_BOD\_MODE0\_INT: Triggered when the value of the brown-out counter reaches the predefined threshold in Mode 0.

Each interrupt source can be configured by a common set of registers that are described in Chapter [Interrupt Configuration Registers](#). The specific registers can be found in Section [21.7 Register Summary](#).

## 21.6 Programming Procedures

- Mode 0
  - Configure [LP\\_ANA\\_BOD\\_MODE0\\_RESET\\_WAIT](#) to set the counter threshold for triggering the reset signal.
  - Configure [LP\\_ANA\\_BOD\\_MODE0\\_INTR\\_WAIT](#) to set the counter threshold for triggering interrupts.
  - Set [LP\\_ANA\\_BOD\\_MODE0\\_RESET\\_SEL](#) to select the reset way in Mode 0.
  - Configure [LP\\_ANA\\_BOD\\_SOURCE\\_ENA](#) to enable the power pin to be detected.
  - Set [LP\\_ANA\\_BOD\\_MODE0\\_RESET\\_ENA](#) to enable the brown-out reset functionality.
  - Set [LP\\_ANA\\_BOD\\_MODE0\\_INTR\\_ENA](#) to enable the noise-filtering counter and interrupts.
- Mode 1
  - Configure [LP\\_ANA\\_BOD\\_SOURCE\\_ENA](#) to enable the power pin to be detected.

## 21.7 Register Summary

The addresses in this section are relative to Brown-out Detector base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name  | Description  | Address | Access |
|---|--|---------|--------|
| <a href="#">LP_ANA_BOD_MODE0_CNTL_REG</a>     | Control register of Mode 0                               | 0x0000  | R/W    |
| <a href="#">LP_ANA_VDD_SOURCE_CNTL_REG</a>    | Control register of monitoring sources                   | 0x0008  | varies |
| <a href="#">LP_ANA_VDDBAT_BOD_CNTL_REG</a>    | Control register of brown-out detecting for VDD_BAT      | 0x000C  | varies |
| <a href="#">LP_ANA_VDDBAT_CHARGE_CNTL_REG</a> | Pre-charge control register for under-voltage of VDD_BAT | 0x0010  | varies |
| <a href="#">LP_ANA_INT_RAW_REG</a>            | Raw interrupt status                                     | 0x0020  | RO     |
| <a href="#">LP_ANA_INT_ST_REG</a>             | Interrupt state register                                 | 0x0024  | RO     |
| <a href="#">LP_ANA_INT_ENA_REG</a>            | Interrupt enable register                                | 0x0028  | R/W    |
| <a href="#">LP_ANA_INT_CLR_REG</a>            | Interrupt clear register                                 | 0x002C  | WT     |

## 21.8 Registers

The addresses in this section are relative to Brown-out Detector base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section [Programming Reserved Register Field](#).

**LP\_ANA\_BOD\_MODE0\_CLOSE\_FLASH\_ENA** Configure to close the flash functionality when under-voltage happens in Mode 0.

0: Disable

1: Enable

(R/W)

**LP\_ANA\_BOD\_MODE0\_INTR\_WAIT** Configure the counter threshold that triggers interrupts in Mode 0. (R/W)

**LP\_ANA\_BOD\_MODE0\_RESET\_WAIT** Configure the counter threshold that triggers reset in Mode 0. (R/W)

**LP\_ANA\_BOD\_MODE0\_CNTL\_CLR** Clear counter value in Mode 0. (R/W)

**LP\_ANA\_BOD\_MODE0\_INTR\_ENA** Configure to enable the counter and interrupts in Mode 0.

0: Disable

1: Enable

(R/W)

**LP\_ANA\_BOD\_MODE0\_RESET\_SEL** Configure the reset way when under-voltage happens in Mode 0.

0: Reset the chip

1: Reset the system

(R/W)

**LP\_ANA\_BOD\_MODE0\_RESET\_ENA** Configure to enable reset in Mode 0.

0: Disable

1: Enable

(R/W)

**LP\_ANA\_VGOOD\_EVENT\_RECORD** Flags for indicating pins whose voltage is lower than the threshold.

0: Under-voltage does not happen on either VDD\_BAT or VDD\_ANA;

1: Under-voltage happens on VDD\_BAT;

2: Under-voltage happens on VDD\_ANA;

3: Under-voltage happens on both VDD\_BAT and VDD\_ANA.

(RO)

**LP\_ANA\_VBAT\_EVENT\_RECORD\_CLR** Clear the flags.

0: Not clear

1: Clear the brown-out flag of VDD\_BAT

2: Clear the brown-out flag of VDD\_ANA

3: No effect

(WT)

**LP\_ANA\_BOD\_SOURCE\_ENA** Configure to detect monitoring sources.

0: Not detecting any pins;

1: Only detect VDD\_BAT;

2: Only detect VDD\_ANA;

3: Detect both VDD\_BAT and VDD\_ANA.

(R/W)

Register 21.3. LP\_ANA\_VDDBAT\_BOD\_CNTL\_REG (0x000C)

**LP\_ANA\_VDDBAT\_UNDERVOLTAGE\_FLAG** Flag indicating that under-voltage occurs on VDD\_BAT. (RO)

**LP\_ANA\_VDDBAT\_CNT\_CLR** Clear the brown-out counter of VDD\_BAT. (WT)

**LP\_ANA\_VDDBAT\_UPVOLTAGE\_TARGET** Configure the voltage-recovery threshold for the brown-out counter of VDD\_BAT. When the counter decreases to this threshold, [LP\\_ANA\\_VDDBAT\\_UNDERVOLTAGE\\_FLAG](#) is cleared to 0. (R/W)

**LP\_ANA\_VDDBAT\_UNDERVOLTAGE\_TARGET** Configure the brown-out threshold for the brown-out counter of VDD\_BAT. When the counter increases to this threshold, [LP\\_ANA\\_VDDBAT\\_UNDERVOLTAGE\\_FLAG](#) is set to 1. (R/W)

Register 21.4. LP\_ANA\_VDDBAT\_CHARGE\_CNTL\_REG (0x0010)

**LP\_ANA\_VDDBAT\_CHARGE\_UNDERVOLTAGE\_FLAG** Flag indicating that VDD\_BAT is charging. (RO)

**LP\_ANA\_VDDBAT\_CHARGE\_CNT\_CLR** Clear the brown-out counter of VDD\_BAT. (WT)

**LP\_ANA\_VDDBAT\_CHARGE\_UPVOLTAGE\_TARGET** Configure the voltage-recovery threshold for the brown-out counter of VDD\_BAT. When the counter decreases to this threshold, [LP\\_ANA\\_VDDBAT\\_CHARGE\\_UNDERVOLTAGE\\_FLAG](#) is cleared to 0. (R/W)

**LP\_ANA\_VDDBAT\_CHARGE\_UNDERVOLTAGE\_TARGET** Configure the brown-out threshold for the brown-out counter of VDD\_BAT. When the counter increases to this threshold, [LP\\_ANA\\_VDDBAT\\_CHARGE\\_UNDERVOLTAGE\\_FLAG](#) is set to 1. (R/W)

Register 21.5. LP\_ANA\_INT\_RAW\_REG (0x0020)

| 0  | 0  | 0  | 0  | 0  | 0  | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | Reset |

**LP\_ANA\_VDDBAT\_CHARGE\_UPVOLTAGE\_INT\_ENA** Configure whether to enable the interrupt which is triggered when the voltage of VDD\_BAT increases to the charging threshold.

0: No

1: Yes

(R/W)

**LP\_ANA\_VDDBAT\_CHARGE\_UNDERVOLTAGE\_INT\_ENA** Configures whether to enable the interrupt which is triggered when the voltage of VDD\_BAT reduces to the charging threshold.

0: Yes

1: No

(R/W)

**LP\_ANA\_VDDBAT\_UPVOLTAGE\_INT\_ENA** Configures whether to enable the interrupt which is triggered when the voltage of VDD\_BAT increases to the brown-out threshold.

0: Yes

1: No

(R/W)

**LP\_ANA\_VDDBAT\_UNDERVOLTAGE\_INT\_ENA** Configures whether to enable the interrupt which is triggered when the voltage of VDD\_BAT reduces to the brown-out threshold.

0: No

1: Yes

(R/W)

**LP\_ANA\_BOD\_MODE0\_INT\_ENA** Configures whether to enable the brown-out interrupt in Mode 0.

0: No

1: Yes

(R/W)

### Register 21.8. LP\_ANA\_INT\_CLR\_REG (0x002C)

Diagram illustrating the Reset signal (32 bits). The signal is shown as a horizontal bar divided into 32 segments, labeled 31 down to 0. The signal is labeled "Reset" at the right end.

**LP\_ANA\_VDDBAT\_CHARGE\_UPVOLTAGE\_INT\_CLR** Configures whether to clear the interrupt triggered by the VDD\_BAT voltage increasing to the charging threshold. (WT)

**LP\_ANA\_VDDBAT\_CHARGE\_UNDERVOLTAGE\_INT\_CLR** Configures whether to clear the interrupt triggered by the VDD\_BAT voltage reducing to the charging threshold. (WT)

**LP\_ANA\_VDDBAT\_UPVOLTAGE\_INT\_CLR** Configures whether to clear the interrupt triggered by the VDD\_BAT voltage increasing to the brown-out threshold. (WT)

**LP\_ANA\_VDDBAT\_UNDERVOLTAGE\_INT\_CLR** Configures whether to clear the interrupt triggered by the VDD\_BAT voltage reducing to the brown-out threshold. (WT)

LP\_ANA\_BOD\_MODE0\_INT\_ST Configures whether to clear the brown-out interrupt in Mode 0.  
(WT)

## Part V

# Cryptography/Security Component

Dedicated to security features, this part explores cryptographic accelerators like AES and ECC. It also covers digital signatures, random number generation, and encryption/decryption algorithms, showcasing the SoC's capabilities in cryptography and secure data processing.

## Chapter 22

## AES Accelerator (AES)

### 22.1 Introduction

ESP32-P4 integrates an Advanced Encryption Standard (AES) accelerator, which is a hardware device that speeds up computation using AES algorithm significantly, compared to AES algorithms implemented solely in software. The AES accelerator integrated in ESP32-P4 has two working modes, which are [Typical AES](#) and [DMA-AES](#).

### 22.2 Features

The following functionality is supported:

- Typical AES working mode
  - AES-128/AES-256 encryption and decryption
- DMA-AES working mode
  - AES-128/AES-256 encryption and decryption
  - Block cipher mode
    - \* ECB (Electronic Codebook)
    - \* CBC (Cipher Block Chaining)
    - \* OFB (Output Feedback)
    - \* CTR (Counter)
    - \* CFB8 (8-bit Cipher Feedback)
    - \* CFB128 (128-bit Cipher Feedback)
  - GCM (Galois/Counter Mode)
  - Interrupt on completion of computation

### 22.3 Clock and Reset

The AES accelerator is activated by setting the [HP\\_SYS\\_CLKRST\\_CRYPT\\_AES\\_CLK\\_EN](#) bit in the [HP\\_SYS\\_CLKRST\\_PERI\\_CLK\\_CTRL25\\_REG](#) register and clearing the [HP\\_SYS\\_CLKRST\\_RST\\_EN\\_AES](#) bit in the [HP\\_SYS\\_CLKRST\\_HP\\_RST\\_EN2\\_REG](#) register. Besides, due to resource reuse between cryptography accelerator modules, users also need to additionally clear the [HP\\_SYS\\_CLKRST\\_RST\\_EN\\_DS](#) bit and the [HP\\_SYS\\_CLKRST\\_RST\\_EN\\_KM](#) bit in the [HP\\_SYS\\_CLKRST\\_HP\\_RST\\_EN2\\_REG](#) register.

## 22.4 AES Working Modes

The AES accelerator integrated in ESP32-P4 has two working modes, which are [Typical AES](#) and [DMA-AES](#).

- Typical AES Working Mode:
  - Supports encryption and decryption using cryptographic keys of 128 and 256 bits, specified in [NIST FIPS 197](#).

In this working mode, the plaintext and ciphertext is written and read via CPU directly.

- DMA-AES Working Mode:
  - Supports encryption and decryption using cryptographic keys of 128 and 256 bits, specified in [NIST FIPS 197](#);
  - Supports block cipher modes ECB, CBC, OFB, CTR, CFB8, and CFB128 under [NIST SP 800-38A](#).
  - Supports GCM under [NIST SP 800-38D](#).

In this working mode, the plaintext and ciphertext are written and read via DMA. An interrupt will be generated when operation completes.

Users can choose the working mode for AES accelerator by configuring the [AES\\_DMA\\_ENABLE\\_REG](#) register according to Table 22.4-1 below.

**Table 22.4-1. AES Accelerator Working Mode**

| <a href="#">AES_DMA_ENABLE_REG</a> | Working Mode |
|------------------------------------|--------------|
| 0                                  | Typical AES  |
| 1                                  | DMA-AES      |

Users can choose the length of cryptographic keys and encryption/decryption by configuring the [AES\\_MODE\\_REG](#) register according to Table 22.4-2 below.

**Table 22.4-2. Key Length and Encryption/Decryption**

| <a href="#">AES_MODE_REG</a> [2:0] | Key Length and Encryption/Decryption |
|------------------------------------|--------------------------------------|
| 0                                  | AES-128 encryption                   |
| 1                                  | reserved                             |
| 2                                  | AES-256 encryption                   |
| 3                                  | reserved                             |
| 4                                  | AES-128 decryption                   |
| 5                                  | reserved                             |
| 6                                  | AES-256 decryption                   |
| 7                                  | reserved                             |

For a detailed introduction to these two working modes, please refer to Section 22.5 and Section 22.6 below.

**Notice:**

ESP32-P4's [Digital Signature Algorithm \(DSA\)](#) module will call the AES accelerator. Therefore, users cannot access the AES accelerator when [Digital Signature Algorithm \(DSA\)](#) module is working.

## 22.5 Typical AES Working Mode

In the Typical AES working mode, users can check the working status of the AES accelerator by inquiring the [AES\\_STATE\\_REG](#) register and comparing the return value against the Table 22.5-1 below.

Table 22.5-1. Working Status under Typical AES Working Mode

| <a href="#">AES_STATE_REG</a> | Status | Description   |
|-------------------------------|--------|---|
| 0                             | IDLE   | The AES accelerator is idle or completed operation.   |
| 1                             | WORK   | The AES accelerator is in the middle of an operation. |

### 22.5.1 Key, Plaintext, and Ciphertext

The encryption or decryption key is stored in [AES\\_KEY\\_n\\_REG](#), which is a set of eight 32-bit registers.

- For AES-128 encryption or decryption, the 128-bit key is stored in [AES\\_KEY\\_0\\_REG](#) ~ [AES\\_KEY\\_3\\_REG](#).
- For AES-256 encryption or decryption, the 256-bit key is stored in [AES\\_KEY\\_0\\_REG](#) ~ [AES\\_KEY\\_7\\_REG](#).

The plaintext and ciphertext are stored in [AES\\_TEXT\\_IN\\_m\\_REG](#) and [AES\\_TEXT\\_OUT\\_m\\_REG](#), which are two sets of four 32-bit registers.

- For AES-128 or AES-256 encryption, the [AES\\_TEXT\\_IN\\_m\\_REG](#) registers are initialized with plaintext. Then, the AES accelerator stores the ciphertext into [AES\\_TEXT\\_OUT\\_m\\_REG](#) after operation.
- For AES-128 or AES-256 decryption, the [AES\\_TEXT\\_IN\\_m\\_REG](#) registers are initialized with ciphertext. Then, the AES accelerator stores the plaintext into [AES\\_TEXT\\_OUT\\_m\\_REG](#) after operation.

### 22.5.2 Endianness

#### Text Endianness

In Typical AES working mode, the AES accelerator uses cryptographic keys to encrypt and decrypt data in blocks of 128 bits. When filling data into [AES\\_TEXT\\_IN\\_m\\_REG](#) register or reading result from [AES\\_TEXT\\_OUT\\_m\\_REG](#) registers, users should follow the text endianness type specified in Table 22.5-2.

Table 22.5-2. Text Endianness Type for Typical AES

| Plaintext/Ciphertext |                |   |   |   |
|----------------------|----------------|---|---|---|
| State <sup>1</sup>   | c <sup>2</sup> |   |   |   |
|                      | 0              | 1                                       | 2                                       | 3                                       |
| r                    | 0              | <a href="#">AES_TEXT_x_0_REG[7:0]</a>   | <a href="#">AES_TEXT_x_1_REG[7:0]</a>   | <a href="#">AES_TEXT_x_2_REG[7:0]</a>   |
|                      | 1              | <a href="#">AES_TEXT_x_0_REG[15:8]</a>  | <a href="#">AES_TEXT_x_1_REG[15:8]</a>  | <a href="#">AES_TEXT_x_2_REG[15:8]</a>  |
|                      | 2              | <a href="#">AES_TEXT_x_0_REG[23:16]</a> | <a href="#">AES_TEXT_x_1_REG[23:16]</a> | <a href="#">AES_TEXT_x_2_REG[23:16]</a> |

Table 22.5-2. Text Endianness Type for Typical AES

| Plaintext/Ciphertext |   |                         |                         |                         |                         |
|----------------------|---|-------------------------|-------------------------|-------------------------|-------------------------|
|                      | 3 | AES_TEXT_x_0_REG[31:24] | AES_TEXT_x_1_REG[31:24] | AES_TEXT_x_2_REG[31:24] | AES_TEXT_x_3_REG[31:24] |

<sup>1</sup> The definition of “State (including c and r)” is described in Section 3.4 *The State* in [NIST FIPS 197](#).  
<sup>2</sup> Where **x** = IN or OUT.

## Key Endianness

In Typical AES working mode, when filling keys into [AES\\_KEY\\_m\\_REG](#) registers, users should follow the key endianness type specified in Table 22.5-3 and Table 22.5-4.

**Table 22.5-3. Key Endianness Type for AES-128 Encryption and Decryption**

| Bit <sup>1</sup> | w[0]                                 | w[1]                                 | w[2]                                 | w[3] <sup>2</sup>                    |
|------------------|--------------------------------------|--------------------------------------|--------------------------------------|--------------------------------------|
| [31:24]          | <a href="#">AES_KEY_O_REG[7:0]</a>   | <a href="#">AES_KEY_1_REG[7:0]</a>   | <a href="#">AES_KEY_2_REG[7:0]</a>   | <a href="#">AES_KEY_3_REG[7:0]</a>   |
| [23:16]          | <a href="#">AES_KEY_O_REG[15:8]</a>  | <a href="#">AES_KEY_1_REG[15:8]</a>  | <a href="#">AES_KEY_2_REG[15:8]</a>  | <a href="#">AES_KEY_3_REG[15:8]</a>  |
| [15:8]           | <a href="#">AES_KEY_O_REG[23:16]</a> | <a href="#">AES_KEY_1_REG[23:16]</a> | <a href="#">AES_KEY_2_REG[23:16]</a> | <a href="#">AES_KEY_3_REG[23:16]</a> |
| [7:0]            | <a href="#">AES_KEY_O_REG[31:24]</a> | <a href="#">AES_KEY_1_REG[31:24]</a> | <a href="#">AES_KEY_2_REG[31:24]</a> | <a href="#">AES_KEY_3_REG[31:24]</a> |

<sup>1</sup> Column “Bit” specifies the bytes of each word stored in w[0] ~ w[3].

