|   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  | **CSI\_BRIG\_VADR\_NUM** Configures the height of an image frame. Measurement unit: line. (R/W)

**CSI\_BRIG\_HADR\_NUM** Configures the amount of 64-bit data in the width of an image frame. (R/W)

**CSI\_BRIG\_HAS\_HSYNC\_E** Configures whether the Image Interface 64 input includes HSYNC\_START and HSYNC\_END packets.

0: Not included

1: Included

(R/W)

**CSI\_BRIG\_VADR\_NUM\_CHECK** Configures whether to enable line number checking.

0: Disable

1: Enable

(R/W)

### Register 32.134. CSI\_BRIG\_ENDIAN\_MODE\_REG (0x0018)

[illegible]

**CSI\_BRIG\_BYTE\_ENDIAN\_ORDER** Configures the byte order of 64-bit data.

0: Byte order remains unchanged

1: Reverse the high and low bytes

(R/W)

### Register 32.135. CSI\_BRIG\_INT\_RAW\_REG (0x001C)

Register 0x00000000: CSI\_BRIG\_DMA\_CFG\_HAS\_UPDATED\_INT\_RAW

31 (reserved) 6 5 4 3 2 1 0

CSI\_BRIG\_CSI\_ASYNC\_FIFO\_OVF\_INT\_RAW  
CSI\_BRIG\_CSI\_BUF\_OVERRUN\_INT\_RAW  
CSI\_BRIG\_DISCARD\_INT\_RAW  
CSI\_BRIG\_VADR\_NUM\_LT\_INT\_RAW  
CSI\_BRIG\_VADR\_NUM\_GT\_INT\_RAW  
Reset

**CSI\_BRIG\_VADR\_NUM\_GT\_INT\_RAW** The raw interrupt status of CSI\_BRIG\_VADR\_NUM\_GT\_INT.  
(R/WTC/SS)

**CSI\_BRIG\_VADR\_NUM\_LT\_INT\_RAW** The raw interrupt status of CSI\_BRIG\_VADR\_NUM\_LT\_INT.  
(R/WTC/SS)

**CSI\_BRIG\_DISCARD\_INT\_RAW** The raw interrupt status of CSI\_BRIG\_DISCARD\_INT. (R/WTC/SS)

**CSI\_BRIG\_CSI\_BUF\_OVERRUN\_INT\_RAW** The raw interrupt status of CSI\_BRIG\_CSI\_BUF\_OVERRUN\_INT. (R/WTC/SS)

**CSI\_BRIG\_CSI\_ASYNC\_FIFO\_OVF\_INT\_RAW** The raw interrupt status of CSI\_BRIG\_CSI\_ASYNC\_FIFO\_OVF\_INT. (R/WTC/SS)

**CSI\_BRIG\_DMA\_CFG\_HAS\_UPDATED\_INT\_RAW** The raw interrupt status of CSI\_BRIG\_DMA\_CFG\_HAS\_UPDATED\_INT. (R/WTC/SS)

### Register 32.136. CSI\_BRIG\_INT\_CLR\_REG (0x0020)

**CSI\_BRIG\_VADR\_NUM\_GT\_REAL\_INT\_CLR** Write 1 to clear CSI\_BRIG\_VADR\_NUM\_GT\_REAL\_INT.  
(WT)

**CSI\_BRIG\_VADR\_NUM\_LT\_REAL\_INT\_CLR** Write 1 to clear CSI\_BRIG\_VADR\_NUM\_LT\_REAL\_INT.  
(WT)

**CSI\_BRIG\_DISCARD\_INT\_CLR** Write 1 to clear CSI\_BRIG\_DISCARD\_INT. (WT)

**CSI\_BRIG\_CSI\_BUF\_OVERRUN\_INT\_CLR** Write 1 to clear CSI\_BRIG\_CSI\_BUF\_OVERRUN\_INT. (WT)

**CSI\_BRIG\_CSI\_ASYNC\_FIFO\_OVF\_INT\_CLR** Write 1 to clear CSI\_BRIG\_CSI\_ASYNC\_FIFO\_OVF\_INT.  
(WT)

**CSI\_BRIG\_DMA\_CFG\_HAS\_UPDATED\_INT\_CLR** Write 1 to clear CSI\_BRIG\_DMA\_CFG\_HAS\_UPDATED\_INT.  
(WT)

### Register 32.137. CSI\_BRIG\_INT\_ST\_REG (0x0024)

Diagram of the 32-bit CS1 register structure:

- Bits 31 to 6: (reserved)
- Bit 5: CSI\_BRIG\_DMA\_CFG\_HAS\_UPDATED\_INT\_ST
- Bit 4: CSI\_BRIG\_CSI\_ASYNC\_FIFO\_OVF\_INT\_ST
- Bit 3: CSI\_BRIG\_CSI\_BUF\_OVERRUN\_INT\_ST
- Bit 2: CSI\_BRIG\_DISCARD\_INT\_ST
- Bit 1: CSI\_BRIG\_VADR\_NUM\_LT\_INT\_ST
- Bit 0: CSI\_BRIG\_VADR\_NUM\_GT\_INT\_ST

**CSI\_BRIG\_VADR\_NUM\_GT\_INT\_ST** The masked interrupt status of CSI\_BRIG\_VADR\_NUM\_GT\_INT.  
(RO)

|                                    |  |
|------------------------------------|--|
| <b>CSI_BRIG_VADR_NUM_LT_INT_ST</b> | The masked interrupt status of CSI_BRIG_VADR_NUM_LT_INT. |
| (RO)                               |  |

**CSI\_BRIG\_DISCARD\_INT\_ST** The masked interrupt status of CSI\_BRIG\_DISCARD\_INT. (RO)

|  |   |

|            |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   | CSI_BRIG_CSI_BUF_OVERRUN_INT_ENA     |   |       |   |
|            |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   | CSI_BRIG_DISCARD_INT_ENA             |   |       |   |
|            |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   | CSI_BRIG_VADR_NUM_LT_INT_ENA         |   |       |   |
|            |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   | CSI_BRIG_VADR_NUM_GT_INT_ENA         |   |       |   |
| 31         |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   | 6 | 5 | 4 | 3 | 2 | 1                                    | 0 | Reset |   |
| 0          | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0                                    | 0 | 0     | 0 |

**CSI\_BRIG\_VADR\_NUM\_GT\_INT\_ENA** Write 1 to enable CSI\_BRIG\_VADR\_NUM\_GT\_INT. (R/W)

**CSI\_BRIG\_VADR\_NUM\_LT\_INT\_ENA** Write 1 to enable CSI\_BRIG\_VADR\_NUM\_LT\_INT. (R/W)

**CSI\_BRIG\_DISCARD\_INT\_ENA** Write 1 to enable CSI\_BRIG\_DISCARD\_INT. (R/W)

**CSI\_BRIG\_CSI\_BUF\_OVERRUN\_INT\_ENA** Write 1 to enable CSI\_BRIG\_CSI\_BUF\_OVERRUN\_INT. (R/W)

**CSI\_BRIG\_CSI\_ASYNC\_FIFO\_OVF\_INT\_ENA** Write 1 to enable CSI\_BRIG\_CSI\_ASYNC\_FIFO\_OVF\_INT. (R/W)

**CSI\_BRIG\_DMA\_CFG\_HAS\_UPDATED\_INT\_ENA** Write 1 to enable CSI\_BRIG\_DMA\_CFG\_HAS\_UPDATED\_INT. (R/W)

## Register 32.139. CSI\_BRIG\_HOST\_CTRL\_REG (0x0040)

|            |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |                        |       |
|------------|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|------------------------|-------|
| (reserved) |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   | CSI_BRIG_CSI_ENABLECLK |       |
| 31         |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   | 1                      | 0     |
| 0          | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1                      | Reset |

**CSI\_BRIG\_CSI\_ENABLECLK** Configures whether to enable the clock lane of CSI PHY.

0: Disable

1: Enable

(R/W)

## Chapter 33

### Pixel-Processing Accelerator (PPA)

#### 33.1 Overview

ESP32-P4 includes a pixel-processing accelerator (PPA) designed for 2D image display. This module realizes hardware-level acceleration of image algorithms and implements functions such as image rotation, scaling, mirroring, and blending.

PPA consists of two functional modules: scaling-rotation-mirroring (SRM) and image blending (BLEND). The SRM module implements image rotation, scaling, and XY-axis mirroring functions, while the BLEND module achieves the blending of two layers of the same size based on the Alpha channel, i.e., transparency.

PPA processes images in units of pixel block. These pixel blocks are acquired from memory through 2D-DMA. The connection between PPA and 2D-DMA is shown in Figure 33.1-1.

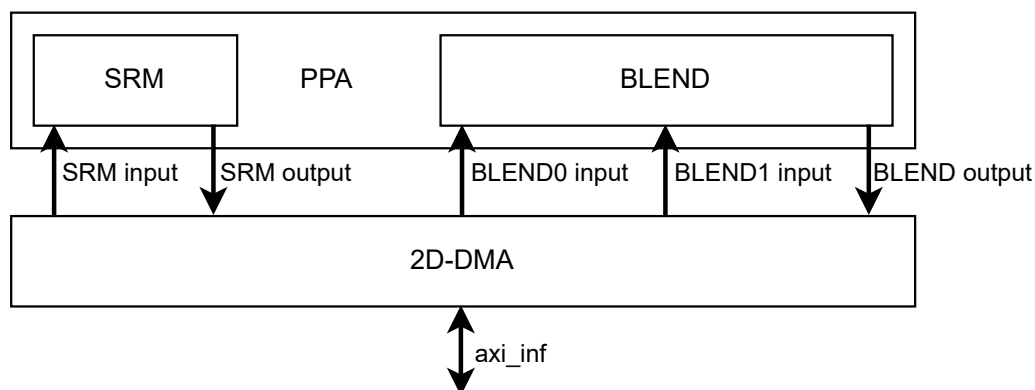

Figure 33.1-1. PPA 2D-DMA Connection

#### 33.2 Terminology

To better illustrate the functions of the PPA module, the following terms are used in this chapter:

- image** A complete image stored in the system memory
- image block** A portion cropped from an image at a certain size, with the maximum size equivalent to the entire image. i.e., hb, vb size under 2D-DMA 2D-MOD0.
- pixel block** A portion cropped from an image block. SRM reads and writes data in pixel blocks.

#### 33.3 Features

- Image rotation, scaling, and mirroring by SRM:

- Input formats: ARGB8888, RGB888, RGB565, YUV420
- Output formats: ARGB8888, RGB888, RGB565, YUV420
- Counterclockwise rotation angles: 0°, 90°, 180°, 270°
- Horizontal and vertical scaling with scaling factors of 4-bit integer part and 8-bit fractional part
- Horizontal and vertical mirroring
- Blending two layers of the same size and filling images with specific pixels by BLEND:
  - Input formats: ARGB8888, RGB888, RGB565, L4, L8, A4, A8
  - Output formats: ARGB8888, RGB888, RGB565
  - Layer blending based on the Alpha channel. If layers lack an Alpha channel, it can be provided through register configuration.
  - Special color filtering by setting color-key ranges of foreground and background layers

## 33.4 Architectural Overview

As shown in figure 33.4-1, there are two independent functional modules in PPA: SRM and BLEND.

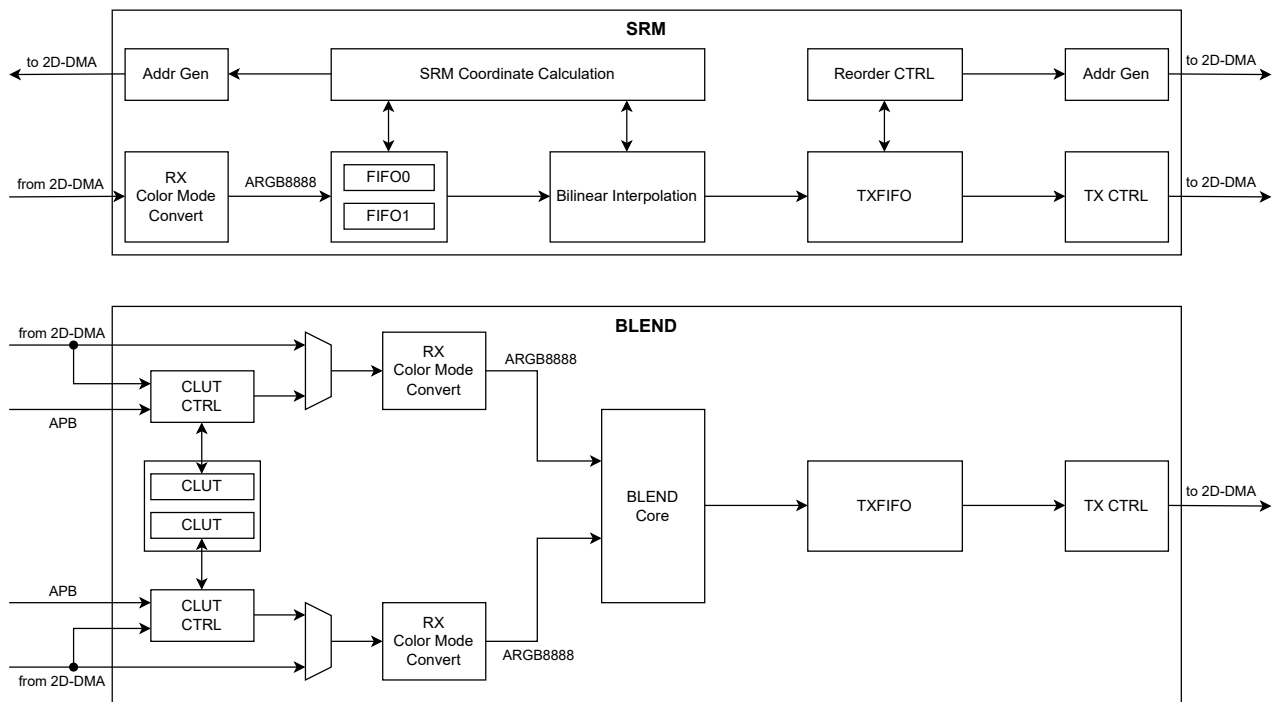

Figure 33.4-1. PPA Architecture

For SRM, SRM Coordinate Calculation scans coordinates of the output pixel blocks and calculates coordinates of the corresponding input pixel blocks. Addr Gen calculates the address according to the input pixel block coordinates and sends them to 2D-DMA. After that, the PPA receives the pixel block data from 2D-DMA, converts it into ARGB8888 format according to the register configuration, and stores it into the RX FIFO (a ping-pong FIFO composed of two SRAMs, each of which can store the whole pixel block). When a complete pixel block is cached, Bilinear Interpolation reads the input pixels from RX FIFO, interpolates them to get the

output pixels, and outputs them to TX FIFO. Reorder CTRL then calculates the output pixel block coordinates and address according to the register configuration and sends them to 2D-DMA. At the same time, Reorder CTRL takes out the corresponding pixels from TX FIFO according to the output pixel block coordinates and sends them to 2D-DMA, which saves them to the corresponding address.

For BLEND, PPA also receives data from 2D-DMA and converts it to ARGB8888 format based on the input data type. Yet the converted pixels will be processed directly by the BLEND Core algorithm module, enter the TX FIFO, and ultimately output to the system memory through 2D-DMA. Unlike SRM, BLEND does not need to calculate the address itself as it is completely controlled by 2D-DMA through a linked list.

## 33.5 Functional Description

### 33.5.1 PPA Color Spaces

PPA supports both true color and pseudo color. True color refers to a color representation in which each pixel in a color image consists of three primary color components: R (red), G (green), and B (blue). Each of these components directly determines the intensity of the corresponding primary color on the display device. The true color formats supported by PPA include ARGB8888, RGB888, and RGB565.

Pseudo color refers to a color representation in which the color of each pixel in a color image is not directly determined by the numerical values of the primary color components. Instead, the pixel value serves as an entry into a Color Look-Up Table (CLUT) to retrieve the corresponding A, R, G, and B values. PPA supports CLUT entry addresses with 8-bit or 4-bit width.

In addition, SRM supports the YUV420 data format. The storage order of supported color formats in memory is shown in Table 33.5-1.

Table 33.5-1. Pixel Storage Order

| Color Format                              | Start Addr + 3 | Start Addr + 2 | Start Addr + 1 | Start Addr + 0 |
|---|----------------|----------------|----------------|----------------|
| ARGB8888                                  | A0[7:0]        | R0[7:0]        | G0[7:0]        | B0[7:0]        |
| RGB888                                    | B1[7:0]        | R0[7:0]        | G0[7:0]        | B0[7:0]        |
|   | G2[7:0]        | B2[7:0]        | R1[7:0]        | G1[7:0]        |
|   | R3[7:0]        | G3[7:0]        | B3[7:0]        | R2[7:0]        |
| RGB565                                    | R1[4:0]G1[5:3] | G1[2:0]B1[4:0] | R0[4:0]G0[5:3] | G0[2:0]B0[4:0] |
| L8  | L3[7:0]        | L2[7:0]        | L1[7:0]        | L0[7:0]        |
| L4  | L7[3:0]L6[3:0] | L5[3:0]L4[3:0] | L3[3:0]L2[3:0] | L1[3:0]L0[3:0] |
| A8  | A3[7:0]        | A2[7:0]        | A1[7:0]        | A0[7:0]        |
| A4  | A7[3:0]A6[3:0] | A5[3:0]A4[3:0] | A3[3:0]A2[3:0] | A1[3:0]A0[3:0] |
| YUV420<br>Odd rows<br>such as 1, 3, 5...  | U2[7:0]        | Y1[7:0]        | Y0[7:0]        | U0[7:0]        |
|   | Y4[7:0]        | U4[7:0]        | Y3[7:0]        | Y2[7:0]        |
|   | Y7[7:0]        | Y6[7:0]        | U6[7:0]        | Y5[7:0]        |
| YUV420<br>Even rows<br>such as 2, 4, 6... | V2[7:0]        | Y1[7:0]        | Y0[7:0]        | V0[7:0]        |
|   | Y4[7:0]        | V4[7:0]        | Y3[7:0]        | Y2[7:0]        |
|   | Y7[7:0]        | Y6[7:0]        | V6[7:0]        | Y5[7:0]        |

### 33.5.1.1 SRM Color Space

SRM supports ARGB8888, RGB888, RGB565, and YUV420 formats for both input and output. The input format is configured by `PPA_SRM_RX_CM`, while the output format is configured by `PPA_SRM_TX_CM`. The SRM input pixel processing steps are shown in Figure 33.5-1.

Figure 33.5-1. PPA SRM Input Pixel Processing

SRM supports RGB and byte swapping for ARGB8888, RGB888, and RGB565 input formats. The specific configurations are as follows:

- Set `PPA_SRM_RX_RGB_SWAP_EN` to 1 to reverse RGB to BGR and ARGB to BGRA.
- Set `PPA_SRM_RX_BYTE_SWAP_EN` to 1 to reverse bytes 0, 1 and 2, 3 respectively, i.e., {0, 1, 2, 3} will be reverted to {1, 0, 3, 2}. RGB888 would not be affected by this configuration as it only has three bytes per pixel.

SRM uses ARGB8888 when processing images internally. When the input lacks an Alpha channel, the default Alpha channel value for the image is set to 255. The Alpha channel can be further configured using the `PPA_SRM_FIX_ALPHA_REG` register, as shown in Figure 33.5-2. For specific configuration effects, please refer to Table 33.5-2.

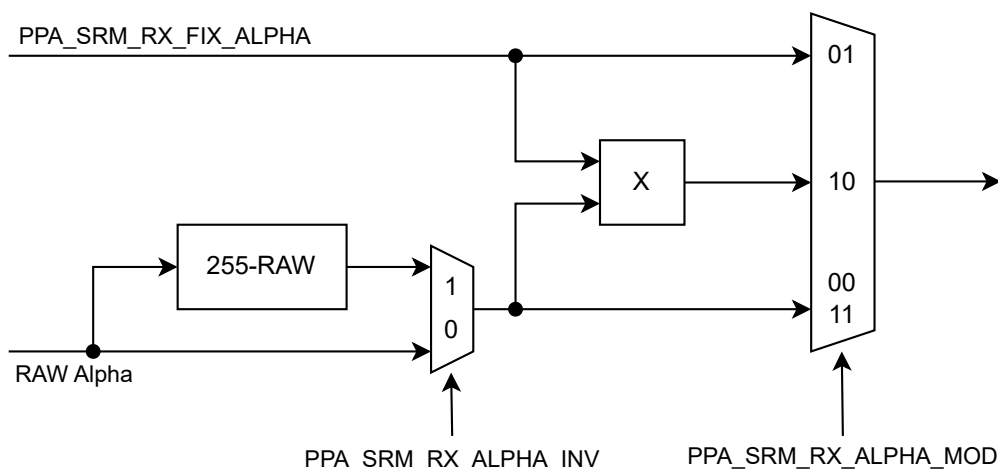

Figure 33.5-2. PPA SRM Alpha Configuration Logic

Table 33.5-2. PPA SRM Alpha Configuration

| <code>PPA_SRM_RX_ALPHA_INV</code> | <code>PPA_SRM_RX_ALPHA_MOD</code> | Output   |
|-----------------------------------|-----------------------------------|--|
| 0                                 | 00/11                             | Original Alpha value   |
|                                   | 01                                | The configuration value of <code>PPA_SRM_RX_FIX_ALPHA</code> |

Continued on the next page...

Table 33.5-2 – ...Continued from the previous page

| PPA_SRM_RX_ALPHA_INV | PPA_SRM_RX_ALPHA_MOD | Output   |
|----------------------|----------------------|--|
|                      | 10                   | The high 8 bits of the value obtained by multiplying the original Alpha value with <a href="#">PPA_SRM_RX_FIX_ALPHA</a>                                  |
| 1                    | 00/11                | The value obtained by subtracting the original Alpha value from 255  |
|                      | 01                   | The configuration value of <a href="#">PPA_SRM_RX_FIX_ALPHA</a>  |
|                      | 10                   | The high 8 bits of the value obtained by multiplying the result of subtracting the original Alpha value from 255 by <a href="#">PPA_SRM_RX_FIX_ALPHA</a> |

Note that when the input or output format is YUV, further configuration of YUV to RGB color conversion is required.

When the input format is YUV420, the input YUV data range needs to be configured as full-range or limit-range via the [PPA\\_YUV\\_RX\\_RANGE](#) field, and the protocol used for YUV to RGB conversion needs to be configured as BT601 or BT709 via the [PPA\\_YUV2RGB\\_PROTOCOL](#) field. The conversion formulas are as follows:

- $YUV_{full}$  to  $YUV_{limit}$ 
  - $Y_{limit} = \frac{220}{256}Y_{full} + 16$
  - $U_{limit} = \frac{225}{256}U_{full} + 16$
  - $V_{limit} = \frac{225}{256}V_{full} + 16$
- $YUV_{limit}$  to RGB in BT601
  - $R = \frac{298}{256}Y_{limit} + \frac{409}{256}V_{limit} - \frac{56906}{256}$
  - $G = \frac{298}{256}Y_{limit} - \frac{100}{256}U_{limit} - \frac{208}{256}V_{limit} + \frac{34707}{256}$
  - $B = \frac{298}{256}Y_{limit} + \frac{516}{256}U_{limit} - \frac{70836}{256}$
- $YUV_{limit}$  to RGB in BT709
  - $R = \frac{298}{256}Y_{limit} + \frac{459}{256}V_{limit} - \frac{63367}{256}$
  - $G = \frac{298}{256}Y_{limit} - \frac{55}{256}U_{limit} - \frac{136}{256}V_{limit} + \frac{19681}{256}$
  - $B = \frac{298}{256}Y_{limit} + \frac{541}{256}U_{limit} - \frac{73918}{256}$

When the output format is YUV420, the output YUV data range needs to be configured as full-range or limit-range via the [PPA\\_YUV\\_TX\\_RANGE](#) field, and the protocol used for YUV to RGB conversion needs to be configured as BT601 or BT709 via the [PPA\\_RGB2YUV\\_PROTOCOL](#) field. The conversion formulas are as follows:

- $YUV_{limit}$  to  $YUV_{full}$ 
  - $Y_{full} = \frac{298}{256}Y_{limit} + \frac{4768}{256}$
  - $U_{full} = \frac{291}{256}U_{limit} + \frac{4550}{256}$
  - $V_{full} = \frac{291}{256}V_{limit} + \frac{4550}{256}$
- RGB to  $YUV_{limit}$  in BT601

$$\begin{aligned}
- Y_{limit} &= \frac{4096}{256} + \frac{66}{256}R + \frac{129}{256}G + \frac{25}{256}B \\
- U_{limit} &= \frac{32768}{256} - \frac{38}{256}R - \frac{74}{256}G + \frac{112}{256}B \\
- V_{limit} &= \frac{32768}{256} + \frac{112}{256}R - \frac{94}{256}G - \frac{18}{256}B
\end{aligned}$$

- RGB to  $YUV_{limit}$  in BT709

$$\begin{aligned}
- Y_{limit} &= \frac{4096}{256} + \frac{47}{256}R + \frac{157}{256}G + \frac{16}{256}B \\
- U_{limit} &= \frac{32768}{256} - \frac{26}{256}R - \frac{86}{256}G + \frac{112}{256}B \\
- V_{limit} &= \frac{32768}{256} + \frac{112}{256}R - \frac{102}{256}G - \frac{10}{256}B
\end{aligned}$$

### 33.5.1.2 BLEND Color Space

For the input format, BLEND supports ARGB8888, RGB888, RGB565, L4, L8, A4, and A8. The input color format of the foreground and background layers can be configured respectively via the [PPA\\_BLEND0/1\\_RX\\_CM](#) field. Among the above input formats, A4 and A8 only support the foreground layer, and when the input format is L4 or A4, the size of the image block, hb, and the offset in the image, x, must be an even number. For the output format, BLEND supports ARGB8888, RGB888, and RGB565, which can be configured via the [PPA\\_BLEND\\_TX\\_CM](#) field.

BLEND's RGB conversion, byte conversion, and alpha channel configuration are consistent with SRM input. Additionally, when the foreground layer data format is A4 or A8, the input data will be Alpha channel values. In this case, if [PPA\\_BLEND\\_BYPASS](#) is set as 1, the foreground layer's input Alpha value replaces the background layer's Alpha channel and output. If set as 0, it will be a normal BLEND operation, and the foreground layer's RGB values will be specified by [PPA\\_BLEND\\_RGB\\_REG](#).

When the input data format is L4 or L8, it requires to first initialize the CLUT for BLEND. BLEND has two CLUTs with a depth of 256 and a width of 32. There are two initialization modes: FIFO and MEM.

- Write 0 to [PPA\\_APB\\_FIFO\\_MASK](#) to enter the FIFO mode.  
In the FIFO mode, access to CLUT is achieved by reading/writing [PPA\\_RDWR\\_WORD\\_BLENDx\\_CLUT](#), where 0 corresponds to the background channel CLUT and 1 corresponds to the foreground channel CLUT.  
Each time this register is read/written, the corresponding read/write address is automatically incremented by 1. The read/write address can be reset by writing 1 and then 0 to [PPA\\_BLENDx\\_CLUT\\_MEM\\_RST](#). The read address can be reset by writing 1 then 0 to [PPA\\_BLENDx\\_CLUT\\_MEM\\_RDADDR\\_RST](#).
- Write 1 to [PPA\\_APB\\_FIFO\\_MASK](#) to enter the MEM mode.  
In the MEM mode, CLUT can be directly accessed through addresses. The CLUT addresses in the PPA's bus address range are as shown in Table 33.5-3.

Table 33.5-3. BLEND CLUT Address

| addr[11:10]                                      | addr[9:2]                    | addr[1:0] |
|--|------------------------------|-----------|
| 01: Select BLEND0 CLUT<br>10: Select BLEND1 CLUT | CLUT actual address, 0 ~ 255 | 00        |

### 33.5.2 PPA 2D-DMA Linked List Configuration

PPA exchanges data with the system memory via 2D-DMA. For both SRM and BLEND, it is necessary to configure the 2D-DMA linked list information for the required image block operations in one go. The 2D-DMA linked list is shown in Figure 33.5-3. For detailed information, please refer to [5 2D-DMA Controller \(2D-DMA\)](#).