<sup>2</sup> w[0] ~ w[3] are “the first Nk words of the expanded key” as specified in Section 5.2 *Key Expansion* in [NIST FIPS 197](#).

**Table 22.5-4. Key Endianness Type for AES-256 Encryption and Decryption**

| Bit <sup>1</sup> | w[0]                                 | w[1]                                 | w[2]                                 | w[3]                                 | w[4]                                 | w[5]                                 | w[6]                                 | w[7] <sup>2</sup>                    |

| [7:0]            | <a href="#">AES_KEY_O_REG[31:24]</a> | <a href="#">AES_KEY_1_REG[31:24]</a> | <a href="#">AES_KEY_2_REG[31:24]</a> | <a href="#">AES_KEY_3_REG[31:24]</a> | <a href="#">AES_KEY_4_REG[31:24]</a> | <a href="#">AES_KEY_5_REG[31:24]</a> | <a href="#">AES_KEY_6_REG[31:24]</a> | <a href="#">AES_KEY_7_REG[31:24]</a> |

<sup>1</sup> Column “Bit” specifies the bytes of each word stored in w[0] ~ w[7].

<sup>2</sup> w[0] ~ w[7] are “the first Nk words of the expanded key” as specified in Chapter 5.2 *Key Expansion* in [NIST FIPS 197](#).

## 22.5.3 Operation Process

### Single Operation

1. Write 0 to the [AES\\_DMA\\_ENABLE\\_REG](#) register.
2. Initialize registers [AES\\_MODE\\_REG](#), [AES\\_KEY\\_n\\_REG](#), and [AES\\_TEXT\\_IN\\_m\\_REG](#).
3. Start operation by writing 1 to the [AES\\_TRIGGER\\_REG](#) register.
4. Wait till the content of the [AES\\_STATE\\_REG](#) register becomes 0, which indicates the operation is completed.
5. Read results from the [AES\\_TEXT\\_OUT\\_m\\_REG](#) register.

### Consecutive Operations

In consecutive operations, primarily the input [AES\\_TEXT\\_IN\\_m\\_REG](#) and output [AES\\_TEXT\\_OUT\\_m\\_REG](#) registers (*m*: 0-3) are being written and read, while the content of [AES\\_DMA\\_ENABLE\\_REG](#), [AES\\_MODE\\_REG](#), and [AES\\_KEY\\_n\\_REG](#) is kept unchanged. Therefore, the initialization can be simplified during the consecutive operation.

1. Write 0 to the [AES\\_DMA\\_ENABLE\\_REG](#) register before starting the first operation.
2. Initialize registers [AES\\_MODE\\_REG](#) and [AES\\_KEY\\_n\\_REG](#) before starting the first operation.
3. Update the content of [AES\\_TEXT\\_IN\\_m\\_REG](#).
4. Start operation by writing 1 to the [AES\\_TRIGGER\\_REG](#) register.
5. Wait till the content of the [AES\\_STATE\\_REG](#) register becomes 0, which indicates the operation completes.
6. Read results from the [AES\\_TEXT\\_OUT\\_m\\_REG](#) register, and return to Step 3 to continue the next operation.

## 22.6 DMA-AES Working Mode

In the DMA-AES working mode, the AES accelerator supports six block cipher modes: ECB, CBC, OFB, CTR, CFB8, and CFB128. Users can choose the block cipher mode by configuring the [AES\\_BLOCK\\_MODE\\_REG](#) register according to Table 22.6-1 below.

Table 22.6-1. Block Cipher Mode

| <a href="#">AES_BLOCK_MODE_REG</a> [2:0] | Block Cipher Mode                |
|--|----------------------------------|
| 0  | ECB (Electronic Codebook)        |
| 1  | CBC (Cipher Block Chaining)      |
| 2  | OFB (Output Feedback)            |
| 3  | CTR (Counter)                    |
| 4  | CFB8 (8-bit Cipher Feedback)     |
| 5  | CFB128 (128-bit Cipher Feedback) |
| 6  | GCM (Galois/Counter Mode)        |
| 7  | reserved                         |

Users can check the working status of the AES accelerator by inquiring the [AES\\_STATE\\_REG](#) register and comparing the return value against the Table 22.6-2 below.

Table 22.6-2. Working Status under DMA-AES Working mode

| <a href="#">AES_STATE_REG</a> [1:0] | Status | Description   |
|-------------------------------------|--------|---|
| 0                                   | IDLE   | The AES accelerator is idle.                          |
| 1                                   | WORK   | The AES accelerator is in the middle of an operation. |
| 2                                   | DONE   | The AES accelerator completed operations.             |

When working in the DMA-AES working mode, the AES accelerator supports interrupt on the completion of computation. To enable this function, write 1 to the [AES\\_INT\\_ENA\\_REG](#) register. By default, the interrupt function is disabled. Also, note that the interrupt should be cleared by software after use.

### 22.6.1 Key, Plaintext, and Ciphertext

#### Block Operation

During the block operations, the AES accelerator reads source data from DMA, and writes result data to DMA after the computation.

- For encryption, DMA reads plaintext from memory, then passes it to AES as source data. After computation, AES passes ciphertext as result data back to DMA to write into memory.
- For decryption, DMA reads ciphertext from memory, then passes it to AES as source data. After computation, AES passes plaintext as result data back to DMA to write into memory.

During block operations, the lengths of the source data and result data are the same. The total computation time is reduced because the DMA data operation and AES computation can happen concurrently.

The length of source data for AES accelerator under DMA-AES working mode must be 128 bits or the integral multiples of 128 bits. Otherwise, trailing zeros will be added to the original source data, so the length of source data equals to the nearest integral multiples of 128 bits. Please see details in Table 22.6-3 below.

Table 22.6-3. TEXT-PADDING

| Function : TEXT-PADDING( )  |  |
|---|--|
| <b>Input</b>  | : $X$ , bit string.  |
| <b>Output</b>   | : $Y = \text{TEXT-PADDING}(X)$ , whose length is the nearest integral multiples of 128 bits. |
| <b>Steps</b><br><p>Let us assume that <math>X</math> is a data-stream that can be split into <math>n</math> parts as following:</p> $X = X_1    X_2    \cdots    X_{n-1}    X_n$ <p>Here, the lengths of <math>X_1, X_2, \cdots, X_{n-1}</math> all equal to 128 bits, and the length of <math>X_n</math> is <math>t</math> (<math>0 \leq t \leq 127</math>).</p> <p>If <math>t = 0</math>, then</p> $\text{TEXT-PADDING}(X) = X;$ <p>If <math>0 &lt; t \leq 127</math>, define a 128-bit block, <math>X_n^*</math>, and let <math>X_n^* = X_n    0^{128-t}</math>, then</p> $\text{TEXT-PADDING}(X) = X_1    X_2    \cdots    X_{n-1}    X_n^* = X    0^{128-t}$ |  |

## 22.6.2 Endianness

Under the DMA-AES working mode, the transmission of source data and result data for AES accelerator is solely controlled by DMA. Therefore, the AES accelerator cannot control the Endianness of the source data and result data, but does have requirement on how these data should be stored in memory and on the length of the data.

For example, let us assume DMA needs to write the following data into memory at address 0x0280.

- Data represented in hexadecimal:
  - 0102030405060708090A0B0C0D0E0F101112131415161718191A1B1C1D1E1F20
- Data Length:
  - Equals to 2 blocks.

Then, this data will be stored in memory as shown in Table 22.6-4 below.

Table 22.6-4. Text Endianness for DMA-AES

| Address | Byte | Address | Byte | Address | Byte | Address | Byte |
|---------|------|---------|------|---------|------|---------|------|
| 0x0280  | 0x01 | 0x0281  | 0x02 | 0x0282  | 0x03 | 0x0283  | 0x04 |
| 0x0284  | 0x05 | 0x0285  | 0x06 | 0x0286  | 0x07 | 0x0287  | 0x08 |
| 0x0288  | 0x09 | 0x0289  | 0x0A | 0x028A  | 0x0B | 0x028B  | 0x0C |
| 0x028C  | 0x0D | 0x028D  | 0x0E | 0x028E  | 0x0F | 0x028F  | 0x10 |
| 0x0290  | 0x11 | 0x0291  | 0x12 | 0x0292  | 0x13 | 0x0293  | 0x14 |
| 0x0294  | 0x15 | 0x0295  | 0x16 | 0x0296  | 0x17 | 0x0297  | 0x18 |
| 0x0298  | 0x19 | 0x0299  | 0x1A | 0x029A  | 0x1B | 0x029B  | 0x1C |
| 0x029C  | 0x1D | 0x029D  | 0x1E | 0x029E  | 0x1F | 0x029F  | 0x20 |

### 22.6.3 Standard Incrementing Function

AES accelerator provides two Standard Incrementing Functions for the CTR block operation, which are INC<sub>32</sub> and INC<sub>128</sub> Standard Incrementing Functions. By setting the [AES\\_INC\\_SEL\\_REG](#) register to 0 or 1, users can choose the INC<sub>32</sub> or INC<sub>128</sub> functions respectively. For details on the Standard Incrementing Function, please see Chapter B.1 *The Standard Incrementing Function* in [NIST SP 800-38A](#).

### 22.6.4 Block Number

Register [AES\\_BLOCK\\_NUM\\_REG](#) stores the Block Number of plaintext  $P$  or ciphertext  $C$ . The length of this register equals to  $\text{length}(\text{TEXT-PADDING}(P))/128$  or  $\text{length}(\text{TEXT-PADDING}(C))/128$ . The AES accelerator only uses this register when working in the DMA-AES mode.

### 22.6.5 Initialization Vector

[AES\\_IV\\_MEM](#) is a 16-byte memory, which is only available for AES accelerator working in block operations. For CBC/OFB/CFB8/CFB128 operations, the [AES\\_IV\\_MEM](#) memory stores the Initialization Vector (IV). For the CTR operation, the [AES\\_IV\\_MEM](#) memory stores the Initial Counter Block (ICB).

Both IV and ICB are 128-bit strings, which can be divided into Byte0, Byte1, Byte2  $\dots$  Byte15 (from left to right). [AES\\_IV\\_MEM](#) stores data following the Endianness pattern presented in Table 22.6-4, i.e., the most significant (i.e., left-most) byte Byte0 is stored at the lowest address while the least significant (i.e., right-most) byte Byte15 at the highest address.

For more details on IV and ICB, please refer to [NIST SP 800-38A](#).

### 22.6.6 Block Operation Process

1. Select one of DMA channels to connect with AES, configure the DMA linked list, and then start DMA. For details, please refer to Chapter 3 *GDMA Controller (GDMA-AHB, GDMA-AXI)*.
2. Initialize the AES accelerator-related registers:
  - Write 1 to the [AES\\_DMA\\_ENABLE\\_REG](#) register.
  - Configure the [AES\\_INT\\_ENA\\_REG](#) register to enable or disable the interrupt function.
  - Initialize registers [AES\\_MODE\\_REG](#) and [AES\\_KEY\\_n\\_REG](#).
  - Select block cipher mode by configuring the [AES\\_BLOCK\\_MODE\\_REG](#) register. For details, see Table 22.6-1.
  - Initialize the [AES\\_BLOCK\\_NUM\\_REG](#) register. For details, see Section 22.6.4.
  - Initialize the [AES\\_INC\\_SEL\\_REG](#) register (only needed when AES accelerator is working under CTR block operation).
  - Initialize the [AES\\_IV\\_MEM](#) memory (This is always needed except for ECB block operation).
3. Start operation by writing 1 to the [AES\\_TRIGGER\\_REG](#) register.
4. Wait for the completion of computation, which happens when the content of [AES\\_STATE\\_REG](#) becomes 2 or the AES interrupt occurs.

5. Check if DMA completes data transmission from AES to memory. At this time, DMA had already written the result data in memory, which can be accessed directly. For details on DMA, please refer to Chapter 3 [GDMA Controller \(GDMA-AHB, GDMA-AXI\)](#).
6. Clear interrupt by writing 1 to the [AES\\_INT\\_CLR\\_REG](#) register, if any AES interrupt occurred during the computation.
7. Release the AES accelerator by writing 1 to the [AES\\_DMA\\_EXIT\\_REG](#) register. After this, the content of the [AES\\_STATE\\_REG](#) register becomes 0. Note that, you can release DMA earlier, but only after Step 4 is completed.

### 22.6.7 GCM Operation Process

1. Configure DMA chain and start DMA. For details on DMA, please refer to Chapter 3 [GDMA Controller \(GDMA-AHB, GDMA-AXI\)](#).
2. Initialize the AES accelerator-related registers:
  - Write 1 to the [AES\\_DMA\\_ENABLE\\_REG](#) register.
  - Configure the [AES\\_INT\\_ENA\\_REG](#) register to enable or disable the interrupt function.
  - Initialize registers [AES\\_MODE\\_REG](#) and [AES\\_KEY\\_n\\_REG](#).
  - Write 6 to the [AES\\_BLOCK\\_MODE\\_REG](#) register.
  - Initialize the [AES\\_BLOCK\\_NUM\\_REG](#) register. Details about this register are described in Section [22.6.4 Block Number](#).
  - Initialize the [AES\\_AAD\\_BLOCK\\_NUM\\_REG](#) register. Details about this register are described in Section [22.7.4 AAD Block Number](#).
  - Initialize the [AES\\_REMAINDER\\_BIT\\_NUM\\_REG](#) register. Details about this register is described in Section [22.7.5 Number of Effective Bits of Incomplete Blocks](#).
3. Start operation by writing 1 to the [AES\\_TRIGGER\\_REG](#) register.
4. Wait for the completion of computation, which happens when the content of [AES\\_STATE\\_REG](#) becomes 2. For details on the working status of AES Accelerator, please refer to Table [22.6-2 Working Status under DMA-AES Working mode](#). At this step, no interrupt occurs.
5. Obtain the  $H$  value from the [AES\\_H\\_MEM](#) memory.
6. Generate  $J_0$  and write it to the [AES\\_JO\\_MEM](#) memory.
7. Continue operating by writing 1 to the [AES\\_CONTINUE\\_OP\\_REG](#) register.
8. Wait for the completion of computation, which happens when the content of [AES\\_STATE\\_REG](#) becomes 2 or the AES interrupt occurs. For details on the working status of AES Accelerator, please refer to Table [22.6-2 Working Status under DMA-AES Working mode](#).
9. Obtain  $T_0$  by reading [AES\\_TO\\_MEM](#).
10. Check if DMA completes data transmission from AES to memory. At this time, DMA had already written the result data in memory, which can be accessed directly. For details on DMA, please refer to Chapter 3 [GDMA Controller \(GDMA-AHB, GDMA-AXI\)](#).

11. Clear interrupt by writing 1 to the [AES\\_INT\\_CLR\\_REG](#) register, if any AES interrupt occurred during the computation.
12. Exit DMA by writing 1 to the [AES\\_DMA\\_EXIT\\_REG](#) register. After this, the content of the [AES\\_STATE\\_REG](#) becomes 0. Note that, you can exit DMA earlier, but only after Step 8 is completed.

## 22.7 GCM Algorithm

ESP32-P4's AES accelerator fully supports GCM Algorithm. In reality, the  $AAD$ ,  $C$  and  $P$  that are longer than  $2^{32}-1$  bits are seldom used. Therefore, we specify that the length of  $AAD$ ,  $C$  and  $P$  should be no longer than  $2^{32}-1$  here. Figure 22.7-1 below demonstrates how GCM encryption is implemented in the AES Accelerator of ESP32-P4.

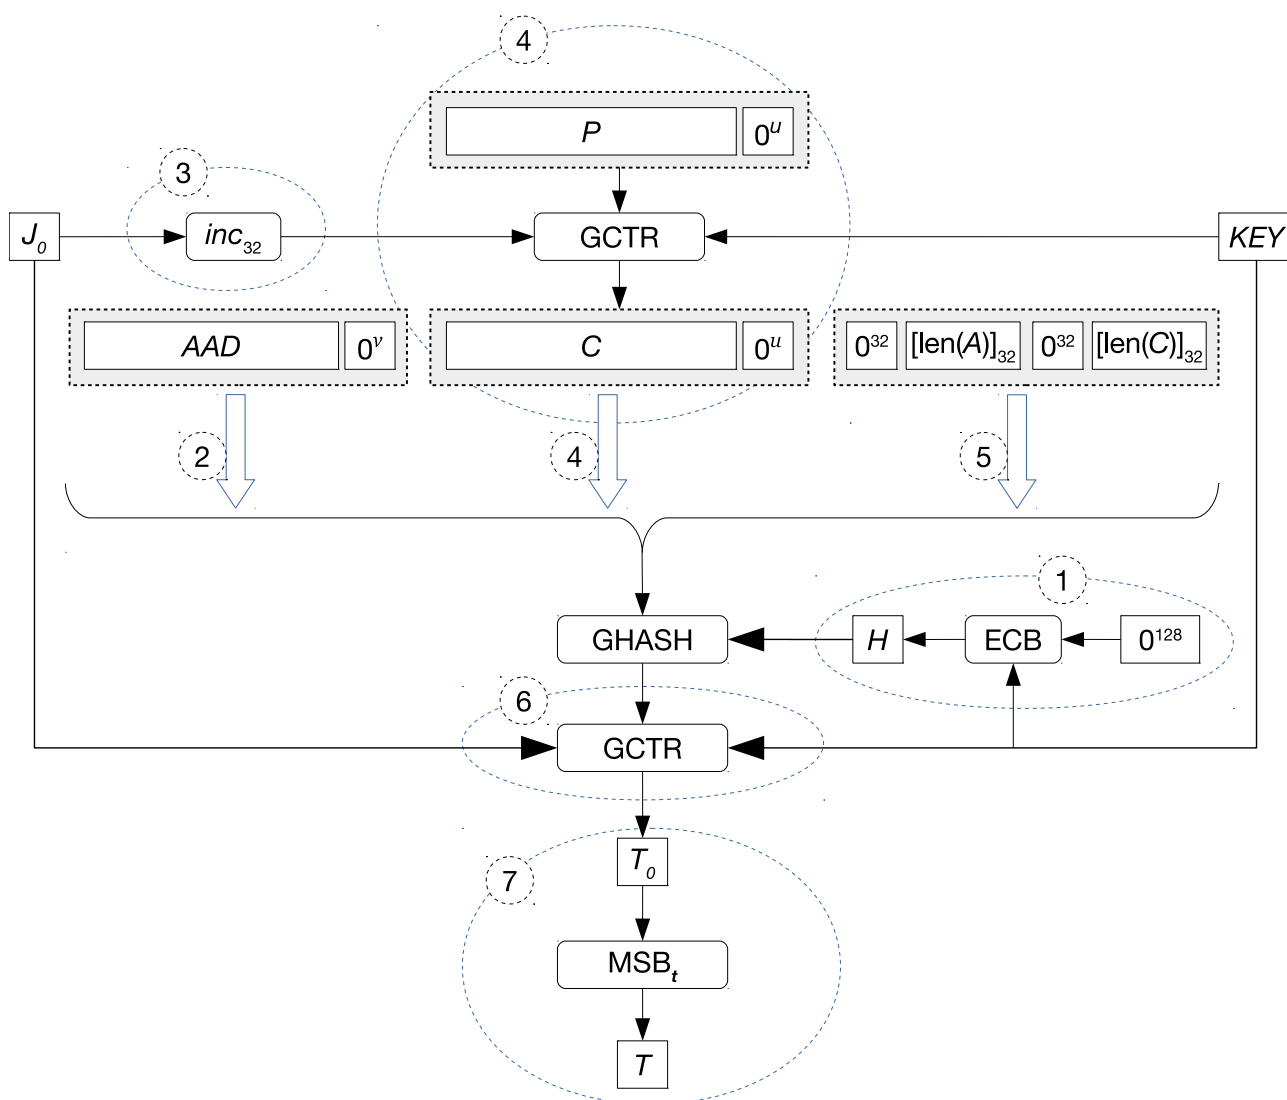

Figure 22.7-1. GCM Encryption Process

GCM encryption is implemented as follows:

1. Hardware executes the ECB Algorithm to obtain the Hash subkey  $H$ , which is needed in the Hash computation.
2. Hardware executes the GHASH Algorithm to perform Hash computation with the [padded](#)  $AAD$ .