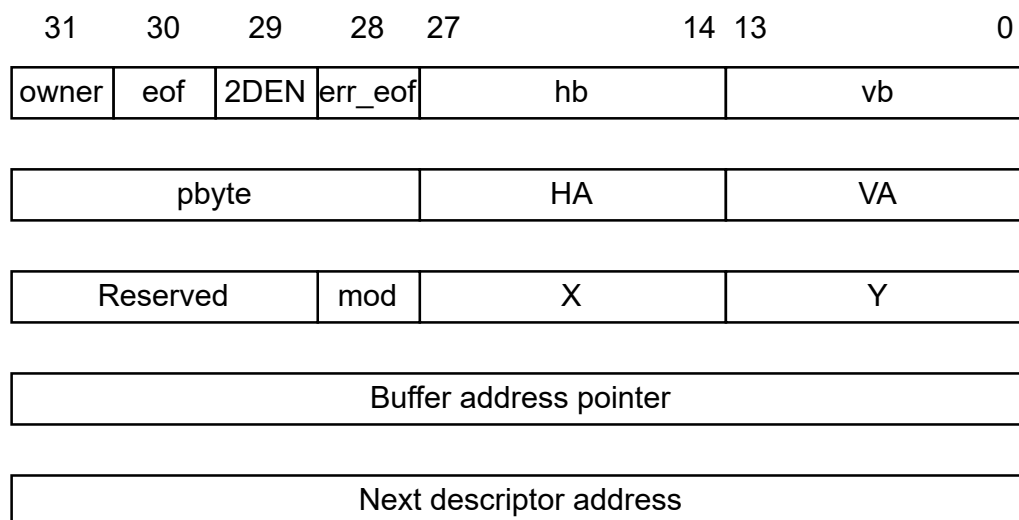

Figure 33.5-3. 2D-DMA Linked List

The corresponding linked list parameters of PPA are shown in Table 33.5-4.

Table 33.5-4. PPA Linked List Configuration

| Field   | Configuration  |
|---------|--|
| owner   | 1  |
| eof     | 1  |
| 2DEN    | 1  |
| err_eof | 0  |
| hb      | Horizontal size of the image block.<br>Must be even if the input or output data format is YUV420   |
| vb      | Vertical size of the image block.<br>Must be even if the input or output data format is YUV420   |
| pbyte   | ARGB8888: 5 (4 byte/pixel)<br>RGB888: 4 (3 byte/pixel)<br>RGB565: 3 (2 byte/pixel)<br>YUV420: 2 (1.5 byte/pixel)<br>A8/L8: 1 (1 byte/pixel)<br>A4/L4: 0 (0.5 byte/pixel) |

Continued on the next page...

Table 33.5-4 – ...Continued from the previous page

| Field                   | Configuration   |
|-------------------------|---|
| HA                      | Horizontal size of the entire image.<br>Must be even if the input or output data format is YUV420                                   |
| VA                      | Vertical size of the entire image.<br>Must be even if the input or output data format is YUV420                                     |
| mod                     | 0   |
| X                       | Horizontal offset of the image block within the image (offset starts from 0).<br>Must be even if the input or output data is YUV420 |
| Y                       | Vertical offset of the image block within the image (offset starts from 0).<br>Must be even if the input or output data is YUV420   |
| Buffer address pointer  | Starting address of the image   |
| Next descriptor address | N/A   |

### 33.5.2.1 SRM Special Configuration

Once the 2D-DMA linked lists for input and output image blocks are configured, SRM needs to select the required pixel blocks from the input image block memory space and process them in units of pixel blocks. The processed pixel blocks are then stored in the corresponding memory space of the output image block. Throughout this process, the starting address of each pixel block needs to be controlled by SRM. To realize this functionality, write 1 to the `DMA2D_IN/OUT_DSCR_PORT_EN_CHx` field of the corresponding channel of the 2D-DMA to enable the descriptor interface (also called DSCR-PORT in 2D-DMA), allowing PPA to control the starting address of the next pixel block in real-time.

For the data input, SRM must receive a complete pixel block each time. When the pixel block selection reaches the boundary of the image block, 2D-DMA needs to automatically pad the pixel block beyond the boundary. This can be achieved by configuring the `DMA2D_OUT_DSCR_PORT_BLK_V/H_CHx` field of the corresponding channel of 2D-DMA to the pixel block size. The pixel block size is 18x18 when the input data is ARGB8888, RGB888, or RGB565; and 20x20 when the input data is YUV420.

## 33.5.3 Scaling - Rotation - Mirroring (SRM)

### 33.5.3.1 Basic Functionality

SRM supports scaling, rotation, and mirroring. It first scales the image based on the origin point, then rotates it around the center point ( $X_{middle}$ ,  $Y_{middle}$ ), and finally mirrors it horizontally and vertically based on the center point ( $X_{target}$ ,  $Y_{target}$ ), as shown in Figure 33.5-4. Scaling, rotation, and mirroring parameters are all configured through registers:

- `PPA_SRM_SCAL_X_INT`: Integer part of the horizontal scaling factor
- `PPA_SRM_SCAL_X_FRAG`: Fractional part of the horizontal scaling factor

- `PPA_SRM_SCAL_Y_INT`: Integer part of the vertical scaling factor
- `PPA_SRM_SCAL_Y_FRAG`: Fractional part of the vertical scaling factor
- `PPA_SRM_ROTATE_ANGLE`: Counterclockwise rotation angle
- `PPA_SRM_MIRROR_X`: Enable horizontal mirroring
- `PPA_SRM_MIRROR_Y`: Enable vertical mirroring

Figure 33.5-4. SRM Procedure

### 33.5.3.2 Pixel Block Rearrangement

When the output pixel block is small, initiating a 2D-DMA transfer for each pixel block would result in low bus bandwidth utilization. To improve bus bandwidth utilization, SRM can cache and concatenate output pixel blocks into a larger pixel block before outputting them all at once. This feature is enabled by default and can be disabled by setting `PPA_SRM_MACRO_BK_RO_BYPASS` to 1.

Once pixel block rearrangement is enabled, under certain conditions, the output pixel blocks will be automatically rearranged and concatenated, as specified in Table 33.5-5.

- For the output pixel block in ARGB8888/RGB888 format, if its vertical height is less than or equal to 32, and the horizontal width is less than or equal to 16, pixel block rearrangement will be automatically enabled.
- For the output pixel block in RGB565 format, if its vertical height is less than or equal to 32, and the horizontal width is less than or equal to 32, pixel block rearrangement will be automatically enabled.
- For the output pixel block in YUV420 format, if its vertical height is less than or equal to 32, and horizontal width is less than or equal to 32, pixel block rearrangement will be automatically enabled.

Table 33.5-5. Number of Pixel Block Rearrangements in SRM Output

| ARGB8888/RGB888 |                      | RGB565          |                      | YUV420                 |                      |
|-----------------|----------------------|-----------------|----------------------|------------------------|----------------------|
| Horizontal Size | Rearrangement Number | Horizontal Size | Rearrangement Number | Horizontal Size (Even) | Rearrangement Number |
| 1               | 32                   | 1               | 64                   | 2                      | 32                   |
| 2               | 16                   | 2               | 32                   | 4                      | 16                   |
| 3               | 10                   | 3               | 20                   | 6                      | 10                   |
| 4               | 8                    | 4               | 16                   | 8                      | 8                    |
| 5               | 6                    | 5               | 12                   | 10                     | 6                    |
| 6               | 5                    | 6               | 10                   | 12                     | 5                    |
| 7               | 4                    | 7               | 9                    | 14                     | 4                    |
| 8               | 4                    | 8               | 8                    | 16                     | 4                    |
| 9               | 3                    | 9               | 7                    | 18                     | 3                    |
| 10              | 3                    | 10              | 6                    | 20-32                  | 2                    |
| 11              | 2                    | 11              | 5                    |                        |                      |
| 12              | 2                    | 12              | 5                    |                        |                      |
| 13              | 2                    | 13              | 4                    |                        |                      |
| 14              | 2                    | 14              | 4                    |                        |                      |
| 15              | 2                    | 15              | 4                    |                        |                      |
| 16              | 2                    | 16              | 4                    |                        |                      |
|                 |                      | 17              | 3                    |                        |                      |
|                 |                      | 18              | 3                    |                        |                      |
|                 |                      | 19-32           | 2                    |                        |                      |

### 33.5.4 Layer Blending (BLEND)

#### 33.5.4.1 Basic Functionality

BLEND combines two image blocks of the same size using the Alpha channel and then outputs the result. The blending formula is as follows, where  $A_b$  is the Alpha channel of the background layer,  $A_f$  is the Alpha channel of the foreground layer,  $C_b$  corresponds to the R, G, and B components of the background layer, and  $C_f$  corresponds to the R, G, B components of the foreground layer:

- $A_{out} = A_b + A_f - A_b * A_f$
- $C_{out} = (C_b * A_b * (1 - A_f) + C_f * A_f) / (A_b + A_f - A_b * A_f)$

Additionally, BLEND supports color-keying based on pixel color. By configuring color ranges via [PPA\\_CK\\_FG/BG\\_HIGH/LOW\\_REG](#), BLEND allows for image segmentation into four distinct regions, each subjected to different operations:

- When the foreground pixel falls within the color-key range and the background pixel falls outside the color-key range, output the background pixel.
- When the background pixel falls within the color-key range and the foreground pixel falls outside the color-key range, the output depends on the value of [PPA\\_COLORKEY\\_FG\\_BG\\_REVERSE](#). If 0, output the background pixel; if 1, output the foreground pixel.

- When both the background and foreground pixels fall within the color-key range, the output is set to the color defined by [PPA\\_COLORKEY\\_DEFAULT\\_R/G/B](#).
- When neither the background nor foreground pixels fall within the color-key range, output follows the normal Alpha Blending process.

When [PPA\\_BLEND\\_BYPASS](#) is set to 1, BLEND directly outputs the background layer data. If the foreground input data type is A4/A8 at this time, the foreground input data will replace the background input data's Alpha channel and then be output.

### 33.5.4.2 Filled Image Output

BLEND also supports filled image output. When this feature is enabled, only the output side of BLEND works, continuously outputting the filled image. The size and data of the filled image can be configured via [PPA\\_BLEND\\_TX\\_SIZE\\_REG](#) and [PPA\\_BLEND\\_TX\\_FIX\\_PIXEL](#).

## 33.6 Interrupts

ESP32-P4's PPA can generate the following interrupt signal that will be sent to the [Interrupt Matrix](#).

- PPA\_INTR

The following interrupt sources can generate PPA\_INTR interrupt signal:

- PPA\_SRM\_PARAM\_CFG\_INT: Triggered when invalid parameters are configured in the SRM mode. You can acquire the specific error type through [PPA\\_SRM\\_PARAM\\_ERR\\_ST\\_REG](#), as shown in Table 33.6-1.
- PPA\_SRM\_EOF\_INT: Triggered when SRM workflow reaches EOF.
- PPA\_BLEND\_EOF\_INT:: Triggered when BLEND workflow reaches EOF.

**Table 33.6-1. SRM Parameter Error Type**

| Error Type                                   | Detail   |
|--|--|
| <a href="#">PPA_TX_DSCR_VB_ERR_ST</a>        | The sum of the vertical size of the output image block from SRM and the vertical offset Y specified in the output descriptor exceeds the total vertical size of the image configured in the output descriptor (VA)     |
| <a href="#">PPA_TX_DSCR_HB_ERR_ST</a>        | The sum of the horizontal size of the output image block from SRM and the vertical offset X specified in the output descriptor exceeds the total horizontal size of the image configured in the output descriptor (HA) |
| <a href="#">PPA_Y_RX_SCAL_EQUAL_O_ERR_ST</a> | The vertical scaling factor for the input image block in SRM is set to 0   |
| <a href="#">PPA_RX_DSCR_VB_ERR_ST</a>        | The sum of the vertical size VB and the vertical offset Y in the SRM input descriptor exceeds the overall vertical size VA in the output descriptor  |

Continued on the next page...

Table 33.6-1 – ...Continued from the previous page

| Error Type                                    | Detail  |
|---|---|
| <a href="#">PPA_YDST_LEN_TOO_SAMLL_ERR_ST</a> | The vertical size of the image block after SRM scaling is 0. For example, if the vertical size of the image block is 14 and the vertical scaling factor is 1/16 without rotation, the scaled vertical size of the image block becomes 0 |
| <a href="#">PPA_YDST_LEN_TOO_LARGE_ERR_ST</a> | The vertical size of the image block after SRM scaling exceeds 8191   |
| <a href="#">PPA_X_RX_SCAL_EQUAL_O_ERR_ST</a>  | The horizontal scaling factor for the input image block in SRM is 0   |
| <a href="#">PPA_RX_DSCR_HB_ERR_ST</a>         | The sum of the horizontal size HB of the input image block configured in the SRM input descriptor and the horizontal offset X exceeds the entire image's horizontal size HA configured in the output descriptor                         |
| <a href="#">PPA_XDST_LEN_TOO_SAMLL_ERR_ST</a> | The horizontal size of the image block after SRM scaling is 0   |
| <a href="#">PPA_XDST_LEN_TOO_LARGE_ERR_ST</a> | The horizontal size of the image block after SRM scaling exceeds 8191   |
| <a href="#">PPA_X_YUV420_RX_SCALE_ERR_ST</a>  | The input descriptor parameters HA/hb/X happen to be odd numbers when the SRM input format is YUV420  |
| <a href="#">PPA_Y_YUV420_RX_SCALE_ERR_ST</a>  | The input descriptor parameters VA/vb/Y happen to be odd numbers when the SRM input format is YUV420  |
| <a href="#">PPA_X_YUV420_TX_SCALE_ERR_ST</a>  | The output descriptor parameters HA/hb/X happen to be odd numbers when the SRM output format is YUV420  |
| <a href="#">PPA_Y_YUV420_TX_SCALE_ERR_ST</a>  | The output descriptor parameters VA/vb/Y happen to be odd numbers when the SRM output format is YUV420  |

## 33.7 Programming Procedures

### 33.7.1 PPA Clock Reset Configuration

1. Enable the clock of the PPA and 2D-DMA modules:
  - Write 1 to [HP\\_SYS\\_CLKRST\\_PPA\\_SYS\\_CLK\\_EN](#) to enable the PPA clock
  - Write 1 to [HP\\_SYS\\_CLKRST\\_DMA2D\\_SYS\\_CLK\\_EN](#) to enable the 2D-DMA clock
2. Reset the PPA and 2D-DMA modules:
  - Write 1 and then 0 to [HP\\_SYS\\_CLKRST\\_RST\\_EN\\_PPA](#) reset PPA
  - Write 1 and then 0 to [HP\\_SYS\\_CLKRST\\_RST\\_EN\\_DMA2D](#) reset 2D-DMA

### 33.7.2 SRM Configuration

1. Refer to Section [33.7.1](#) to enable and reset PPA and 2D-DMA.
2. Configure the inlink and outlink of 2D-DMA. For detailed parameters, please refer to Table [33.5-4](#).
3. Select the input and output channels of 2D-DMA:
  - Write 0x1 to [DMA2D\\_OUT\\_PERI\\_SEL\\_CHx](#) to allocate one 2D-DMA output channel to the PPA SRM input

- Write 0x1 to [DMA2D\\_IN\\_PERI\\_SEL\\_CHx](#) to allocate one 2D-DMA input channel to the PPA SRM output
4. Enable descriptor interface for 2D-DMA channels used by PPA:
    - Write 1 to [DMA2D\\_OUT\\_DSCR\\_PORT\\_EN\\_CHx](#) to enable descriptor interface
    - Write 1 to [DMA2D\\_IN\\_DSCR\\_PORT\\_EN\\_CHx](#) to enable descriptor interface
  5. Configure the descriptor interface completion parameters of 2D-DMA:
    - Configure the horizontal completion parameters via [DMA2D\\_OUT\\_DSCR\\_PORT\\_BLK\\_H\\_CHx](#) to 20 for YUV420, or to 18 for other color modes
    - Configure the vertical completion parameters via [DMA2D\\_OUT\\_DSCR\\_PORT\\_BLK\\_V\\_CHx](#) to 20 for YUV420, or to 18 for other color modes
  6. Enable the input and output channels of 2D-DMA:
    - Write 1 to [DMA2D\\_OUTLINK\\_START\\_CHx](#) to enable the output channel of 2D-DMA
    - Write 1 to [DMA2D\\_INLINK\\_START\\_CHx](#) to enable the input channel of 2D-DMA
  7. Configure SRM parameters:
    - Configure SRM input data format via [PPA\\_SRM\\_RX\\_CM](#)
    - Configure SRM output data format via [PPA\\_SRM\\_TX\\_CM](#)
    - Configure the integer part of the horizontal scaling factor via [PPA\\_SRM\\_SCAL\\_X\\_INT](#)
    - Configure the fractional part of the horizontal scaling factor via [PPA\\_SRM\\_SCAL\\_X\\_FRAG](#)
    - Configure the integer part of the vertical scaling factor via [PPA\\_SRM\\_SCAL\\_Y\\_INT](#)
    - Configure the fractional part of the vertical scaling factor via [PPA\\_SRM\\_SCAL\\_Y\\_FRAG](#)
    - Configure the counterclockwise rotation angle via [PPA\\_SRM\\_ROTATE\\_ANGLE](#)
    - Enable horizontal mirroring via [PPA\\_SRM\\_MIRROR\\_X](#)
    - Enable vertical mirroring via [PPA\\_SRM\\_MIRROR\\_Y](#)
  8. Write 1 to [PPA\\_SCAL\\_ROTATE\\_START](#) to start the SRM workflow.

### 33.7.3 BLEND CLUT Configuration

1. In the FIFO mode:
  - Write 0 to [PPA\\_APB\\_FIFO\\_MASK](#) to enter the FIFO mode
  - Write data to [PPA\\_RDWR\\_WORD\\_BLEND0\\_CLUT](#) to initialize the background layer's CLUT
  - Write data to [PPA\\_RDWR\\_WORD\\_BLEND1\\_CLUT](#) to initialize the foreground layer's CLUT
2. In the MEM mode:
  - Write 1 to [PPA\\_APB\\_FIFO\\_MASK](#) to enter the MEM mode
  - Initialize the CLUT by writing data directly to the corresponding address, referring to Table [33.5-3](#)

### 33.7.4 BLEND Configuration

1. Refer to Section [33.7.1](#) to enable and reset PPA and 2D-DMA.
2. Configure the input and output link lists of 2D-DMA. For detailed parameters, please refer to Table [33.5-4](#).
3. Select the input and output channels of 2D-DMA:
  - Write 0x2 to [DMA2D\\_OUT\\_PERI\\_SEL\\_CHx](#) to allocate one 2D-DMA output channel to PPA BLEND for background layer input
  - Write 0x3 to [DMA2D\\_OUT\\_PERI\\_SEL\\_CHx](#) to allocate one 2D-DMA output channel to PPA BLEND for foreground layer input
  - Write 0x2 to [DMA2D\\_IN\\_PERI\\_SEL\\_CHx](#) to allocate one 2D-DMA input channel to PPA BLEND for output
4. Enable the input and output channels for 2D-DMA. The x in the registers refers to the two channels allocated to BLEND foreground and background respectively:
  - Write 1 to [DMA2D\\_OUTLINK\\_START\\_CHx](#) to enable the output channel of 2D-DMA
  - Write 1 to [DMA2D\\_INLINK\\_START\\_CHx](#) to enable the input channel of 2D-DMA
5. Configure BLEND parameter:
  - Configure the data type for the background layer input of BLEND via [PPA\\_BLEND0\\_RX\\_CM](#). If the format is L4/L8, initialize the CLUT first as described in [33.7.3](#)
  - Configure the data type for the background layer input of BLEND via [PPA\\_BLEND1\\_RX\\_CM](#). If the format is L4/L8, initialize the CLUT first as described in [33.7.3](#)
  - Configure the output data format of BLEND via [PPA\\_BLEND\\_TX\\_CM](#)
  - Configure the upper and lower limits of the color-key for the background layer via [PPA\\_CK\\_BG\\_HIGH\\_REG](#) and [PPA\\_CK\\_BG\\_LOW\\_REG](#)
  - Configure the upper and lower limits of the color-key for the foreground layer via [PPA\\_CK\\_FG\\_HIGH\\_REG](#) and [PPA\\_CK\\_FG\\_LOW\\_REG](#)
  - Configure the default value and behavior for the color-key via [PPA\\_CK\\_DEFAULT\\_REG](#)
  - Write 1 to [PPA\\_BLEND\\_EN](#) to enable BLEND
6. Write 1 to [PPA\\_BLEND\\_TRANS\\_MODE\\_UPDATE](#) to start BLEND workflow

### 33.7.5 BLEND Image Filling Configuration

1. Refer to Section [33.7.1](#) to enable and reset PPA and 2D-DMA.
2. Configure the input link lists of 2D-DMA (output link lists of PPA BLEND). For detailed parameters, please refer to Table [33.5-4](#).
3. Write 0x2 to [DMA2D\\_IN\\_PERI\\_SEL\\_CHx](#) to allocate one 2D-DMA input channel to PPA BLEND output.
4. Write 1 to [DMA2D\\_INLINK\\_START\\_CHx](#) to enable the output channel of 2D-DMA.
5. Configure BLEND parameters:
  - Configure the output data format of BLEND via [PPA\\_BLEND\\_TX\\_CM](#)

- Write 1 to [PPA\\_BLEND\\_FIX\\_PIXEL\\_FILL\\_EN](#) to enable image filling
- Configure the pixel value for image filling via [PPA\\_BLEND\\_TX\\_FIX\\_PIXEL](#)
- Configure the filled image size via [PPA\\_BLEND\\_HB](#) and [PPA\\_BLEND\\_VB](#)

6. Write 1 to [PPA\\_BLEND\\_TRANS\\_MODE\\_UPDATE](#) to start BLEND workflow.

### 33.7.6 Error Handling

- Refer to Section [33.7.1](#) to reset the whole PPA, and configure again.
- Or write 1 and then 0 to reset SRM and BLEND via [PPA\\_SCAL\\_ROTATE\\_RST](#), [PPA\\_BLEND\\_RST](#), and configure again.

**Note:**

- The 2D-DMA configurations mentioned in this chapter involve only key steps. For detailed procedures, please refer to [5 2D-DMA Controller \(2D-DMA\)](#).
- In this chapter, DMA2D\_OUT corresponds to the PPA input direction, and DMA2D\_IN corresponds to the PPA output direction.

## 33.8 Register Summary

The addresses in this section are relative to the Pixel-Processing Accelerator base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name                                     | Description   | Address | Access           |
|--|---|---------|------------------|
| <b>Configuration Registers</b>           |   |         |                  |
| <a href="#">PPA_BLEND0_CLUT_DATA_REG</a> | CLUT SRAM data read/write register of BLEND background layer  | 0x0000  | R/W              |
| <a href="#">PPA_BLEND1_CLUT_DATA_REG</a> | CLUT SRAM data read/write register of BLEND foreground layer  | 0x0004  | R/W              |
| <a href="#">PPA_CLUT_CONF_REG</a>        | Configures BLEND CLUT   | 0x000C  | R/W              |
| <a href="#">PPA_SRM_COLOR_MODE_REG</a>   | Configures SRM color space                                    | 0x0020  | R/W              |
| <a href="#">PPA_BLEND_COLOR_MODE_REG</a> | Configures BLEND color space                                  | 0x0024  | R/W              |
| <a href="#">PPA_SRM_BYTE_ORDER_REG</a>   | Configures SRM byte order                                     | 0x0028  | R/W              |
| <a href="#">PPA_BLEND_BYTE_ORDER_REG</a> | Configures BLEND byte order                                   | 0x002C  | R/W              |
| <a href="#">PPA_BLEND_TRANS_MODE_REG</a> | Configures the BLEND mode                                     | 0x0034  | varies           |
| <a href="#">PPA_SRM_FIX_ALPHA_REG</a>    | Configures SRM Alpha channel                                  | 0x0038  | R/W              |
| <a href="#">PPA_BLEND_TX_SIZE_REG</a>    | Configures BLEND image filling size                           | 0x003C  | R/W              |
| <a href="#">PPA_BLEND_FIX_ALPHA_REG</a>  | Configures BLEND Alpha override                               | 0x0040  | R/W              |
| <a href="#">PPA_BLEND_RGB_REG</a>        | Configures RGB color  | 0x0048  | R/W              |
| <a href="#">PPA_BLEND_FIX_PIXEL_REG</a>  | Configures BLEND image filling pixel                          | 0x004C  | R/W              |
| <a href="#">PPA_CK_FG_LOW_REG</a>        | Configures the foreground color-key lower threshold of BLEND  | 0x0050  | R/W              |
| <a href="#">PPA_CK_FG_HIGH_REG</a>       | Configures the foreground color-key higher threshold of BLEND | 0x0054  | R/W              |
| <a href="#">PPA_CK_BG_LOW_REG</a>        | Configures the background color-key lower threshold of BLEND  | 0x0058  | R/W              |
| <a href="#">PPA_CK_BG_HIGH_REG</a>       | Configures the background color-key higher threshold of BLEND | 0x005C  | R/W              |
| <a href="#">PPA_CK_DEFAULT_REG</a>       | Configures the default color-key value of BLEND               | 0x0060  | R/W              |
| <a href="#">PPA_SRM_SCAL_ROTATE_REG</a>  | Configures the SRM mode                                       | 0x0064  | varies           |
| <a href="#">PPA_SRM_MEM_PD_REG</a>       | Configures SRM memory   | 0x0068  | R/W              |
| <a href="#">PPA_REG_CONF_REG</a>         | Enables register clock  | 0x006C  | R/W              |
| <b>Interrupt Registers</b>               |   |         |                  |
| <a href="#">PPA_INT_RAW_REG</a>          | Raw status interrupt  | 0x0010  | R/<br>WTC/<br>SS |
| <a href="#">PPA_INT_ST_REG</a>           | Masked interrupt  | 0x0014  | RO               |
| <a href="#">PPA_INT_ENA_REG</a>          | Interrupt enable bits   | 0x0018  | R/W              |
| <a href="#">PPA_INT_CLR_REG</a>          | Interrupt clear bits  | 0x001C  | WT               |
| <b>Status Registers</b>                  |   |         |                  |

| Name                                     | Description                             | Address | Access |
|--|---|---------|--------|
| <a href="#">PPA_CLUT_CNT_REG</a>         | BLEND CLUT write counter register       | 0x0070  | RO     |

| <b>Version Register</b>                  |   |         |        |
| <a href="#">PPA_DATE_REG</a>             | PPA Version register                    | 0x0100  | R/W    |

### 33.9 Registers

The addresses in this section are relative to the Pixel-Processing Accelerator base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section [Programming Reserved Register Field](#).

Register 33.1. PPA\_BLEND0\_CLUT\_DATA\_REG (0x0000)

**PPA\_RDWR\_WORD\_BLEND0\_CLUT** Configures BLEND background layer CLUT access in FIFO mode. (R/W)

Register 33.2. PPA\_BLEND1\_CLUT\_DATA\_REG (0x0004)

**PPA\_RDWR\_WORD\_BLEND1\_CLUT** Configures BLEND foreground layer CLUT access in FIFO mode. (R/W)

## Register 33.3. PPA\_CLUT\_CONF\_REG (0x000C)

**PPA\_APB\_FIFO\_MASK** Configures the access mode of BLEND CLUT

1'b0: Access CLUT in FIFO mode. For details, please refer to [33.5.1.2](#).

1'b1: Access CLUT in MEM mode. For details, please refer to [33.5.1.2](#).

(R/W)

**PPA\_BLEND0\_CLUT\_MEM\_RST** Configures whether to reset BLEND0 CLUT.

0: Release reset

1: Reset

(R/W)

**PPA\_BLEND1\_CLUT\_MEM\_RST** Configures whether to reset BLEND1 CLUT.

0: Release reset

1: Reset

(R/W)

**PPA\_BLEND0\_CLUT\_MEM\_RDADDR\_RST** Configures whether to reset BLEND0 CLUT read address in FIFO mode.

0: Release reset

1: Reset

(R/W)

**PPA\_BLEND1\_CLUT\_MEM\_RDADDR\_RST** Configures whether to reset BLEND1 CLUT read address in FIFO mode.

0: Release reset

1: Reset

(R/W)

**PPA\_BLEND\_CLUT\_MEM\_FORCE\_PD** Configures whether to enable the force power down of BLEND CLUT.

0: Disable

1: Enable

(R/W)

Continued on the next page...

**Register 33.3. PPA\_CLUT\_CONF\_REG (0x000C)**

Continued from the previous page...