3. Hardware gets ready for CTR encryption by obtaining the result of applying Standard Incrementing Function  $\text{INC}_{32}$  to  $J_0$ .
4. Hardware executes the GCTR Algorithm to encrypt the padded plaintext  $P$ , then executes the GHASH Algorithm to perform Hash computation on the padded ciphertext  $C$ .
5. Hardware executes the GHASH Algorithm to perform Hash computation on AAD Blocks, obtaining a 128-bit Hash result.
6. Hardware executes the GCTR Algorithm to encrypt  $J_0$ , obtaining  $T_0$ .
7. Software obtains the result  $T_0$  from hardware, and executes  $\text{MSB}_t$  Algorithm to obtain the final authentication tag  $T$ .

The only difference between GCM decryption and GCM encryption lies in Step 4 in Figure 22.7-1. To be more specific, instead of executing GCTR Algorithm to encrypt the padded plaintext, the AES Accelerator executes the same algorithm to decrypt the padded ciphertext in GCM decryption. For details, please see [NIST SP 800-38D](#).

## 22.7.1 Hash Subkey

During GCM operation, the Hash subkey  $H$  is a 128-bit value computed by hardware, which is demonstrated in Step 1 in Figure 22.7-1. Also you can find more information about Hash subkey at “Step 1. Let  $H = \text{CIPH}_K(0^{128})$ ” in Chapter 7 GCM Specification of [NIST SP 800-38D](#).

The Hash subkey  $H$  is stored in the `AES_H_MEM` memory. Just like other endianness, its most significant (i.e., left-most) byte Byte0 is stored at the lowest address in the memory while least significant (i.e., right-most) byte Byte15 at the highest address. For details, see Table 22.5-2.

## 22.7.2 $J_0$

$J_0$  is a 128-bit value computed by hardware, which is required during Step 3 and Step 6 in Figure 22.7-1. For details on the generation of  $J_0$ , please see Chapter 7 GCM Specification in [NIST SP 800-38D](#).

$J_0$  is stored in the `AES_JO_MEM` memory. Just like other endianness, its most significant (i.e., left-most) byte Byte0 is stored at the lowest address in the memory while least significant (i.e., right-most) byte Byte15 at the highest address. For details, see Table 22.5-2.

## 22.7.3 Authentication Tag

Authentication Tag (Tag for short) is one of the key results of GCM computation, which is demonstrated in Step 7 of Figure 22.7-1. The value of the Tag is determined by its length  $t$  ( $1 \leq t \leq 128$ ):

- When  $t = 128$ , the value of Tag equals to  $T_0$ , a 128-bit string that is stored in the `AES_TO_MEM`. Just like other endianness, its most significant (i.e., left-most) byte Byte0 is stored at the lowest address in the memory while least significant (i.e., right-most) byte Byte15 at the highest address. For details, see Table 22.5-2.
- When  $1 \leq t < 128$ , the value of Tag equals to the  $t$  most significant (i.e., left-most) bits of  $T_0$ . In this case, Tag is represented as  $\text{MSB}_t(T_0)$ , which returns the  $t$  most significant bits of  $T_0$ . For example,  $\text{MSB}_4(111011010) = 1110$  and  $\text{MSB}_5(11010011010) = 11010$ . For details on the  $\text{MSB}_t()$  function, please refer to Chapter 6 Mathematical Components of GCM in [NIST SP 800-38D](#).

## 22.7.4 AAD Block Number

Register [AES\\_AAD\\_BLOCK\\_NUM\\_REG](#) stores the Block Number of Additional Authenticated Data (AAD). The length of this register equals to  $(\text{TEXT-PADDING}(\text{AAD}) \text{ length})/128$ . AES Accelerator only uses this register when working in the DMA-AES mode.

## 22.7.5 Number of Effective Bits of Incomplete Blocks

Register [AES\\_REMAINDER\\_BIT\\_NUM\\_REG](#) stores the Remainder Bit Number, which indicates the number of effective bits of incomplete blocks in plaintext/ciphertext. The value stored in this register equals to  $\text{length}(P)/128$  or  $\text{length}(C)/128$ . AES Accelerator only uses this register when working in the DMA-AES mode.

Register [AES\\_REMAINDER\\_BIT\\_NUM\\_REG](#) does not affect the results of plaintext or ciphertext, but does impact the value of  $T_0$ , therefore the Tag value too.

The GCM Algorithm can be viewed as the combination of GCTR operation and GHASH operation, among which, the GCTR performs the encryption and decryption, while the GHASH solves the Tag.

Note that the [AES\\_REMAINDER\\_BIT\\_NUM\\_REG](#) register is only effective for GCM encryption. To be more specific:

- For GCM encryption, the Hardware firstly computes  $C$ , then passes it in the form of  $\text{TEXT-PADDING}(C)$  as the input of GHASH operation. In this case, hardware determines how many trailing “0” should be added based on the content of [AES\\_REMAINDER\\_BIT\\_NUM\\_REG](#).
- For GCM decryption, the padding is completed with the  $\text{TEXT-PADDING}(C)$  function. In this case, the [AES\\_REMAINDER\\_BIT\\_NUM\\_REG](#) register is not effective.

## 22.8 Interrupts

ESP32-P4's AES can generate the following interrupt signal(s) that will be sent to the [Interrupt Matrix](#).

- AES\_INTR

There is one internal interrupt source from AES that can generate the above interrupt signal(s). The interrupt source from AES are listed with its trigger condition and the resulted interrupt signal(s) in Table [22.8-1](#).

Table 22.8-1. AES's Internal Interrupt Sources

| Internal Interrupt Source | Trigger Condition                  | Interrupt Signal |
|---------------------------|------------------------------------|------------------|
| AES_DMA_DONE_INT          | Completion of an AES DMA operation | AES_INTR         |

**Note:**

For definitions of *interrupt*, *interrupt signal*, *interrupt source*, and their correlations, please refer to Chapter [11 Interrupt Matrix](#) > Section [11.2 Interrupt Terminology in ESP32-P4](#).

## 22.9 Memory Summary

The addresses in this section are relative to the AES accelerator base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name                       | Description | Size (byte) | Starting Address | Ending Address | Access |
|----------------------------|-------------|-------------|------------------|----------------|--------|
| <a href="#">AES_IV_MEM</a> | Memory IV   | 16 bytes    | 0x0050           | 0x005F         | R/W    |
| <a href="#">AES_H_MEM</a>  | Memory H    | 16 bytes    | 0x0060           | 0x006F         | RO     |
| <a href="#">AES_JO_MEM</a> | Memory JO   | 16 bytes    | 0x0070           | 0x007F         | R/W    |
| <a href="#">AES_TO_MEM</a> | Memory TO   | 16 bytes    | 0x0080           | 0x008F         | RO     |

## 22.10 Register Summary

The addresses in this section are relative to the AES accelerator base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name                                      | Description                                     | Address | Access |
|---|---|---------|--------|
| <b>Key Registers</b>                      |   |         |        |
| <a href="#">AES_KEY_0_REG</a>             | AES key data register 0                         | 0x0000  | R/W    |
| <a href="#">AES_KEY_1_REG</a>             | AES key data register 1                         | 0x0004  | R/W    |
| <a href="#">AES_KEY_2_REG</a>             | AES key data register 2                         | 0x0008  | R/W    |
| <a href="#">AES_KEY_3_REG</a>             | AES key data register 3                         | 0x000C  | R/W    |
| <a href="#">AES_KEY_4_REG</a>             | AES key data register 4                         | 0x0010  | R/W    |

## 22.11 Registers

The addresses in this section are relative to the AES accelerator base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section IX.

**Register 22.1. AES\_KEY\_ *n*\_REG (*n*: 0-7) (0x0000+4\**n*)**

**AES\_KEY\_ *n*\_REG (*n*: 0-7)** Represents AES key data. (R/W)

**Register 22.2. AES\_TEXT\_IN\_ *m*\_REG (*m*: 0-3) (0x0020+4\**m*)**

**AES\_TEXT\_IN\_ *m*\_REG (*m*: 0-3)** Represents the source text data when the AES accelerator operates in the Typical AES working mode. (R/W)

**Register 22.3. AES\_TEXT\_OUT\_ *m*\_REG (*m*: 0-3) (0x0030+4\**m*)**

**AES\_TEXT\_OUT\_ *m*\_REG (*m*: 0-3)** Represents the result text data when the AES accelerator operates in the Typical AES working mode. (RO)

**Register 22.4. AES\_MODE\_REG (0x0040)**

|            |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |          |       |   |
|------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|----------|-------|---|
| (reserved) |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | AES_MODE |       |   |
| 31         |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 3        | 2     | 0 |
| 0x00000000 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0        | Reset |   |

**AES\_MODE** Configures the key length and encryption/decryption of the AES accelerator.

- 0: AES-128 encryption
  - 1: Reserved
  - 2: AES-256 encryption
  - 3: Reserved
  - 4: AES-128 decryption
  - 5: Reserved
  - 6: AES-256 decryption
  - 7: Reserved
- (R/W)

**Register 22.5. AES\_DMA\_ENABLE\_REG (0x0090)**

|            |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |                |       |
|------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|---|----------------|-------|
| (reserved) |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   | AES_DMA_ENABLE |       |
| 31         |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 1 | 0              |       |
| 0x00000000 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   | 0              | Reset |

**AES\_DMA\_ENABLE** Configures the working mode of the AES accelerator.

- 0: Typical AES
  - 1: DMA-AES
- (R/W)

**Register 22.6. AES\_BLOCK\_MODE\_REG (0x0094)**

|            |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                |       |   |  |
|------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|----------------|-------|---|--|
| (reserved) |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | AES_BLOCK_MODE |       |   |  |
| 31         |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 3              | 2     | 0 |  |
| 0x00000000 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0              | Reset |   |  |

**AES\_BLOCK\_MODE** Configures the block cipher mode of the AES accelerator operating under the DMA-AES working mode.

- 0: ECB (Electronic Code Block)
- 1: CBC (Cipher Block Chaining)
- 2: OFB (Output FeedBack)
- 3: CTR (Counter)
- 4: CFB8 (8-bit Cipher FeedBack)
- 5: CFB128 (128-bit Cipher FeedBack)
- 6: GCM (Galois/Counter Mode)
- 7: Reserved

(R/W)

**Register 22.7. AES\_BLOCK\_NUM\_REG (0x0098)**

|               |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |       |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|---------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|-------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|
| AES_BLOCK_NUM |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |       |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| 31            |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |       |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| 0x00000000    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |       |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|               |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | Reset |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

**AES\_BLOCK\_NUM** Represents the Block Number of plaintext or ciphertext when the AES accelerator operates under the DMA-AES working mode. For details, see Section 22.6.4. (R/W)

**Register 22.8. AES\_INC\_SEL\_REG (0x009C)**

|            |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |             |       |  |  |
|------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|-------------|-------|--|--|
| (reserved) |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | AES_INC_SEL |       |  |  |
| 31         |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 1           | 0     |  |  |
| 0x00000000 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0           | Reset |  |  |

**AES\_INC\_SEL** Configures the Standard Incrementing Function for CTR block operation.

- 0: INC<sub>32</sub>
  - 1: INC<sub>128</sub>
- (R/W)

Register 22.9. AES\_AAD\_BLOCK\_NUM\_REG (0x00A0)

|            |   |
|------------|---|
| 31         | 0 |
| 0x00000000 |   |
| Reset      |   |

**AES\_AAD\_BLOCK\_NUM** Stores the ADD block number for the GCM operation. For details, see Section 22.7.4. (R/W)

Register 22.10. AES\_REMAINDER\_BIT\_NUM\_REG (0x00A4)

|            |   |   |   |  |  |  |                       |       |
|------------|---|---|---|--|--|--|-----------------------|-------|
| (reserved) |   |   |   |  |  |  | AES_REMAINDER_BIT_NUM |       |
| 31         | 7 | 6 | 0 |  |  |  |                       |       |
| 0x00000000 |   |   |   |  |  |  | 0                     | Reset |

**AES\_REMAINDER\_BIT\_NUM** Stores the Remainder Bit Number for the GCM operation. For details, see Section 22.7.5. (R/W)

Register 22.11. AES\_TRIGGER\_REG (0x0048)

|            |  |  |  |  |  |  |  |  |  |  |  |  |  |   |             |       |
|------------|--|--|--|--|--|--|--|--|--|--|--|--|--|---|-------------|-------|
| (reserved) |  |  |  |  |  |  |  |  |  |  |  |  |  |   | AES_TRIGGER |       |
| 31         |  |  |  |  |  |  |  |  |  |  |  |  |  | 1 | 0           |       |
| 0x00000000 |  |  |  |  |  |  |  |  |  |  |  |  |  |   | x           | Reset |

**AES\_TRIGGER** Configures whether to start AES operation.

- 0: No effect
- 1: Start

(WT)

## Register 22.12. AES\_STATE\_REG (0x004C)

|            |   |           |       |
|------------|---|-----------|-------|
| (reserved) |   | AES_STATE |       |
| 31         | 2 | 1         | 0     |
| 0x00000000 |   | 0x0       | Reset |

**AES\_STATE** Represents the working status of the AES accelerator.

In Typical AES working mode:

- 0: IDLE
- 1: WORK
- 2: No effect
- 3: No effect

In DMA-AES working mode:

- 0: IDLE
- 1: WORK
- 2: DONE
- 3: No effect

(RO)

## Register 22.13. AES\_CONTINUE\_OP\_REG (0x00A8)

|            |   |              |       |
|------------|---|--------------|-------|
| (reserved) |   | AES_CONTINUE |       |
| 31         | 1 | 0            |       |
| 0x00000000 |   | x            | Reset |

**AES\_CONTINUE\_OP** Configures whether to continue AES operation.

- 0: No effect
  - 1: Continue
- (WO)

**Register 22.14. AES\_DMA\_EXIT\_REG (0x00B8)**

|            |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |              |       |
|------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--------------|-------|
| (reserved) |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | AES_DMA_EXIT |       |
| 31         |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 1            | 0     |
| 0x00000000 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | x            | Reset |

**AES\_DMA\_EXIT** Configures whether to exit AES operation.

0: No effect

1: Exit

Only valid for DMA-AES operation. (WO)

**Register 22.15. AES\_INT\_CLR\_REG (0x00AC)**

|            |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |             |       |
|------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|-------------|-------|
| (reserved) |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | AES_INT_CLR |       |
| 31         |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 1           | 0     |
| 0x00000000 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | x           | Reset |

**AES\_INT\_CLR** Configures whether to clear AES interrupt.

0: No effect

1: Clear

(WT)

**Register 22.16. AES\_INT\_ENA\_REG (0x00B0)**

|            |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |             |       |
|------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|-------------|-------|
| (reserved) |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | AES_INT_ENA |       |
| 31         |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 1           | 0     |
| 0x00000000 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0           | Reset |

**AES\_INT\_ENA** Configures whether to enable AES interrupt.

0: Disable

1: Enable

(R/W)

## Chapter 23

### ECC Accelerator (ECC)

#### 23.1 Introduction

Elliptic Curve Cryptography (ECC) is an approach to public-key cryptography based on the algebraic structure of elliptic curves. ECC uses smaller keys compared to RSA cryptography while providing equivalent security.

ESP32-P4's ECC accelerator can complete various calculations based on different elliptic curves, thus accelerating the ECC algorithm and ECC-derived algorithms (such as ECDSA).

#### 23.2 Features

ESP32-P4's ECC accelerator has the following features:

- 2 different elliptic curves, namely P-192 and P-256 defined in [FIPS 186-3](#)
- 11 working modes
- Interrupt upon completion of calculation

#### 23.3 ECC Basics

To better illustrate the functionality of the ECC accelerator, the basic knowledge and terminology used in this chapter are introduced in this section.

##### 23.3.1 Elliptic Curve and Points on the Curves

The ECC algorithm is based on elliptic curves over prime fields, which can be represented as:

$$y^2 = x^3 + ax + b \bmod p$$

where,

- $p$  is a prime number,
- $a$  and  $b$  are two non-negative integers smaller than  $p$ ,
- and  $(x, y)$  is a point on the curve satisfying the representation.

##### 23.3.2 Affine Coordinates and Jacobian Coordinates

An elliptic curve can be represented as below:

- In affine coordinates:

$$y^2 = x^3 + ax + b \bmod p$$

- In Jacobian coordinates:

$$Y^2 = X^3 + aXZ^4 + bZ^6 \bmod p$$

To convert affine coordinates  $(x, y)$  to/from Jacobian coordinates  $(X, Y, Z)$ :

- From Jacobian to Affine coordinates:

$$x = X/Z^2 \bmod p$$

$$y = Y/Z^3 \bmod p$$

- From Affine to Jacobian coordinates:

$$X = x$$

$$Y = y$$

$$Z = 1$$

### 23.3.3 Memory Blocks

ECC's memory blocks store the input and output data of the ECC operation.

Table 23.3-1. ECC Accelerator Memory Blocks

| Memory Block    | Size (byte) | Starting Address <sup>*</sup> | Ending Address <sup>*</sup> | Access |
|-----------------|-------------|-------------------------------|-----------------------------|--------|
| ECC_MULT_Mem_k  | 32          | 0x100                         | 0x11F                       | R/W    |
| ECC_MULT_Mem_Px | 32          | 0x120                         | 0x13F                       | R/W    |
| ECC_MULT_Mem_Py | 32          | 0x140                         | 0x15F                       | R/W    |
| ECC_MULT_Mem_Qx | 32          | 0x160                         | 0x17F                       | R/W    |
| ECC_MULT_Mem_Qy | 32          | 0x180                         | 0x19F                       | R/W    |
| ECC_MULT_Mem_Qz | 32          | 0x1A0                         | 0x1BF                       | R/W    |

<sup>\*</sup> Address offset related to the ECC accelerator base address is provided in Table 6.3-2 in Chapter 6 *System and Memory*.

### 23.3.4 Data and Data Block

ESP32-P4's ECC operates on 256-bit data. The data ( $D[255 : 0]$ ) can be divided into eight 32-bit data blocks  $D[n][31 : 0]$  ( $n = 0, 1, \dots, 7$ ). Data blocks with smaller indexes correspond to lower binary bits. To be specific:

$$D[255 : 0] = D[7][31 : 0], D[6][31 : 0], D[5][31 : 0], D[4][31 : 0], D[3][31 : 0], D[2][31 : 0], D[1][31 : 0], D[0][31 : 0]$$

### 23.3.5 Writing Data

Write data means writing data to an ECC memory block and using this data as the input to the ECC algorithm. To be specific, write data to an ECC memory block means writing  $D[n][31 : 0]$  ( $n = 0, 1, \dots, 7$ ) to the "starting address of this ECC memory block +  $4 \times n$ " successively:

- write  $D[0]$  to "starting address"

- write  $D[1]$  to “starting address + 4”
- ...
- write  $D[7]$  to “starting address + 28”

**Note:**

When the key size of 192 bits is used, append 0 before 192 bits of data to ensure 256-bit data is written.

### 23.3.6 Reading Data

Read data means reading data from the starting address of an ECC memory block and using this data as the output from the ECC algorithm. To be specific, read data from an ECC memory block means reading  $D[n][31:0](n = 0, 1, \dots, 7)$  from the “starting address of this ECC memory block +  $4 \times n$ ” successively:

- read  $D[0]$  from “starting address”
- read  $D[1]$  from “starting address + 4”
- ...
- read  $D[7]$  from “starting address + 28”

**Note:**

When the key size of 192 bits is used, only read the low 192 bits (6 blocks) of data.

### 23.3.7 Standard Calculation and Jacobian Calculation

ESP32-P4's ECC performs Affine Point Calculation (including Affine Point Verification, Affine Point Add, and Affine Point Multiplication) using the affine coordinates and Jacobian Calculation (including Jacobian Point Verification, Jacobian Point Add, and Jacobian Point Multiplication) using the Jacobian coordinates.

## 23.4 Function Description

### 23.4.1 Key Size

ESP32-P4's ECC supports acceleration based on two key sizes, each corresponding to an elliptic curve. By configuring the `ECC_MULT_KEY_LENGTH` field, users can select the desired key size. For details, see Table 23.4-1 below.

Table 23.4-1. ECC Accelerator Key Size Selection

| <code>ECC_MULT_KEY_LENGTH</code> | Elliptic Curves <sup>*</sup> |
|----------------------------------|------------------------------|
| 0                                | FIPS P-192                   |
| 1                                | FIPS P-256                   |

<sup>\*</sup> See definition of FIPS P-192 and P-256 in [FIPS 186-3](#).

## 23.4.2 Working Modes

ESP32-P4's ECC accelerator supports 11 working modes based on two elliptic curves described in the above section. By configuring the [ECC\\_MULT\\_WORK\\_MODE](#) field, users can select the desired working mode. For details, see Table 23.4-2.

Table 23.4-2. Working Modes of ECC Accelerator

| <a href="#">ECC_MULT_WORK_MODE</a> | Working Modes                             |
|------------------------------------|---|
| 0                                  | Affine Point Multi                        |
| 1                                  | <b>Reserved</b>                           |
| 2                                  | Affine Point Verif                        |
| 3                                  | Affine Point Verif + Multi                |
| 4                                  | Jacobian Point Multi                      |
| 5                                  | Point Add                                 |
| 6                                  | Jacobian Point Verif                      |
| 7                                  | Affine Point Verif + Jacobian Point Multi |
| 8                                  | Mod Add                                   |
| 9                                  | Mod Sub                                   |
| 10                                 | Mod Multi                                 |
| 11                                 | Mod Div                                   |

**Note:**

Note that the calculation of Jacobian Point Multi mode is about 10% faster than that of the Affine Point Multi mode.

Detailed descriptions about different working modes are provided in the following sections.

### 23.4.2.1 Affine Point Multiplication (Affine Point Multi)

Affine Point Multiplication can be represented as:

$$Q = (Q_x, Q_y) = (J_x, J_y, J_z) = k \cdot (P_x, P_y)$$

where,

- $(Q_x, Q_y)$  is the affine expression of point Q.
- $(J_x, J_y, J_z)$  is the Jacobian expression of point Q.
- Input:  $P_x$ ,  $P_y$ , and  $k$  are stored in [ECC\\_MULT\\_Mem\\_Px](#), [ECC\\_MULT\\_Mem\\_Py](#), and [ECC\\_MULT\\_Mem\\_k](#) respectively.
- Output:  $Q_x$  and  $Q_y$  are stored in [ECC\\_MULT\\_Mem\\_Px](#) and [ECC\\_MULT\\_Mem\\_Py](#) respectively.

### 23.4.2.2 Affine Point Verification (Affine Point Verif)

Affine Point Verification can be used to verify if a point  $(P_x, P_y)$  is on a selected elliptic curve.

- Input:  $P_x$  and  $P_y$  are stored in [ECC\\_MULT\\_Mem\\_Px](#) and [ECC\\_MULT\\_Mem\\_Py](#) respectively.
- Output: The verification result is stored in the [ECC\\_MULT\\_VERIFICATION\\_RESULT](#) bit.

### 23.4.2.3 Affine Point Verification + Affine Point Multiplication (Affine Point Verif + Multi)

In this mode, ECC first verifies if point  $(P_x, P_y)$  is on the selected elliptic curve. If so, the following multiplication is performed:

$$Q = (Q_x, Q_y) = (J_x, J_y, J_z) = k \cdot (P_x, P_y)$$

where,

- $(Q_x, Q_y)$  is the affine expression of point Q.
- $(J_x, J_y, J_z)$  is the Jacobian expression of point Q.
- Input:  $P_x$ ,  $P_y$ , and  $k$  are stored in [ECC\\_MULT\\_Mem\\_Px](#), [ECC\\_MULT\\_Mem\\_Py](#), and [ECC\\_MULT\\_Mem\\_k](#) respectively.
- Output:
  - The verification result is stored in the [ECC\\_MULT\\_VERIFICATION\\_RESULT](#) bit.
  - $Q_x$  and  $Q_y$  are stored in [ECC\\_MULT\\_Mem\\_Px](#) and [ECC\\_MULT\\_Mem\\_Py](#) respectively.
  - $J_x$ ,  $J_y$ , and  $J_z$  are stored in [ECC\\_MULT\\_Mem\\_Qx](#), [ECC\\_MULT\\_Mem\\_Qy](#), and [ECC\\_MULT\\_Mem\\_Qz](#).

### 23.4.2.4 Jacobian Point Multiplication (Jacobian Point Multi)

Jacobian Point Multiplication can be represented as:

$$Q = (Q_x, Q_y, Q_z) = k \cdot (P_x, P_y, 1)$$

where,

- $(Q_x, Q_y, Q_z)$  is the Jacobian expression of point Q.
- 1 in the point's Jacobian coordinates is automatically completed by hardware.
- Input:  $P_x$ ,  $P_y$ , and  $k$  are stored in [ECC\\_MULT\\_Mem\\_Px](#), [ECC\\_MULT\\_Mem\\_Py](#), and [ECC\\_MULT\\_Mem\\_k](#) respectively.
- Output:  $Q_x$ ,  $Q_y$ , and  $Q_z$  are stored in [ECC\\_MULT\\_Mem\\_Qx](#), [ECC\\_MULT\\_Mem\\_Qy](#), and [ECC\\_MULT\\_Mem\\_Qz](#) respectively.

### 23.4.2.5 Point Addition (Point Add)

Point Addition can be represented as:

$$R = (R_x, R_y) = (J_x, J_y, J_z) = (P_x, P_y, 1) + (Q_x, Q_y, Q_z)$$

where,

- $(R_x, R_y)$  is the affine expression of point R.
- $(J_x, J_y, J_z)$  is the Jacobian expression of point R.
- 1 in the point's Jacobian coordinates is automatically completed by hardware.
- Input:
  - $P_x$  and  $P_y$  are stored in [ECC\\_MULT\\_Mem\\_Px](#) and [ECC\\_MULT\\_Mem\\_Py](#).
  - $Q_x$ ,  $Q_y$ , and  $Q_z$  are stored in [ECC\\_MULT\\_Mem\\_Qx](#), [ECC\\_MULT\\_Mem\\_Qy](#), and [ECC\\_MULT\\_Mem\\_Qz](#).

- Output:
  - $R_x$  and  $R_y$  are stored in [ECC\\_MULT\\_Mem\\_Px](#) and [ECC\\_MULT\\_Mem\\_Py](#).
  - $J_x$ ,  $J_y$  and  $J_z$  are stored in [ECC\\_MULT\\_Mem\\_Qx](#), [ECC\\_MULT\\_Mem\\_Qy](#), and [ECC\\_MULT\\_Mem\\_Qz](#).

#### 23.4.2.6 Jacobian Point Verification (Jacobian Point Verif)

Jacobian Point Verification can be used to verify if point  $(Q_x, Q_y, Q_z)$  is on a selected elliptic curve.

- $(Q_x, Q_y, Q_z)$  is the Jacobian expression of point Q.
- Input:  $Q_x$ ,  $Q_y$ , and  $Q_z$  are stored in [ECC\\_MULT\\_Mem\\_Qx](#), [ECC\\_MULT\\_Mem\\_Qy](#), and [ECC\\_MULT\\_Mem\\_Qz](#) respectively.
- Output: The verification result is stored in the [ECC\\_MULT\\_VERIFICATION\\_RESULT](#) bit.

#### 23.4.2.7 Affine Point Verification + Jacobian Point Multiplication (Affine Point Verif + Jacobian Point Multi)

In this mode, ECC first verifies if point  $(P_x, P_y)$  is on the selected elliptic curve. If so, the following multiplication is performed:

$$Q = (Q_x, Q_y, Q_z) = k \cdot (P_x, P_y, 1)$$

where,

- $(Q_x, Q_y, Q_z)$  is the Jacobian expression of point Q.
- 1 in the point's Jacobian coordinates is automatically completed by hardware.
- Input:  $P_x$ ,  $P_y$ , and  $k$  are stored in [ECC\\_MULT\\_Mem\\_Px](#), [ECC\\_MULT\\_Mem\\_Py](#), and [ECC\\_MULT\\_Mem\\_k](#).
- Output:
  - The verification result is stored in the [ECC\\_MULT\\_VERIFICATION\\_RESULT](#) bit.
  - $Q_x$ ,  $Q_y$ , and  $Q_z$  are stored in [ECC\\_MULT\\_Mem\\_Qx](#), [ECC\\_MULT\\_Mem\\_Qy](#), and [ECC\\_MULT\\_Mem\\_Qz](#).

#### 23.4.2.8 Mod Addition (Mod Add)

Mod Addition can be represented as:

$$R = A + B \bmod N$$

where,

- Input:
  - A and B are stored in [ECC\\_MULT\\_Mem\\_Px](#) and [ECC\\_MULT\\_Mem\\_Py](#).
  - The value of N is related to the register fields below:
    - \* [ECC\\_MULT\\_KEY\\_LENGTH](#) to select the related curve.
    - \* [ECC\\_MULT\\_MOD\\_BASE](#) to choose using mod base or order of the base point.
- Output: R is stored in [ECC\\_MULT\\_Mem\\_Px](#).

### 23.4.2.9 Mod Subtraction (Mod Sub)

Mod Subtraction can be represented as:

$$R = A - B \bmod N$$

where,

- Input:
  - A and B are stored in [ECC\\_MULT\\_Mem\\_Px](#) and [ECC\\_MULT\\_Mem\\_Py](#).
  - The value of N is related to the register fields below:
    - \* [ECC\\_MULT\\_KEY\\_LENGTH](#) to select the related curve.
    - \* [ECC\\_MULT\\_MOD\\_BASE](#) to choose using mod base or order of the base point.
- Output: R is stored in [ECC\\_MULT\\_Mem\\_Px](#).

### 23.4.2.10 Mod Multiplication (Mod Multi)

Mod Multiplication can be represented as:

$$R = A \cdot B \bmod N$$

where,

- Input:
  - A and B are stored in [ECC\\_MULT\\_Mem\\_Px](#) and [ECC\\_MULT\\_Mem\\_Py](#).
  - The value of N is related to the register fields below:
    - \* [ECC\\_MULT\\_KEY\\_LENGTH](#) to select the related curve.
    - \* [ECC\\_MULT\\_MOD\\_BASE](#) to choose using mod base or order of the base point.
- Output: R is stored in [ECC\\_MULT\\_Mem\\_Py](#).

### 23.4.2.11 Mod Division (Mod Div)

Mod Division can be represented as:

$$R = A \cdot B^{-1} \bmod N$$

where,

- Input:
  - A and B are stored in [ECC\\_MULT\\_Mem\\_Px](#) and [ECC\\_MULT\\_Mem\\_Py](#).
  - The value of N is related to the register fields below:
    - \* [ECC\\_MULT\\_KEY\\_LENGTH](#) to select the related curve.
    - \* [ECC\\_MULT\\_MOD\\_BASE](#) to choose using mod base or order of the base point.
- Output: R is stored in [ECC\\_MULT\\_Mem\\_Py](#).

## 23.5 Clock and Reset

ESP32-P4's ECC only has one clock module (CRYPTO\_ECC\_CLK) and one reset module (CRYPTO\_ECC\_RST).

ECC's clock and reset is handled by the the Power/Clock/Reset (PCR) module (see Chapter 9 [Reset and Clock](#) for more information). Users should enable the ECC clock by setting [HP\\_SYS\\_CLKRST\\_CRYPT0\\_ECC\\_CLK\\_EN](#) and release the ECC reset by clearing [HP\\_SYS\\_CLKRST\\_RST\\_EN\\_ECC](#) before starting the ECC accelerator. Besides, due to resource reuse between cryptography accelerator modules, users also need to additionally clear the [HP\\_SYS\\_CLKRST\\_RST\\_EN\\_ECDSA](#) bit.

## 23.6 Interrupts

ESP32-P4's ECC accelerator can generate the ECC\_INTR interrupt signal that will be sent to the [Interrupt Matrix](#).

ECC\_INTR has only one interrupt source to generate the ECC\_INTR interrupt signal, i.e., ECC\_MULT\_CALC\_DONE\_INT, which is triggered on the completion of an ECC calculation.

Each interrupt source can be configured by a common set of registers that are described in Section [Interrupt Configuration Registers](#). The ECC\_MULT\_CALC\_DONE\_INT interrupt source is configured by the following registers (refer to Section [23.8 Register Summary](#) for more information):

- [ECC\\_MULT\\_CALC\\_DONE\\_INT\\_RAW](#): Stores the raw interrupt status of ECC\_MULT\_CALC\_DONE\_INT.
- [ECC\\_MULT\\_CALC\\_DONE\\_INT\\_ST](#): Indicates the status of the ECC\_MULT\_CALC\_DONE\_INT interrupt. This bit is generated by enabling or disabling the [ECC\\_MULT\\_CALC\\_DONE\\_INT\\_RAW](#) bit via [ECC\\_MULT\\_CALC\\_DONE\\_INT\\_ENA](#).
- [ECC\\_MULT\\_CALC\\_DONE\\_INT\\_ENA](#): Enables or disables the ECC\_MULT\_CALC\_DONE\_INT interrupt.
- [ECC\\_MULT\\_CALC\\_DONE\\_INT\\_CLR](#): Set this bit to clear the ECC\_MULT\_CALC\_DONE\_INT interrupt status. By setting this bit to 1, the [ECC\\_MULT\\_CALC\\_DONE\\_INT\\_RAW](#) and [ECC\\_MULT\\_CALC\\_DONE\\_INT\\_ST](#) bits will be cleared.

**Note:**

For definitions of *interrupt*, *interrupt signal*, *interrupt source*, and their correlations, please refer to Chapter 11 [Interrupt Matrix](#) > Section 11.2 [Interrupt Terminology in ESP32-P4](#).

## 23.7 Programming Procedures

The programming procedure for configuring ECC is described below:

1. Configure the ECC clock and reset. Refer to Section [23.5](#) for detailed information.
2. Select the key size and working mode as described in Section [23.4](#).
3. Enable the [ECC\\_MULT\\_CALC\\_DONE\\_INT](#) interrupt as described in Section [23.6](#).
4. Set the [ECC\\_MULT\\_START](#) field to start ECC calculation.

5. Wait for the [ECC\\_MULT\\_CALC\\_DONE\\_INT](#) interrupt, which indicates the completion of the ECC calculation.
6. Check the result as described in Section [23.4](#).

## 23.8 Register Summary

The addresses in this section are relative to ECC Accelerator base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name                                 | Description                          | Address | Access   |
|--------------------------------------|--------------------------------------|---------|----------|
| <b>Interrupt Registers</b>           |                                      |         |          |
| <a href="#">ECC_MULT_INT_RAW_REG</a> | ECC raw interrupt status register    | 0x000C  | R/SS/WTC |

**ECC\_MULT\_START** Configures whether to start the calculation of the ECC accelerator. This bit will be self-cleared when the calculation is done.