**PPA\_BLEND\_CLUT\_MEM\_FORCE\_PU** Configures whether to enable the force power up of BLEND CLUT.

0: Disable

1: Enable

(R/W)

**PPA\_BLEND\_CLUT\_MEM\_CLK\_ENA** Configures whether to enable the force clock on of BLEND CLUT.

0: Disable

1: Enable

(R/W)

Register 33.4. PPA\_SRM\_COLOR\_MODE\_REG (0x0020)

|            |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |                      |   |   |   |                      |    |   |   |                  |   |   |       |                  |   |   |  |               |  |  |  |               |  |  |  |

**PPA\_SRM\_RX\_CM** Configures the input image color format for SRM.

- 0: ARGB8888
  - 1: RGB888
  - 2: RGB565
  - 8: YUV420
  - Others: Reserved
- (R/W)

**PPA\_SRM\_TX\_CM** Configures the output image color format for SRM.

- 0: ARGB8888
  - 1: RGB888
  - 2: RGB565
  - 8: YUV420
  - Others: Reserved
- (R/W)

**PPA\_YUV\_RX\_RANGE** Configures the YUV range when the SRM input format is YUV.

- 0: limit range
  - 1: full range
- (R/W)

**PPA\_YUV\_TX\_RANGE** Configures the YUV range when the SRM output format is YUV.

- 0: limit range
  - 1: full range
- (R/W)

**PPA\_YUV2RGB\_PROTOCOL** Configures the protocol used for the SRM input direction YUV to RGB.

- 0: BT601
  - 1: BT709
- (R/W)

**PPA\_RGB2YUV\_PROTOCOL** Configures the protocol used for the SRM output direction RGB to YUV.

- 0: BT601
  - 1: BT709
- (R/W)

Register 33.5. PPA\_BLEND\_COLOR\_MODE\_REG (0x0024)

**PPA\_BLEND0\_RX\_CM** Configures the input image color format for BLEND background layer.

- 0: ARGB8888
- 1: RGB888
- 2: RGB565
- 4: L8
- 5: L4
- Others: Reserved

(R/W)

**PPA\_BLEND1\_RX\_CM** Configures the input image color format for BLEND foreground layer.

- 0: ARGB8888
- 1: RGB888
- 2: RGB565
- 4: L8
- 5: L4
- 6: A8
- 7: A4
- Others: Reserved

(R/W)

**PPA\_BLEND\_TX\_CM** Configures the output image color format of BLEND.

- 0: ARGB8888
- 1: RGB888
- 2: RGB565
- Others: Reserved

(R/W)

Register 33.6. PPA\_SRM\_BYTE\_ORDER\_REG (0x0028)

**PPA\_SRM\_RX\_BYTE\_SWAP\_EN** Configures whether to swap the SRM valid data input in byte.

0: Not swap

1: Swap

(R/W)

**PPA\_SRM\_RX\_RGB\_SWAP\_EN** Configures whether to swap the order of each channel when the SRM input is RGB or ARGB.

0: Not swap

1: Swap RGB to BGR, and ARGB to BGRA

(R/W)

**PPA\_SRM\_MACRO\_BK\_RO\_BYPASS** Configures whether to enable the pixel block order function

0: Enable and automatically calculate if the current block needs to be reordered

1: Disable

(R/W)

### Register 33.7. PPA\_BLEND\_BYTE\_ORDER\_REG (0x002C)

|                            |   |
|----------------------------|---|
| PPA_BLEND0_RX_BYTE_SWAP_EN | Configures whether to swap the BLEND background layer valid data input in byte. |
|----------------------------|---|

0: Not swap

1: Swap

(R/W)

**PPA\_BLEND1\_RX\_BYTE\_SWAP\_EN** Configures whether to swap the BLEND foreground layer valid data input in byte.

0: Not swap

1: Swap

(R/W)

**PPA\_BLEND0\_RX\_RGB\_SWAP\_EN** Configures whether to swap the order of each channel when the BLEND background layer input is RGB or ARGB.

0: Not swap

### 1: Swap RGB to BGR, and ARGB to BGRA

(R/W)

**PPA\_BLEND1\_RX\_RGB\_SWAP\_EN** Configures whether to swap the order of each channel when the BLEND foreground layer input is RGB or ARGB.

0: Not swap

1: Swap RGB to BGR, and ARGB to BGRA

(R/W)

### Register 33.8. PPA\_BLEND\_TRANS\_MODE\_REG (0x0034)

[illegible]

**PPA\_BLEND\_EN** Configures whether to enable BLEND.

0: Disable

1: Enable

(R/W)

**PPA\_BLEND\_BYPASS** Configures whether to bypass BLEND and directly output the background layer.

0: Bypass

1: Not bypass

(R/W)

**PPA\_BLEND\_FIX\_PIXEL\_FILL\_EN** Configures whether to enable filled image output.

0: Disable

1: Enable, where only BLEND TX works and the output pixel and size are configured by `PPA_BLEND_TX_SIZE_REG` and `PPA_BLEND_TX_FIX_PIXEL`.

(R/W)

PPA\_BLEND\_TRANS\_MODE\_UPDATE Write 1 to update the transfer mode, active  
PPA\_BLEND\_FIX\_PIXEL\_FILL\_EN, and start BLEND workflow. (WT)

**A\_BLEND\_RST** Configures whether to reset BLEND.

0: Release reset

1: Reset

(R/W)

**Register 33.9. PPA\_SRM\_FIX\_ALPHA\_REG (0x0038)**

**PPA\_SRM\_RX\_FIX\_ALPHA** Configures the Alpha channel value of SRM. (R/W)

**PPA\_SRM\_RX\_ALPHA\_MOD** Configures the Alpha mode of SRM input data.

1: Use the value of [PPA\\_SRM\\_RX\\_FIX\\_ALPHA](#)

2: Use the value of the higher eight bits of the original Alpha value multiplied by [PPA\\_SRM\\_RX\\_FIX\\_ALPHA](#)

Others: Use the value of the original Alpha value

(R/W)

**PPA\_SRM\_RX\_ALPHA\_INV** Configures whether to invert the original Alpha value of SRM.

0: Not invert

1: Invert to 255 minus the original Alpha value

For data formats without Alpha channels, the original Alpha value is 255.

(R/W)

**Register 33.10. PPA\_BLEND\_TX\_SIZE\_REG (0x003C)**

**PPA\_BLEND\_HB** Configures the horizontal width of image block that would be filled in the image filling mode. Measurement unit: pixel. (R/W)

**PPA\_BLEND\_VB** Configures the vertical width of image block that would be filled in the image filling mode. Measurement unit: pixel. (R/W)

### Register 33.11. PPA\_BLEND\_FIX\_ALPHA\_REG (0x0040)

|                       |  |  |  |  |  |  |  |  |  |  |                         |    |    |    |                         |     |    |    |                         |  |     |       |                         |   |  |  |                         |  |  |  |                         |  |  |  |

| 0 0 0 0 0 0 0 0 0 0 0 |  |  |  |  |  |  |  |  |  |  | 0                       | 0  | 0  | 0  | 0                       | 128 |    |    |                         |  | 128 | Reset |                         |   |  |  |                         |  |  |  |                         |  |  |  |

**PPA\_BLEND0\_RX\_FIX\_ALPHA** Configures the Alpha channel value of the BLEND background layer.  
(R/W)

|                         |  |
|-------------------------|--|
| PPA_BLEND1_RX_FIX_ALPHA | Configures the Alpha channel value of the BLEND foreground layer.<br>(R/W) |
|-------------------------|--|

**PPA\_BLEND0\_RX\_ALPHA\_MOD** Configures the Alpha mode of BLEND background layer data.

- 1: Use the value of `PPA_BLEND0_RX_FIX_ALPHA`
- 2: Use the value of the higher eight bits of the original Alpha value multiplied by `PPA_BLEND0_RX_FIX_ALPHA`
- Others: Use the value of the original Alpha value

(R/W)

**PPA\_BLEND1\_RX\_ALPHA\_MOD** Configures the Alpha mode of BLEND foreground layer data.

- 1: Use the value of `PPA_BLEND1_RX_FIX_ALPHA`
- 2: Use the value of the higher eight bits of the original Alpha value multiplied by `PPA_BLEND1_RX_FIX_ALPHA`
- Others: Use the value of the original Alpha value

(R/W)

**PPA\_BLEND0\_RX\_ALPHA\_INV** Configures whether to invert the original Alpha value of the BLEND background layer data.

- 0: Not invert  
1: Invert to 255 minus the original Alpha value

For data formats without Alpha channels, the original Alpha value is 255.

(R/W)

**PPA\_BLEND1\_RX\_ALPHA\_INV** Configures whether to invert the original Alpha value of the BLEND foreground layer data.

- 0: Not invert  
1: Invert to 255 minus the original Alpha value

For data formats without Alpha channels, the original Alpha value is 255.

(R/W)

Register 33.12. PPA\_BLEND\_RGB\_REG (0x0048)

**PPA\_BLEND1\_RX\_B** Configures the B channel value when the BLEND foreground layer is in A4/A8.  
(R/W)

**PPA\_BLEND1\_RX\_G** Configures the G channel value when the BLEND foreground layer is in A4/A8.  
(R/W)

**PPA\_BLEND1\_RX\_R** Configures the R channel value when the BLEND foreground layer is in A4/A8.  
(R/W)

Register 33.13. PPA\_BLEND\_FIX\_PIXEL\_REG (0x004C)

**PPA\_BLEND\_TX\_FIX\_PIXEL** Configures the pixel in the BLEND image filling mode.  
[31:24]: A, [23:16]:R, [15:8]: G, [7:0]: B.  
(R/W)

Register 33.14. PPA\_CK\_FG\_LOW\_REG (0x0050)

|            |    |    |    |    |   |   |   |                       |  |  |  |  |  |  |  |                       |  |  |  |  |  |  |  |                       |  |  |  |  |  |  |  |

## Chapter 34

# LCD and Camera Controller (LCD\_CAM)

## 34.1 Overview

The LCD and Camera controller (LCD\_CAM) on the ESP32-P4, consisting of an independent LCD control module and a camera control module, is a versatile component designed to facilitate interfacing with both LCDs and cameras.

The LCD module provides an LCD interface that can connect to RGB, Motorola 6800 (MOTO6800), and Intel 8080 (I8080) compatible LCD devices. The LCD module is responsible for sending video data to the display.

The Camera module provides one parallel camera interface that can connect to external digital video port (DVP) cameras in 8/16-bit modes. It manages communication with the camera to capture images or video frames.

The LCD\_CAM controller offers flexibility for projects that involve both displaying information on screens and working with cameras for image or video processing.

## 34.2 Features

LCD\_CAM has the following features:

- Supports the following operation modes:
  - LCD master TX mode
  - Camera slave RX mode
  - Camera master RX mode
- Supports simultaneous connection to an external LCD and a camera
- When interfacing with an external LCD, the following is supported:
  - 8/16/24-bit parallel output modes
  - RGB, MOTO6800, and I8080 LCD formats
  - LCD data retrieved from internal memory or external memory via GDMA
- When interfacing with an external camera (i.e., DVP image sensor), the following is supported:
  - 8/16-bit parallel input modes
  - Camera data stored in internal or external memory via GDMA
- Supports interrupts

## 34.3 Functional Description

### 34.3.1 Block Diagram

Figure 34.3-1 shows the structure of LCD\_CAM which includes:

- One TX control unit (LCD\_Ctrl)
- One RX control unit (Camera\_Ctrl)
- One asynchronous TX FIFO (Async TX FIFO) for communicating with external devices, e.g., LCDs
- One asynchronous RX FIFO (Async RX FIFO) for communicating with external devices, e.g., cameras
- Two clock generators (LCD\_Clock Generator and CAM\_Clock Generator) for generating clocks for each module
- Two format converters (RGB/YUV Converter) for converting video data into various formats

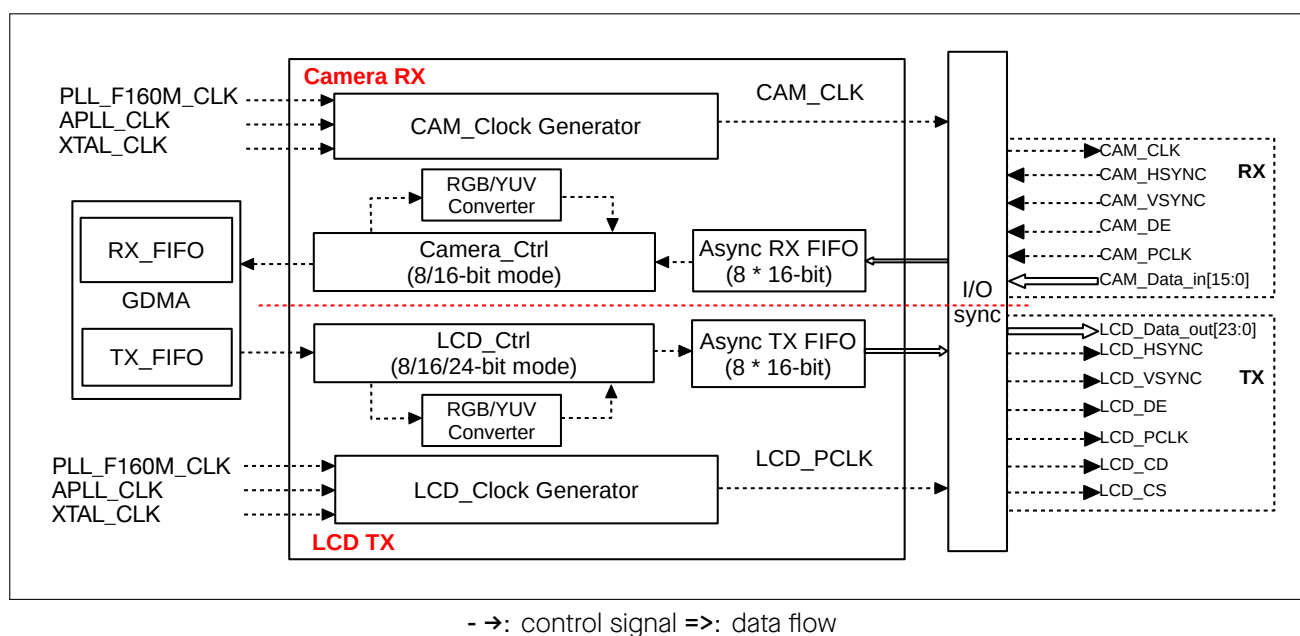

Figure 34.3-1. LCD\_CAM Block Diagram

### 34.3.2 Signal Description

Table 34.3-1 shows the input and output signals required for the operation of the LCD and Camera controller.

The definition of the three operation modes is as follows:

- **Camera Slave RX Mode:** In this mode, the Camera module is the receiver of control signals.
- **Camera Master RX Mode:** In this mode, the Camera module sends clock signals to the slave, which will transmit data to the master upon receiving the signals.
- **LCD Master TX Mode:** In this mode, the LCD module initiates communication with the slave and sends control signals to the slave.

Table 34.3-1. LCD\_CAM Input and Output Signal Descriptions

| Operation Mode        | Signal <sup>1</sup>            | Direction | Function  |
|-----------------------|--------------------------------|-----------|---|
| Camera Slave RX Mode  | CAM_PCLK                       | Input     | Camera pixel clock signal                                 |
|                       | CAM_VSYNC                      | Input     | Vertical synchronization signal (VSYNC) <sup>3</sup>      |
|                       | CAM_HSYNC                      | Input     | Horizontal synchronization signal (HSYNC) <sup>3</sup>    |
|                       | CAM_DE                         | Input     | Horizontal enable signal (DE) <sup>3</sup>                |
|                       | CAM_Data_in[N:0] <sup>2</sup>  | Input     | Camera parallel input data bus, 8/16-bit modes supported  |
| Camera Master RX Mode | CAM_PCLK                       | Input     | Camera pixel clock input signal                           |
|                       | CAM_CLK                        | Output    | Camera master clock output signal                         |
|                       | CAM_VSYNC                      | Input     | Vertical synchronization signal <sup>3</sup>              |
|                       | CAM_HSYNC                      | Input     | Horizontal synchronization signal <sup>3</sup>            |
|                       | CAM_DE                         | Input     | Horizontal enable signal <sup>3</sup>                     |
|                       | CAM_Data_in[N:0] <sup>2</sup>  | Input     | Camera parallel input data bus, 8/16-bit modes supported  |
| LCD Master TX Mode    | LCD_PCLK                       | Output    | LCD pixel clock signal                                    |
|                       | LCD_HSYNC                      | Output    | Horizontal synchronization signal in RGB format           |
|                       | LCD_VSYNC                      | Output    | Vertical synchronization signal in RGB format             |
|                       | LCD_DE                         | Output    | Horizontal enable signal in RGB format                    |
|                       | LCD_CD                         | Output    | Command and data (CD) signal in I8080 format              |
|                       | LCD_CS                         | Output    | Chip select (CS) signal in I8080/MOT06800 format          |
|                       | LCD_Data_out[M:0] <sup>2</sup> | Output    | LCD parallel output data bus, 8/16/24-bit modes supported |

<sup>1</sup> All the signals must be mapped to the chip's pins via GPIO matrix. For more information, see Chapter 8 [GPIO Matrix and IO MUX](#).

<sup>2</sup> For the input signals with 8 or 16-bit width,  $N = 7$  or  $15$  respectively. For the output signals with 8, 16, or 24-bit width,  $M = 7, 15, \text{ or } 23$  respectively.

<sup>3</sup> If [LCD\\_CAM\\_CAM\\_VH\\_DE\\_MODE\\_EN](#) is set, i.e., VSYNC + HSYNC mode is selected, then VSYNC, HSYNC, and DE signals control the data. In this case, users need to wire the three signal lines. If [LCD\\_CAM\\_CAM\\_VH\\_DE\\_MODE\\_EN](#) is cleared, i.e., DE mode is selected, then VSYNC and DE signals control the data. In this case, wiring HSYNC signal line is not a must. But in this case, the YUV-RGB conversion function of the Camera module is not available.

### 34.3.3 LCD\_CAM Module Clocks

#### 34.3.3.1 LCD Clock

The clocks used in the LCD module are generated from clock sources by the LCD\_Clock Generator, see Figure 34.3-2. The clocks include:

- Master clock: LCD\_CLK, divided from the clock sources
- Pixel clock: LCD\_PCLK, divided from LCD\_CLK

[HP\\_SYS\\_CLKRST\\_LCD\\_CLK\\_EN](#) is used to enable [LCD\\_CLK\\_SRC](#) (the clock source), and [HP\\_SYS\\_CLKRST\\_LCD\\_CLK\\_SRC\\_SEL](#) is used to select [LCD\\_CLK\\_SRC](#) from one of the following clock sources:

- 0: XTAL\_CLK
- 1: PLL\_F160M\_CLK
- 2: APLL\_CLK
- 3: Disable LCD clock source

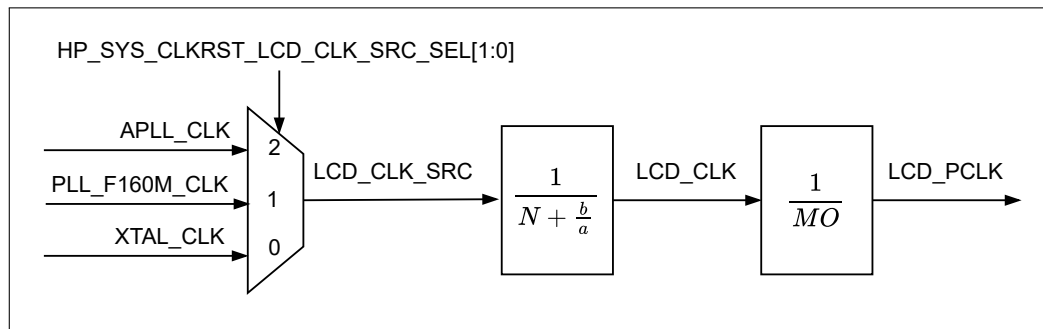

Figure 34.3-2. LCD Clock

The following formula shows the relation between the frequency of [LCD\\_CLK](#) ( $f_{\text{LCD\_CLK}}$ ) and [LCD\\_CLK\\_SRC](#) ( $f_{\text{LCD\_CLK\_SRC}}$ ):

$$f_{\text{LCD\_CLK}} = \frac{f_{\text{LCD\_CLK\_SRC}}}{N + \frac{b}{a}}$$

The values of  $N$ ,  $a$ , and  $b$  are related to [HP\\_SYS\\_CLKRST\\_LCD\\_CLK\\_DIV\\_NUM](#), [HP\\_SYS\\_CLKRST\\_LCD\\_CLK\\_DIV\\_NUMERATOR](#), and [HP\\_SYS\\_CLKRST\\_LCD\\_CLK\\_DIV\\_DENOMINATOR](#). Specifically,

- When [HP\\_SYS\\_CLKRST\\_LCD\\_CLK\\_DIV\\_NUM](#) = 0,  $N = 1$ . The values of  $a$  and  $b$  do not take effect. The divider is always 1.
- When [HP\\_SYS\\_CLKRST\\_LCD\\_CLK\\_DIV\\_NUM](#) >= 1,  $N = \text{HP\_SYS\_CLKRST\_LCD\_CLK\_DIV\_NUM} + 1$ .
  - For integer divider, please clear [HP\\_SYS\\_CLKRST\\_LCD\\_CLK\\_DIV\\_NUMERATOR](#) and [HP\\_SYS\\_CLKRST\\_LCD\\_CLK\\_DIV\\_DENOMINATOR](#).
  - For fractional divider,  $b = \text{HP\_SYS\_CLKRST\_LCD\_CLK\_DIV\_NUMERATOR}$ ,  $a = \text{HP\_SYS\_CLKRST\_LCD\_CLK\_DIV\_DENOMINATOR}$ . The value of [HP\\_SYS\\_CLKRST\\_LCD\\_CLK\\_DIV\\_NUMERATOR](#) should be smaller than the value of [HP\\_SYS\\_CLKRST\\_LCD\\_CLK\\_DIV\\_DENOMINATOR](#).

The following formula shows the relation between the frequencies of [LCD\\_PCLK](#) ( $f_{\text{LCD\_PCLK}}$ ) and [LCD\\_CLK](#) ( $f_{\text{LCD\_CLK}}$ ):

$$f_{\text{LCD\_PCLK}} = \frac{f_{\text{LCD\_CLK}}}{\text{MO}}$$

MO is determined by [LCD\\_CAM\\_LCD\\_CLK\\_EQU\\_SYSCLK](#) and [LCD\\_CAM\\_LCD\\_CLKCNT\\_N](#), specifically:

- When [LCD\\_CAM\\_LCD\\_CLK\\_EQU\\_SYSCLK](#) = 1, MO = 1.

- When `LCD_CAM_LCD_CLK_EQU_SYSCLK = 0`, `MO = LCD_CAM_LCD_CLKCNT_N + 1`.

#### Notes:

- `LCD_CAM_LCD_CLKCNT_N` must not be configured as 0.
- Using fractional divider may introduce clock jitters. In case `LCD_CLK` and `LCD_PCLK` can not be generated from `PLL_F160M_CLK` by integer divider, `APLL_CLK` can be used as the clock source. For more information, please refer to Chapter 9 *Reset and Clock*.

### 34.3.3.2 Camera Clock

The clocks used in the Camera module are generated from clock sources by the CAM\_Clock Generator, see Figure 34.3-3. The clocks include:

- Master clock: `CAM_CLK`, master clock output from the Camera module, divided from the clock sources.
- Pixel clock: `CAM_PCLK`, clock input from camera slave.

`HP_SYS_CLKRST_CAM_CLK_EN` is used to enable the `CAM_CLK_SRC` (the clock source), and `HP_SYS_CLKRST_CAM_CLK_SRC_SEL` is used to select `CAM_CLK_SRC` from one of the following clock sources:

- 0: `XTAL_CLK`
- 1: `PLL_F160M_CLK`
- 2: `APLL_CLK`
- 3: Disable camera clock source

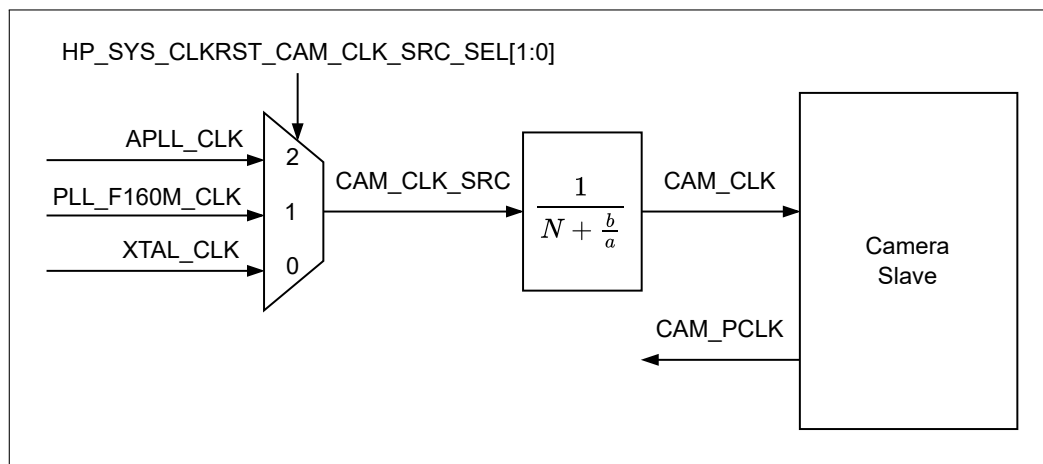

Figure 34.3-3. Camera Clock

The following formula shows the relation between the frequencies of `CAM_CLK` ( $f_{CAM\_CLK}$ ) and the divider's clock source ( $f_{CAM\_CLK\_SRC}$ ):

$$f_{CAM\_CLK} = \frac{f_{CAM\_CLK\_SRC}}{N + \frac{b}{a}}$$

$N$  is an integer value between 2 and 256. The value of  $N$  corresponds to the value of `HP_SYS_CLKRST_CAM_CLK_DIV_NUM` as follows:

- When `HP_SYS_CLKRST_CAM_CLK_DIV_NUM = 0`,  $N = 256$ .

- When `HP_SYS_CLKRST_CAM_CLK_DIV_NUM` = 1,  $N = 2$ .
- When `HP_SYS_CLKRST_CAM_CLK_DIV_NUM` = other value,  $N = \text{HP\_SYS\_CLKRST\_CAM\_CLK\_DIV\_NUM}$ .

$b$  corresponds to the value of `HP_SYS_CLKRST_CAM_CLK_DIV_NUMERATOR`, and  $a$  to the value of `HP_SYS_CLKRST_CAM_CLK_DIV_DENOMINATOR`.

- For integer divider, please clear `HP_SYS_CLKRST_CAM_CLK_DIV_NUMERATOR` and `HP_SYS_CLKRST_CAM_CLK_DIV_DENOMINATOR`.
- For fractional divider, the value of `HP_SYS_CLKRST_CAM_CLK_DIV_NUMERATOR` should be smaller than the value of `HP_SYS_CLKRST_CAM_CLK_DIV_DENOMINATOR`.

### 34.3.4 LCD\_CAM Reset

LCD\_CAM module has the following reset registers that can reset different parts of the module:

- `HP_SYS_CLKRST_RST_EN_LCDCAM`: Setting this register will reset the whole LCD\_CAM module.
- `LCD_CAM_LCD_RESET`: Setting this register will reset the whole LCD module, including the LCD control unit (LCD\_Ctrl), the RGB/YUV Converter, and Async TX FIFO. Configuring this register will not affect the Camera module.
- `LCD_CAM_CAM_RESET`: Setting this register will reset the whole Camera module, including the Camera control unit (Camera\_Ctrl), the RGB/YUV Converter, and Async RX FIFO. Configuring this register will not affect the LCD module.
- `LCD_CAM_LCD_AFIFO_RESET`: Setting this register will reset the Async TX FIFO without affecting other parts in the module. For example, setting this reset register every time the LCD finishes sending a frame can prevent transmission errors of the previous frame from affecting the transmission of the next frame.
- `LCD_CAM_CAM_AFIFO_RESET`: Setting this register will reset the Async RX FIFO without affecting other parts in the module. For example, setting this reset register every time the Camera finishes receiving a frame can prevent transmission errors of the previous frame from affecting the receiving of the next frame.

#### Notes:

- The reset register `HP_SYS_CLKRST_RST_EN_LCDCAM` is not self-clearing, meaning writing 1 enables the reset, and writing 0 releases the reset.
- All the above reset registers, except for `HP_SYS_CLKRST_RST_EN_LCDCAM`, are self-clearing, meaning that after writing 1, the hardware will generate a reset pulse and automatically clear the register.
- The module clocks `LCD_CLK` and `CAM_CLK` must be configured first before the module and FIFO are reset.

### 34.3.5 LCD\_CAM Data Format Control

#### 34.3.5.1 LCD Data Format Control

When the data is transmitted by the LCD module, it undergoes three stages of processing:

1. Stage One: Data preprocessing  
The LCD module processes the input data from GDMA and sends it to the YUV-RGB converter.

## 2. Stage Two: Data color space conversion

The YUV-RGB converter processes the data. If the YUV-RGB converter is disabled, the data remains unchanged at this stage.

## 3. Stage Three: Data post-processing

The LCD module gets data from the YUV-RGB converter for post-processing and then transmits the data to GPIO.

**Note:**

The output data from the previous stage is the input data for the subsequent stage.

The detailed configuration of each stage is described below.

### Stage One: Data Preprocessing

At this stage, configure the following registers to adjust the bit width, bit order, and byte order of the data from GDMA.

- [LCD\\_CAM\\_LCD\\_BYTE\\_MODE](#)
  - 0: The data width of the LCD input from GDMA is 8 bits.
  - 1: The data width of the LCD input from GDMA is 16 bits.
  - 2: The data width of the LCD input from GDMA is 24 bits.
- [LCD\\_CAM\\_LCD\\_BIT\\_ORDER](#)
  - 0: Do not invert.
  - 1: Invert the input data bit order.
- [LCD\\_CAM\\_LCD\\_BYTE\\_ORDER](#)
  - 0: Do not invert.
  - 1: Invert data byte order, only valid in 16/24-bit modes.

For the detailed configuration, see Table [34.3-2](#).

Table 34.3-2. LCD Data Format Control – Stage One

| GDMA Data Order <sup>1</sup> | LCD_CAM_LCD_BYTE_MODE | LCD_CAM_LCD_BIT_ORDER | LCD_CAM_LCD_BYTE_ORDER <sup>2</sup> | Output Data Order <sup>3,4</sup> |
|------------------------------|-----------------------|-----------------------|-------------------------------------|----------------------------------|
| B0,B1,B2,B3,B4,B5            | 0                     | 0                     | 0                                   | {B0}{B1}{B2}{B3}{B4}{B5}         |
|                              |                       | 1                     | 0                                   | {B0'}{B1'}{B2'}{B3'}{B4'}{B5'}   |
|                              | 1                     | 0                     | 0                                   | {B1,B0}{B3,B2}{B5,B4}            |
|                              |                       |                       | 1                                   | {B0,B1}{B2,B3}{B4,B5}            |
|                              |                       | 1                     | 0                                   | {B1',B0'}{B3',B2'}{B5',B4'}      |
|                              |                       |                       | 1                                   | {B0',B1'}{B2',B3'}{B4',B5'}      |
|                              | 2                     | 0                     | 0                                   | {B2,B1,B0}{B5,B4,B3}             |
|                              |                       |                       | 1                                   | {B0,B1,B2}{B3,B4,B5}             |
|                              |                       | 1                     | 0                                   | {B2',B1',B0'}{B5',B4',B3'}       |
|                              |                       |                       | 1                                   | {B0',B1',B2'}{B3',B4',B5'}       |

<sup>1</sup> B0 ~ B5 represent the bytes of the data from GDMA, from low address to high address.

<sup>2</sup> Only the configuration listed in the table is valid. Other configurations may cause unexpected data errors.

<sup>3</sup> In output data, the bits in {} are in big-endian, and are in parallel with each other, while the data of {} is in serial with the data of other {}. Data is sent out from left to right. Take {B0}{B1}{B2}{B3} as an example. The bits in {B0} are in parallel with each other, but are in serial with the bits in {B1}{B2}{B3}. {B0} is sent out first.

<sup>4</sup> In output data, Bn'[7:0] = Bn[0:7] (n = 0,1,2,3,4,5).

### Stage Two: Data Color Space Conversion

At this stage, the data undergoes color space conversion. For detailed configurations, please refer to Section 34.3.6.

#### Note:

Users can skip Stage Two by configuring `LCD_CAM_LCD_CONV_ENABLE` as 0, in which case the output of Stage One will directly become the input of Stage Three.

### Stage Three: Data Post-processing

At this stage, configure the following registers to adjust the bit and byte order of the output data.

- `LCD_CAM_LCD_WIRE_MODE`
  - 0: The bit width of the data transmitted to GPIO is 8 bits.
  - 1: The bit width of the data transmitted to GPIO 16 bits.
  - 2: The bit width of the data transmitted to GPIO is 24 bits.
- `LCD_CAM_LCD_DOUT_BIT_ORDER`
  - 0: Do not invert.
  - 1: Invert the output data bit order.
- `LCD_CAM_LCD_DOUT_BYTE_SWIZZLE_ENABLE`
  - 0: Disable LCD output data byte reordering.
  - 1: Enable LCD output data byte reordering by configuring `LCD_CAM_LCD_DOUT_BYTE_SWIZZLE_MODE`. For the reordering results see Table 34.3-3.

Table 34.3-3. LCD Output Data Reordering

| Stage Three Input Data Byte Order <sup>1</sup> | LCD_CAM_LCD_DOUT_BYTE_SWIZZLE_MODE <sup>2</sup> | Stage Three Output Data Byte Order <sup>3</sup> |
|--|---|---|
| B0,B1,B2,B3,B4,B5                              | 0   | B1,B0,B3,B2,B5,B4                               |
|  | 1   | B0,B2,B1,B3,B5,B4                               |
|  | 2   | B1,B0,B2,B4,B3,B5                               |
|  | 3   | B1,B2,B0,B4,B5,B3                               |
|  | 4   | B2,B0,B1,B5,B3,B4                               |
|  | 5   | B2,B1,B0,B5,B4,B3                               |

<sup>1</sup> B0 ~ B5 represent the bytes of the input data in stage three, i.e., the input data is arranged in a little-endian byte sequence. For example, when the valid data width of the input data is 16 bits, the original input data sequence B1,B0,B3,B2,B5,B4 is converted to B0,B1,B2,B3,B4,B5.

<sup>2</sup> Only the values listed in the table are valid. Other values may cause unexpected data errors.

<sup>3</sup> The byte order of data that is ultimately transmitted to GPIO is determined by the “Stage Three Output Data Byte Order” and the bit width. For example, if the “Stage Three Output Data Byte Order” is B1,B0,B2,B4,B3,B5 and the transmitted data width is 16 bits, then the transmitted data byte order would be {B0,B1}{B4,B2}{B5,B3}. In this sequence, the data within each {} is in big-endian parallel format, and the data in each {} is in serial with the data in other {}. Data is transmitted from left to right. In this particular example, the data in {B0,B1} are in parallel with each other, while the data in {B0,B1} is in serial with the data in {B4,B2} and {B5,B3}. {B0,B1} is transmitted first.

### 34.3.5.2 Camera Data Format Control

When the Camera module receives data, configure the following registers to adjust the bit/byte order of the data sent to GDMA.

- [LCD\\_CAM\\_CAM\\_2BYTE\\_EN](#)
  - 0: The data width of the Camera input is 8 bits.
  - 1: The data width of the Camera input is 16 bits.
- [LCD\\_CAM\\_CAM\\_BIT\\_ORDER](#)
  - 0: Do not invert.
  - 1: Invert data bit order.
    - \* Invert CAM\_DATA\_in[7:0] to CAM\_DATA\_in[0:7] in 8-bit mode.
    - \* Invert CAM\_DATA\_in[15:0] to CAM\_DATA\_in[0:15] in 16-bit mode.
- [LCD\\_CAM\\_CAM\\_BYTE\\_ORDER](#)
  - 0: Do not invert.
  - 1: Invert data byte order, only valid in 16-bit mode.

For the detailed configuration, see Table [34.3-4](#).

Table 34.3-4. Camera Data Format Control

| RX Data Order <sup>1</sup> | LCD_CAM_CAM<br>_2BYTE_EN | LCD_CAM_CAM<br>_BIT_ORDER <sup>2</sup> | LCD_CAM_CAM<br>_BYTE_ORDER <sup>2</sup> | GDMA<br>Order <sup>3,4</sup> | Data |
|----------------------------|--------------------------|--|---|------------------------------|------|
| {B0}{B1}{B2}{B3}           | 0                        | 0                                      | 0                                       | B0,B1,B2,B3                  |      |
|                            |                          | 1                                      | 0                                       | BO',B1',B2',B3'              |      |
| {B1,B0}{B3,B2}             | 1                        | 0                                      | 0                                       | B0,B1,B2,B3                  |      |
|                            |                          |  | 1                                       | B1,B0,B3,B2                  |      |
|                            |                          | 1                                      | 0                                       | BO',B1',B2',B3'              |      |
|                            |                          |  | 1                                       | B1',BO',B3',B2'              |      |

<sup>1</sup> In RX data, the bits in {} are in big-endian, and are in parallel with each other, while the data in {} is in serial with the data in other {}. Data is received from left to right. Take {B0}{B1}{B2}{B3} as an example. The bits in {B0} are in parallel with each other, but are in serial with the bits in {B1}{B2}{B3}. {B0} is received first.

<sup>2</sup> Only the configuration listed in the table is valid. Other configurations may cause unexpected data errors.

<sup>3</sup> B0 ~ B3 represent the bytes of the data to GDMA, from low address to high address.

<sup>4</sup> In the data to GDMA,  $Bn'[7:0] = Bn[0:7]$  ( $n = 0,1,2,3$ ).

**Note:**

If only one byte is received each time, CAM\_Data\_in[7:0] is valid data. For such case, users must connect CAM\_Data\_in[7:0] with the master.

### 34.3.6 YUV-RGB Data Format Conversion

LCD\_CAM is capable of converting data formats between YUV and RGB. The LCD module and Camera module each have a data format converter. The converters support format conversion:

- under BT601 and BT709 standards
- between RGB565 (full/limited range) and YUV422/420/411 (full/limited range) formats
- between YUV422/420/411 (full/limited range) formats
- The converter in the LCD module also supports conversion:
  - from YUV422/420/411 (full/limited range) to RGB888 (full/limited range)
  - from RGB565 (full/limited range) to YUV444 (full/limited range)
  - from YUV422/420/411 (full/limited range) to YUV444 (full/limited range)

#### 34.3.6.1 YUV Formats

In LCD\_CAM module, assume that there are 8 pixels to be transmitted, corresponding to YUV data  $[Y_i, U_i, V_i]$  ( $i = 1 \sim 8$ ). Then:

- In YUV422 mode, the LCD sends (or the camera receives) the data as follows:

|       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |       |
|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| $Y_1$ | $U_1$ | $Y_2$ | $V_2$ | $Y_3$ | $U_3$ | $Y_4$ | $V_4$ | $Y_5$ | $U_5$ | $Y_6$ | $V_6$ | $Y_7$ | $U_7$ | $Y_8$ | $V_8$ |
|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|

- In YUV420 mode, the LCD sends (or the camera receives) the data as follows:

|       |       |       |       |       |       |       |       |       |       |       |       |
|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| $Y_1$ | $U_1$ | $Y_2$ | $Y_3$ | $U_3$ | $Y_4$ | $Y_5$ | $V_5$ | $Y_6$ | $Y_7$ | $V_7$ | $Y_8$ |
|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|

- In YUV411 mode, the LCD sends (or the camera receives) the data as follows:

|       |       |       |       |       |       |       |       |       |       |       |       |
|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| $Y_1$ | $U_1$ | $Y_2$ | $Y_3$ | $V_3$ | $Y_4$ | $Y_5$ | $U_5$ | $Y_6$ | $Y_7$ | $V_7$ | $Y_8$ |
|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|

### 34.3.6.2 Format Conversion Configuration

The configuration process for the format conversion in the Camera module is almost identical to that in the LCD module. Therefore, we will illustrate the process using the example of format conversion in the LCD module.

1. Enable YUV-RGB format converter by setting [LCD\\_CAM\\_LCD\\_CONV\\_ENABLE](#).
2. Configure the valid bit width of the input data by configuring [LCD\\_CAM\\_LCD\\_CONV\\_MODE\\_8BITS\\_ON](#):
  - 0: The valid bit width is 16 bits.
  - 1: The valid bit width is 8 bits.
3. Configure the valid bit width of the output data:
  - For the format conversion in the Camera module, the valid bit width of the output data is equal to that of the input data.
  - For the format conversion in the LCD module, when [LCD\\_CAM\\_LCD\\_WIRE\\_MODE](#) is:
    - 2: The valid bit width of the format converter's output data is 24 bits.
    - Other value: The valid bit width of the format converter's output data is equal to that of the input data.
4. Select the standard by configuring [LCD\\_CAM\\_LCD\\_CONV\\_PROTOCOL\\_MODE](#):
  - 0: BT601 standard
  - 1: BT709 standard
5. Configure the conversion mode:
  - In 24-bit output mode:

**Table 34.3-5. Conversion Mode Control in 24-bit Mode**

| Conversion Mode | TRANS_MODE <sup>1</sup> | YUV_MODE <sup>2</sup> | YUV2YUV_MODE <sup>3</sup> |
|-----------------|-------------------------|-----------------------|---------------------------|
| RGB565 → YUV444 | 1                       | -                     | 3                         |
| YUV422 → RGB888 | 0                       | 0                     | 3                         |
| YUV420 → RGB888 | 0                       | 1                     | 3                         |
| YUV411 → RGB888 | 0                       | 2                     | 3                         |
| YUV422 → YUV444 | 1                       | 0                     | 0/1/2                     |
| YUV420 → YUV444 | 1                       | 1                     | 0/1/2                     |
| YUV411 → YUV444 | 1                       | 2                     | 0/1/2                     |

<sup>1</sup> The value of [LCD\\_CAM\\_LCD\\_CONV\\_TRANS\\_MODE](#)<sup>2</sup> The value of [LCD\\_CAM\\_LCD\\_CONV\\_YUV\\_MODE](#)<sup>3</sup> The value of [LCD\\_CAM\\_LCD\\_CONV\\_YUV2YUV\\_MODE](#)

- In other output modes:

**Table 34.3-6. Conversion Mode Control in Other Modes**

| Conversion Mode | TRANS_MODE <sup>1</sup> | YUV_MODE <sup>2</sup> | YUV2YUV_MODE <sup>3</sup> |
|-----------------|-------------------------|-----------------------|---------------------------|
| RGB565 → YUV422 | 1                       | 0                     | 3                         |
| RGB565 → YUV420 | 1                       | 1                     | 3                         |
| RGB565 → YUV411 | 1                       | 2                     | 3                         |
| YUV422 → RGB565 | 0                       | 0                     | 3                         |
| YUV420 → RGB565 | 0                       | 1                     | 3                         |
| YUV411 → RGB565 | 0                       | 2                     | 3                         |
| YUV422 → YUV420 | 1                       | 0                     | 1                         |
| YUV422 → YUV411 | 1                       | 0                     | 2                         |
| YUV420 → YUV422 | 1                       | 1                     | 0                         |
| YUV420 → YUV411 | 1                       | 1                     | 2                         |
| YUV411 → YUV422 | 1                       | 2                     | 0                         |
| YUV411 → YUV420 | 1                       | 2                     | 1                         |

<sup>1</sup> The value of [LCD\\_CAM\\_LCD\\_CONV\\_TRANS\\_MODE](#)<sup>2</sup> The value of [LCD\\_CAM\\_LCD\\_CONV\\_YUV\\_MODE](#)<sup>3</sup> The value of [LCD\\_CAM\\_LCD\\_CONV\\_YUV2YUV\\_MODE](#)

6. Configure the color range for the input data by configuring [LCD\\_CAM\\_LCD\\_CONV\\_DATA\\_IN\\_MODE](#):

- 0: limited color range<sup>1</sup>
- 1: full color range<sup>2</sup>

7. Configure the color range for the output data by configuring [LCD\\_CAM\\_LCD\\_CONV\\_DATA\\_OUT\\_MODE](#):

- 0: limited color range<sup>1</sup>
- 1: full color range<sup>2</sup>

**Note:**

1. If the limited color range is selected,
  - the color range of RGB is: 16 ~ 240.
  - the color range of YUV is:
    - Y: 16 ~ 240.
    - U-V: 16 ~ 235.
2. If the full color range is selected, the color range of RGB or YUV is 0 ~ 255.

### 34.3.7 LCD\_CAM Timing

#### 34.3.7.1 LCD Timing (RGB Format)

Figure 34.3-4 shows the LCD frame structure.

Figure 34.3-4. LCD Frame Structure

As depicted in the figure, the frame structure can be set up with the following registers:

- [LCD\\_CAM\\_LCD\\_VT\\_HEIGHT](#)
- [LCD\\_CAM\\_LCD\\_VA\\_HEIGHT](#)
- [LCD\\_CAM\\_LCD\\_HB\\_FRONT](#)
- [LCD\\_CAM\\_LCD\\_HT\\_WIDTH](#)
- [LCD\\_CAM\\_LCD\\_HA\\_WIDTH](#)
- [LCD\\_CAM\\_VB\\_FRONT](#)

Figure 34.3-5 shows the timing of an LCD full frame.

Figure 34.3-5. LCD Timing (RGB Format)

**Note:**

When configuring the parameters shown in the figures above, please note that the parameter is equal to the register value + 1. For example, if the expected VSYNC width is 1, then please configure `LCD_CAM_LCD_VSYNC_WIDTH` to 0. For more information, see the register description.

### 34.3.7.2 LCD Timing (I8080/MOTO6800 Format)

Figure 34.3-6 shows the LCD timing sequence in I8080/MOTO6800 format.

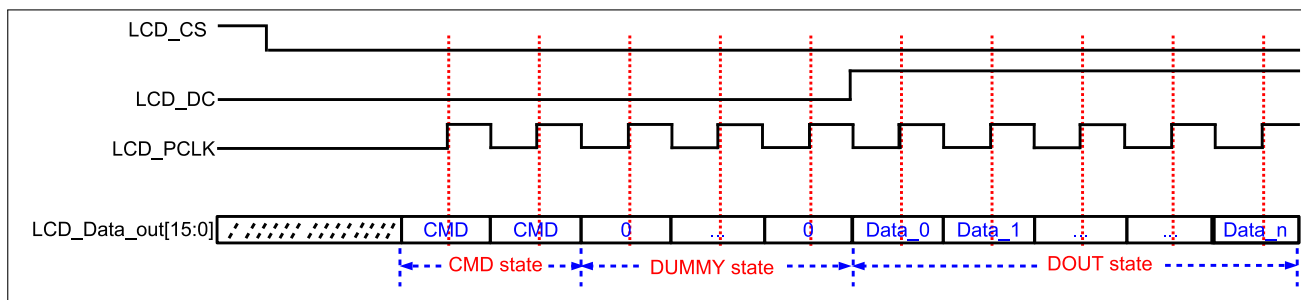

Figure 34.3-6. LCD Timing (I8080/MOTO6800 Format)

## 34.4 Interrupts

ESP32-P4's LCD\_CAM can generate the following interrupt signal that will be sent to the [Interrupt Matrix](#).

- `LCD_CAM_INTR`

The following internal interrupt sources from LCD\_CAM can generate `LCD_CAM_INTR`:

- `LCD_CAM_CAM_HS_INT`: Triggered when the Camera module receives lines more than or equal to the value of `LCD_CAM_CAM_LINE_INT_NUM` + 1.
- `LCD_CAM_CAM_VSYNC_INT`: Triggered when the Camera module receives a whole frame.

- LCD\_CAM\_LCD\_TRANS\_DONE\_INT: Triggered when the LCD module finishes the transmission.
- LCD\_CAM\_LCD\_VSYNC\_INT: Triggered when the LCD module transmits a whole frame.

**Note:**

For definitions of *interrupt*, *interrupt signal*, *interrupt source*, and their correlations, please refer to Chapter [11 Interrupt Matrix](#) > Section [11.2 Interrupt Terminology in ESP32-P4](#).

## 34.5 Software Configuration Process

**Note:**

Updating the configurations of the LCD module or the Camera module requires setting the LCD\_CAM\_LCD\_UPDATE and LCD\_CAM\_CAM\_UPDATE respectively to synchronize registers from the APB clock domain to the LCD/camera clock domain. Check the configuration examples below for more details.

### 34.5.1 Configure LCD (RGB Format) as TX Mode

Follow the steps below to configure LCD (RGB format) as TX mode via software:

1. Configure clock according to Section [34.3.3](#).
2. Configure signal pins according to Table [34.3-1](#) and Chapter [8 GPIO Matrix and IO MUX](#).
3. Enable corresponding interrupts, see Section [34.4](#).
4. Enable RGB format by setting [LCD\\_CAM\\_LCD\\_RGB\\_MODE\\_EN](#).
5. Configure frame structure according to Section [34.3.71](#).
6. Set [LCD\\_CAM\\_LCD\\_UPDATE](#) so that the configurations take effect.
7. Reset TX control unit (LCD\_Ctrl) and Async TX FIFO as described in Section [34.3.4](#).
8. Configure GDMA outlink, see Chapter [4 VDMA Controller \(VDMA\)](#).
9. Start transmitting data:
  - Wait till LCD slave gets ready.
  - Set [LCD\\_CAM\\_LCD\\_START](#) to start transmitting data.
10. Wait for the interrupt signals set in Step [3](#).
11. In frame intervals during data transmission, check if [LCD\\_CAM\\_LCD\\_NEXT\\_FRAME\\_EN](#) is set:
  - If yes, set [LCD\\_CAM\\_LCD\\_UPDATE](#) (repeating the steps above) to continue transmitting next frame.
  - If not, LCD stops transmitting data.
12. Clear [LCD\\_CAM\\_LCD\\_START](#) if data transmission is done.

### 34.5.2 Configure LCD (I8080/MOTO6800 Format) as TX Mode

Follow the steps below to configure LCD (I8080/MOTO6800 format) as TX mode via software:

1. Configure clock according to Section [34.3.3](#).

2. Configure signal pins according to Table [34.3-1](#) and Chapter [8 GPIO Matrix and IO MUX](#).
3. Enable corresponding interrupts, see Section [34.4](#).
4. Clear [LCD\\_CAM\\_LCD\\_RGB\\_MODE\\_EN](#) to disable RGB format.
5. Configure CMD phase with [LCD\\_CAM\\_LCD\\_CMD](#), [LCD\\_CAM\\_LCD\\_CMD\\_2\\_CYCLE\\_EN](#), and [LCD\\_CAM\\_LCD\\_LATTER\\_CMD\\_VALUE](#).
6. Configure DUMMY phase with [LCD\\_CAM\\_LCD\\_DUMMY](#) and [LCD\\_CAM\\_LCD\\_DUMMY\\_CYCLELEN](#).
7. Configure DOUT phase with [LCD\\_CAM\\_LCD\\_DOUT](#), depending on the output mode:
  - In a fixed-length output<sup>1</sup>, configure data length in [LCD\\_CAM\\_LCD\\_DOUT\\_CYCLELEN](#).
  - In a continuous output<sup>2</sup>, set [LCD\\_CAM\\_LCD\\_ALWAYS\\_OUT\\_EN](#). Users do not need to configure [LCD\\_CAM\\_LCD\\_DOUT\\_CYCLELEN](#).

**Note:**

- (a) In a fixed-length output, the LCD module stops sending data once the data length reaches the value set in [LCD\\_CAM\\_LCD\\_DOUT\\_CYCLELEN](#).
- (b) In a continuous output, LCD module keeps sending data till:
  - [LCD\\_CAM\\_LCD\\_START](#) is cleared;
  - or [LCD\\_CAM\\_LCD\\_RESET](#) is set;
  - or all the data in GDMA is sent out.

8. Configure the CD signal mode, including the default value of the CD signal and the values at each phase, see the description of [LCD\\_CAM\\_LCD\\_MISC\\_REG](#).
9. Set [LCD\\_CAM\\_LCD\\_UPDATE](#) so that the configurations take effect.
10. Reset TX control unit (LCD\_Ctrl) and Async TX FIFO as described in Section [34.3.4](#).
11. Configure GDMA outlink, see Chapter [4 VDMA Controller \(VDMA\)](#).
12. Start transmitting data:
  - Wait till LCD slave gets ready.
  - Set [LCD\\_CAM\\_LCD\\_START](#) to start transmitting data.
13. Wait for the interrupt signals set in Step 2.
14. Clear [LCD\\_CAM\\_LCD\\_START](#) if data transmission is done.

**Notes:**

No matter in which format, RGB or I8080/MOTO6800, the rules below must be followed when accessing internal and external memory via GDMA:

- If LCD data bus is configured to 8-bit parallel output mode, then
  - The pixel clock frequency must be less than 80 MHz.
  - If YUV-RGB format conversion is being used at the same time, the pixel clock frequency must be less than 60 MHz.
- If LCD data bus is configured to 16-bit parallel output mode, then

- The pixel clock frequency must be less than 40 MHz.
- If YUV-RGB format conversion is being used at the same time, the pixel clock frequency must be less than 30 MHz.

### 34.5.3 Configure Camera as RX Mode

Follow the steps below to configure the Camera as RX mode via software:

1. Configure clock according to Section 34.3.3. Note that in slave mode, the module clock frequency should be twice as fast as the PCLK frequency of the image sensor.
2. Configure signal pins according to Table 34.3-1 and Chapter 8 *GPIO Matrix and IO MUX*.
3. Set or clear `LCD_CAM_CAM_VH_DE_MODE_EN` according to the control signal HSYNC.
4. Set needed RX data format according to Section 34.3.5.2.
5. Set `LCD_CAM_CAM_UPDATE` so that the configurations take effect.
6. Reset RX control unit (Camera\_Ctrl) and Async RX FIFO as described in Section 34.3.4.
7. Enable corresponding interrupts, see Section 34.4.
8. Configure GDMA inlink, and set the length of RX data in `LCD_CAM_CAM_REC_DATA_BYTELEN`.
9. Start receiving data:
  - In master mode, when the slave is ready, set `LCD_CAM_CAM_START` to start receiving data.
  - In slave mode, set `LCD_CAM_CAM_START`. Receiving data starts after the master provides clock signal and control signal.
10. Receive data and store the data to GDMA. Then corresponding interrupts set in Step 7 will be generated.

#### Notes:

- No matter in which operation mode, camera master RX mode or camera slave RX mode, the rules below must be followed when accessing internal memory via GDMA:
  - If 8-bit parallel data input mode is selected, then
    - \* The pixel clock frequency must be less than 80 MHz.
    - \* If YUV-RGB format is being used at the same time, the pixel clock frequency must be less than 60 MHz.
  - If 16-bit parallel data input mode is selected, then
    - \* The pixel clock frequency must be less than 40 MHz.
    - \* If YUV-RGB format conversion is being used at the same time, the pixel clock frequency must be less than 30 MHz.

#### Note:

If both LCD and camera are connected externally at the same time, it is necessary to ensure that the maximum data throughput on the interface is less than the total data bandwidth of GDMA when accessing internal/external storage. The default frequency of APB\_CLK is 80 MHz in this scenario. For more information about APB\_CLK, see Chapter 9 [Reset and Clock](#).

## 34.6 Register Summary

The addresses in this section are relative to LCD\_CAM base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name   | Description                                   | Address | Access |
|--|---|---------|--------|
| <b>LCD Module Configuration Registers</b>      |   |         |        |
| <a href="#">LCD_CAM_LCD_CLOCK_REG</a>          | LCD clock configuration register              | 0x0000  | R/W    |

## 34.7 Registers

The addresses in this section are relative to LCD\_CAM base address provided in Table 6.3-2 in Chapter 6 [System and Memory](#).

For how to program reserved fields, please refer to Section [Programming Reserved Register Field](#).

**Register 34.1. LCD\_CAM\_LCD\_CLOCK\_REG (0x0000)**

|                |     |            |  |  |  |  |  |  |                       |   |                            |     |                           |  |                          |       |
|----------------|-----|------------|--|--|--|--|--|--|-----------------------|---|----------------------------|-----|---------------------------|--|--------------------------|-------|
| LCD_CAM_CLK_EN |     | (reserved) |  |  |  |  |  |  | LCD_CAM_LCD_CLK_CNT_N |   | LCD_CAM_LCD_CLK_EQU_SYSCLK |     | LCD_CAM_LCD_CLK_IDLE_EDGE |  | LCD_CAM_LCD_CLK_OUT_EDGE |       |
|                |     |            |  |  |  |  |  |  |                       |   |                            |     |                           |  |                          |       |
| 31             | 30  |            |  |  |  |  |  |  | 9                     | 8 | 7                          | 6   | 5                         |  |                          | 0     |
| 0              | 0x0 |            |  |  |  |  |  |  | 0                     | 0 | 1                          | 0x3 |                           |  |                          | Reset |

**LCD\_CAM\_LCD\_CLKCNT\_N** Determines the frequency of the LCD pixel clock LCD\_PCLK together with [LCD\\_CAM\\_LCD\\_CLK\\_EQU\\_SYSCLK](#).