0: No effect

1: Start the calculation of the ECC accelerator

(R/W/SC)

**ECC\_MULT\_RESET** Configures whether to reset the ECC accelerator.

0: No effect

1: Reset

(WT)

**ECC\_MULT\_KEY\_LENGTH** Configures the key length of the ECC accelerator.

0: P-192

1: P-256

(R/W)

**ECC\_MULT\_MOD\_BASE** Configures whether to choose using the mod base or order of base point in the mod operation. Only valid in working modes 8-11.

0: n (order of base point)

1: p (mod base of curve)

(R/W)

**ECC\_MULT\_WORK\_MODE** Configures the working mode of the ECC accelerator.

0: Affine Point Multi mode

1: Reserved

2: Affine Point Verif mode

3: Affine Point Verif + Multi mode

4: Jacobian Point Multi mode

5: Point Add mode

6: Jacobian Point Verif mode

7: Affine Point Verif + Jacobian Point Multi mode

8: Mod Add mode

9: Mod Sub mode

10: Mod Multi mode

11: Mod Div mode

(R/W)

**ECC\_MULT\_DATE** Version control register. (R/W)

## Chapter 24

### HMAC Accelerator (HMAC)

The Hash-based Message Authentication Code (HMAC) module computes Message Authentication Codes (MACs) using hash algorithm SHA-256 and keys as described in RFC 2104. The 256-bit HMAC key is stored in an eFuse key block and can be set as read-protected, i.e., the key is not accessible from outside the HMAC accelerator.

#### 24.1 Main Features

- Standard HMAC-SHA-256 algorithm
- HMAC-SHA-256 calculation based on key in eFuse,
  - whose result cannot be accessed by software in downstream mode for high security
  - whose result can be accessed by software in upstream mode
- Generates required keys for the Digital Signature Algorithm (DSA) peripheral in downstream mode
- Re-enables soft-disabled JTAG in downstream mode

#### 24.2 Functional Description

The HMAC module operates in two modes: upstream mode and downstream mode. In upstream mode, users provide the HMAC message and read back the calculation result. In downstream mode, the HMAC module provides input to two possible other internal hardware modules: On the one hand, an HMAC can be used to enable JTAG after JTAG has been temporarily disabled before. On the other hand, an HMAC can be used as decryption key for Digital Signature parameters stored in flash memory for the DSA peripheral. Furthermore, the calculations happen internally and automatically in downstream mode, so that confidentiality of any key and derived key material is ensured, given correct configuration.

**Note:**

After the reset signal being released, the HMAC module will check whether the DSA key exists in the eFuse. If the key exists, the HMAC module will enter downstream digital signature algorithm mode and finish the DSA key calculation automatically. This process is automatically completed by hardware and does not require software participation. When the downstream operation after reset is completed, the HMAC will automatically return to the idle state.

##### 24.2.1 Upstream Mode

To calculate the HMAC value in upstream mode, users should perform the following steps:

1. Initialize the HMAC module and enter upstream mode.

2. Write the correctly padded message to the HMAC, one block at a time.
3. Read back the result from HMAC.

For details of this process, please see Section [24.2.5](#).

**Note:**

Common use cases for the upstream mode are challenge-response protocols supporting HMAC-SHA-256. Assume the two entities in the challenge-response protocol are A and B respectively, and the data message they expect to exchange is M. The general authentication process of this protocol is as follows:

- A calculates a unique random number M.
- A sends M to B.
- B calculates the HMAC (through M and KEY) and sends the result to A.
- A calculates the HMAC (through M and KEY) internally.
- A compares the two results. If the results are the same, then the identity of B is authenticated.

## 24.2.2 Downstream Mode - JTAG Enable Feature

JTAG debugging can be disabled by eFuse in a way which allows later re-enabling using the HMAC module. (For more details, please see Chapter [7 eFuse Controller](#).) The HMAC module will expect the user to supply the HMAC result for one of the eFuse keys. The HMAC module will check whether the supplied HMAC matches the one calculated from the chosen key. If both HMACs are the same, JTAG will be enabled until the user calls the HMAC module to clear the results and consequently disable JTAG again.

To re-enable JTAG, users should perform the following steps:

1. Enable the HMAC module by initializing clock and reset signals of HMAC, and enter downstream JTAG enable mode by configuring [HMAC\\_SET\\_PARA\\_PURPOSE\\_REG](#). Then, wait for the calculation to complete. Please see Section [24.2.5](#) for more details.
2. Write 1 to the [HMAC\\_SOFT\\_JTAG\\_CTRL\\_REG](#) register to enter JTAG re-enable mode.
3. Write the 256-bit HMAC value to register [HMAC\\_WR\\_JTAG\\_REG](#). This value is obtained by performing a local HMAC calculation from the 32-byte 0x00 using SHA-256 and the key that has been written to the eFuse. It needs to be written 8 times and 32-bit each time in big-endian word order.
4. If the HMAC result calculated from the key in the eFuse matches the value that users wrote in step 3, then JTAG is re-enabled. Otherwise, JTAG remains disabled.
5. After writing 1 to [HMAC\\_SET\\_INVALIDATE\\_JTAG\\_REG](#) or resetting the chip, JTAG will be disabled. If users want to re-enable JTAG again, they need to repeat the above steps again.

## 24.2.3 Downstream Mode - Digital Signature Algorithm and Key Derivation Feature

The Digital Signature Algorithm (DSA) module encrypts its parameters using the AES-CBC algorithm. The HMAC module is used as a Key Derivation Function (KDF) to derive the AES key to decrypt these parameters (parameter decryption key).

Before starting the DSA module, users need to obtain the parameter decryption key for the DSA module through HMAC calculation. For more information, please see Chapter [27 Digital Signature Algorithm \(DSA\)](#). After the chip is powered on, the HMAC module will check whether the key required to calculate the parameter decryption key has been burned in the eFuse block. If the key has been burned, HMAC module will automatically enter the downstream digital signature algorithm mode and complete the HMAC calculation based on the chosen key.

### 24.2.4 HMAC eFuse Configuration

Each HMAC key burned into an eFuse block has a key purpose, specifying for which functionality the key can be used. The HMAC module will not accept a key with a non-matching purpose for any functionality. The HMAC module provides three different functionalities: re-enabling JTAG, DSA KDF in downstream mode, and pure HMAC calculation in upstream mode. For each functionality, there exists a corresponding key purpose, listed in Table [24.2-1](#). Additionally, another purpose specifies a key which may be used for re-enabling JTAG as well as for serving as DSA KDF.

Before enabling HMAC to do calculations, user should make sure the key to be used has been burned in eFuse by reading the registers EFUSE\_KEY\_PURPOSE\_x (We have a total of 6 keys in eFuse, so the value of x is 0 ~ 5. Among which, [EFUSE\\_KEY\\_PURPOSE\\_0 ~ EFUSE\\_KEY\\_PURPOSE\\_1](#) belong to the register [EFUSE\\_RD\\_REPEAT\\_DATA1\\_REG](#), and [EFUSE\\_KEY\\_PURPOSE\\_2 ~ EFUSE\\_KEY\\_PURPOSE\\_5](#) belong to the register [EFUSE\\_RD\\_REPEAT\\_DATA2\\_REG](#)) from [7 eFuse Controller](#). Take upstream mode as an example, if there is no EFUSE\_KEY\_PURPOSE\_HMAC\_UP in EFUSE\_KEY\_PURPOSE\_0 ~ 5, it means there is no key in eFuse that can be used for the HMAC upstream mode. Users can burn a key to eFuse as follows:

1. Prepare a secret 256-bit HMAC key and burn the key to an empty eFuse block  $y$ . As there are 6 blocks for storing a key in eFuse and the numbers of those blocks range from 4 to 9, the value of  $y$  is 4 ~ 9. Hence, when talking about key0, it means eFuse block4. Then, program the purpose to EFUSE\_KEY\_PURPOSE\_ $(y - 4)$ . Take upstream mode as an example: after programming the key, the user should program EFUSE\_KEY\_PURPOSE\_HMAC\_UP (corresponding value is 8) to EFUSE\_KEY\_PURPOSE\_ $(y - 4)$ . Please see Chapter [7 eFuse Controller](#) on how to program eFuse keys.
2. If needed, configure this eFuse key block to be read protected, so that users cannot read its value. A copy of this key should be kept by any party who needs to verify this device.

Please note that the key whose purpose is EFUSE\_KEY\_PURPOSE\_HMAC\_DOWN\_ALL can be used for both re-enabling JTAG or DSA.

**Table 24.2-1. HMAC Purposes and Configuration Value**

| Purpose                         | Mode       | Value | Description                                   |
|---------------------------------|------------|-------|---|
| JTAG Re-enable                  | Downstream | 6     | EFUSE_KEY_PURPOSE_HMAC_DOWN_JTAG              |
| DSA KDF                         | Downstream | 7     | EFUSE_KEY_PURPOSE_HMAC_DOWN_DIGITAL_SIGNATURE |
| HMAC Calculation                | Upstream   | 8     | EFUSE_KEY_PURPOSE_HMAC_UP                     |
| Both JTAG Re-enable and DSA KDF | Downstream | 5     | EFUSE_KEY_PURPOSE_HMAC_DOWN_ALL               |

#### Select eFuse Key Blocks and HMAC Purposes

The eFuse controller provides six key blocks, i.e., KEY0 ~ 5. To select a particular KEY $n$  for an HMAC calculation, write the key number  $n$  to register [HMAC\\_SET\\_PARA\\_KEY\\_REG](#).

Write a correct purpose to register [HMAC\\_SET\\_PARA\\_PURPOSE\\_REG](#) (see Section 24.2.5). Note that the purpose of the key has also been programmed to eFuse memory. Only when the configured HMAC purpose matches the defined purpose of KEY $n$ , the HMAC module will execute the configured calculation. Otherwise, it will return a matching error and stop the current calculation.

For example, suppose a user selects KEY3 for HMAC calculation, and the value programmed to [EFUSE\\_KEY\\_PURPOSE\\_3](#) is 6 (EFUSE\_KEY\_PURPOSE\_HMAC\_DOWN\_JTAG). Based on Table 24.2-1, KEY3 can be used to re-enable JTAG. If the value written to register [HMAC\\_SET\\_PARA\\_PURPOSE\\_REG](#) is also 6, then the HMAC module will start the process to re-enable JTAG.

## 24.2.5 HMAC Process (Detailed)

The process for users to call HMAC in ESP32-P4 is as follows:

### 24.2.5.1 Enable HMAC Module

1. Set the peripheral clock bits for HMAC and SHA peripherals in register [HP\\_SYS\\_CLKRST\\_REG\\_CRYPTO\\_HMAC\\_CLK\\_EN](#), and clear the corresponding peripheral reset bits in register [HP\\_SYS\\_CLKRST\\_REG\\_RST\\_EN\\_HMAC](#). For information on those registers, please see Chapter 9 [Reset and Clock](#).
2. Write 1 to register [HMAC\\_SET\\_START\\_REG](#).

### 24.2.5.2 Configure HMAC Keys and Key Purposes

1. Write the key purpose  $m$  to register [HMAC\\_SET\\_PARA\\_PURPOSE\\_REG](#). The possible key purpose values are shown in Table 24.2-1. For more information, please refer to Section 24.2.4.
2. Select KEY $n$  in eFuse memory as the key by writing  $n$  (ranges from 0 to 5) to register [HMAC\\_SET\\_PARA\\_KEY\\_REG](#). For more information, please refer to Section 24.2.4.
3. Write 1 to register [HMAC\\_SET\\_PARA\\_FINISH\\_REG](#) to complete the configuration.
4. Read register [HMAC\\_QUERY\\_ERROR\\_REG](#). If its value is 1, it means the purpose of the selected block does not match the configured key purpose and the calculation will not proceed. If its value is 0, it means the purpose of the selected block matches the configured key purpose, and then the calculation can proceed.
5. When the value of [HMAC\\_SET\\_PARA\\_PURPOSE\\_REG](#) is not 8, it means the HMAC module is in downstream mode, proceed with 24.2.5.3. When the value is 8, it means the HMAC module is in upstream mode, proceed with 24.2.5.4.

### 24.2.5.3 Downstream Mode Process

1. Poll Status register [HMAC\\_QUERY\\_BUSY\\_REG](#) until it reads 0.
2. To clear the result and make further usage of the dependent hardware (JTAG or DSA) impossible, write 1 to either register [HMAC\\_SET\\_INVALIDATE\\_JTAG\\_REG](#) to clear the result generated by the JTAG key; or to register [HMAC\\_SET\\_INVALIDATE\\_DS\\_REG](#) to clear the result generated by DSA key. Afterwards, the HMAC process needs to be restarted to re-enable any of the dependent peripherals.

#### 24.2.5.4 Upstream Mode Process

1. Write message in upstream mode:

- (a) Poll Status register [HMAC\\_QUERY\\_BUSY\\_REG](#) until it reads 0.
- (b) Apply SHA padding to message as described in Section 24.3.1, and get message block: Block\_*n* (*n* ≥ 0)
- (c) Perform one of the following operations according to the block number *n*:
  - If there is only one message block in total which has included all padding bits:
    - i. Write the 512-bit Block\_*n* to register [HMAC\\_WR\\_MESSAGE\\_n\\_REG](#) (*n*: 0-15). Write 1 to register [HMAC\\_SET\\_MESSAGE\\_ONE\\_REG](#), to trigger the processing of this message block.
    - ii. Poll Status register [HMAC\\_QUERY\\_BUSY\\_REG](#) until it reads 0.
    - iii. Write 1 to register [HMAC\\_ONE\\_BLOCK\\_REG](#), and finish message transmission.
  - If Block\_*n* is the last padded block:
    - i. Write the 512-bit Block\_0 to register [HMAC\\_WR\\_MESSAGE\\_n\\_REG](#) (*n*: 0-15). Write 1 to register [HMAC\\_SET\\_MESSAGE\\_ONE\\_REG](#), to trigger the processing of this message block.
    - ii. Poll Status register [HMAC\\_QUERY\\_BUSY\\_REG](#) until it reads 0.
    - iii. Message transmission finished automatically.
  - If Block\_*n* is the second last padded block:
    - i. Write the 512-bit Block\_*n* to register [HMAC\\_WR\\_MESSAGE\\_n\\_REG](#) (*n*: 0-15). Write 1 to register [HMAC\\_SET\\_MESSAGE\\_ONE\\_REG](#), to trigger the processing of this message block.
    - ii. Poll Status register [HMAC\\_QUERY\\_BUSY\\_REG](#) until it reads 0.
    - iii. Write 1 to register [HMAC\\_SET\\_MESSAGE\\_PAD\\_REG](#), and continue message transmission (jump back to step (c)).
  - If Block\_*n* is neither the last nor the second last message block:
    - i. Write the 512-bit Block\_*n* to register [HMAC\\_WR\\_MESSAGE\\_n\\_REG](#) (*n*: 0-15). Write 1 to register [HMAC\\_SET\\_MESSAGE\\_ONE\\_REG](#), to trigger the processing of this message block.
    - ii. Poll Status register [HMAC\\_QUERY\\_BUSY\\_REG](#) until it reads 0.
    - iii. Write 1 to register [HMAC\\_SET\\_MESSAGE\\_ING\\_REG](#), and continue message transmission (jump back to step (c)).

2. Read hash result in upstream mode:

- (a) Poll Status register [HMAC\\_QUERY\\_BUSY\\_REG](#) until it reads 0.
- (b) Read hash result from register [HMAC\\_RD\\_RESULT\\_n\\_REG](#) (*n*: 0-7).
- (c) Write 1 to register [HMAC\\_SET\\_RESULT\\_FINISH\\_REG](#) to finish calculation. The result will be cleared at the same time.
- (d) Upstream mode operation is completed.

**Note:**

The SHA accelerator can be called directly, or used internally by the DSA module and the HMAC module. However, they can not share the hardware resources simultaneously. Therefore, the SHA module must not be called neither by the CPU nor by the DSA module when the HMAC module is in use.

## 24.3 HMAC Algorithm Details

### 24.3.1 Padding Bits

The HMAC module uses SHA-256 as hash algorithm. If the input message is not a multiple of 512 bits, the user must apply a SHA-256 padding algorithm in software. The SHA-256 padding algorithm is the same as described in Section *Padding the Message* of [FIPS PUB 180-4](#). In downstream mode, users do not need to input any message or apply padding. The HMAC module uses a default 32-byte pattern of 0x00 for re-enabling JTAG and a 32-byte pattern of 0xff for deriving the AES key for the DSA module.

For the convenience of reading, here we will briefly describe the process of message padding. As shown in Figure 24.3-1, suppose the length of the unpadded message is  $m$  bits. Padding steps are as follows:

1. Append one bit of value "1" to the end of the unpadded message.
2. Append  $k$  bits of value "0", where  $k$  is the smallest non-negative number which satisfies  $m + 1 + k \equiv 448 \pmod{512}$ .
3. Append a 64-bit integer value as a binary block. This block consists of the length of the unpadded message as a big-endian binary integer value  $m$ .

Figure 24.3-1. HMAC SHA-256 Padding Diagram

In upstream mode, if the length of the unpadded message is a multiple of 512 bits, users can configure hardware to apply SHA padding by writing 1 to [HMAC\\_SET\\_MESSAGE\\_END\\_REG](#) or do padding work themselves by writing 1 to [HMAC\\_SET\\_MESSAGE\\_PAD\\_REG](#). If the length is not a multiple of 512 bits, SHA padding must be manually applied by the user. After the user prepared the padding data, they should complete the subsequent configuration according to the Section 24.2.5.

### 24.3.2 HMAC Algorithm Structure

The structure of the implemented algorithm in the HMAC module is shown in Figure 24.3-2. This is the standard HMAC algorithm as described in RFC 2104.

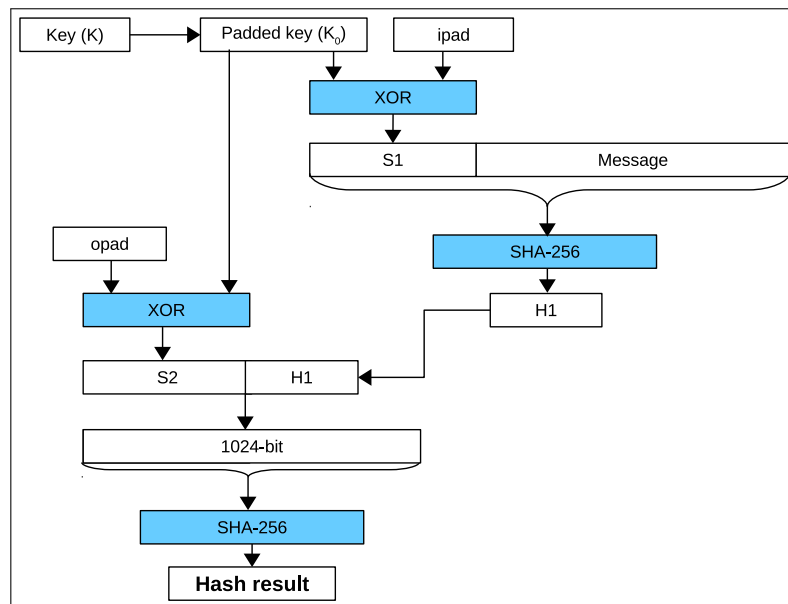

Figure 24.3-2. HMAC Structure Schematic Diagram

In Figure 24.3-2:

1. ipad is a 512-bit message block composed of 64 bytes of 0x36.
2. opad is a 512-bit message block composed of 64 bytes of 0x5c.