When [LCD\\_CAM\\_LCD\\_CLK\\_EQU\\_SYSCLK](#) = 0,

$$f_{LCD\_PCLK} = f_{LCD\_CLK} / (LCD\_CAM\_LCD\_CLKCNT\_N + 1)$$

Note: this field must not be configured to 0.

(R/W)

**LCD\_CAM\_LCD\_CLK\_EQU\_SYSCLK** Determines the frequency of the LCD pixel clock LCD\_PCLK together with [LCD\\_CAM\\_LCD\\_CLK\\_EQU\\_SYSCLK](#).

$$0: f_{LCD\_PCLK} = f_{LCD\_CLK} / (LCD\_CAM\_LCD\_CLKCNT\_N + 1)$$

$$1: f_{LCD\_PCLK} = f_{LCD\_CLK}$$

(R/W)

**LCD\_CAM\_LCD\_CLK\_IDLE\_EDGE** Indicates the level of LCD\_PCLK in idle state.

0: LCD\_PCLK is low.

1: LCD\_PCLK is high.

(R/W)

**LCD\_CAM\_LCD\_CLK\_OUT\_EDGE** Indicates the level of LCD\_PCLK in the first half clock cycle.

0: LCD\_PCLK is low.

1: LCD\_PCLK is high.

(R/W)

**LCD\_CAM\_CLK\_EN** Set this bit to force enable the clock for all configuration registers. Clock gate is not used. (R/W)

**Register 34.2. LCD\_CAM\_LCD\_RGB\_YUV\_REG (0x0010)**

**LCD\_CAM\_LCD\_CONV\_8BITS\_DATA\_INV** Configures whether to swap every two 8-bit GDMA input data.

0: Do not swap.

1: Swap.

(R/W)

**LCD\_CAM\_LCD\_CONV\_YUV2YUV\_MODE** Configures data format conversion in YUV-to-YUV mode.

0: Data is converted to YUV422 format.

1: Data is converted to YUV420 format.

2: Data is converted to YUV411 format.

3: Data format conversion is disabled.

Only valid when [LCD\\_CAM\\_LCD\\_CONV\\_TRANS\\_MODE](#) = 1.

(R/W)

**LCD\_CAM\_LCD\_CONV\_YUV\_MODE** Configures the YUV format of input data in YUV-to-YUV mode and YUV-to-RGB mode.

0: Input data is in YUV422 format.

1: Input data is in YUV420 format.

2: Input data is in YUV411 format.

(R/W)

**LCD\_CAM\_LCD\_CONV\_PROTOCOL\_MODE** Configures the data format conversion standard.

0: BT601.

1: BT709.

(R/W)

**LCD\_CAM\_LCD\_CONV\_DATA\_OUT\_MODE** Configures the color range for output data.

0: Limited color range.

1: Full color range.

(R/W)

**LCD\_CAM\_LCD\_CONV\_DATA\_IN\_MODE** Configures the color range for input data.

0: Limited color range.

1: Full color range.

(R/W)

Continued on the next page...

**Register 34.2. LCD\_CAM\_LCD\_RGB\_YUV\_REG (0x0010)**

Continued from the previous page...

**LCD\_CAM\_LCD\_CONV\_MODE\_8BITS\_ON** Configures the valid bit width of the YUV-RGB converter's input data.

0: 16 bits.

1: 8 bits.

(R/W)

**LCD\_CAM\_LCD\_CONV\_TRANS\_MODE** Configures the RGB or YUV format for data conversion.

0: Converted to RGB format.

1: Converted to YUV format.

(R/W)

**LCD\_CAM\_LCD\_CONV\_ENABLE** Configures whether to enable YUV-RGB converter.

0: Bypass the converter.

1: Enable the converter.

(R/W)

**Register 34.3. LCD\_CAM\_LCD\_USER\_REG (0x0014)**

**LCD\_CAM\_LCD\_DOUT\_CYCLELEN** Configures the period of the LCD module's data output phase (DOUT). The actual period duration = the value of this field + 1. (R/W)

**LCD\_CAM\_LCD\_ALWAYS\_OUT\_EN** Enables continuous output of the LCD module. In this mode, the LCD module continuously outputs data during the DOUT phase, until [LCD\\_CAM\\_LCD\\_START](#) is cleared or [LCD\\_CAM\\_LCD\\_RESET](#) is set. (R/W)

**LCD\_CAM\_LCD\_DOUT\_BYTE\_SWIZZLE\_MODE** Configures LCD output data byte reordering. For details please refer to Table [34.3-3](#). (R/W)

**LCD\_CAM\_LCD\_DOUT\_BYTE\_SWIZZLE\_ENABLE** Configures whether to enable LCD output data byte reordering.  
 0: Disable  
 1: Enable  
 (R/W)

**LCD\_CAM\_LCD\_DOUT\_BIT\_ORDER** Configures whether to invert the LCD output data bit order.  
 0: Do not invert.  
 1: Invert the bit order. In n-bit mode, LCD\_DATA\_in[n-1:0] is inverted to LCD\_DATA\_in[0:n-1].  
 (R/W)

**LCD\_CAM\_LCD\_BYTE\_MODE** Configures the data bit width from GDMA.  
 0: 8-bit  
 1: 16-bit  
 2: 24-bit  
 (R/W)

**LCD\_CAM\_LCD\_UPDATE** Configures whether to update the LCD register configurations.  
 0: Do not update.  
 1: Update configurations. This bit is cleared by hardware.  
 (R/W)

**LCD\_CAM\_LCD\_BIT\_ORDER** Configures whether to invert the bit order of the LCD input data.  
 0: Do not invert.  
 1: Invert the bit order. In n-bit mode, LCD\_DATA\_in[n-1:0] is inverted to LCD\_DATA\_in[0:n-1].  
 (R/W)

Continued on the next page...

**Register 34.3. LCD\_CAM\_LCD\_USER\_REG (0x0014)**

Continued from the previous page...

**LCD\_CAM\_LCD\_BYTE\_ORDER** Configures whether to invert the byte order of the LCD input data.

0: Do not invert.

1: Invert data byte order, only valid in 16/24-bit mode.

(R/W)

**LCD\_CAM\_LCD\_DOUT** Configures the LCD DOUT phase.

0: Disable.

1: The LCD module sends data in RGB/I8080 format.

(R/W)

**LCD\_CAM\_LCD\_DUMMY** Configures the LCD DUMMY phase.

0: Disable.

1: Enable the DUMMY phase when LCD initiates.

(R/W)

**LCD\_CAM\_LCD\_CMD** Configures the LCD CMD phase.

0: Disable.

1: The LCD module sends commands.

(R/W)

**LCD\_CAM\_LCD\_START** When set to 1, the LCD module starts transmitting data. (R/W)

**LCD\_CAM\_LCD\_RESET** When set to 1, the LCD module is reset. (WO)

**LCD\_CAM\_LCD\_DUMMY\_CYCLELEN** Configures DUMMY cycles. DUMMY cycles = this value + 1.

(R/W)

**LCD\_CAM\_LCD\_CMD\_2\_CYCLE\_EN** Configures the number of cycles of the Command phase.

0: One cycle.

1: Two cycles.

(R/W)

**Register 34.4. LCD\_CAM\_LCD\_MISC\_REG (0x0018)**

Reset

**LCD\_CAM\_LCD\_WIRE\_MODE** Configures the bit width of LCD output data to GPIO.

0: 8-bit

1: 16-bit

2: 24-bit

(R/W)

**LCD\_CAM\_LCD\_VFK\_CYCLELEN** Configures the clock cycles of the setup time in LCD non-RGB mode. Setup clock cycles = this value + 1. (R/W)**LCD\_CAM\_LCD\_VBK\_CYCLELEN** Configures the clock cycles of the hold time in LCD non-RGB mode. Hold clock cycles = this value + 1. (R/W)**LCD\_CAM\_LCD\_NEXT\_FRAME\_EN** Configures whether to send the next frame.

0: The LCD module stops when the current frame is sent out.

1: The LCD module continues sending the next frame when the current frame is sent out.

(R/W)

**LCD\_CAM\_LCD\_BK\_EN** Configures whether to enable blanking region when LCD sends data.

0: No blanking region.

1: Enable blanking region.

(R/W)

**LCD\_CAM\_LCD\_AFIFO\_RESET** When set to 1, Async TX FIFO is reset. (WO)**LCD\_CAM\_LCD\_CD\_DATA\_SET** Configures LCD\_CD value in DOUT phase for LCD I8080 mode.0: LCD\_CD = [LCD\\_CAM\\_LCD\\_CD\\_IDLE\\_EDGE](#)1: LCD\_CD = [!LCD\\_CAM\\_LCD\\_CD\\_IDLE\\_EDGE](#)

(R/W)

**LCD\_CAM\_CAM\_STOP\_EN** Configures whether to stop the Camera module.

0: Do not stop.

1: The Camera module stops when GDMA RX FIFO is full.

(R/W)

**LCD\_CAM\_CAM\_VSYNC\_FILTER\_THRES** Configures the filter threshold value for CAM\_VSYNC signal. (R/W)

**LCD\_CAM\_CAM\_UPDATE** Configures whether to update the Camera register configurations.

0: No effect.

1: Update configurations. This bit is cleared by hardware.

(R/W)

**LCD\_CAM\_CAM\_BYTE\_ORDER** Configures whether to invert the byte order of the Camera's input data.

0: Do not invert.

1: Invert data byte order, only valid in 16-bit mode.

(R/W)

**LCD\_CAM\_CAM\_BIT\_ORDER** Configures whether to invert the bit order of the Camera's input data.

0: Do not invert.

1: Invert the bit order. In n-bit mode, CAM\_DATA\_in[n-1:0] is inverted to CAM\_DATA\_in[0:n-1]. n = 8 or 15.

(R/W)

**LCD\_CAM\_CAM\_LINE\_INT\_EN** Configures whether the RAW bit of [LCD\\_CAM\\_CAM\\_HS\\_INT](#) can generate.

0: Disable the interrupt, i.e., [LCD\\_CAM\\_CAM\\_HS\\_INT\\_RAW](#) cannot generate.

1: Enable the interrupt, i.e., [LCD\\_CAM\\_CAM\\_HS\\_INT\\_RAW](#) can generate.

(R/W)

**LCD\_CAM\_CAM\_VS\_EOF\_EN** Configures whether to enable CAM\_VSYNC to generate in\_suc\_eof.

0: in\_suc\_eof is controlled by [LCD\\_CAM\\_CAM\\_REC\\_DATA\\_BYTELEN](#).

1: in\_suc\_eof is controlled by CAM\_VSYNC.

(R/W)

### Register 34.13. LCD\_CAM\_CAM\_CTRL1\_REG (0x0008)

|    |    |    |    |    |    |    |    |    |    |    |     |    |    |      |       |
|----|----|----|----|----|----|----|----|----|----|----|-----|----|----|------|-------|
| 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 | 23 | 22 | 21 |     | 16 | 15 |      | 0     |

**LCD\_CAM\_CAM\_REC\_DATA\_BYTELEN** Configures the data byte length received by the Camera module. When the length of received data reaches this value + 1, GDMA in\_suc\_eof\_int is triggered. (R/W)

**LCD\_CAM\_CAM\_LINE\_INT\_NUM** Configures the number of video lines. When the number of video lines reaches this value + 1, **LCD\_CAM\_CAM\_HS\_INT** is triggered. (R/W)

**LCD\_CAM\_CAM\_CLK\_INV** Configures whether to invert the input signal CAM\_PCLK.  
0: Do not invert.  
1: Invert.  
(R/W)

|                                    |   |
|------------------------------------|---|
| <b>LCD_CAM_CAM_VSYNC_FILTER_EN</b> | Configures whether to enable CAM_VSYNC filter function. |
| 0: Bypass.                         |   |
| 1: Enable.                         |   |
| (R/W)                              |   |

**LCD\_CAM\_CAM\_2BYTE\_EN** Configures the width of input data.  
 0: 8 bits.  
 1: 16 bits.  
 (R/W)

**LCD\_CAM\_CAM\_DE\_INV** Configures whether to invert the input signal CAM\_DE.  
0: Do not invert.  
1: Invert.  
(R/W)

**LCD\_CAM\_CAM\_HSYNC\_INV** Configures whether to invert the input signal CAM\_HSYNC.  
0: Do not invert.  
1: Invert.  
(R/W)

**LCD\_CAM\_CAM\_VSYNC\_INV** Configures whether to invert the input signal CAM\_VSYNC.  
0: Do not invert.  
1: Invert.  
(R/W)

**Register 34.13. LCD\_CAM\_CAM\_CTRL1\_REG (0x0008)**

Continued from the previous page...

**LCD\_CAM\_CAM\_VH\_DE\_MODE\_EN** Configures the input control signals.

0: VSYNC and DE signals control the data. In this case, wiring HSYNC signal line is not a must. But in this case, the YUV-RGB conversion function of the camera module is not available.

1: VSYNC, HSYNC, and DE signals control the data. In this case, users need to wire the three signal lines.

(R/W)

**LCD\_CAM\_CAM\_START** Camera module start signal. (R/W)

**LCD\_CAM\_CAM\_RESET** When set to 1, the Camera module is reset. (WO)

**LCD\_CAM\_CAM\_AFIFO\_RESET** When set to 1, the Camera Async RX FIFO is reset. (WO)

**Register 34.14. LCD\_CAM\_CAM\_RGB\_YUV\_REG (0x000C)**

Reset

**LCD\_CAM\_CAM\_CONV\_8BITS\_DATA\_INV** Configures whether to swap every two bytes of input data.

0: Do not invert.

1: Invert.

(R/W)

**LCD\_CAM\_CAM\_CONV\_YUV2YUV\_MODE** Configures the data format conversion in YUV-to-YUV mode.

0: Data is converted to YUV422 format.

1: Data is converted to YUV420 format.

2: Data is converted to YUV411 format.

3: Disabled.

Valid only when [LCD\\_CAM\\_CAM\\_CONV\\_TRANS\\_MODE](#) = 1.

(R/W)

**LCD\_CAM\_CAM\_CONV\_YUV\_MODE** Configures the YUV format of the Camera input data in YUV-to-YUV mode or YUV-to-RGB mode.

0: Data is converted to YUV422 format.

1: Data is converted to YUV420 format.

2: Data is converted to YUV411 format.

(R/W)

**LCD\_CAM\_CAM\_CONV\_PROTOCOL\_MODE** Configures the data format conversion standard.

0: BT601.

1: BT709.

(R/W)

**LCD\_CAM\_CAM\_CONV\_DATA\_OUT\_MODE** Configures the color range for the YUV-RGB converter's output data.

0: Limited color range.

1: Full color range.

(R/W)

## Chapter 35

### MIPI CSI

#### 35.1 Introduction

The MIPI CSI module of ESP32-P4 provides a standard interface with camera modules for mobile devices, such as smartphones, tablets, and other portable electronics. It connects cameras to application processors in mobile devices, enabling high-speed data transfer and efficient communication between the camera and the host system.

ESP32-P4 MIPI CSI implements a MIPI RX D-PHY and a MIPI CSI-2 host controller. It provides one clock lane and two data lanes, supporting a data transmission of up to 1.5 Gbps per lane to communicate with camera sensors compliant with the [MIPI CSI-2 specification](#).

**Note:**

The [MIPI CSI-2 specification](#) defines the communication between image application processors and cameras. It is part of the communication protocols defined by MIPI Alliance standards, designed for chip-to-chip communication in mobile systems.

#### 35.2 Terminology

This section covers terminology used to describe the functionality of MIPI CSI.

|                    |  |
|--------------------|--|
| <b>MIPI CSI-2</b>  | MIPI Alliance Specification for Camera Serial Interface 2. It receives camera data through the PHY Protocol Interface (PPI) from the MIPI RX D-PHY and outputs data through a 32-bit image interface to the Image Signal Processor (ISP).                  |
| <b>MIPI D-PHY</b>  | MIPI Alliance Specification for the source synchronous physical layer. It implements the physical layer of universal lanes for the MIPI D-PHY interface, which receives clock and data from MIPI camera sensors through one clock lane and two data lanes. |
| <b>PPI</b>         | PHY Protocol Interface defined in MIPI Alliance Specification. It connects the CSI-2 host controller and D-PHY.  |
| <b>ISP</b>         | Image Signal Processor, used to process images received from the camera. For more details about ISP, please refer to Chapter <a href="#">32 Image Signal Processor (ISP)</a> .   |
| <b>Transmitter</b> | The device that transmits data, usually a MIPI camera.   |
| <b>Receiver</b>    | The device that receives data, in this chapter, the ESP32-P4 chip.   |
| <b>Clock lane</b>  | The clock lane of the MIPI D-PHY interface, used to transmit high-speed differential clock signals.  |

|                                       |  |
|---------------------------------------|--|
| <b>Data lane</b>                      | The data lane of the MIPI D-PHY interface, used to transmit data and commands.   |
| <b>Line</b>                           | The line of the data lane of the MIPI D-PHY interface; each data lane consists of two lines: P and N.  |
| <b>Sequence</b>                       | A string of state codes received through the data lane, controlling the MIPI RX D-PHY to enter other modes from Control mode.  |
| <b>Control mode</b>                   | One of the operating modes of the MIPI RX D-PHY, used to receive requests from the transmitter. All other modes return to this mode.   |
| <b>High-Speed Data Reception mode</b> | One of the operating modes of the MIPI RX D-PHY, used to receive data in burst mode.   |
| <b>Escape mode</b>                    | One of the operating modes of the MIPI RX D-PHY, used to support low-speed asynchronous communication on the data lane to maintain a low-power state.                              |
| <b>Ultra Low Power State (ULPS)</b>   | One of the operating modes of the MIPI RX D-PHY, in which the clock lane and data lane are in idle state, maintaining the lowest power consumption except for the Shut-Down state. |
| <b>Test code</b>                      | Specific control or configuration codes used to manage and test the MIPI D-PHY, such as setting operational mode.  |

## 35.3 Feature List

MIPI CSI in ESP32-P4 supports the following features:

- MIPI RX D-PHY compliant with MIPI D-PHY interface specification revision 1.1
- MIPI CSI-2 host compliant with MIPI CSI-2 specification
- Two data lanes, each with a rate ranging from 80 Mbps to 1.5 Gbps
- Ultra Low Power State in Escape mode
- 32-bit image interface with ISP
- Various input image formats:
  - RGB888/RGB666/RGB565
  - YUV422/YUV420
  - RAW8/RAW10/RAW12
- Error detection and correction at PHY level, packet level, line level, and frame level
- Electromagnetic Interference (EMI) mitigation by data scrambling

**Note:**

ESP32-P4 does not support different virtual channels defined in the MIPI specification, so virtual channel numbers in the packet header are ignored.

## 35.4 Architectural Overview

Figure 35.4-1 shows the architecture of MIPI CSI and its connection to other system components. The MIPI CSI consists of the following components:

- **MIPI RX D-PHY:** Implements the physical link layer, including one clock lane (CP/CN) and two data lanes (D0P/D0N and D1P/D1N) to connect with cameras.
- **MIPI CSI-2 host:** Implements the CSI-2 protocol, receives camera data from D-PHY, and outputs through the Image Interface, which includes:
  - **Pipeline:** Registers PPI signals.
  - **Descrambler:** Converts PPI scrambled data to its original values when enabled.
  - **PHY adaptation layer:** Manages the PHY interface, including PHY error handling.
  - **Packet analyzer:** Processes received data from lanes, including data lane merging, header decoding, and various error detection and correction.
  - **Image interface:** Reorders pixels into 32-bit Image Interface data and generates timing-accurate video synchronization signals.
  - **Error management:** Monitors and notifies about error conditions on the CSI-2 link.
  - **Register bank:** Provides access to configuration and control registers.
- **PPI interface:** Connects the MIPI RX D-PHY and the MIPI CSI-2 host controller.
- **Test code interface:** Sends configuration details from the MIPI CSI-2 host controller to the MIPI RX D-PHY.

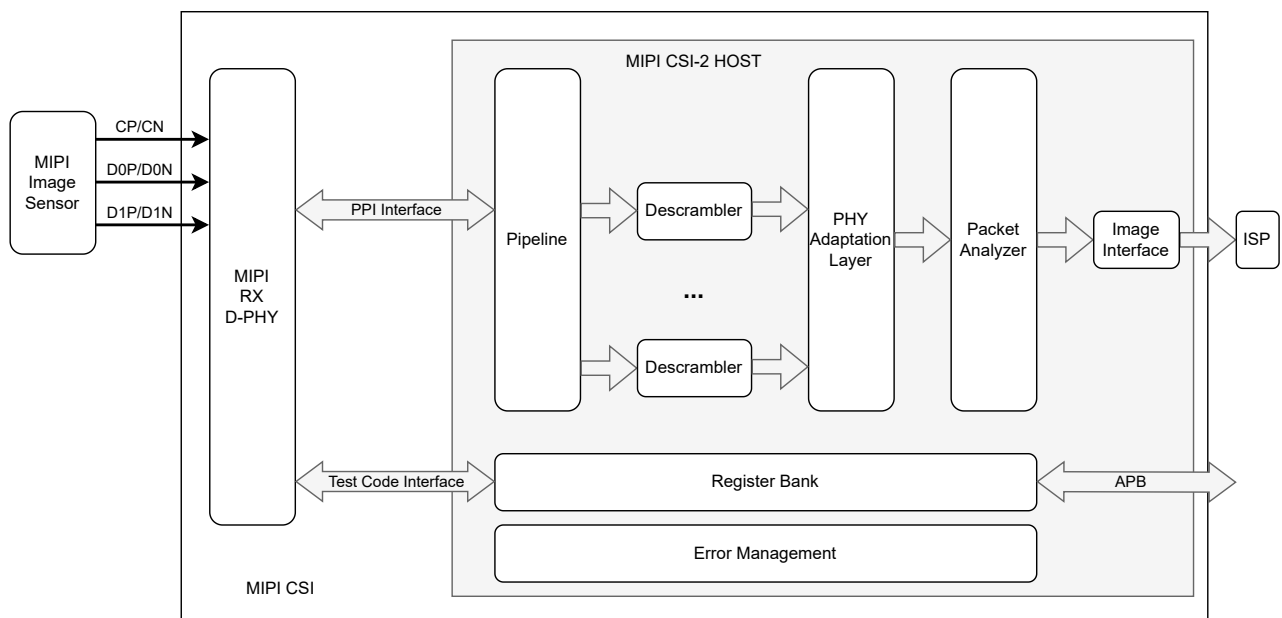

Figure 35.4-1. MIPI CSI Architecture

## 35.5 Functional Description

This section introduces the operating states and modes of the MIPI RX D-PHY and the major functions that facilitate the use of MIPI CSI. For detailed configurations, refer to Section [35.7 Programming Procedures](#).

### 35.5.1 Data Lane State

The functions of the transmitter determine the data lane state by driving certain line levels. During normal operation, either an HS-TX or an LP-TX is driving a lane.

- HS-TX: High-Speed transaction. An HS-TX always drives the lane differentially. It operates in two states: HS-0 and HS-1. When HS-TX drives the lane, the lane remains in High-Speed Data Reception mode.
  - HS-0: Transmits differential data 0 in High-Speed Data Reception mode.
  - HS-1: Transmits differential data 1 in High-Speed Data Reception mode.
- LP-TX: Low-Power transaction. The two LP-TXs drive the two lines of a lane independently and single-ended. It operates in four states: LP-00, LP-01, LP-10, and LP-11. When LP-TX drives the lane, the lane is in Control mode or Escape mode.
  - LP-00: A bridge state between other LP states (LP-01, LP-10, LP-11) in Control Mode or Escape Mode. When in Ultra Low Power State (ULPS), lanes are also in the LP-00 state.
  - LP-01: Transmits data 0 in Escape mode, or indicates entry into High-Speed Data Reception mode from Control mode.  
The complete sequence for entering High-Speed Data Reception mode is: LP-11 → LP-01 → LP-00
  - LP-10: Transmits data 1 in Escape mode, or indicates entry into Escape mode or Turnaround mode from Control mode.  
The complete sequence for entering Escape mode is: LP-11 → LP-10 → LP-00 → LP-01 → LP-00.  
The complete sequence for entering the Turnaround mode is: LP-11 → LP-10 → LP-00 → LP-10 → LP-00
  - LP-11: The stop state, i.e., the default idle state of a lane.

**Note:**

The Turnaround mode is used for switching the data transmission direction. This mode is not used in the ESP32-P4 MIPI CSI, and will not be further explained in this chapter.

Figure [35.5-1](#) shows the lane line levels for High-Speed (HS) and Low-Power (LP) transactions.

Figure 35.5-1. Level of MIPI Data Lane Lines

Table 35.5-1 shows the available line states.

Table 35.5-1. Lane State Descriptions

| State Code | DP Line | DN Line | Corresponding State in Different Modes |              |             |
|------------|---------|---------|--|--------------|-------------|
|            |         |         | High-Speed Data Reception Mode         | Control Mode | Escape Mode |
| HS-0       | HS Low  | HS High | 0                                      | N/A          | N/A         |
| HS-1       | HS High | HS Low  | 1                                      | N/A          | N/A         |
| LP-00      | LP Low  | LP Low  | N/A                                    | Bridge       | Space       |
| LP-01      | LP Low  | LP High | N/A                                    | HS-Rqst      | 0           |
| LP-10      | LP High | LP Low  | N/A                                    | LP-Rqst      | 1           |
| LP-11      | LP High | LP High | N/A                                    | Stop         | N/A         |

## 35.5.2 MIPI RX D-PHY Operation

Figure 35.5-2 illustrates the various states and modes of the MIPI RX D-PHY during initialization and active state. Detailed descriptions of each states and modes are presented in the following sections.

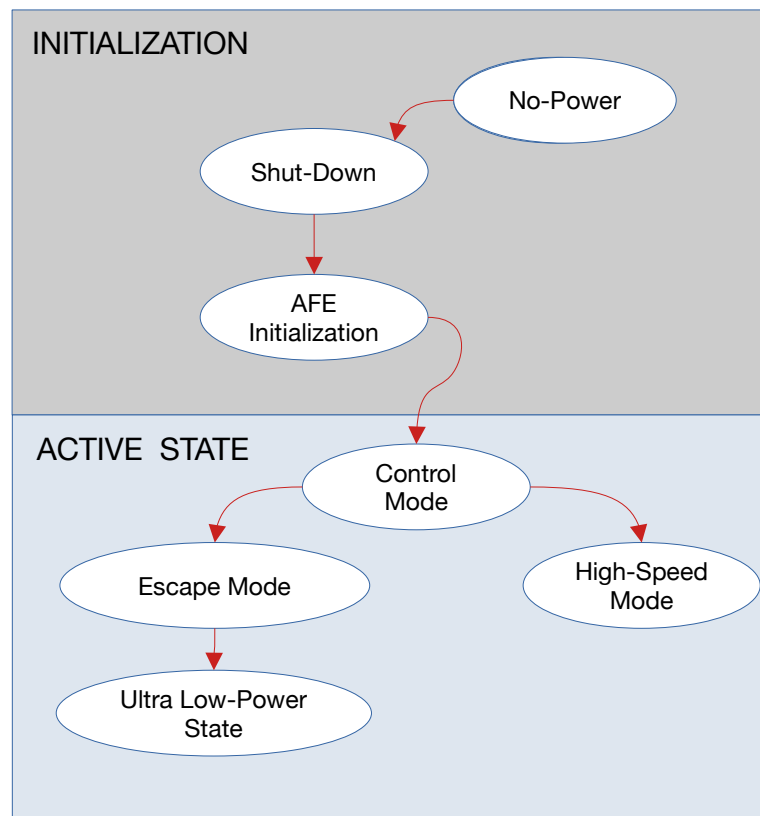

Figure 35.5-2. MIPI RX D-PHY Operating States and Modes

### 35.5.2.1 No-Power State

In the No-Power state, no supply voltage is applied to the PHY.

The MIPI RX D-PHY of MIPI CSI is in No-Power state when the power supply VDD\_HP\_*n* (n: 0-3) and VDD\_MIPI\_DPHY are off.

### 35.5.2.2 Shut-Down State

Shut-Down state refers to the idle state.

In Shut-Down state, the PHY disables all analog blocks, resets all digital logic, and sets the DOP/DON, D1P/D1N, and CP/CN lanes to high impedance (Hi-Z). Activating the Shut-Down state ensures the lowest power consumption. To enable the Shut-Down state of the PHY, set [CSI\\_HOST\\_DPHY\\_RSTZ](#) and [CSI\\_HOST\\_PHY\\_SHUTDOWNZ](#) to 0.

Before leaving the Shut-Down state, configure several parameters, including the lane number to be used and the lane operation frequency range.

The MIPI RX D-PHY consists of two data lanes. Configure [CSI\\_HOST\\_N\\_LANES](#) to select either one or both data lanes. These configurations should remain static or stable before exiting the Shut-Down state.

Depending on the specific requirements for the MIPI RX D-PHY, additional configuration steps might be necessary. By default, the PHY operates within a lower range of 80-110 Mbps. To accommodate higher bit rates, adjust the HS frequency ranges (the `hsfreorange` field) in test code [HS RX Control of lane 0](#) with the appropriate code. It is recommended to perform this adjustment in the Shut-Down state, as the control interface is independent of the rest of the MIPI RX D-PHY.

The different ranges supported are shown in Table 35.5-2. The hsfreqrange field indicates the HS operating frequency range and is accessible through test code 0x44. For detailed configuration, please refer to Section 35.5.3 *MIPI RX D-PHY Configuration*.

**Table 35.5-2. Frequency Ranges Supported by MIPI RX D-PHY**

| Frequency Range (Mbps) | hsfreqrange[5:0] |
|------------------------|------------------|
| 80-89                  | 000000           |
| 90-99                  | 010000           |
| 100-109                | 100000           |
| 110-129                | 000001           |
| 130-139                | 010001           |
| 140-149                | 100001           |
| 150-169                | 000010           |
| 170-179                | 010010           |
| 180-199                | 100010           |
| 200-219                | 000011           |
| 220-239                | 010011           |
| 240-249                | 100011           |
| 250-269                | 000100           |
| 270-299                | 010100           |
| 300-329                | 000101           |
| 330-359                | 010101           |
| 360-399                | 100101           |
| 400-449                | 000110           |
| 450-499                | 010110           |
| 500-549                | 000111           |
| 550-599                | 010111           |
| 600-649                | 001000           |
| 650-699                | 011000           |
| 700-749                | 001001           |
| 750-799                | 011001           |
| 800-849                | 101001           |
| 850-899                | 111001           |
| 900-949                | 001010           |
| 950-999                | 011010           |
| 1000-1049              | 101010           |
| 1050-1099              | 111010           |
| 1100-1149              | 001011           |
| 1150-1199              | 011011           |
| 1200-1249              | 101011           |
| 1250-1299              | 111011           |
| 1300-1349              | 001100           |
| 1350-1399              | 011100           |
| 1400-1449              | 101100           |

| Frequency Range (Mbps) | hsfreqrange[5:0] |
|------------------------|------------------|
| 1450-1500              | 111100           |

When [CSI\\_HOST\\_DPHY\\_RSTZ](#) and [CSI\\_HOST\\_PHY\\_SHUTDOWNZ](#) are set to 1, the MIPI RX D-PHY leaves the Shut-Down state and starts the initialization procedure.

### 35.5.2.3 AFE Initialization

After releasing [CSI\\_HOST\\_DPHY\\_RSTZ](#) and [CSI\\_HOST\\_PHY\\_SHUTDOWNZ](#), the PHY begins an initialization sequence for normal operation. It is recommended to release [CSI\\_HOST\\_PHY\\_SHUTDOWNZ](#) before [CSI\\_HOST\\_DPHY\\_RSTZ](#). Additionally, ensure that [CSI\\_DPHY\\_CFG\\_CLK](#) (refer to Table 9.2-5 in Chapter 9 *Reset and Clock* for details) is available and stable at this point.

The initialization sequence includes several steps, such as enabling internal blocks and performing internal calibrations. Once completed, control transfers to the lanes, which manage power for LP/HS requests from the transmitter by enabling or disabling the corresponding receivers.

Set [CSI\\_HOST\\_PHY\\_STOPSTATEDATA\\_n](#) and [CSI\\_HOST\\_PHY\\_STOPSTATECLK](#) to 1 to perform all initialization steps. In this state, both clock and data lanes are in stop state (LP-11).

The initialization period (TINIT) is a protocol-dependent parameter with a minimum duration of 100 ns, as defined by the specification. After setting [CSI\\_HOST\\_PHY\\_STOPSTATEDATA\\_n](#) and [CSI\\_HOST\\_PHY\\_STOPSTATECLK](#) to 1, the software should wait more than 100 ns before starting camera data reception.

### 35.5.2.4 Control Mode

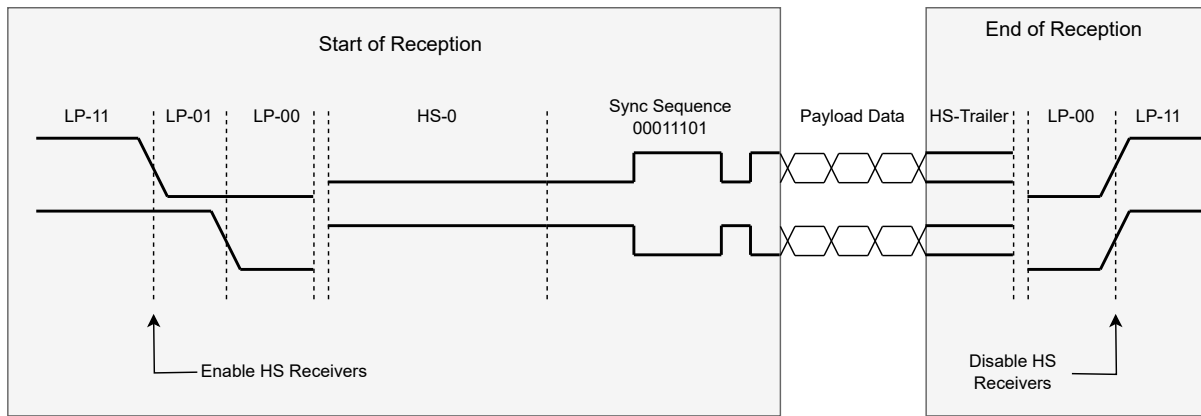

After completing AFE initialization, the MIPI RX D-PHY remains in Control mode by default. It receives the LP-11 state code (stop state) on the lines until a request is made. Upon receiving a request, the PHY enters either High-Speed Data Reception mode, Escape mode, or Ultra Low Power State. All requests must begin and end with the lanes in the stop state.

### 35.5.2.5 High-Speed Data Reception Mode

In High-Speed Data Reception mode, the PHY receives data in bursts. The lane operates in high-speed mode only during these bursts.

As shown in Figure 35.5-3, a burst consists of three parts: the low-power initialization sequence, the high-speed data payload, and the end of reception sequence.

**Figure 35.5-3. MIPI CSI HS Data Reception Sequence**

The receiver enters high-speed mode following the low-power sequence of [LP-11 > LP-01 > LP-00]. Synchronization is achieved through a sync sequence of “00011101”. After synchronization, the PHY receives high-speed data until a transition from LP-00 to LP-11 is detected on the lane.

### 35.5.2.6 Escape Mode

Escape mode allows asynchronous communication using data lanes at low speed. During Escape mode, the lane remains in low-power state. A data lane enters this mode after Escape mode request sequence [LP-11 > LP-10 > LP-00 > LP-01 > LP-00]. If an LP-11 state code is detected before the lane reaches LP-00, the request will be aborted, and the lane will return to stop state. Upon entering Escape mode, the transmitter sends an 8-bit command to indicate a requested action.

MIPI CSI only supports Ultra Low Power State (ULPS) in escape mode. The 8-bit command to enter ULPS is “b00011110”. If the entry command is not valid, it will be ignored, and the receiver will wait until the transmitter returns to the stop state.

#### Ultra Low Power State

Ultra Low Power State involves the lowest power consumption, except for the Shut-Down state.

For data lanes, this mode is activated by sending an Ultra Low Power State entry command “00011110”. After that, the clock lane and data lanes enter the space state (LP-00).

Figure 35.5-4 shows the ULPS sequences for clock and data lanes.

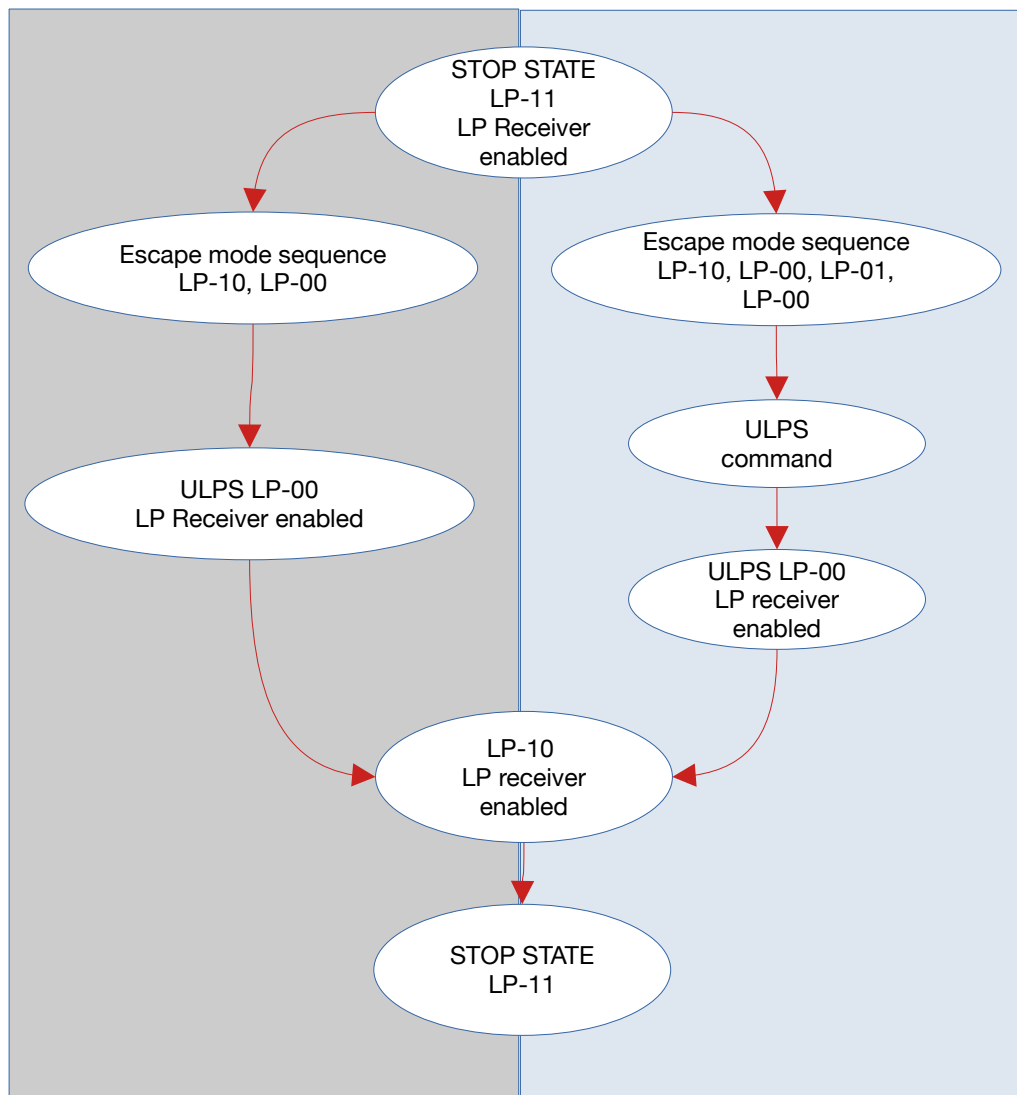

Figure 35.5-4. ULPS Sequences for Clock and Data Lanes

### 35.5.3 MIPI RX D-PHY Configuration

The MIPI RX D-PHY includes test codes for configuring MIPI RX D-PHY operation. Refer to Section 35.5.3.2 for all supported test codes.

#### 35.5.3.1 MIPI RX D-PHY Programming Interface

The MIPI RX D-PHY test code programming involves two steps: first, program the test code into the registers; second, provide the test data to the tester's inputs.

Before configuring a test code, perform the following steps:

- Write 0 to [CSI\\_HOST\\_PHY\\_SHUTDOWNZ](#) and [CSI\\_HOST\\_DPHY\\_RSTZ](#) to shut down and reset the PHY.
- It is also recommended to set [CSI\\_HOST\\_PHY\\_TESTCLR](#) to 1 to apply a reset pulse before the first configuration of any test code.

Next, configure the test code by following these steps:

- Set the test code.

The test code loads when `CSI_HOST_PHY_TESTEN` is set to 1 and with the falling edge on `CSI_HOST_PHY_TESTCLK`.

- Ensure that `CSI_HOST_PHY_TESTCLK` is set to 1.
- Set `CSI_HOST_PHY_TESTDIN` to the 8-bit test code.
- Set `CSI_HOST_PHY_TESTEN` to 1.
- Set `CSI_HOST_PHY_TESTCLK` to 0. The falling edge on `CSI_HOST_PHY_TESTCLK` latches the value of `CSI_HOST_PHY_TESTDIN[7:0]` as the current test code.
- Set `CSI_HOST_PHY_TESTEN` to 0.
- Enter the test data.

The test data programs to the latest loaded test code when `CSI_HOST_PHY_TESTEN` is 0 and with the rising edge on `CSI_HOST_PHY_TESTCLK`.

- Set `CSI_HOST_PHY_TESTCLK` to 0, if not done already.
- Set `CSI_HOST_PHY_TESTDIN` to the 8-bit test data.
- Set `CSI_HOST_PHY_TESTCLK` to 1. The rising edge on `CSI_HOST_PHY_TESTCLK` programs the test data internally.
- Repeat the above steps to add more test data for the same test code.

Set `CSI_HOST_PHY_TESTCLR` to 1 to reset a test code. This is necessary only before the first programming operation or if you wish to reset the PHY's configuration to its default value.

Figure 35.5-5 shows a timing diagram for the MIPI RX D-PHY control interface. After programming a test code, `CSI_HOST_PHY_TESTDOUT` asynchronously outputs the relevant data associated with the specific test code. This data may include read-back information or other meaningful signals.

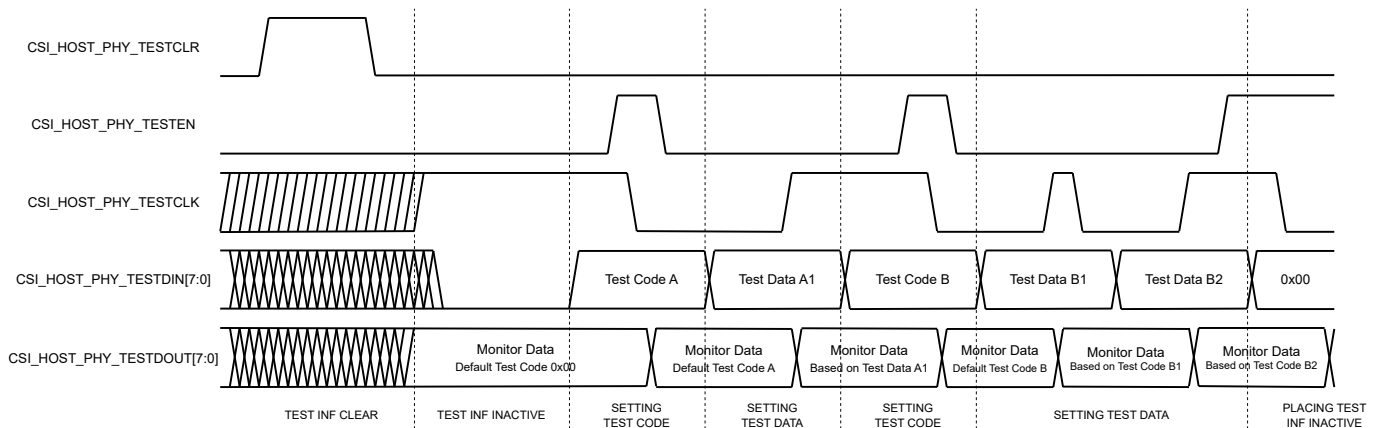

Figure 35.5-5. Control Interface Timing Diagram

**Note:**

Some test codes require two write data operations. In the first operation, the value of `CSI_HOST_PHY_TESTCLK` changes from 1 to 0. Ensure that the falling edge in the clock does not occur when `CSI_HOST_PHY_TESTEN` is set to 1. Otherwise, the current test data will be latched as an erroneous test code.

It is highly recommended to set the test interface to an inactive state by programming the test code 0x00 when not

used, as shown in the final sequence in Figure 35.5-5.

### 35.5.3.2 MIPI RX D-PHY Test Code

The MIPI RX D-PHY is configured through test codes via [CSI\\_HOST\\_PHY\\_TEST\\_CTRL0\\_REG](#) and [CSI\\_HOST\\_PHY\\_TEST\\_CTRL1\\_REG](#). Refer to Section 35.5.3.1 *MIPI RX D-PHY Programming Interface* for more details.

#### Normal Operation

Use the following test code to enable normal operation of the PHY and the wake-up state of the test interface. In this mode, the test interface is inactive.

- **Test Code:** 0x00
- **Test Data:** None

#### HS RX Control of Lane 0

Use the following test code to select the HS operating frequency range (hsfreqrange).

- **Test Code:** 0x44
- **Test Data:**

Table 35.5-3. Test Data in HS RX Control of Lane 0

| w-1'b0           | w-6'b0   | w-1'b0   |
|------------------|--|----------|
| Program Selector | HS operating frequency range selection (hsfreqrange) | Reserved |

When Program Selector is 0, Test Data[6:1] programs hsfreqrange.

- **Test Dout:**

Table 35.5-4. Test Dout in HS RX Control of Lane 0

| r-1'b0 | r-6'b0   | r-1'b0 |
|--------|--|--------|
| 1'b0   | HS operating frequency range selection (hsfreqrange) | 1'b0   |

When [CSI\\_HOST\\_PHY\\_TESTDIN](#)[7] is 0, Test Dout[6:1] reflects the value of the programmed hsfreqrange.

#### Others

Other test codes are reserved.

## 35.5.4 Descrambler

Data scrambling uses randomization techniques to mitigate electromagnetic interference (EMI) and radio frequency (RF) self-interference. This spreads the transmission energy of the link across a wider frequency band.

The transmitted data is scrambled with a Pseudo-Random-Bit-Stream (PRBS) to reduce the likelihood of repetitive patterns on a lane basis. The PRBS is generated using a Linear Feedback Shift Register (LFSR) that implements the generator polynomial:

$$G(x) = x^{16} + x^5 + x^4 + x^3 + 1 \quad (35.1)$$

Each data lane has an instance of the de-scrambling block. Set [CSI\\_HOST\\_SCRAMBLE\\_ENABLE](#) to 1 to enable this block. Each lane can be configured with a different 16-bit LFSR seed value via [CSI\\_HOST\\_SCRAMBLE\\_SEED\\_LANE \$n\$](#) .

The default seed values after resetting the controller are listed in [35.5-5](#).

**Table 35.5-5. Scrambler PRBS Initial Seed Values for Lane 1 and Lane 2**

| Lane | Initial Seed Value |
|------|--------------------|
| 1    | 0x1008             |
| 2    | 0x1188             |

### 35.5.5 Error Management

The MIPI CSI-2 host analyzes received packets to identify protocol errors. Possible errors are listed in [Table 35.5-6](#). These errors serve as interrupt sources and can generate the CSI\_INTR signal. See [Section 35.6 Interrupts](#) for more details.

**Table 35.5-6. Detectable Errors by MIPI CSI-2 Host**

| Error/Interrupt Source                 | Description  | Corresponding Register Field  |
|--|--|---|
| PHY_ERRSOTSYNCHS_ $n$ ( $n$ : 0-1)     | Start-of-transmission error (no synchronization achieved) on data lane $n$ | <a href="#">CSI_HOST_ST_PHY_ERRSOTSYNCHS_<math>n</math> (<math>n</math>: 0-1)</a>     |
| ERR_ECC_DOUBLE                         | Header ECC contains at least two errors (unrecoverable)                    | <a href="#">CSI_HOST_ST_ERR_ECC_DOUBLE</a>  |
| SHORTER_PAYLOAD                        | Reported word count exceeds received word count (unrecoverable)            | <a href="#">CSI_HOST_ST_SHORTER_PAYLOAD</a>   |
| ERR_F_BNDRY_MATCH_VC $n$ ( $n$ : 0-15) | Error matching frame start with frame end for virtual channel $n$          | <a href="#">CSI_HOST_ST_ERR_F_BNDRY_MATCH_VC<math>n</math> (<math>n</math>: 0-15)</a> |
| ERR_F_SEQ_VC $n$ ( $n$ : 0-15)         | Incorrect frame sequence detected on virtual channel $n$                   | <a href="#">CSI_HOST_ST_ERR_F_SEQ_VC<math>n</math> (<math>n</math>: 0-15)</a>         |
| ERR_FRAME_DATA_VC $n$ ( $n$ : 0-15)    | At least one CRC error in the last received frame on virtual channel $n$   | <a href="#">CSI_HOST_ST_ERR_FRAME_DATA_VC<math>n</math> (<math>n</math>: 0-15)</a>    |
| ERR_CRC_VC $n$ ( $n$ : 0-15)           | Payload CRC error detected on virtual channel $n$                          | <a href="#">CSI_HOST_ST_ERR_CRC_VC<math>n</math> (<math>n</math>: 0-15)</a>           |
| ERR_ID_VC $n$ ( $n$ : 0-15)            | Unrecognized or unimplemented data type detected on virtual channel $n$    | <a href="#">CSI_HOST_ST_ERR_ID_VC<math>n</math> (<math>n</math>: 0-15)</a>            |

|  |  |  |
|--|--|--|
| ERR_ECC_CORRECTED_VC $n$ ( $n$ : 0-15) | Checksum error detected on virtual channel $n$                                       | CSI_HOST_ST_ERR_ECC_CORRECTED_VC $n$ ( $n$ : 0-15) |
| PHY_ERRSOTHS_ $n$ ( $n$ : 0-1)         | Start-of-transmission error (synchronization can still be achieved) on data lane $n$ | CSI_HOST_ST_PHY_ERRSOTHS_ $n$ ( $n$ : 0-1)         |
| PHY_ERRESC_ $n$ ( $n$ : 0-1)           | Escape entry error (ULPS) on data lane $n$   | CSI_HOST_ST_PHY_ERRESC_ $n$ ( $n$ : 0-1)           |

**Note:**

MIPI CSI does not support virtual channel interleaving. Before starting transmission, verify which virtual channel is in use. Additionally, read error information from the specified virtual channel to detect any errors.

A reset is recommended for all errors in “\*\_FATAL\_REG” registers.

## 35.6 Interrupts

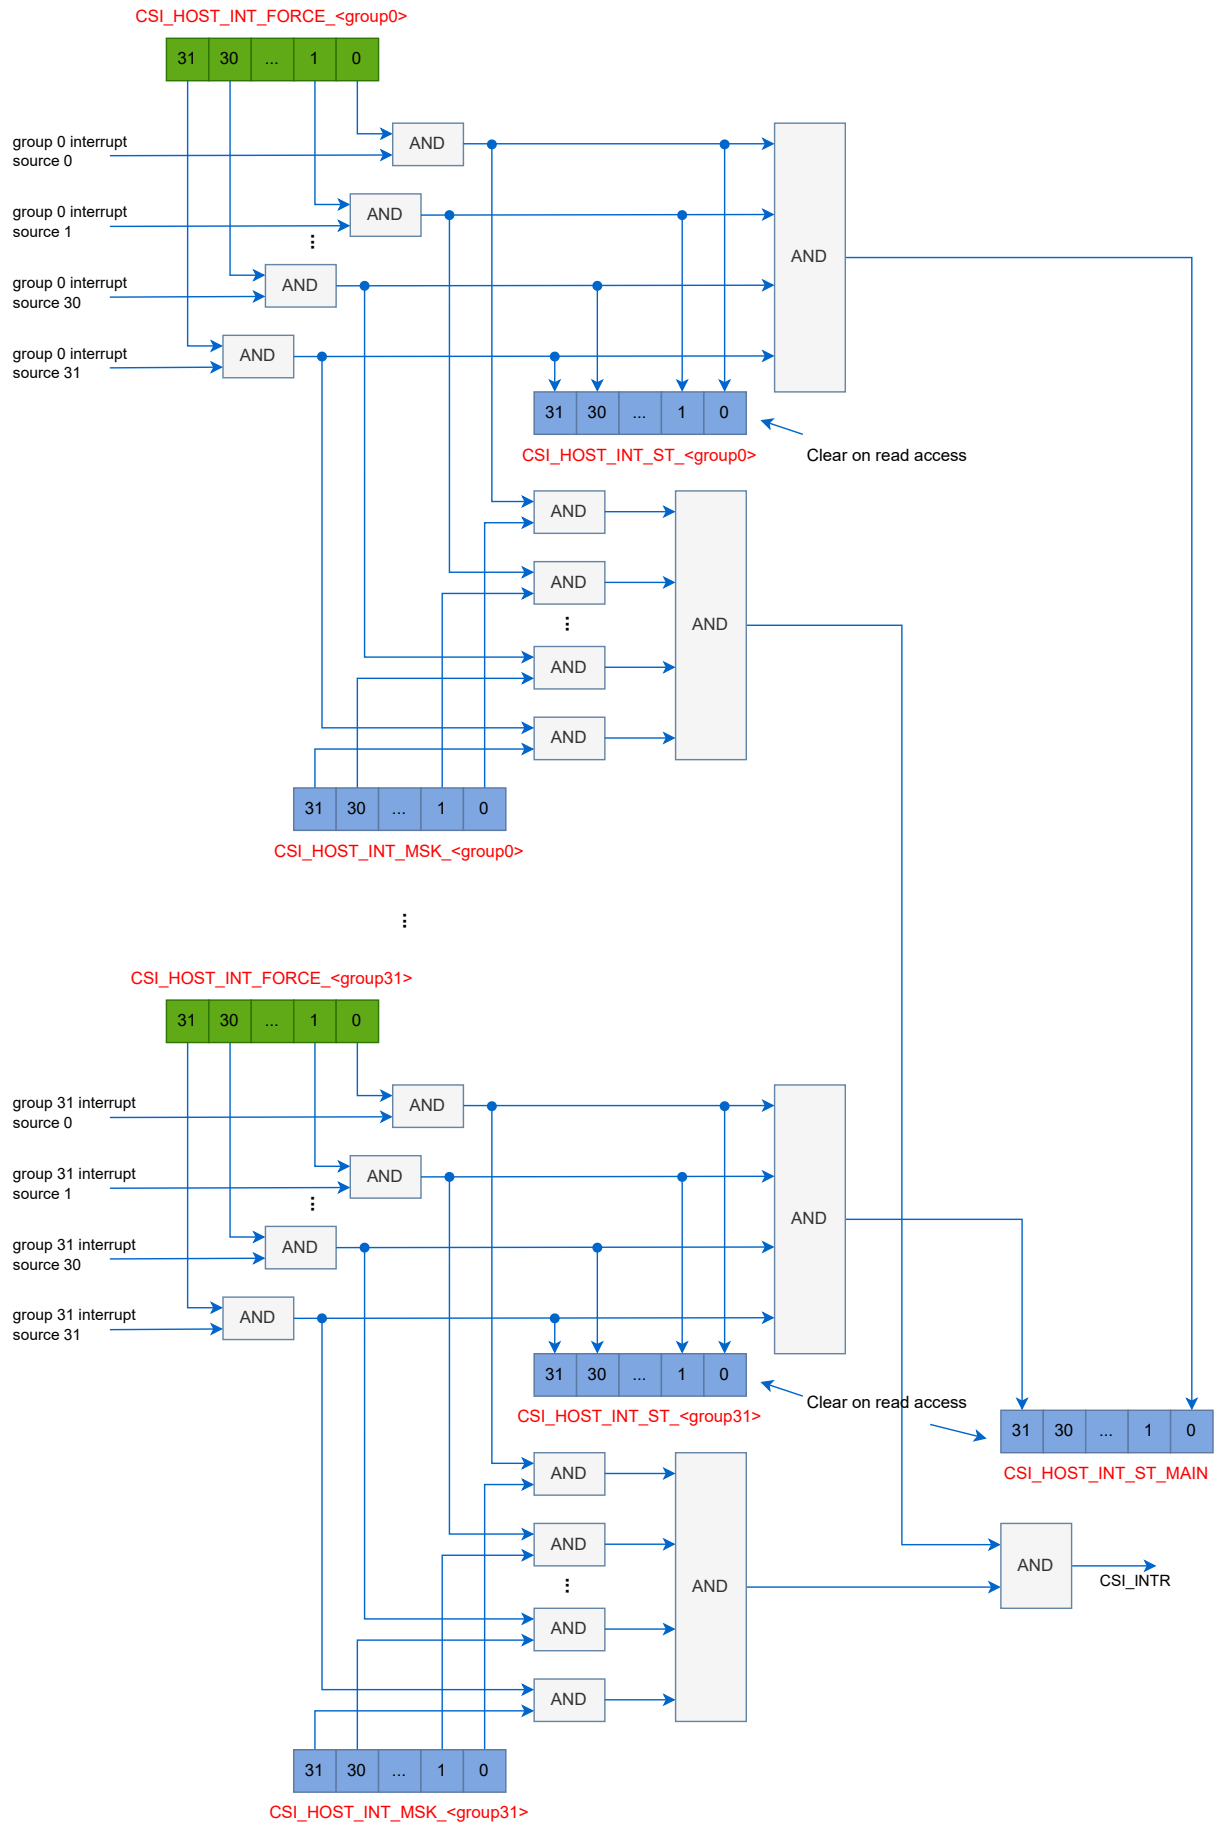

ESP32-P4's MIPI CSI can generate the CSI\_INTR interrupt signal that will be sent to the [Interrupt Matrix](#).