The HMAC module appends a 256-bit 0 sequence after the bit sequence of the 256-bit key K in order to get a 512-bit  $K_0$ . Then, the HMAC module XORs  $K_0$  with ipad to get the 512-bit S1. Afterwards, the HMAC module appends the input message (multiple of 512 bits) after the 512-bit S1, and exercises the SHA-256 algorithm to get the 256-bit H1.

The HMAC module appends the 256-bit SHA-256 hash result H1 to the 512-bit S2 value, which is calculated using the XOR operation of  $K_0$  and opad. A 768-bit sequence will be generated. Then, the HMAC module uses the SHA padding algorithm described in Section 24.3.1 to pad the 768-bit sequence to a 1024-bit sequence, and applies the SHA-256 algorithm to get the final hash result (256-bit).

## 24.4 Register Summary

The addresses in this section are relative to HMAC Accelerator base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name   | Description  | Address | Access |
|--|--|---------|--------|
| <b>Control/Status Registers</b>              |  |         |        |
| <a href="#">HMAC_SET_START_REG</a>           | HMAC start control register  | 0x0040  | WO     |

## 24.5 Registers

The addresses in this section are relative to HMAC Accelerator base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section [Programming Reserved Register Field](#).

Register 24.1. HMAC\_SET\_START\_REG (0x0040)

**HMAC\_SET\_START** Configures whether or not to enable HMAC.

- 0: Disable HMAC
- 1: Enable HMAC

(WO)

Register 24.2. HMAC\_SET\_PARA\_FINISH\_REG (0x004C)

**HMAC\_SET\_PARA\_FINISH** Configures whether to finish HMAC configuration.

- 0: No effect
- 1: Finish configuration

(WO)

**Register 24.3. HMAC\_SET\_MESSAGE\_ONE\_REG (0x0050)**

**HMAC\_SET\_TEXT\_ONE** Calls SHA to calculate one message block.

0: No effect

1: Calls SHA to calculate one message block.

(WO)

**Register 24.4. HMAC\_SET\_MESSAGE\_ING\_REG (0x0054)**

**HMAC\_SET\_TEXT\_ING** Configures whether or not there are unprocessed message blocks.

0: No unprocessed message block

1: There are still some message blocks to be processed.

(WO)

**Register 24.5. HMAC\_SET\_MESSAGE\_END\_REG (0x0058)**

**HMAC\_SET\_TEXT\_END** Configures whether to start hardware padding.

0: No effect

1: Start hardware padding

(WO)

### Register 24.6. HMAC\_SET\_RESULT\_FINISH\_REG (0x005C)

[illegible]

**HMAC\_SET\_RESULT\_END** Configures whether to exit upstream mode and clear calculation results.

0: Not exit

1: Exit upstream mode and clear calculation results.

(WO)

### Register 24.7. HMAC\_SET\_INVALIDATE\_JTAG\_REG (0x0060)

[illegible]

**HMAC\_SET\_INVALIDATE\_JTAG** Configures whether or not to clear calculation results when re-enabling JTAG in downstream mode.

0: Not clear

### 1: Clear calculation results

(WO)

Register 24.8. HMAC\_SET\_INVALIDATE\_DS\_REG (0x0064)

**HMAC\_SET\_INVALIDATE\_DS** Configures whether or not to clear calculation results of the DS module in downstream mode.

- 0: Not clear
- 1: Clear calculation results (WO)

Register 24.9. HMAC\_QUERY\_ERROR\_REG (0x0068)

**HMAC\_QUEY\_CHECK** Represents whether or not an HMAC key matches the purpose.

- 0: Match
- 1: Error (RO)

Register 24.10. HMAC\_QUERY\_BUSY\_REG (0x006C)

**HMAC\_BUSY\_STATE** Represents whether or not HMAC is in a busy state. Before configuring HMAC, please make sure HMAC is in an IDLE state.

- 0: Idle
- 1: HMAC is still working on the calculation (RO)

Register 24.11. HMAC\_SET\_PARA\_PURPOSE\_REG (0x0044)

**HMAC\_PURPOSE\_SET** Configures the HMAC purpose, refer to the Table 24.2-1. (WO)

Register 24.12. HMAC\_SET\_PARA\_KEY\_REG (0x0048)

**HMAC\_KEY\_SET** Configures HMAC key. There are six keys with index 0~5. Write the index of the selected key to this field. (WO)

Register 24.13. HMAC\_WR\_MESSAGE\_ *n* \_REG (*n*: 0-15) (0x0080+4\**n*)

**HMAC\_WDATA\_ *n*** Represents the *n*th 32-bit of message. (WO)

Register 24.14. HMAC\_RD\_RESULT\_ *n* \_REG (*n*: 0-7) (0x00C0+4\**n*)

**HMAC\_RDATA\_ *n*** Represents the *n*th 32-bit of hash result. (RO)

**Register 24.15. HMAC\_SET\_MESSAGE\_PAD\_REG (0x00F0)**

|            |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |                   |   |   |   |   |   |   |   |   |   |   | ## Chapter 25

### RSA Accelerator (RSA)

#### 25.1 Introduction

The RSA accelerator provides hardware support for high-precision computation used in various RSA asymmetric cipher algorithms, significantly improving their run time and reducing their software complexity compared with RSA algorithms implemented solely in software. The RSA accelerator also supports operands of different lengths, which provides more flexibility during the computation.

#### 25.2 Features

The following functionality is supported:

- Large-number modular exponentiation with two additional acceleration options to further increase the calculation speed
- Large-number modular multiplication
- Large-number multiplication
- Operands of different lengths
- Interrupt on completion of computation

#### 25.3 Functional Description

The RSA accelerator is activated by setting the HP\_SYS\_CLKRST\_REG\_CRYPT0\_RSA\_CLK\_EN bit in the [HP\\_SYS\\_CLKRST\\_PERI\\_CLK\\_CTRL25\\_REG](#) register and clearing the HP\_SYS\_CLKRST\_REG\_RST\_EN\_RSA bit in the [HP\\_SYS\\_CLKRST\\_HP\\_RST\\_EN2\\_REG](#) register. Additionally, users also need to clear HP\_SYS\_CLKRST\_REG\_RST\_EN\_DS and HP\_SYS\_CLKRST\_REG\_RST\_EN\_ECDSA bits to reset the [Digital Signature Algorithm \(DSA\)](#) and the [Elliptic Curve Digital Signature Algorithm \(ECDSA\)](#) accelerators.

The RSA accelerator is only available after the [RSA-related memories](#) are initialized. The content of the [RSA\\_QUERY\\_CLEAN\\_REG](#) register is 0 during initialization and will become 1 after the initialization is done. Therefore, wait until [RSA\\_QUERY\\_CLEAN\\_REG](#) becomes 1 before using the RSA accelerator.

The [RSA\\_INT\\_ENA\\_REG](#) register is used to control the interrupt triggered on completion of computation. Write 1 or 0 to this field to enable or disable the interrupt. By default, the interrupt function of the RSA accelerator is enabled.

**Notice:**

ESP32-P4's [Digital Signature Algorithm \(DSA\)](#) and [Elliptic Curve Digital Signature Algorithm \(ECDSA\)](#) modules also call

the RSA accelerator when working. Therefore, users cannot access the RSA accelerator when the [Digital Signature Algorithm \(DSA\)](#) or the [Elliptic Curve Digital Signature Algorithm \(ECDSA\)](#) module is working.

### 25.3.1 Definitions and Representations

ESP32-P4's RSA accelerator supports operands of different lengths  $N = 32 \times n$ .

To represent the numbers used as operands, let us define a base- $b$  positional notation, as follows:

$$b = 2^{32}$$

Using this notation, each number is represented by a sequence of base- $b$  digits:

$$n = \frac{N}{32}$$

$$Z = (Z_{n-1}Z_{n-2} \cdots Z_0)_b$$

$$X = (X_{n-1}X_{n-2} \cdots X_0)_b$$

$$Y = (Y_{n-1}Y_{n-2} \cdots Y_0)_b$$

$$M = (M_{n-1}M_{n-2} \cdots M_0)_b$$

$$\bar{r} = (\bar{r}_{n-1}\bar{r}_{n-2} \cdots \bar{r}_0)_b$$

Each of the values in  $Z_{n-1} \cdots Z_0$ ,  $X_{n-1} \cdots X_0$ ,  $Y_{n-1} \cdots Y_0$ ,  $M_{n-1} \cdots M_0$ ,  $\bar{r}_{n-1} \cdots \bar{r}_0$  represents one base- $b$  digit (a 32-bit word).

$Z_{n-1}$ ,  $X_{n-1}$ ,  $Y_{n-1}$ ,  $M_{n-1}$  and  $\bar{r}_{n-1}$  are the most significant bits of  $Z$ ,  $X$ ,  $Y$ ,  $M$ , while  $Z_0$ ,  $X_0$ ,  $Y_0$ ,  $M_0$  and  $\bar{r}_0$  are the least significant bits.

If we define  $R = b^n$ , the additional argument  $\bar{r}$  can be calculated as  $\bar{r} = R^2 \bmod M$ .

Also, argument  $M'$  can be calculated using the formula below:

$$M' = -M^{-1} \bmod b$$

where,  $M^{-1}$  is the [modular multiplicative inverse](#) of  $M$ , and it can be calculated with the extended binary GCD algorithm.

### 25.3.2 Large-Number Modular Exponentiation

Large-number modular exponentiation performs  $Z = X^Y \bmod M$ . The computation is based on Montgomery multiplication. Therefore, aside from the  $X$ ,  $Y$ , and  $M$  arguments, two additional ones are needed —  $\bar{r}$  and  $M'$ , which need to be calculated in advance by software.

The RSA accelerator supports operands of length  $N = 32 \times n$ , where  $n \in \{1, 2, 3, \dots, 128\}$ . The bit lengths of arguments  $Z$ ,  $X$ ,  $Y$ ,  $M$ , and  $\bar{r}$  can be arbitrary  $N$ , but all numbers in a calculation must be of the same length. The bit length of  $M'$  must be 32.

Large-number modular exponentiation on the ESP32-P4 can be implemented as follows:

1. Write 1 or 0 to the [RSA\\_INT\\_ENA](#) field to enable or disable the interrupt function.
2. Configure relevant registers:

- (a) Write  $(\frac{N}{32} - 1)$  to the [RSA\\_MODE\\_REG](#) register.

- (b) Write  $M'$  to the [RSA\\_M\\_PRIME\\_REG](#) register.
- (c) Configure registers related to the acceleration options, which are described later in Section 25.3.5.
- 3. Write  $X_i$ ,  $Y_i$ ,  $M_i$  and  $\bar{r}_i$  for  $i \in \{0, 1, \dots, n-1\}$  to memory blocks [RSA\\_X\\_MEM](#), [RSA\\_Y\\_MEM](#), [RSA\\_M\\_MEM](#) and [RSA\\_Z\\_MEM](#). The capacity of each memory block is 128 words. Each word of each memory block can store one base- $b$  digit. The memory blocks use the little endian format for storage, i.e., the least significant digit of each number is in the lowest address.  
  
Users need to write data to each memory block only according to the length of the number; data beyond this length is ignored.
- 4. Write 1 to the [RSA\\_SET\\_START\\_MODEXP](#) field of the [RSA\\_SET\\_START\\_MODEXP\\_REG](#) register to start computation.
- 5. Wait for the completion of computation, which happens when the content of [RSA\\_QUERY\\_IDLE](#) becomes 1 or the RSA interrupt occurs, if enabled.
- 6. Read the result  $Z_i$  for  $i \in \{0, 1, \dots, n-1\}$  from [RSA\\_Z\\_MEM](#).
- 7. If you have the interrupt enabled, write 1 to [RSA\\_CLEAR\\_INTERRUPT](#) to clear the interrupt.

After the computation, the [RSA\\_MODE\\_REG](#) register, memory blocks [RSA\\_Y\\_MEM](#) and [RSA\\_M\\_MEM](#), as well as the [RSA\\_M\\_PRIME\\_REG](#) remain unchanged. However,  $X_i$  in [RSA\\_X\\_MEM](#) and  $\bar{r}_i$  in [RSA\\_Z\\_MEM](#) computation are overwritten, and only these overwritten memory blocks need to be re-initialized before starting another computation.

### 25.3.3 Large-Number Modular Multiplication

Large-number modular multiplication performs  $Z = X \times Y \bmod M$ . This computation is based on Montgomery multiplication. Therefore, similar to the large-number modular exponentiation, two additional arguments are needed –  $\bar{r}$  and  $M'$ , which need to be calculated in advance by software.

The RSA accelerator supports large-number modular multiplication with operands of length  $N = 32 \times n$ , where  $n \in \{1, 2, 3, \dots, 128\}$ .

The computation can be executed as follows:

- 1. Write 1 or 0 to the [RSA\\_INT\\_ENA\\_REG](#) register to enable or disable the interrupt function.
- 2. Configure relevant configuration registers:
  - (a) Write  $(\frac{N}{32} - 1)$  to the [RSA\\_MODE\\_REG](#) register.
  - (b) Write  $M'$  to the [RSA\\_M\\_PRIME\\_REG](#) register.
- 3. Write  $X_i$ ,  $Y_i$ ,  $M_i$ , and  $\bar{r}_i$  for  $i \in \{0, 1, \dots, n-1\}$  to memory blocks [RSA\\_X\\_MEM](#), [RSA\\_Y\\_MEM](#), [RSA\\_M\\_MEM](#), and [RSA\\_Z\\_MEM](#), respectively. The capacity of each memory block is 128 words. Each word of each memory block can store one base- $b$  digit. The memory blocks use the little endian format for storage, i.e., the least significant digit of each number is in the lowest address.  
  
Users need to write data to each memory block only according to the length of the number; data beyond this length are ignored.
- 4. Write 1 to the [RSA\\_SET\\_START\\_MODMULT](#) field.

5. Wait for the completion of computation, which happens when the content of [RSA\\_QUERY\\_IDLE](#) becomes 1 or the RSA interrupt occurs, if enabled.
6. Read the result  $Z_i$  for  $i \in \{0, 1, \dots, n-1\}$  from [RSA\\_Z\\_MEM](#).
7. If you have the interrupt enabled, write 1 to [RSA\\_CLEAR\\_INTERRUPT](#) to clear the interrupt, .

After the computation, the length of operands in [RSA\\_MODE\\_REG](#), the  $X_i$  in memory [RSA\\_X\\_MEM](#), the  $Y_i$  in memory [RSA\\_Y\\_MEM](#), the  $M_i$  in memory [RSA\\_M\\_MEM](#), and the  $M'$  in memory [RSA\\_M\\_PRIME\\_REG](#) remain unchanged. However, the  $\bar{r}_i$  in memory [RSA\\_Z\\_MEM](#) has already been overwritten, and only this overwritten memory block needs to be re-initialized before starting another computation.

### 25.3.4 Large-Number Multiplication

Large-number multiplication performs  $Z = X \times Y$ . The length of result  $Z$  is twice that of operand  $X$  and operand  $Y$ . Therefore, the RSA accelerator only supports large-number multiplication with operand length  $N = 32 \times n$ , where  $n \in \{1, 2, 3, \dots, 64\}$ . The length  $\hat{N}$  of result  $Z$  is  $2 \times N$ .

The computation can be executed as follows:

1. Write 1 or 0 to the [RSA\\_INT\\_ENA\\_REG](#) register to enable or disable the interrupt function.
2. Write  $(\frac{\hat{N}}{32} - 1)$ , i.e.,  $(\frac{N}{16} - 1)$  to the [RSA\\_MODE\\_REG](#) register.
3. Write  $X_i$  and  $Y_i$  for  $i \in \{0, 1, \dots, n-1\}$  to memory blocks [RSA\\_X\\_MEM](#) and [RSA\\_Z\\_MEM](#). Each word of each memory block can store one base- $b$  digit. The memory blocks use the little endian format for storage, i.e., the least significant digit of each number is in the lowest address.  $n$  is  $\frac{N}{32}$ .

Write  $X_i$  for  $i \in \{0, 1, \dots, n-1\}$  to the address of the  $i$  words of the [RSA\\_X\\_MEM](#) memory block. Note that  $Y_i$  for  $i \in \{0, 1, \dots, n-1\}$  will not be written to the address of the  $i$  words of the [RSA\\_Z\\_MEM](#) register, but the address of the  $n + i$  words, i.e., the base address of the [RSA\\_Z\\_MEM](#) memory plus the address offset  $4 \times (n + i)$ .

Users need to write data to each memory block only according to the length of the number; data beyond this length is ignored.

4. Write 1 to the [RSA\\_SET\\_START\\_MULT](#) register.
5. Wait for the completion of computation, which happens when the content of [RSA\\_QUERY\\_IDLE](#) becomes 1 or the RSA interrupt occurs, if enabled.
6. Read the result  $Z_i$  for  $i \in \{0, 1, \dots, \hat{n}-1\}$  from the [RSA\\_Z\\_MEM](#) register.  $\hat{n}$  is  $2 \times n$ .
7. If you have the interrupt enabled, write 1 to [RSA\\_CLEAR\\_INTERRUPT](#) to clear the interrupt.

After the computation, the length of operands in [RSA\\_MODE\\_REG](#) and the  $X_i$  in memory [RSA\\_X\\_MEM](#) remain unchanged. However, the  $Y_i$  in memory [RSA\\_Z\\_MEM](#) has already been overwritten, and only this overwritten memory block needs to be re-initialized before starting another computation.

### 25.3.5 Options for Additional Acceleration

The ESP32-P4 RSA accelerator also provides [SEARCH](#) and [CONSTANT\\_TIME](#) options that can be configured to further accelerate the large-number modular exponentiation. By default, both options are configured as no additional acceleration.

Users can choose to use one or two of these options to further accelerate the computation. Note that, even when none of these two options is configured, using the hardware RSA accelerator is still much faster than implementing the RSA algorithm in software.