The CSI\_HOST\_INT\_ST\_<group> registers report error conditions and trigger the CSI\_INTR interrupt signal.

You can mask the interrupt pin by using the CSI\_HOST\_INT\_MSK\_<group> registers. All errors are masked by default. Set any bit of these registers to 1 to enable the specific error interrupt. The error asserts the respective bit in the CSI\_HOST\_INT\_ST\_<group> register. The CSI\_HOST\_INT\_ST\_<group> registers clear after a read operation.

Setting any bit of the Interrupt Force registers (CSI\_HOST\_INT\_FORCE\_<group>) to 1 triggers the corresponding interrupt without needing to activate the error conditions. These registers are for test purposes.

Figure [35.6-1](#) shows the interrupt mechanism:

The interrupt signal CSI\_INTR can be generated by the following internal interrupt sources (see Table 35.5-6 *Detectable Errors by MIPI CSI-2 Host* for details interrupt source description):

- PHY Fatal Interrupt:
  - PHY\_ERRSOTSYNCHS\_ *n* (*n*: 0-1)
- Packet Fatal Interrupt:
  - ERR\_ECC\_DOUBLE
  - SHORTER\_PAYLOAD
- Boundary Frame Fatal Interrupt:
  - ERR\_F\_BNDRY\_MATCH\_VC*n* (*n*: 0-15)
- Sequence Frame Fatal Interrupt:
  - ERR\_F\_SEQ\_VC*n* (*n*: 0-15)
- CRC Frame Fatal Interrupt:
  - ERR\_FRAME\_DATA\_VC*n* (*n*: 0-15)
- Payload CRC Fatal Interrupt:
  - ERR\_CRC\_VC*n* (*n*: 0-15)
- Data ID Interrupt:
  - ERR\_ID\_VC*n* (*n*: 0-15)
- ECC Corrected Interrupt:
  - ERR\_ECC\_CORRECTED\_VC*n* (*n*: 0-15)
- PHY Interrupt:
  - PHY\_ERRSOTHS\_ *n* (*n*: 0-1)
  - PHY\_ERRESC\_ *n* (*n*: 0-1)

**Note:**

For definitions of *interrupt*, *interrupt signal*, *interrupt source*, and their correlations, please refer to Chapter 11 *Interrupt Matrix* > Section 11.2 *Interrupt Terminology in ESP32-P4*.

## 35.7 Programming Procedures

This section describes how to configure the MIPI RX D-PHY and the MIPI CSI-2 host for image data reception. MIPI CSI receives image data only in high-speed data reception mode.

### 35.7.1 Start High-Speed Data Reception

#### 35.7.1.1 Clock and Reset

- Set `HP_SYS_CLKRST_CSI_HOST_SYS_CLK_EN` to 1 to enable the MIPI CSI clock.

- Set [HP\\_SYS\\_CLKRST\\_RST\\_EN\\_CSI\\_HOST](#) to 0 to release the MIPI CSI reset.
- Configure [HP\\_SYS\\_CLKRST\\_MIPI\\_CSI\\_DPHY\\_CLK\\_SRC\\_SEL](#) to select a proper clock source for the MIPI RX D-PHY configuration clock.
- Set [HP\\_SYS\\_CLKRST\\_MIPI\\_CSI\\_DPHY\\_CFG\\_CLK\\_EN](#) to 1 to enable the MIPI RX D-PHY configuration clock.
- Set [HP\\_SYS\\_CLKRST\\_RST\\_EN\\_CSI\\_BRG](#) to 1 to release the CSI\_Bridge module of the ISP and reset the ISP.

### 35.7.1.2 MIPI RX D-PHY and MIPI Host Initialization

- Clear [CSI\\_HOST\\_CSI2\\_RESETN](#) to reset the CSI\_HOST controller logic.
- Set [CSI\\_HOST\\_PHY\\_TESTCLR](#) to 1, then clear [CSI\\_HOST\\_PHY\\_TESTCLR](#) to reset the test code logic.
- Configure the MIPI RX D-PHY frequency range in test code 0x44 using the MIPI RX D-PHY programming interface.
- Configure [CSI\\_HOST\\_N\\_LANES](#) to define the number of active lanes in the system.
- Set [CSI\\_HOST\\_PHY\\_SHUTDOWNZ](#) and [CSI\\_HOST\\_DPHY\\_RSTZ](#) to 1 to release the MIPI RX D-PHY from the reset state.
- Set the corresponding bit in the [CSI\\_HOST\\_INT\\_MSK\\_\\*\\_REG](#) register to 1 to enable the error interrupt.
- Configure the descrambler function if needed.
- Set [CSI\\_HOST\\_CSI2\\_RESETN](#) to 1 to release the CSI\_HOST reset.
- Wait until [CSI\\_HOST\\_PHY\\_STOPSTATEDATA\\_n](#) and [CSI\\_HOST\\_PHY\\_STOPSTATECLK](#) are 1.
- Start the camera image capture.

### 35.7.2 Stop High-Speed Data Reception

- Disable related channels in . Wait until is disabled. Refer to Chapter [4 VDMA Controller \(VDMA\)](#).
- Reset the ISP. Refer to Chapter [32 Image Signal Processor \(ISP\)](#).
- Set [HP\\_SYS\\_CLKRST\\_RST\\_EN\\_CSI\\_HOST](#) to 1 to reset the MIPI CSI.

## 35.8 Register Summary

The addresses in this section are relative to CSI Host base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name   | Description   | Address | Access |
|--|---|---------|--------|
| <b>Version Register</b>                          |   |         |        |
| <a href="#">CSI_HOST_VERSION_REG</a>             | CSI_HOST version control register                   | 0x0000  | RO     |
| <b>Configuration Registers</b>                   |   |         |        |
| <a href="#">CSI_HOST_N_LANES_REG</a>             | Active lane number configuration register           | 0x0004  | R/W    |
| <a href="#">CSI_HOST_CSI2_RESETN_REG</a>         | CSI_HOST reset control register                     | 0x0008  | R/W    |
| <a href="#">CSI_HOST_PHY_SHUTDOWNZ_REG</a>       | RX D-PHY Shut-Down state control register           | 0x0040  | R/W    |
| <a href="#">CSI_HOST_DPHY_RSTZ_REG</a>           | RX D-PHY reset control register                     | 0x0044  | R/W    |
| <a href="#">CSI_HOST_PHY_RX_REG</a>              | RX D-PHY RX-related signal status register          | 0x0048  | RO     |
| <a href="#">CSI_HOST_PHY_TEST_CTRL0_REG</a>      | RX D-PHY test code interface control register 0     | 0x0050  | R/W    |
| <a href="#">CSI_HOST_PHY_TEST_CTRL1_REG</a>      | RX D-PHY test code interface control register 1     | 0x0054  | varies |
| <a href="#">CSI_HOST_SCRAMBLING_REG</a>          | Descrambler enable register                         | 0x0300  | R/W    |
| <a href="#">CSI_HOST_SCRAMBLING_SEED1_REG</a>    | Data lane 0 Descrambler seed value control register | 0x0304  | R/W    |
| <a href="#">CSI_HOST_SCRAMBLING_SEED2_REG</a>    | Data lane 1 Descrambler seed value control register | 0x0308  | R/W    |
| <b>Interrupt Registers</b>                       |   |         |        |
| <a href="#">CSI_HOST_INT_ST_MAIN_REG</a>         | Main interrupt status register                      | 0x000C  | RC     |
| <a href="#">CSI_HOST_INT_ST_PHY_FATAL_REG</a>    | RX D-PHY fatal interrupt status register            | 0x00E0  | RC     |
| <a href="#">CSI_HOST_INT_MSK_PHY_FATAL_REG</a>   | RX D-PHY fatal interrupt mask register              | 0x00E4  | R/W    |
| <a href="#">CSI_HOST_INT_FORCE_PHY_FATAL_REG</a> | RX D-PHY fatal interrupt force register             | 0x00E8  | R/W    |
| <a href="#">CSI_HOST_INT_ST_PKT_FATAL_REG</a>    | Packet fatal interrupt status register              | 0x00F0  | RC     |
| <a href="#">CSI_HOST_INT_MSK_PKT_FATAL_REG</a>   | Packet fatal interrupt mask register                | 0x00F4  | R/W    |
| <a href="#">CSI_HOST_INT_FORCE_PKT_FATAL_REG</a> | Packet fatal interrupt force register               | 0x00F8  | R/W    |
| <a href="#">CSI_HOST_INT_ST_PHY_REG</a>          | RX D-PHY interrupt status register                  | 0x0110  | RC     |
| <a href="#">CSI_HOST_INT_MSK_PHY_REG</a>         | RX D-PHY interrupt mask register                    | 0x0114  | R/W    |
| <a href="#">CSI_HOST_INT_FORCE_PHY_REG</a>       | RX D-PHY interrupt force register                   | 0x0118  | R/W    |

| Name   | Description   | Address | Access |
|--|---|---------|--------|
| <a href="#">CSI_HOST_INT_ST_BNDRY_FRAME_FATAL_REG</a>    | Frame boundary fatal interrupt status register                | 0x0280  | RC     |
| <a href="#">CSI_HOST_INT_MSK_BNDRY_FRAME_FATAL_REG</a>   | Frame boundary fatal interrupt mask register                  | 0x0284  | R/W    |
| <a href="#">CSI_HOST_INT_FORCE_BNDRY_FRAME_FATAL_REG</a> | Frame boundary fatal interrupt force register                 | 0x0288  | R/W    |
| <a href="#">CSI_HOST_INT_ST_SEQ_FRAME_FATAL_REG</a>      | Frame sequence fatal interrupt status register                | 0x0290  | RC     |
| <a href="#">CSI_HOST_INT_MSK_SEQ_FRAME_FATAL_REG</a>     | Frame sequence fatal interrupt mask register                  | 0x0294  | R/W    |
| <a href="#">CSI_HOST_INT_FORCE_SEQ_FRAME_FATAL_REG</a>   | Frame sequence fatal interrupt force register                 | 0x0298  | R/W    |
| <a href="#">CSI_HOST_INT_ST_CRC_FRAME_FATAL_REG</a>      | Frame CRC fatal interrupt status register                     | 0x02A0  | RC     |
| <a href="#">CSI_HOST_INT_MSK_CRC_FRAME_FATAL_REG</a>     | Frame CRC fatal interrupt mask register                       | 0x02A4  | R/W    |
| <a href="#">CSI_HOST_INT_FORCE_CRC_FRAME_FATAL_REG</a>   | Frame CRC fatal interrupt force register                      | 0x02A8  | R/W    |
| <a href="#">CSI_HOST_INT_ST_PLD_CRC_FATAL_REG</a>        | Payload CRC fatal interrupt status register                   | 0x02B0  | RC     |
| <a href="#">CSI_HOST_INT_MSK_PLD_CRC_FATAL_REG</a>       | Payload CRC fatal interrupt mask register                     | 0x02B4  | R/W    |
| <a href="#">CSI_HOST_INT_FORCE_PLD_CRC_FATAL_REG</a>     | Payload CRC fatal interrupt force register                    | 0x02B8  | R/W    |
| <a href="#">CSI_HOST_INT_ST_DATA_ID_REG</a>              | Data ID interrupt status register                             | 0x02C0  | RC     |
| <a href="#">CSI_HOST_INT_MSK_DATA_ID_REG</a>             | Data ID interrupt mask register                               | 0x02C4  | R/W    |
| <a href="#">CSI_HOST_INT_FORCE_DATA_ID_REG</a>           | Data ID interrupt force register                              | 0x02C8  | R/W    |
| <a href="#">CSI_HOST_INT_ST_ECC_CORRECTED_REG</a>        | Header error detected and corrected interrupt status register | 0x02D0  | RC     |
| <a href="#">CSI_HOST_INT_MSK_ECC_CORRECTED_REG</a>       | Header error detected and corrected interrupt mask register   | 0x02D4  | R/W    |
| <a href="#">CSI_HOST_INT_FORCE_ECC_CORRECTED_REG</a>     | Header error detected and corrected interrupt force register  | 0x02D8  | R/W    |
| <b>Status Register</b>                                   |   |         |        |
| <a href="#">CSI_HOST_PHY_STOPSTATE_REG</a>               | RX D-PHY stop state signal status register                    | 0x004C  | RO     |

### 35.9 Registers

The addresses in this section are relative to CSI Host base address provided in Table 6.3-2 in Chapter 6 [System and Memory](#).

For how to program reserved fields, please refer to Section [Programming Reserved Register Field](#).

Register 35.1. CSI\_HOST\_VERSION\_REG (0x0000)

**CSI\_HOST\_VERSION** Version control register. (RO)

Register 35.2. CSI\_HOST\_N\_LANES\_REG (0x0004)

**CSI\_HOST\_N\_LANES** Configures the number of active lanes that the MIPI CSI-2 host uses to receive the camera device data. This can only be updated when the RX D-PHY lane is in stop state.

- 0: Data lane 0 is active
- 1: Both data lane 0 and data lane 1 are active
- Other values: Invalid

(R/W)

Register 35.3. CSI\_HOST\_CSI2\_RESETN\_REG (0x0008)

**CSI\_HOST\_CSI2\_RESETN** Configures whether to reset the internal logic of the MIPI CSI-2 host controller.

0: Reset

1: Release the reset

This register only affects the internal logic of the controller. It will not reset the configuration to default values.

(R/W)

Register 35.4. CSI\_HOST\_PHY\_SHUTDOWNZ\_REG (0x0040)

**CSI\_HOST\_PHY\_SHUTDOWNZ** Configures whether to enable the Shut-Down state of the RX D-PHY.

0: Enable

1: Disable

(R/W)

## Register 35.5. CSI\_HOST\_DPHY\_RSTZ\_REG (0x0044)

**CSI\_HOST\_DPHY\_RSTZ** Configures whether to reset the RX D-PHY digital circuitry.

0: Reset

1: Release the reset

**CSI\_HOST\_PHY\_RXULPSESC\_***n* (*n*: 0-1) Represents whether data lane *n* has entered the Ultra Low Power State.

0: Entered

1: Not entered

(RO)

**CSI\_HOST\_PHY\_RXULPSCLKNOT** Represents whether RX D-PHY clock lane has entered the Ultra Low Power State.

0: Entered

1: Not entered

(RO)

**CSI\_HOST\_PHY\_RXCLKACTIVEHS** Represents whether RX D-PHY clock lane is actively receiving a DDR clock.

0: Not actively receiving

1: Actively receiving

(RO)

## Register 35.7. CSI\_HOST\_PHY\_TEST\_CTRL0\_REG (0x0050)

**CSI\_HOST\_PHY\_TESTCLR** Configures whether to initialize the test code interface.

0: Not initialize

1: Initialize

To ensure the analog programmability default values are preset, this bit must be set to 1 then clear to 0 after power-up.

(R/W)

**CSI\_HOST\_PHY\_TESTCLK** Configures clock to capture [CSI\\_HOST\\_PHY\\_TESTDIN](#) bus contents into D-PHY test code logic, with [CSI\\_HOST\\_PHY\\_TESTEN](#) controlling the operation selection. (R/W)

## Register 35.8. CSI\_HOST\_PHY\_TEST\_CTRL1\_REG (0x0054)

**CSI\_HOST\_PHY\_TESTDIN** Configures the 8-bit data input of the test code interface for programming internal registers and accessing test functionalities. (R/W)

**CSI\_HOST\_PHY\_TESTDOUT** Represents the 8-bit data output of the test code interface for reading data and other probing functionalities. (RO)

**CSI\_HOST\_PHY\_TESTEN** Configures whether to performs the test data write operation of the test code interface on the rising edge or the falling edge of [CSI\\_HOST\\_PHY\\_TESTCLK](#).

0: On the rising edge

1: On the falling edge

(R/W)

Register 35.9. CSI\_HOST\_SCRAMBLING\_REG (0x0300)

**CSI\_HOST\_SCRAMBLE\_ENABLE** Configures whether to enable the descrambler.

0: Disable

1: Enable

(R/W)

Register 35.10. CSI\_HOST\_SCRAMBLING\_SEED<sub>*n*</sub>\_REG (*n*: 1-2) (0x0300 + 0x04\**n*)

**CSI\_HOST\_SCRAMBLE\_SEED\_LANE<sub>*n-1*</sub>** Configures the seed value used by the descrambler for lane *n-1*. (R/W)

Register 35.11. CSI\_HOST\_INT\_ST\_MAIN\_REG (0x000C)

- CSI\_HOST\_ST\_STATUS\_INT\_PHY\_FATAL Represents the status of CSI\_HOST\_INT\_ST\_PHY\_FATAL\_REG. (RC)
- CSI\_HOST\_ST\_STATUS\_INT\_PKT\_FATAL Represents the status of CSI\_HOST\_INT\_ST\_PKT\_FATAL\_REG. (RC)
- CSI\_HOST\_ST\_STATUS\_INT\_BNDRY\_FRAME\_FATAL Represents the status of CSI\_HOST\_INT\_ST\_BNDRY\_FRAME\_FATAL\_REG. (RC)
- CSI\_HOST\_ST\_STATUS\_INT\_SEQ\_FRAME\_FATAL Represents the status of CSI\_HOST\_INT\_ST\_SEQ\_FRAME\_FATAL\_REG. (RC)
- CSI\_HOST\_ST\_STATUS\_INT\_CRC\_FRAME\_FATAL Represents the status of CSI\_HOST\_INT\_ST\_CRC\_FRAME\_FATAL\_REG. (RC)
- CSI\_HOST\_ST\_STATUS\_INT\_PLD\_CRC\_FATAL Represents the status of CSI\_HOST\_INT\_ST\_PLD\_CRC\_FATAL\_REG. (RC)
- CSI\_HOST\_ST\_STATUS\_INT\_DATA\_ID Represents the status of CSI\_HOST\_INT\_ST\_DATA\_ID\_REG. (RC)
- CSI\_HOST\_ST\_STATUS\_INT\_ECC\_CORRECTED Represents the status of CSI\_HOST\_INT\_ST\_ECC\_CORRECTED\_REG. (RC)
- CSI\_HOST\_ST\_STATUS\_INT\_PHY Represents the status of CSI\_HOST\_INT\_PHY\_REG. (RC)

Register 35.12. CSI\_HOST\_INT\_ST\_PHY\_FATAL\_REG (0x00E0)

CSI\_HOST\_ST\_PHY\_ERRSOTSYNCHS\_ *n* (*n*: 0-1) Represents whether the PHY\_ERRSOTSYNCHS\_ *n* error occurs.

0: Do not occur

1: Occur

(RC)

Register 35.13. CSI\_HOST\_INT\_MSK\_PHY\_FATAL\_REG (0x00E4)

CSI\_HOST\_MASK\_PHY\_ERRSOTSYNCHS\_ *n* (*n*: 0-1) Configures whether to mask CSI\_HOST\_ST\_PHY\_ERRSOTSYNCHS\_ *n*.

0: Mask the error interrupt

1: Enable the error interrupt

(R/W)

Register 35.14. CSI\_HOST\_INT\_FORCE\_PHY\_FATAL\_REG (0x00E8)

**CSI\_HOST\_FORCE\_PHY\_ERRSOTSYNCHS\_n** (*n*: 0-1) Configures whether to force set [CSI\\_HOST\\_ST\\_PHY\\_ERRSOTSYNCHS\\_n](#) to 1.

0: Do not force set

1: Force set

(R/W)

Register 35.15. CSI\_HOST\_INT\_ST\_PKT\_FATAL\_REG (0x00F0)

**CSI\_HOST\_ST\_ERR\_ECC\_DOUBLE** Represents whether the ERR\_ECC\_DOUBLE error occurs.

0: Do not occur

1: Occur

(RC)

**CSI\_HOST\_ST\_SHORTER\_PAYLOAD** Represents whether the SHORTER\_PAYLOAD error occurs.

0: Do not occur

1: Occur

(RC)

### Register 35.16. CSI\_HOST\_INT\_MSK\_PKT\_FATAL\_REG (0x00F4)

|                               |            |         |    |      |
|-------------------------------|------------|---------|----|------|
| CSI_HOST_MASK_ERR_ECC_DOUBLE  | Configures | whether | to | mask |
| CSI_HOST_ST_ERR_ECC_DOUBLE.   |            |         |    |      |
| 0: Mask the error interrupt   |            |         |    |      |
| 1: Enable the error interrupt |            |         |    |      |
| (R/W)                         |            |         |    |      |

| CSI_HOST_MASK_SHORTER_PAYLOAD | Configures | whether | to | mask |
|-------------------------------|------------|---------|----|------|
| CSI_HOST_ST_SHORTER_PAYLOAD.  |            |         |    |      |
| 0: Mask the error interrupt   |            |         |    |      |
| 1: Enable the error interrupt |            |         |    |      |
| (R/W)                         |            |         |    |      |

Register 35.17. CSI\_HOST\_INT\_FORCE\_PKT\_FATAL\_REG (0x00F8)

CSI\_HOST\_FORCE\_ERR\_ECC\_DOUBLE

Configures whether to force set CSI\_HOST\_ST\_ERR\_ECC\_DOUBLE to 1.

0: Do not force set

1: Force set

(R/W)

CSI\_HOST\_FORCE\_SHORTER\_PAYLOAD

Configures whether to force set CSI\_HOST\_ST\_SHORTER\_PAYLOAD to 1.

0: Do not force set

1: Force set

(R/W)

Register 35.18. CSI\_HOST\_INT\_ST\_PHY\_REG (0x0110)

**CSI\_HOST\_ST\_PHY\_ERRSOTHS\_ *n* (*n*: 0-1)** Represents whether the PHY\_ERRSOTHS\_ *n* error occurs.

- 0: Do not occur
- 1: Occur (RC)

**CSI\_HOST\_ST\_PHY\_ERRESC\_ *n* (*n*: 0-1)** Represents whether the PHY\_ERRESC\_ *n* error occurs.

- 0: Do not occur
- 1: Occur (RC)

Register 35.19. CSI\_HOST\_INT\_MSK\_PHY\_REG (0x0114)

**CSI\_HOST\_MASK\_PHY\_ERRSOTHS\_ *n* (*n*: 0-1)** Configures whether to mask [CSI\\_HOST\\_ST\\_PHY\\_ERRSOTHS\\_ \*n\*](#).  
0: Mask the error interrupt  
1: Enable the error interrupt  
(R/W)

**CSI\_HOST\_MASK\_PHY\_ERRESC\_ *n* (*n*: 0-1)** Configures whether to mask [CSI\\_HOST\\_ST\\_PHY\\_ERRESC\\_ \*n\*](#).  
0: Mask the error interrupt  
1: Enable the error interrupt  
(R/W)

### Register 35.20. CSI\_HOST\_INT\_FORCE\_PHY\_REG (0x0118)

|  |                                 |
|--|---------------------------------|
| CSI_HOST_FORCE_PHY_ERRSOTHS_n (n: 0-1) | Configures whether to force set |
|--|---------------------------------|

CSI\_HOST\_ST\_PHY\_ERRSOTHS\_*n* to 1.

0: Do not force set

1: Force set

(R/W)

|                             |                                 |
|-----------------------------|---------------------------------|
| CSI_HOST_FORCE_PHY_ERRESC_0 | Configures whether to force set |
|-----------------------------|---------------------------------|

CSI\_HOST\_ST\_PHY\_ERRESC\_ *n* to 1.

0: Do not force set

1: Force set

(R/W)

### Register 35.21. CSI\_HOST\_INT\_ST\_BNDRY\_FRAME\_FATAL\_REG (0x0280)

CSI\_HOST\_ST\_ERR\_F\_BNDRY\_MATCH\_VC*n* (*n*: 0-15) Represents whether the  
ERR F BNDRY MATCH VC*n* error occurs.

0: Do not occur

1: Occur

(RC)

Register 35.22. CSI\_HOST\_INT\_MSK\_BNDRY\_FRAME\_FATAL\_REG (0x0284)

|                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |    |    |    |    |    |    |   |   |   |   |   |   |   |   |   |       |

**CSI\_HOST\_PHY\_STOPSTATECLK** Represents whether clock lane in stop state.

0: Not in stop state

1: In stop state

(RO)

## Chapter 36

# Voice Activity Detection (VAD)

## 36.1 Introduction

ESP32-P4 integrates a Voice Activity Detection (VAD) module. This module facilitates the hardware implementation of the first-stage algorithm for voice wake-up and other multimedia functions. Additionally, it provides hardware support for low-power voice wake-up solutions.

## 36.2 Feature List

The VAD module has the following features:

- VAD algorithm processes voice data frame by frame, with each frame containing 256 data points. The data sampling rate is 8 kHz, and the bit width is 16 bits
- 2 KB buffer that stores up to 4 frames of data
- Independent system wake-up source
- Configurable interrupt sources
- Flexible configuration of algorithm parameters

## 36.3 Architectural Overview

Figure [36.3-1](#) is the block diagram of the ESP32-P4 VAD module. The VAD module includes:

- Energy threshold check
- FFT (Fast Fourier Transform) calculation
- LTSD (Long-Term Spectral Divergence) calculation

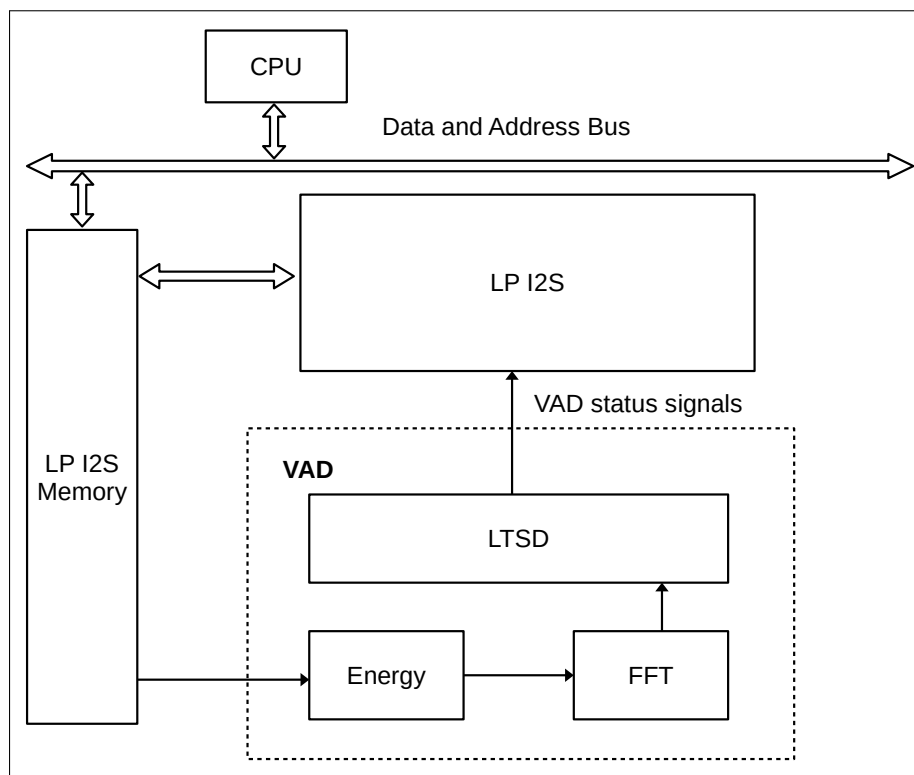

Figure 36.3-1. ESP32-P4 VAD Architecture

The VAD module reads 8 kHz, 16-bit wide audio data from LP I2S memory. It processes the data through three stages: energy detection, FFT, and LTSD. Then the module detects the voice activity status and sends the VAD status signal to the LP I2S module, which is used to generate the corresponding interrupt and wake-up signal.