To be more specific, when neither of these two options are configured for additional acceleration, the time required to calculate  $Z = X^Y \bmod M$  is solely determined by the lengths of operands. When either or both of these two options are configured for additional acceleration, the time required is also correlated with the 0 and 1 bit distribution in  $Y$ .

To better illustrate how these two options work, first assume  $Y$  is represented in binaries as

$$Y = (\tilde{Y}_{N-1}\tilde{Y}_{N-2}\cdots\tilde{Y}_{t+1}\tilde{Y}_t\tilde{Y}_{t-1}\cdots\tilde{Y}_0)_2$$

where,

- $N$  is the length of  $Y$ ,
- $\tilde{Y}_t$  is 1,
- $\tilde{Y}_{N-1}, \tilde{Y}_{N-2}, \dots, \tilde{Y}_{t+1}$  are all equal to 0,
- and  $\tilde{Y}_{t-1}, \tilde{Y}_{t-2}, \dots, \tilde{Y}_0$  are either 0 or 1 but exactly  $m$  bits should be equal to 0 and  $t-m$  bits 1, i.e., the Hamming weight of  $\tilde{Y}_{t-1}\tilde{Y}_{t-2}, \dots, \tilde{Y}_0$  is  $t-m$ .

When either of these two options is configured for additional acceleration:

- SEARCH Option (Configuring [RSA\\_SEARCH\\_ENABLE](#) to 1 for additional acceleration)
  - The accelerator ignores the bit positions of  $\tilde{Y}_i$ , where  $i > \alpha$ . Search position  $\alpha$  is set by configuring the [RSA\\_SEARCH\\_POS\\_REG](#) register. Set  $\alpha$  to a number smaller than  $N-1$ , which otherwise leads to the same result as if this option is not used for additional acceleration. The best acceleration performance can be achieved by setting  $\alpha$  to  $t$ , in which case all the  $\tilde{Y}_{N-1}, \tilde{Y}_{N-2}, \dots, \tilde{Y}_{t+1}$  of 0 s are ignored during the calculation. Note that if you set  $\alpha$  to be less than  $t$ , then the result of the modular exponentiation  $Z = X^Y \bmod M$  will be incorrect.
  - Note that this option compromises the security because it ignores some bits, which essentially shortens the key length, thus should not be enabled for applications with high security requirement.
- CONSTANT\_TIME Option (Configuring [RSA\\_CONSTANT\\_TIME\\_REG](#) to 0 for additional acceleration)
  - The accelerator speeds up the calculation by simplifying the calculation concerning the 0 bits of  $Y$ . Therefore, the higher the proportion of bits 0 against bits 1, the better is the acceleration performance.
  - Note that this option also compromises the security because its time cost correlates with the 0/1 distribution of the key, which can be used in a Side Channel Attack (SCA), thus should not be enabled for applications with high security requirement.

Below is an example to demonstrate the performance of the RSA accelerator under different combinations of [SEARCH](#) and [CONSTANT\\_TIME](#) configuration. In this example:

- We perform  $Z = X^Y \bmod M$
- $N = 3072$

- $Y = 65537$
- $X$  and  $M$  are taken at random
- When the SEARCH option is enabled,  $\alpha$ , i.e., the position register [RSA\\_SEARCH\\_POS\\_REG](#), is set to 16.

Table 25.3-1 below demonstrates the time cost in clock cycles under different combinations of [SEARCH](#) and [CONSTANT\\_TIME](#) configuration when performing  $Z = X^Y \bmod M$  as described above.

**Table 25.3-1. Acceleration Performance**

| SEARCH Option   | CONSTANT_TIME Option | Time Cost (clock cycle) |
|-----------------|----------------------|-------------------------|
| No acceleration | No acceleration      | $174.7 \times 10^6$     |
| Accelerated     | No acceleration      | $1.023 \times 10^6$     |
| No acceleration | Acceleration         | $0.546 \times 10^6$     |
| Acceleration    | Acceleration         | $0.540 \times 10^6$     |

As shown in Table 25.3-1:

- The time cost is biggest when none of these two options is configured for additional acceleration.
- The time cost is smallest when both of these two options are configured for additional acceleration.
- The time cost can be dramatically reduced when either or both option(s) are configured for additional acceleration.

## 25.4 Interrupts

ESP32-P4's RSA accelerator can generate the following interrupt signal that will be sent to the [Interrupt Matrix](#).

- RSA\_INTR

There is one internal interrupt source from the RSA accelerator that can generate the above interrupt signal. The interrupt source from the RSA accelerator is listed with its trigger condition and the resulting interrupt signal in Table 25.4-1.

**Table 25.4-1. RSA's Internal Interrupt Source**

| Internal Interrupt Source | Trigger Condition                | Interrupt Signal |
|---------------------------|----------------------------------|------------------|
| RSA_CALC_DONE_INT         | Completion of an RSA calculation | RSA_INTR         |

**Note:**

For definitions of *interrupt*, *interrupt signal*, *interrupt source*, and their correlations, please refer to Chapter 11 [Interrupt Matrix](#) > Section 11.2 [Interrupt Terminology in ESP32-P4](#).

## 25.5 Memory Summary

The addresses in this section are relative to the RSA accelerator base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

Table 25.5-1. RSA Accelerator Memory Blocks

| Name                      | Description | Size (byte) | Starting Address | Ending Address | Access |
|---------------------------|-------------|-------------|------------------|----------------|--------|
| <a href="#">RSA_M_MEM</a> | Memory M    | 512         | 0x0000           | 0x01FF         | R/W    |
| <a href="#">RSA_Z_MEM</a> | Memory Z    | 512         | 0x0200           | 0x03FF         | R/W    |
| <a href="#">RSA_Y_MEM</a> | Memory Y    | 512         | 0x0400           | 0x05FF         | R/W    |
| <a href="#">RSA_X_MEM</a> | Memory X    | 512         | 0x0600           | 0x07FF         | R/W    |

## 25.6 Register Summary

The addresses in this section are relative to the RSA accelerator base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name                                      | Description                         | Address | Access |
|---|-------------------------------------|---------|--------|
| <b>Control or Configuration Registers</b> |                                     |         |        |
| <a href="#">RSA_M_PRIME_REG</a>           | Represents M'                       | 0x0800  | R/W    |
| <a href="#">RSA_MODE_REG</a>              | Configures RSA length               | 0x0804  | R/W    |
| <a href="#">RSA_SET_START_MODEXP_REG</a>  | Starts modular exponentiation       | 0x080C  | WT     |
| <a href="#">RSA_SET_START_MODMULT_REG</a> | Starts modular multiplication       | 0x0810  | WT     |
| <a href="#">RSA_SET_START_MULT_REG</a>    | Starts multiplication               | 0x0814  | WT     |
| <a href="#">RSA_QUERY_IDLE_REG</a>        | Represents the RSA status           | 0x0818  | RO     |
| <a href="#">RSA_CONSTANT_TIME_REG</a>     | Configures the constant_time option | 0x0820  | R/W    |
| <a href="#">RSA_SEARCH_ENABLE_REG</a>     | Configures the search option        | 0x0824  | R/W    |
| <a href="#">RSA_SEARCH_POS_REG</a>        | Configures the search position      | 0x0828  | R/W    |
| <b>Status Register</b>                    |                                     |         |        |
| <a href="#">RSA_QUERY_CLEAN_REG</a>       | RSA initialization status           | 0x0808  | RO     |
| <b>Interrupt Registers</b>                |                                     |         |        |
| <a href="#">RSA_INT_CLR_REG</a>           | Clears RSA interrupt                | 0x081C  | WT     |
| <a href="#">RSA_INT_ENA_REG</a>           | Enables the RSA interrupt           | 0x082C  | R/W    |
| <b>Version Control Register</b>           |                                     |         |        |
| <a href="#">RSA_DATE_REG</a>              | Version control register            | 0x0830  | R/W    |

## 25.7 Registers

The addresses in this section are relative to the RSA accelerator base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section IX .

Register 25.1. RSA\_M\_PRIME\_REG (0x0800)

**RSA\_M\_PRIME** Represents  $M'$ . (R/W)

Register 25.2. RSA\_MODE\_REG (0x0804)

**RSA\_MODE** Configures the RSA length. (R/W)

Register 25.3. RSA\_SET\_START\_MODEXP\_REG (0x080C)

**RSA\_SET\_START\_MODEXP** Configures whether or not to starts the modular exponentiation.

- 0: No effect
  - 1: Start
- (WT)

#### Register 25.4. RSA\_SET\_START\_MODMULT\_REG (0x0810)

Diagram of the RSA\_SET\_START\_MODMULT register structure:

- Bit 31: reserved
- Bits 0-30: RSA\_SET\_START\_MODMULT
- Bit 0: Reset

**RSA\_SET\_START\_MODMULT** Configures whether or not to start the modular multiplication.

0: No effect

1: Start

(WT)

### Register 25.5. RSA\_SET\_START\_MULT\_REG (0x0814)

Diagram illustrating the structure of the **RSA\_SET\_START\_MULT** register:

- The register is 32 bits wide, with bit positions 31 down to 0.
- Bit 31 is the most significant bit.
- Bits 31 down to 1 are labeled **(reserved)**.
- Bit 0 is labeled **0**.
- The register is divided into two main sections:
  - RSA\_SET\_START\_MULT** (bits 31 down to 1): This section contains the reserved bits.
  - Reset** (bit 0): This section contains the reset bit.

**RSA\_SET\_START\_MULT** Configures whether or not to start the multiplication.

0: No effect

1: Start

(WT)

### Register 25.6. RSA\_QUERY\_IDLE\_REG (0x0818)

**RSA\_QUERY\_IDLE** Represents the RSA status.

0: Busy

1: Idle

(RO)

**Register 25.7. RSA\_CONSTANT\_TIME\_REG (0x0820)**

**RSA\_CONSTANT\_TIME** Configures the constant\_time option.

0: Acceleration

1: No acceleration (default)

(R/W)

**Register 25.8. RSA\_SEARCH\_ENABLE\_REG (0x0824)**

**RSA\_SEARCH\_ENABLE** Configures the search option.

0: No acceleration (default)

1: Acceleration

This option should be used together with [RSA\\_SEARCH\\_POS\\_REG](#). (R/W)

**Register 25.9. RSA\_SEARCH\_POS\_REG (0x0828)**

**RSA\_SEARCH\_POS** Configures the starting address to start search. This field should be used together with [RSA\\_SEARCH\\_ENABLE\\_REG](#). The field is only valid when [RSA\\_SEARCH\\_ENABLE](#) is high. (R/W)

**Register 25.10. RSA\_QUERY\_CLEAN\_REG (0x0808)**

|            |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |                 |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   | ## Chapter 26

### SHA Accelerator (SHA)

#### 26.1 Introduction

ESP32-P4 integrates an SHA accelerator, which is a hardware device that speeds up the SHA algorithm significantly, compared to an SHA algorithm implemented solely in software. The SHA accelerator integrated in ESP32-P4 has two working modes, which are [Typical SHA](#) and [DMA-SHA](#).

#### 26.2 Features

The following functionality is supported:

- The following hash algorithms introduced in [FIPS PUB 180-4 Spec](#).
  - SHA-1
  - SHA-224
  - SHA-256
  - SHA-384
  - SHA-512
  - SHA-512/224
  - SHA-512/256
  - SHA-512/t
- Two working modes
  - Typical SHA
  - DMA-SHA
- Interleaved function when working in Typical SHA working mode
- Interrupt function when working in DMA-SHA working mode

#### 26.3 Working Modes

The SHA accelerator integrated in ESP32-P4 has two working modes.

- [Typical SHA Working Mode](#): all the data is written and read via CPU directly.
- [DMA-SHA Working Mode](#): all the data is read via DMA. That is, users can configure the GDMA-AXI controller to read all the data needed for hash operation, thus releasing CPU for completing other tasks.

The SHA accelerator is activated by setting the [HP\\_SYS\\_CLKRST\\_CRYPT\\_SHA\\_CLK\\_EN](#) register field and clearing the [HP\\_SYS\\_CLKRST\\_RST\\_EN\\_SHA](#) register field. Additionally, due to the hardware reuse relationship between cryptography modules, set the related reset register field of [Digital Signature Algorithm \(DSA\)](#), [HMAC Accelerator \(HMAC\)](#), and [Elliptic Curve Digital Signature Algorithm \(ECDSA\)](#) to 1 can reset the SHA module. Therefore, users also need to clear [HP\\_SYS\\_CLKRST\\_RST\\_EN\\_DS](#), [HP\\_SYS\\_CLKRST\\_RST\\_EN\\_HMAC](#), and [HP\\_SYS\\_CLKRST\\_RST\\_EN\\_ECDSA](#) fields.

Users can start the SHA accelerator with different working modes by configuring registers [SHA\\_START\\_REG](#) and [SHA\\_DMA\\_START\\_REG](#). For details, please see Table 26.3-1.

Table 26.3-1. SHA Accelerator Working Mode

| Working Mode | Configuration Method                       |
|--------------|--|
| Typical SHA  | Set <a href="#">SHA_START_REG</a> to 1     |
| DMA-SHA      | Set <a href="#">SHA_DMA_START_REG</a> to 1 |

Users can choose hash algorithms by configuring the [SHA\\_MODE\\_REG](#) register. For details, please see Table 26.3-2.

Table 26.3-2. SHA Hash Algorithm Selection

| Hash Algorithm | <a href="#">SHA_MODE_REG</a> Configuration |
|----------------|--|
| SHA-1          | 0  |
| SHA-224        | 1  |
| SHA-256        | 2  |
| SHA-384        | 3  |
| SHA-512        | 4  |
| SHA-512/224    | 5  |
| SHA-512/256    | 6  |
| SHA-512/t      | 7  |

**Notice:**

ESP32-P4's [Digital Signature Algorithm \(DSA\)](#) and [HMAC Accelerator \(HMAC\)](#) modules also call the SHA accelerator when working. Therefore, users cannot access the SHA accelerator when these modules are working.

## 26.4 Function Description

The SHA accelerator generates the message digest via two steps: [Preprocessing](#) and [Hash operation](#).

### 26.4.1 Preprocessing

Preprocessing consists of three steps: [padding the message](#), [parsing the message into message blocks](#) and [setting the initial hash value](#).

### 26.4.1.1 Padding the Message

The SHA accelerator can only process message blocks of 512 or 1024 bits, depending on the algorithm. Thus, all the messages should be padded to a multiple of 512 bits or 1024 bits before the hash operation.

Suppose that the length of the message  $M$  is  $m$  bits. Then  $M$  shall be padded as introduced below:

- **SHA-1, SHA-224 and SHA-256**

1. First, append the bit “1” to the end of the message;
2. Second, append  $k$  bits of zeros, where  $k$  is the smallest, non-negative solution to the equation  $m + 1 + k \equiv 448 \bmod 512$ ;
3. Last, append the 64-bit block of value equal to the number  $m$  expressed using a binary representation.

- **SHA-384, SHA-512, SHA-512/224, SHA-512/256 and SHA-512/t**

1. First, append the bit “1” to the end of the message;
2. Second, append  $k$  zero bits, where  $k$  is the smallest, non-negative solution to the equation  $m + 1 + k \equiv 896 \bmod 1024$ ;
3. Last, append the 128-bit block of value equal to the number  $m$  expressed using a binary representation.

For more details, please refer to [FIPS PUB 180-4 Spec](#) > Section “Padding the Message”.

### 26.4.1.2 Parsing the Message

The message and its padding must be parsed into  $N$  512-bit or 1024-bit blocks. During the task, all the message blocks should be written into the [SHA\\_M\\_n\\_REG](#).

- For **SHA-1, SHA-224 and SHA-256**:

The message and its padding are parsed into  $N$  512-bit blocks,  $M^{(1)}, M^{(2)}, \dots, M^{(N)}$ . Since the 512 bits of the input block may be expressed as sixteen 32-bit words, the first 32 bits of message block  $i$  are denoted  $M_0^{(i)}$ , the next 32 bits are  $M_1^{(i)}$ , and so on up to  $M_{15}^{(i)}$ .

During the task,  $M_0^{(i)}$  should be stored in [SHA\\_M\\_0\\_REG](#),  $M_1^{(i)}$  stored in [SHA\\_M\\_1\\_REG](#), ..., and  $M_{15}^{(i)}$  stored in [SHA\\_M\\_15\\_REG](#).

- For **SHA-384, SHA-512, SHA-512/224, SHA-512/256 and SHA-512/t**:

The message and its padding are parsed into  $N$  1024-bit blocks. Since the 1024 bits of the input block may be expressed as sixteen 64-bit words, the first 64 bits of message block  $i$  are denoted  $M_0^{(i)}$ , the next 64 bits are  $M_1^{(i)}$ , and so on up to  $M_{15}^{(i)}$ .

During the task, the most significant 32 bits and the least significant 32 bits of  $M_0^{(i)}$  should be stored in [SHA\\_M\\_0\\_REG](#) and [SHA\\_M\\_1\\_REG](#), respectively, ..., the most significant 32 bits and the least significant 32 bits of  $M_{15}^{(i)}$  should be stored in [SHA\\_M\\_30\\_REG](#) and [SHA\\_M\\_31\\_REG](#), respectively.

**Note:**

For more information about “message block”, please refer to [FIPS PUB 180-4 Spec](#) > Section “Glossary of Terms and Acronyms”.

### 26.4.1.3 Setting the Initial Hash Value

Before hash task begins for each of the secure hash algorithms, the initial Hash value  $H^{(0)}$  must be set based on different algorithms, among which the SHA-1, SHA-224, SHA-256, SHA-384, SHA-512, SHA-512/224, and SHA-512/256 algorithms use the initial Hash values (constant C) stored in the hardware.

However, SHA-512/ $t$  requires a distinct initial hash value for each operation for a given value of  $t$ . Simply put, SHA-512/ $t$  is the generic name for a  $t$ -bit hash function based on SHA-512 whose output is truncated to  $t$  bits.  $t$  is any positive integer without a leading zero such that  $t < 512$ , and  $t$  is not 384. The initial hash value for SHA-512/ $t$  for a given value of  $t$  can be calculated by performing SHA-512 from hexadecimal representation of the string "SHA-512/ $t$ ". It's not hard to observe that when determining the initial hash values for SHA-512/ $t$  algorithms with different  $t$ , the only difference lies in the value of  $t$ .

Therefore, we have specially developed the following simplified method to calculate the initial hash value for SHA-512/ $t$ :

1. **Generate  $t\_string$  and  $t\_length$ :**  $t\_string$  is a 32-bit data that stores the input message of  $t$ .  $t\_length$  is a 7-bit data that stores the length of the input message. The  $t\_string$  and  $t\_length$  are generated in methods described below, depending on the value of  $t$ :

- If  $1 \leq t \leq 9$ , then  $t\_length = 7'h48$  and  $t\_string$  is padded in the following format:

|                  |        |         |
|------------------|--------|---------|
| $8'h30 + 8'ht_0$ | $1'b1$ | $23'b0$ |
|------------------|--------|---------|

where  $t_0 = t$ .

For example, if  $t = 8$ , then  $t_0 = 8$  and  $t\_string = 32'h38800000$ .

- If  $10 \leq t \leq 99$ , then  $t\_length = 7'h50$  and  $t\_string$  is padded in the following format:

|                  |                  |        |         |
|------------------|------------------|--------|---------|
| $8'h30 + 8'ht_1$ | $8'h30 + 8'ht_0$ | $1'b1$ | $15'b0$ |
|------------------|------------------|--------|---------|

where,  $t_0 = t \% 10$  and  $t_1 = t / 10$ .

For example, if  $t = 56$ , then  $t_0 = 6$ ,  $t_1 = 5$ , and  $t\_string = 32'h35368000$ .

- If  $100 \leq t < 512$ , then  $t\_length = 7'h58$  and  $t\_string$  is padded in the following format:

|                  |                  |                  |        |        |
|------------------|------------------|------------------|--------|--------|
| $8'h30 + 8'ht_2$ | $8'h30 + 8'ht_1$ | $8'h30 + 8'ht_0$ | $1'b1$ | $7'b0$ |
|------------------|------------------|------------------|--------|--------|

where,  $t_0 = t \% 10$ ,  $t_1 = (t / 10) \% 10$ , and  $t_2 = t / 100$ .

For example, if  $t = 231$ , then  $t_0 = 1$ ,  $t_1 = 3$ ,  $t_2 = 2$ , and  $t\_string = 32'h32333180$ .

2. **Initialize relevant registers:** Initialize [SHA\\_T\\_STRING\\_REG](#) and [SHA\\_T\\_LENGTH\\_REG](#) with the generated  $t\_string$  and  $t\_length$  in the previous step.
3. **Obtain initial hash value:** Set the [SHA\\_MODE\\_REG](#) register to 7. Set the [SHA\\_START\\_REG](#) register to 1 to start the SHA accelerator. Then poll register [SHA\\_BUSY\\_REG](#) until the content of this register becomes 0, indicating the calculation of initial hash value is completed.

Please note that the initial value for SHA-512/ $t$  can be also calculated according to the Section "5.3.6 SHA-512/ $t$ " in [FIPS PUB 180-4 Spec](#), which is performing SHA-512 operation (with its initial hash value set to the result of 8-bitwise XOR operation of C and 0xa5) from the hexadecimal representation of the string "SHA-512/ $t$ ".

## 26.4.2 Hash Operation

After the preprocessing, the ESP32-P4 SHA accelerator starts to hash a message  $M$  and generates message digest of different lengths, depending on different hash algorithms. As described above, the ESP32-P4 SHA accelerator supports two working modes, which are [Typical SHA](#) and [DMA-SHA](#). The operation process for the SHA accelerator under two working modes is described in the following subsections.

### 26.4.2.1 Typical SHA Mode Process

Usually, the SHA accelerator will process all blocks of a message and produce a message digest before starting the computation of the next message digest.

However, ESP32-P4 SHA also supports optional “interleaved” message digest calculation in Typical SHA mode, which means before SHA completes all blocks of the current message, users are given a chance to insert new computation of another message digest upon the completion of each individual block of the current message.

Specifically, users can read out the message digest from registers [SHA\\_H\\_n\\_REG](#) after completing part of a message digest calculation, and use the SHA accelerator for a different calculation. After the different calculation completes, users can restore the previous message digest to registers [SHA\\_H\\_n\\_REG](#), and resume the accelerator with the previously paused calculation.

#### Typical SHA Process (except for SHA-512/t)

1. Select a hash algorithm.
  - Configure the [SHA\\_MODE\\_REG](#) register based on Table [26.3-2](#).
2. Process the current message block.
  - Write the message block in registers [SHA\\_M\\_n\\_REG](#).
3. Start the SHA accelerator<sup>1</sup>.
  - If this is the first time to execute this step, set the [SHA\\_START\\_REG](#) register to 1 to start the SHA accelerator. In this case, the accelerator uses the initial hash value stored in hardware for a given algorithm configured in Step 1 to start the calculation;
  - If this is not the first time to execute this step<sup>2</sup>, set the [SHA\\_CONTINUE\\_REG](#) register to 1 to start the SHA accelerator. In this case, the accelerator uses the hash value stored in the [SHA\\_H\\_n\\_REG](#) register to start calculation.
4. Check the progress of the current message block.
  - Poll register [SHA\\_BUSY\\_REG](#) until the content of this register becomes 0, indicating the accelerator has completed the calculation for the current message block and now is in the “idle” status<sup>3</sup>.
5. Decide if you have more message blocks to process:
  - If yes, please go back to Step 2.
  - Otherwise, please continue.
6. Obtain the message digest.
  - Read the message digest from registers [SHA\\_H\\_n\\_REG](#).

### Typical SHA Process (SHA-512/t)

1. Select a hash algorithm.
  - Configure the [SHA\\_MODE\\_REG](#) register to 7 for SHA-512/t.
2. Calculate the initial hash value.
  - (a) Calculate `t_string` and `t_length` and initialize [SHA\\_T\\_STRING\\_REG](#) and [SHA\\_T\\_LENGTH\\_REG](#) with the generated `t_string` and `t_length`. For details, please refer to Section 26.4.1.3.
  - (b) Set the [SHA\\_START\\_REG](#) register to 1 to start the SHA accelerator.
  - (c) Poll register [SHA\\_BUSY\\_REG](#) until the content of this register becomes 0, indicating the calculation of initial hash value is completed.
3. Process the current message block<sup>1</sup>.
  - Write the message block in registers [SHA\\_M\\_n\\_REG](#).
4. Start the SHA accelerator
  - Set the [SHA\\_CONTINUE\\_REG](#) register to 1. In this case, the accelerator uses the hash value stored in the [SHA\\_H\\_n\\_REG](#) register to start calculation.
5. Check the progress of the calculation.
  - Poll register [SHA\\_BUSY\\_REG](#) until the content of this register becomes 0, indicating the accelerator has completed the calculation for the current message block and now is in the “idle” status<sup>3</sup>.
6. Decide if you have more message blocks to process:
  - If yes, please go back to Step 3.
  - Otherwise, please continue.
7. Obtain the message digest.
  - Read the message digest from registers [SHA\\_H\\_n\\_REG](#).

**Note:**

1. In this step, the software can also write the next message block (to be processed) in registers [SHA\\_M\\_n\\_REG](#), if any, while the hardware starts SHA calculation, to save time.
2. You are resuming the SHA accelerator with the previously paused calculation.
3. Here you can decide if you want to insert other calculations. If yes, please go to the [process for interleaved calculations](#) for details.

As mentioned above, ESP32-P4 SHA accelerator supports “interleaving” calculation under the Typical SHA working mode.

The process to implement interleaved calculation is described below.

1. Prepare to hand the SHA accelerator over for an interleaved calculation by storing the following data of the previous calculation.
  - The selected hash algorithm configured in the [SHA\\_MODE\\_REG](#) register.
  - The message digest stored in registers [SHA\\_H\\_n\\_REG](#).

2. Perform the interleaved calculation. For the detailed process of the interleaved calculation, please refer to [Typical SHA process](#) or [DMA-SHA process](#), depending on the working mode of your interleaved calculation.
3. Prepare to hand the SHA accelerator back to the previously paused calculation by restoring the following data of the previous calculation.
  - Write the previously stored hash algorithm back to register [SHA\\_MODE\\_REG](#).
  - Write the previously stored message digest back to registers [SHA\\_H\\_n\\_REG](#).
4. Write the next message block from the previous paused calculation in registers [SHA\\_M\\_n\\_REG](#), and set the [SHA\\_CONTINUE\\_REG](#) register to 1 to restart the SHA accelerator with the previously paused calculation.

### 26.4.2.2 DMA-SHA Mode Process

ESP32-P4 SHA accelerator does not support “interleaving” message digest calculation at the level of individual message blocks when using DMA, which means you cannot insert new calculation before a complete DMA-SHA process (of one or more message blocks) completes. In this case, users who need interleaved operation are recommended to divide the message blocks and perform several DMA-SHA calculations, instead of trying to compute all the messages in one go.

Single DMA-SHA calculation supports up to 63 message blocks.

In contrast to the Typical SHA working mode, when the SHA accelerator is working under the DMA-SHA mode, all data read are completed via GDMA-AXI. Therefore, users are required to configure the GDMA-AXI controller following the description in Chapter 3 [GDMA Controller \(GDMA-AHB, GDMA-AXI\)](#).

#### DMA-SHA process (except SHA-512/t)

1. Select a hash algorithm.
  - Select a hash algorithm by configuring the [SHA\\_MODE\\_REG](#) register. For details, please refer to Table 26.3-2.
2. Configure the [SHA\\_INT\\_ENA\\_REG](#) register to enable or disable interrupt (Set 1 to enable).
3. Configure the number of message blocks.
  - Write the number of message blocks  $M$  to the [SHA\\_DMA\\_BLOCK\\_NUM\\_REG](#) register.
4. Start the DMA-SHA calculation.
  - If the current DMA-SHA calculation follows a previous calculation, firstly write the message digest from the previous calculation to registers [SHA\\_H\\_n\\_REG](#), then write 1 to register [SHA\\_DMA\\_CONTINUE\\_REG](#) to start SHA accelerator;
  - Otherwise, write 1 to register [SHA\\_DMA\\_START\\_REG](#) to start the accelerator.
5. Wait till the completion of the DMA-SHA calculation, which happens when:
  - The content of [SHA\\_BUSY\\_REG](#) register becomes 0, or
  - An SHA interrupt occurs. In this case, please clear interrupt by writing 1 to the [SHA\\_INT\\_CLEAR\\_REG](#) register.

6. Obtain the message digest:

- Read the message digest from registers [SHA\\_H\\_n\\_REG](#).

#### DMA-SHA process for SHA-512/t

1. Select a hash algorithm.

- Select SHA-512/t algorithm by configuring the [SHA\\_MODE\\_REG](#) register to 7.

2. Configure the [SHA\\_INT\\_ENA\\_REG](#) register to enable or disable interrupt (Set 1 to enable).

3. Calculate the initial hash value.

- (a) Calculate t\_string and t\_length and initialize [SHA\\_T\\_STRING\\_REG](#) and [SHA\\_T\\_LENGTH\\_REG](#) with the generated t\_string and t\_length. For details, please refer to Section [26.4.1.3](#).
- (b) Set the [SHA\\_START\\_REG](#) register to 1 to start the SHA accelerator.
- (c) Poll register [SHA\\_BUSY\\_REG](#) until the content of this register becomes 0, indicating the calculation of initial hash value is completed.

4. Configure the number of message blocks.

- Write the number of message blocks  $M$  to the [SHA\\_DMA\\_BLOCK\\_NUM\\_REG](#) register.

5. Start the DMA-SHA calculation.

- Write 1 to register [SHA\\_DMA\\_CONTINUE\\_REG](#) to start the accelerator.

6. Wait till the completion of the DMA-SHA calculation, which happens when:

- The content of [SHA\\_BUSY\\_REG](#) register becomes 0, or
- An SHA interrupt occurs. In this case, please clear interrupt by writing 1 to the [SHA\\_INT\\_CLEAR\\_REG](#) register.

7. Obtain the message digest:

- Read the message digest from registers [SHA\\_H\\_n\\_REG](#).

### 26.4.3 Message Digest

After the hash task completes, the SHA accelerator writes the message digest from the task to registers [SHA\\_H\\_n\\_REG](#) ( $n$ : 0 ~ 15). The lengths of the generated message digest are different depending on different hash algorithms. For details, see Table [26.4-4](#) below:

Table 26.4-4. The Storage and Length of Message Digest from Different Algorithms

| Hash Algorithm | Length of Message Digest (in bits) | Storage <sup>1</sup>       |
|----------------|------------------------------------|----------------------------|
| SHA-1          | 160                                | SHA_H_O_REG ~ SHA_H_4_REG  |
| SHA-224        | 224                                | SHA_H_O_REG ~ SHA_H_6_REG  |
| SHA-256        | 256                                | SHA_H_O_REG ~ SHA_H_7_REG  |
| SHA-384        | 384                                | SHA_H_O_REG ~ SHA_H_11_REG |
| SHA-512        | 512                                | SHA_H_O_REG ~ SHA_H_15_REG |
| SHA-512/224    | 224                                | SHA_H_O_REG ~ SHA_H_6_REG  |
| SHA-512/256    | 256                                | SHA_H_O_REG ~ SHA_H_7_REG  |
| SHA-512/ $t^2$ | $t$                                | SHA_H_O_REG ~ SHA_H_x_REG  |

<sup>1</sup> The message digest is stored in registers from most significant bits to the least significant bits, with the first word stored in register [SHA\\_H\\_O\\_REG](#) and the second word stored in register [SHA\\_H\\_1\\_REG](#)... For details, please see subsection [26.4.1.2](#).

<sup>2</sup> The registers used for SHA-512/ $t$  algorithm depend on the value of  $t$ .  $x+1$  indicates the number of 32-bit registers used to store  $t$  bits of message digest, so that  $x = \text{roundup}(t/32)-1$ .

1. For example:

- When  $t = 8$ , then  $x = 0$ , indicating that the 8-bit long message digest is stored in the most significant 8 bits of register [SHA\\_H\\_O\\_REG](#);
- When  $t = 32$ , then  $x = 0$ , indicating that the 32-bit long message digest is stored in register [SHA\\_H\\_O\\_REG](#);
- When  $t = 132$ , then  $x = 4$ , indicating that the 132-bit long message digest is stored in registers [SHA\\_H\\_O\\_REG](#), [SHA\\_H\\_1\\_REG](#), [SHA\\_H\\_2\\_REG](#), [SHA\\_H\\_3\\_REG](#), and [SHA\\_H\\_4\\_REG](#).

## 26.5 Interrupt

ESP32-P4's SHA accelerator can generate the following interrupt signal(s) that will be sent to the [Interrupt Matrix](#).

- SHA\_INTR

There are several internal interrupt sources from SHA that can generate the above interrupt signal(s). The interrupt sources from SHA are listed with their trigger conditions and the resulted interrupt signal(s) in [Table 26.5-1](#).

Table 26.5-1. SHA's Internal Interrupt Sources

| Internal Interrupt Source | Trigger Condition   | Interrupt Signal |
|---------------------------|---|------------------|
| SHA_CALC_DONE_INT         | Completion of an message digest calculation in DMA-SHA mode | SHA_INTR         |

### Note:

- For definitions of *interrupt*, *interrupt signal*, *interrupt source*, and their correlations, please refer to [Chapter 11](#)

*Interrupt Matrix* > Section 11.2 *Interrupt Terminology in ESP32-P4*.

- Different from the standard interrupt register group, the interrupt register group of SHA only contains the INT\_ENA ([SHA\\_INT\\_ENA\\_REG](#)) and INT\_CLR ([SHA\\_INT\\_CLEAR\\_REG](#)) fields, and does not support users to read the INT\_RAW and INT\_ST fields.

## 26.6 Register Summary

The addresses in this section are relative to SHA accelerator base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name                                   | Description  | Address | Access |
|--|--|---------|--------|
| <b>Control/Configuration Registers</b> |  |         |        |
| <a href="#">SHA_MODE_REG</a>           | Configures SHA algorithm                                       | 0x0000  | R/W    |
| <a href="#">SHA_T_STRING_REG</a>       | Initial Hash Value calculation factor t_string (for SHA-512/t) | 0x0004  | R/W    |
| <a href="#">SHA_T_LENGTH_REG</a>       | Initial Hash Value calculation factor t_length (for SHA-512/t) | 0x0008  | R/W    |
| <a href="#">SHA_CONTINUE_REG</a>       | Continues SHA operation (only effective in Typical SHA mode)   | 0x0014  | WO     |
| <a href="#">SHA_DMA_START_REG</a>      | Starts the SHA accelerator for DMA-SHA operation               | 0x001C  | WO     |
| <a href="#">SHA_START_REG</a>          | Starts the SHA accelerator for Typical SHA operation           | 0x0010  | WO     |
| <a href="#">SHA_DMA_CONTINUE_REG</a>   | Continues SHA operation (only effective in DMA-SHA mode)       | 0x0020  | WO     |

## 26.7 Registers

The addresses in this section are relative to SHA accelerator base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section *Programming Reserved Register Field*.

**Register 26.1. SHA\_MODE\_REG (0x0000)**

|   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |          |   |       |  |
|---|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|----------|---|-------|--|
| (reserved)  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | SHA_MODE |   |       |  |
| 31  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 3        | 2 | 0     |  |
| 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0x0      |   | Reset |  |

**SHA\_MODE** Configures the SHA algorithm.

- 0: SHA-1
  - 1: SHA-224
  - 2: SHA-256
  - 3: SHA-384
  - 4: SHA-512
  - 5: SHA-512/224
  - 6: SHA-512/256
  - 7: SHA-512/t
- (R/W)

**Register 26.2. SHA\_T\_STRING\_REG (0x0004)**

|              |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |
|--------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|---|
| SHA_T_STRING |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |
| 31           |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |
| 0x000000     |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |
| Reset        |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |

**SHA\_T\_STRING** Configures t\_string for calculating the initial Hash value for SHA-512/t. (R/W)

**Register 26.3. SHA\_T\_LENGTH\_REG (0x0008)**

|   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |              |   |       |  |
|---|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--------------|---|-------|--|
| (reserved)  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | SHA_T_LENGTH |   |       |  |
| 31  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 7            | 6 | 0     |  |
| 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0x0          |   | Reset |  |

**SHA\_T\_LENGTH** Configures t\_length for calculating the initial Hash value for SHA-512/t. (R/W)

Register 26.4. SHA\_DMA\_BLOCK\_NUM\_REG (0x000C)

|   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                   |   |   |  |  |  |       |  |
|---|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|-------------------|---|---|--|--|--|-------|--|
| (reserved)  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | SHA_DMA_BLOCK_NUM |   |   |  |  |  |       |  |
| 31  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 6                 | 5 | 0 |  |  |  |       |  |
| 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0x0               |   |   |  |  |  | Reset |  |

**SHA\_DMA\_BLOCK\_NUM** Configures the DMA-SHA block number. (R/W)

Register 26.5. SHA\_START\_REG (0x0010)