## 36.4 Functional Description

The ESP32-P4's VAD module offers flexible and configurable functionality. Users can adjust algorithm parameters and wake-up sources to meet their specific needs.

### 36.4.1 Algorithm Parameter Configuration

#### Number of Initial Frames

When the VAD module starts running, it first enters an initialization phase before normal operation. During this phase, it automatically learns noise parameters. The duration of the initialization phase depends on the number of initial frames configured by the user. Proper setting of initial frames can effectively suppress noise and significantly reduce false positives. However, if the initialization phase is extended over too many frames, voice activity within these frames may be missed. Therefore, please configure an appropriate number of initial frames based on actual conditions.

It is recommended to place the device in the target environment noise during the initialization, and set the number of initial frames to 100-200 frames.

Users can configure the number of initial frames via [LP\\_I2S\\_PARAM\\_INIT\\_FRAME\\_NUM](#).

**Note:**

It is recommended to let the VAD module learn noise parameters during the initialization. However, the VAD module will also continuously learn and update noise parameters during normal operation. Therefore, in scenarios where the false positive rate during initial frames is not a concern, the number of initial frames can be reduced, allowing the VAD module to enter the normal operation more quickly.

**Energy Threshold**

The VAD module sets an energy threshold before the voice activity detection. Setting the threshold can filter out low-energy voice activities (e.g., distant voices) from triggering a wake-up. Appropriate energy threshold setting can effectively reduce false positives and conserve power.

It defines the energy value of a speech frame as the mean square of one-frame data. The VAD module calculates the sum of squares of one-frame data in real-time. If this sum is less than the energy threshold multiplied by 256, subsequent calculations will not be performed. Users can configure the energy threshold via [LP\\_I2S\\_PARAM\\_MIN\\_ENERGY](#).

**Band Energy Check**

The band energy check assesses the proportion of band energy within the overall frequency spectrum. Enabling the band energy check in varying environments can help reduce false positives; however, it may also reduce true positives. Users should determine whether to enable or disable the band energy check based on the environment.

Users can enable or disable the band energy check via [LP\\_I2S\\_PARAM\\_SKIP\\_BAND\\_ENERGY](#).

- 0: Enable band energy check
- 1: Disable band energy check

**Voice Activity Detection**

The VAD module has two voice activity status: voice activity status and non-voice activity status, managed by voice frame counter `speech_count` and non-voice frame counter `silent_count`. These counters control transitions between the status as follows:

- **Non-voice activity status:**
  - When voice activities are detected in the current frame, the count value of `speech_count` increases by 1.
  - When voice activities are not detected in the current frame, the count value of `speech_count` decreases by 1 (down to a minimum of 0).
  - If the count value of `speech_count` is greater than [LP\\_I2S\\_PARAM\\_HANGOVER\\_SPEECH](#), the VAD module enters the voice activity status and resets `silent_count` to 0.
  - Under the non-voice activity status, the VAD module continuously learns and updates noise information.
- **Voice activity status:**
  - When voice activities are detected in the current frame, the count value of `speech_count` increases by 1, and the count value of `silent_count` decreases by 1 (down to a minimum of 0).

- When voice activities are not detected in the current frame, the count value of `silent_count` increases by 1:
  - \* If the count value of `speech_count` is greater than `LP_I2S_PARAM_MIN_SPEECH_COUNT`, and
    - The count value of `silent_count` is greater than `LP_I2S_PARAM_HANGOVER_SILENT`, the VAD module transitions to the non-voice activity status and resets both `speech_count` and `silent_count` to 0;
    - The count value of `silent_count` is less than `LP_I2S_PARAM_HANGOVER_SILENT`, the VAD module maintains the voice activity status.
  - \* If the count value of `speech_count` is less than or equal to `LP_I2S_PARAM_MIN_SPEECH_COUNT`, the VAD module transitions directly to the non-voice activity status and resets `speech_count` to 0.
- Under the voice activity status, the VAD module pauses updating noise information. When the count value of `speech_count` exceeds `LP_I2S_PARAM_MAX_SPEECH_COUNT`, indicating stability in the new environment, it resumes learning and updating noise information.

### Status Registers

The VAD module provides several key operational variables as status registers (read-only) to facilitate user debugging. The status registers include:

- `LP_I2S_VAD_FLAG`: Represents the current voice activity detection status. 1 represents the VAD module is in the voice activity status, while 0 represents it is in the non-voice activity status.
- `LP_I2S_ENERGY_ENOUGH`: Represents whether the current frame passes the energy threshold check. 1 represents the current frame passes the energy threshold check, while 0 represents not pass.
- `LP_I2S_SPEECH_COUNT_OB`: Represents the count value of the voice frame counter, `speech_count`.
- `LP_I2S_SILENT_COUNT_OB`: Represents the count value of the non-voice frame counter, `silent_count`.

## 36.4.2 Wake-up Source Configuration

When the VAD module is in the voice activity status, it triggers the wake-up source `LP_I2S_WAKEUP`. Users can configure the wake-up source (please refer to Chapter [42 LP I2S Controller](#)), enabling the VAD to become one of the wake-up sources for ESP32-P4.

## 36.5 Interrupts

ESP32-P4's VAD module shares the same interrupt signal `LP_I2S_INTR` with the LP I2S module. The following interrupt sources can generate the interrupt signal:

- `LP_I2S_VAD_DONE_INT`: Triggered when the VAD completes processing one frame of data.
- `LP_I2S_VAD_RESET_DONE_INT`: Triggered when the VAD is reset.

Each interrupt source can be configured by a common set of registers that are described in Section [Interrupt Configuration Registers](#). The specific registers can be found in Section [36.7 Register Summary](#).

## 36.6 Programming Procedure

### 36.6.1 Automatic Operation Mode

1. Configure the VAD parameters as described in Section [36.4.1](#).
2. Enable the VAD automatic detection mode by writing 1 to [LP\\_I2S\\_VAD\\_EN](#).
3. Configure the LP I2S to operate in 16-bit receive mode and start receiving data in 16-bit format. The received data will be stored in the LP I2S memory.
4. The VAD module will automatically perform operations on each frame of data after the LP I2S receives the complete frame.
5. (Optional) When the VAD module triggers a wake-up source/interrupt signal, the LP I2S memory already contains the voice frame that triggered the VAD wake-up, along with the previous three voice frames. Users can read these four frames of voice data from the LP I2S memory via the LP core for subsequent processing. For details on the size of the LP I2S memory and data reading methods, please refer to Chapter [42 LP I2S Controller](#) > Section [42.8.3 Internal Memory](#).

### 36.6.2 Manual Operation Mode

1. Configure the VAD parameters as described in Section [36.4.1](#).
2. Manually store the voice data in the LP I2S memory. For details, refer to Chapter [42 LP I2S Controller](#) > Section [42.8.3 Internal Memory](#).
3. With all the voice data stored in the memory, write 1 to [LP\\_I2S\\_VAD\\_FORCE\\_START](#), then the VAD will perform operations on one frame of data.
4. When the VAD module completes processing one frame of data, [LP\\_I2S\\_VAD\\_DONE\\_INT](#) interrupt will be generated.

## 36.7 Register Summary

The addresses in this section are relative to VAD base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name                                  | Description                                   | Address | Access |

**LP\_I2S\_VAD\_EN** Configures whether to enable the automatic operation mode.

0: Disable

1: Enable

(R/W)

**LP\_I2S\_VAD\_RESET** Configures whether to reset the VAD module.

0: Not reset

1: Reset

(WT)

**LP\_I2S\_VAD\_FORCE\_START** Configures whether to trigger the manual operation on one frame of data.

0: Not trigger

1: Trigger

(WT)

**LP\_I2S\_VAD\_FLAG** Represents the voice activity status. For details, see Section 36.4.1. (RO)

**LP\_I2S\_ENERGY\_ENOUGH** Represents whether the current frame passes the energy threshold check. For details, see Section 36.4.1. (RO)

**Register 36.3. LP\_I2S\_VAD\_PARAM0\_REG (0x0080)**

**LP\_I2S\_PARAM\_MIN\_ENERGY** Configures the energy threshold. For details, see Section 36.4.1. (R/W)

**LP\_I2S\_PARAM\_INIT\_FRAME\_NUM** Configures the number of initial frames. For details, see Section 36.4.1. (R/W)

## Part VII

# Connectivity Interface

This part addresses the connectivity aspects of the system, describing components related to various communication interfaces like I2C, I2S, SPI, UART, USB, and more. The part also covers interfaces to generate signals used in remote control, motor control, LED control, etc.

## Chapter 37

### UART Controller (UART)

#### 37.1 Overview

A UART is a character-oriented data link for asynchronous communication between devices. Such communication does not add clock signals to the data sent. Therefore, in order to communicate successfully, the transmitter and the receiver must operate at the same baud rate with the same stop bit(s) and parity bit(s).

A UART data frame usually begins with one start bit, followed by data bits, one parity bit (optional), and one or more stop bits. UART controllers on ESP32-P4 support various lengths of data bits and stop bits. These controllers also support software and hardware flow control as well as GDMA for high-speed data transfer. This allows developers to use multiple UART ports at minimal software cost.

ESP32-P4 has six UART controllers, including five regular UARTs and one low-power (LP) UART. These UARTs are compatible with various UART devices, and support Infrared Data Association (IrDA) and RS485 communication. In this chapter, the five regular UART controllers are referred to as UART $n$ , in which  $n$  denotes 0, 1, 2, 3, or 4. LP UART is the cut-down version of the regular UART, with a separate group of registers. For differences between UART and LP UART, please refer to Table 37.2-1.

#### 37.2 Features

Table 37.2-1 lists the feature comparison between UART and LP UART:

Table 37.2-1. UART and LP UART Feature Comparison

| UART Feature  | LP UART Feature  |
|---|--|
| Programmable baud rate up to 5 MBaud  |  |
| 128 x 8 bit RAM respectively for the TX channel and RX channel of a UART controller | 20 x 8-bit RAM, shared by the TX FIFO and RX FIFO of LP UART |
| Full-duplex asynchronous communication  |  |

The following description mainly covers regular UART controllers.

## 37.3 UART Structure

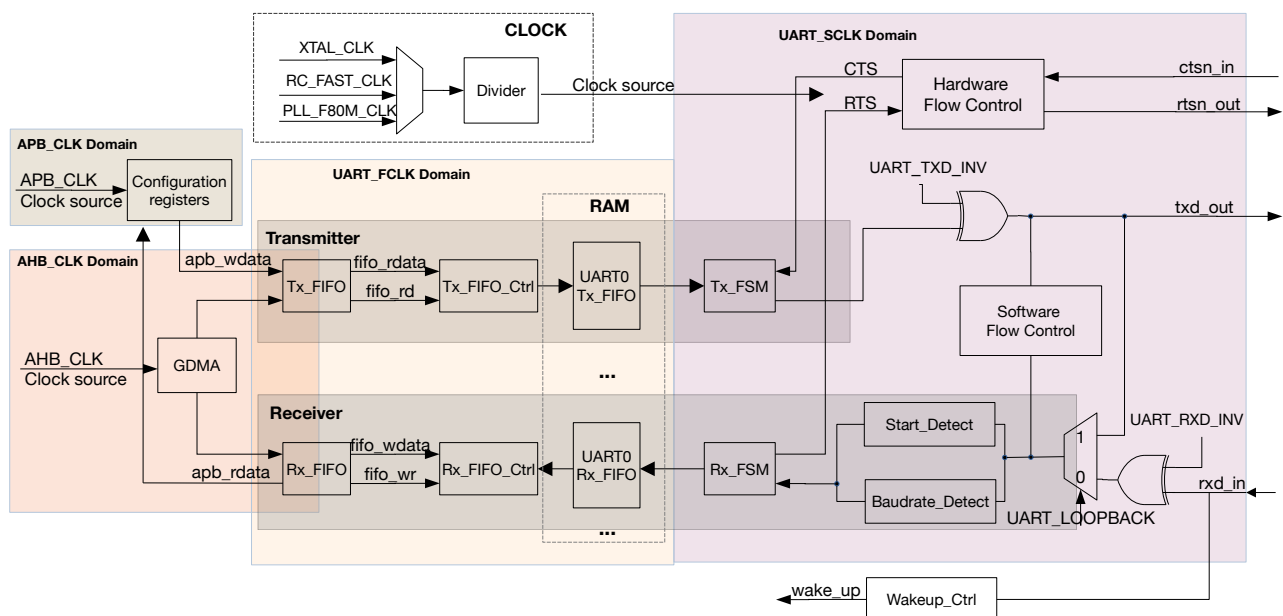

Figure 37.3-1. UART Structure

Figure 37.3-1 shows the basic structure of a UART controller. A UART controller works in four clock domains, namely APB\_CLK, AHB\_CLK, UART\_SCLK, and UART\_FCLK. APB\_CLK and AHB\_CLK are synchronized but with different frequencies (APB\_CLK is derived from AHB\_CLK by division), and likewise UART\_SCLK and UART\_FCLK are synchronized but with different frequencies (UART\_SCLK is derived from UART\_FCLK by division). UART\_FCLK has three clock sources: PLL\_F80M\_CLK, RC\_FAST\_CLK, and crystal clock XTAL\_CLK (for details, please refer to Chapter 9 *Reset and Clock*), which are selected by configuring HP\_SYS\_UART $n$ \_CLK\_SRC\_SEL. The selected clock source is divided by a divider to generate UART\_SCLK clock signals. The divisor is configured by HP\_SYS\_CLKRST\_UART $n$ \_SCLK\_DIV\_NUM for the integral part, HP\_SYS\_CLKRST\_UART $n$ \_SCLK\_DIV\_DENOMINATOR for the denominator of the fractional part, and HP\_SYS\_CLKRST\_UART $n$ \_SCLK\_DIV\_NUMERATOR for the numerator of the fractional part. The divisor ranges from 1 ~ 256. Only regular UART has such a divider; LP UART does not.

A UART controller can be broken down into two parts based on functions: a transmitter and a receiver.

The transmitter contains a TX FIFO (i.e., Tx\_FIFO in Figure 37.3-1), which buffers data to be sent. Software can write data to Tx\_FIFO via the APB bus, or move data to Tx\_FIFO using GDMA. Tx\_FIFO\_Ctrl controls writing and reading Tx\_FIFO. When Tx\_FIFO is not empty, Tx\_FSM reads data bits in the data frame via Tx\_FIFO\_Ctrl, and converts them into a bitstream. The levels of output bitstream signal txd\_out can be inverted by configuring the [UART\\_TXD\\_INV](#) field.

The receiver contains an RX FIFO (i.e., Rx\_FIFO in Figure 37.3-1), which buffers data to be processed. The input bitstream signal rxd\_in is transferred to the UART controller, and its level can be inverted by configuring [UART\\_RXD\\_INV](#) field. Baudrate\_Detect measures the baud rate of input bitstream signal rxd\_in by detecting its minimum pulse width. Start\_Detect detects the start bit in a data frame. If the start bit is detected, Rx\_FSM stores data bits in the data frame into Rx\_FIFO by Rx\_FIFO\_Ctrl. Software can read data from Rx\_FIFO via the APB bus, or receive data using GDMA.

HW\_Flow\_Ctrl controls rxd\_in and txd\_out data flows by standard UART RTS and CTS flow control signals (rtsn\_out and ctsn\_in). SW\_Flow\_Ctrl controls data flows by adding special characters to outgoing data and detecting special characters in incoming data. When a UART controller is in Light-sleep mode (see Chapter 13 [Low-Power Management](#) for more details), a wake\_up signal can be generated in four ways and sent to RTC, which then wakes up the ESP32-P4 chip. For more information about wakeup, please refer to Section 37.4.8.

## 37.4 Functional Description

### 37.4.1 Clock and Reset

UART controllers are asynchronous. Their register configuration module works in the APB\_CLK domain. TX FIFO and RX FIFO work across the AHB\_CLK and UART\_FCLK domains. The UART RAM control unit works in the UART\_FCLK domain. The UART transmission and reception control module works in the UART\_SCLK domain, i.e., UART Core's clock domain.

When the frequency of the UART\_SCLK is higher than the frequency needed to generate the baud rate, the UART Core can be clocked at a lower frequency by the divider, in order to reduce power consumption. Usually, the UART Core's clock frequency is lower than the APB\_CLK's frequency, and can be divided by the largest divisor when higher than the frequency needed to generate the baud rate. The frequency of the UART Core's clock can also be at most twice higher than the APB\_CLK. The clock for the UART transmitter and the UART receiver can be controlled independently. To enable the clock for the UART transmitter, [UART\\_TX\\_SCLK\\_EN](#) shall be set; to enable the clock for the UART receiver, [UART\\_RX\\_SCLK\\_EN](#) shall be set.

To ensure that the configured register values are synchronized from APB\_CLK domain to the UART\_SCLK domain, please follow the procedures in Section 37.5.

To reset the whole UART, please:

- Enable the UART Core's clock by setting [HP\\_SYS\\_CLKRST\\_UARTn\\_CLK\\_EN](#) to 1.
- Write 1 to [HP\\_SYS\\_CLKRST\\_RST\\_EN\\_UARTn\\_CORE](#).
- Clear [HP\\_SYS\\_CLKRST\\_RST\\_EN\\_UARTn\\_CORE](#) to 0.

## 37.4.2 UART FIFO

The transmitter and the receiver on the UART controller each use a 128 x 8-bit RAM, and access their respective RAM through a separate 4 x 8-bit asynchronous FIFO interface. The RAM and asynchronous FIFO interface for the transmitter and the receiver are independent and cannot be shared.

UART Tx\_FIFO is reset by setting [UART\\_TXFIFO\\_RST](#). UART Rx\_FIFO is reset by setting [UART\\_RXFIFO\\_RST](#).

Data to be sent is written to TX FIFO via the APB bus or using GDMA, read automatically, and converted from a frame into a bitstream by hardware Tx\_FSM. Data received is converted from a bitstream into a frame by hardware Rx\_FSM, written into RX FIFO, and then stored into RAM via the APB bus or using GDMA. The five UART controllers share one GDMA channel.

The empty signal threshold for Tx\_FIFO is configured by setting [UART\\_TXFIFO\\_EMPTY\\_THRHD](#). When data stored in Tx\_FIFO is less than [UART\\_TXFIFO\\_EMPTY\\_THRHD](#), a UART\_TXFIFO\_EMPTY\_INT interrupt is generated. The full signal threshold for Rx\_FIFO is configured by setting [UART\\_RXFIFO\\_FULL\\_THRHD](#). When data stored in Rx\_FIFO is greater than or equal to [UART\\_RXFIFO\\_FULL\\_THRHD](#), a UART\_RXFIFO\_FULL\_INT interrupt is generated. In addition, when Rx\_FIFO receives more data than its capacity, a UART\_RXFIFO\_OVF\_INT interrupt is generated.

UART $n$  can access FIFO via register [UART\\_FIFO\\_REG](#). You can put data into TX FIFO by writing [UART\\_RXFIFO\\_RD\\_BYTE](#), and get data in RX FIFO by reading [UART\\_RXFIFO\\_RD\\_BYTE](#).

## 37.4.3 Baud Rate Generation and Detection

### 37.4.3.1 Baud Rate Generation

Before a UART controller sends or receives data, the baud rate should be configured by setting corresponding registers. The baud rate generator of a UART controller functions by dividing the input clock source. It can divide the clock source by a fractional amount. The divisor is configured by [UART\\_CLKDIV\\_SYNC\\_REG](#): [UART\\_CLKDIV](#) for the integral part, and [UART\\_CLKDIV\\_FRAG](#) for the fractional part. When using the 80 MHz input clock, the UART controller supports a maximum baud rate of 5 MBaud.

The divisor of the baud rate divider is equal to

$$UART\_CLKDIV + \frac{UART\_CLKDIV\_FRAG}{16}$$

meaning that the final baud rate is equal to

$$\frac{INPUT\_FREQ}{UART\_CLKDIV + \frac{UART\_CLKDIV\_FRAG}{16}}$$

where INPUT\_FREQ is the frequency of UART Core's source clock. For example, if [UART\\_CLKDIV](#) = 694 and [UART\\_CLKDIV\\_FRAG](#) = 7, then the divisor value is

$$694 + \frac{7}{16} = 694.4375$$

When [UART\\_CLKDIV\\_FRAG](#) is 0, the baud rate generator is an integer clock divider where an output pulse is generated every [UART\\_CLKDIV](#) input pulses.

When [UART\\_CLKDIV\\_FRAG](#) is not 0, the divider is fractional and the output baud rate clock pulses are not strictly uniform. As shown in Figure 37.4-1, for every 16 output pulses, the generator divides either

( $\text{UART\_CLKDIV} + 1$ ) input pulses or  $\text{UART\_CLKDIV}$  input pulses per output pulse. A total of  $\text{UART\_CLKDIV\_FRAG}$  output pulses are generated by dividing ( $\text{UART\_CLKDIV} + 1$ ) input pulses, and the remaining ( $16 - \text{UART\_CLKDIV\_FRAG}$ ) output pulses are generated by dividing  $\text{UART\_CLKDIV}$  input pulses.

The output pulses are interleaved as shown in Figure 37.4-1 below, to make the output timing more uniform:

Figure 37.4-1. UART Controllers Division

To support IrDA (see Section 37.4.7 for details), the fractional clock divider for IrDA data transmission generates clock signals divided by  $16 \times \text{UART\_CLKDIV\_SYNC\_REG}$ . This divider works similarly as the one elaborated above: it takes  $\text{UART\_CLKDIV}/16$  as the integer value and the lowest four bits of  $\text{UART\_CLKDIV}$  as the fractional value.

### 37.4.3.2 Baud Rate Detection

Automatic baud rate detection (Autobaud) on UARTs is enabled by setting  $\text{UART\_AUTOBAUD\_EN}$ . The Baudrate\_Detect module shown in Figure 37.4-2 filters any noise whose pulse width is shorter than  $\text{UART\_GLITCH\_FLT}$ .

Before communication starts, the transmitter could send random data to the receiver for baud rate detection.  $\text{UART\_LOWPULSE\_MIN\_CNT}$  stores the minimum low pulse width,  $\text{UART\_HIGHPULSE\_MIN\_CNT}$  stores the minimum high pulse width,  $\text{UART\_POSEDGE\_MIN\_CNT}$  stores the minimum pulse width between two positive edges, and  $\text{UART\_NEGEDGE\_MIN\_CNT}$  stores the minimum pulse width between two negative edges. These four fields are read by software to determine the transmitter's baud rate.

Figure 37.4-2. The Timing Diagram of Weak UART Signals Along Negative Edges

The baud rate can be determined in the following three ways:

1. Normally, to avoid sampling erroneous data along positive or negative edges in a metastable state, which results in the inaccuracy of  $\text{UART\_LOWPULSE\_MIN\_CNT}$  or  $\text{UART\_HIGHPULSE\_MIN\_CNT}$ , use a

weighted average of these two values to eliminate errors for 1-bit pulses. In this case, the baud rate is calculated as follows:

$$B_{\text{uart}} = \frac{f_{\text{clk}}}{(\text{UART\_LOWPULSE\_MIN\_CNT} + \text{UART\_HIGHPULSE\_MIN\_CNT} + 2)/2}$$

2. If UART signals are weak along negative edges as shown in Figure 37.4-2, which leads to an inaccurate average of `UART_LOWPULSE_MIN_CNT` and `UART_HIGHPULSE_MIN_CNT`, use `UART_POSEDGE_MIN_CNT` to determine the transmitter's baud rate as follows:

$$B_{\text{uart}} = \frac{f_{\text{clk}}}{(\text{UART\_POSEDGE\_MIN\_CNT} + 1)/2}$$

3. If UART signals are weak along positive edges, use `UART_NEGEDGE_MIN_CNT` to determine the transmitter's baud rate as follows:

$$B_{\text{uart}} = \frac{f_{\text{clk}}}{(\text{UART\_NEGEDGE\_MIN\_CNT} + 1)/2}$$

### 37.4.4 UART Data Frame

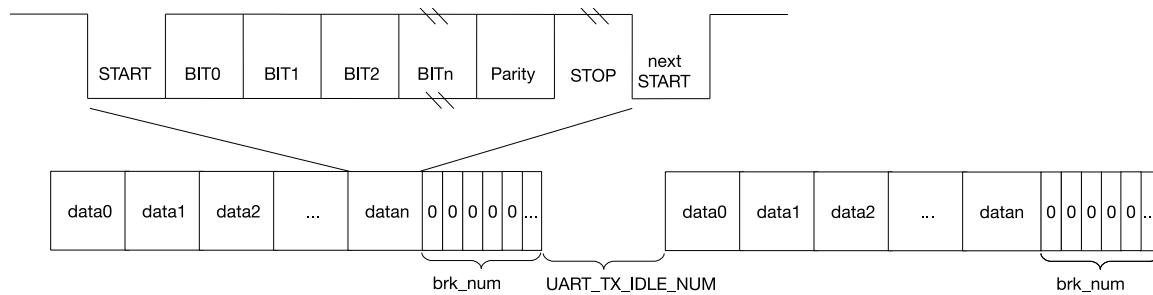

Figure 37.4-3. Structure of UART Data Frame

Figure 37.4-3 shows the basic structure of a data frame. A frame starts with one start bit, and ends with stop bits which can be 1, 1.5, or 2 bit-long, configured by `UART_STOP_BIT_NUM` (in RS485 mode turnaround delay may be added. See details in Section 37.4.6.2). The start bit is logical low, whereas stop bits are logical high.

The actual data length can be anywhere between 5 ~ 8 bit, configured by `UART_BIT_NUM`. When `UART_PARITY_EN` is set, a parity bit is added after data bits. `UART_PARITY` is used to choose even parity or odd parity. When the receiver detects a parity bit error in the data received, a `UART_PARITY_ERR_INT` interrupt is generated, and the data received will still be stored into RX FIFO. When the receiver detects a data frame error, a `UART_FRM_ERR_INT` interrupt is generated, and the data received by default is stored into RX FIFO.

If all data in `Tx_FIFO` has been sent, a `UART_TX_DONE_INT` interrupt is generated. After this, if the `UART_TXD_BRK` bit is set, then the transmitter will enter the break condition and send several NULL characters in which the TX data line is logical low. The number of NULL characters is configured by `UART_TX_BRK_NUM`. Once the transmitter has sent all NULL characters, a `UART_TX_BRK_DONE_INT` interrupt is generated. The minimum interval between data frames can be configured using `UART_TX_IDLE_NUM`. If the transmitter stays idle for `UART_TX_IDLE_NUM` or more time, a `UART_TX_BRK_IDLE_DONE_INT` interrupt is generated.

The receiver can also detect the Break conditions when the RX data line detects any low logical level for one NULL character transmission, and a `UART_BRK_DET_INT` interrupt will be triggered to detect when a break condition has been completed.

The receiver can detect the current bus state through the timeout interrupt `UART_RXFIFO_TOUT_INT`. The `UART_RXFIFO_TOUT_INT` interrupt will be triggered when the bus is in the idle state for more than `UART_RX_TOUT_THRHD` bit time on current baud rate after the receiver has received at least one byte. You can use this interrupt to detect whether all the data from the transmitter has been sent.

### 37.4.5 AT\_CMD Character Structure

Figure 37.4-4. AT\_CMD Character Structure

Figure 37.4-4 is the structure of a special character `AT_CMD`. If the receiver constantly receives `AT_CMD_CHAR` and the following conditions are met, a `UART_AT_CMD_CHAR_DET_INT` interrupt is generated.

- The interval between the first `AT_CMD_CHAR` and the last non-`AT_CMD_CHAR` character is at least `UART_PRE_IDLE_NUM` cycles.
- The interval between two `AT_CMD_CHAR` characters is less than `UART_RX_GAP_TOUT` in the unit of baud rate cycles.
- The number of `AT_CMD_CHAR` characters is equal to or greater than `UART_CHAR_NUM`.
- The interval between the last `AT_CMD_CHAR` character and next non-`AT_CMD_CHAR` character is at least `UART_POST_IDLE_NUM` cycles.

Note: Given that the interval between `AT_CMD_CHAR` characters is less than `UART_RX_GAP_TOUT` in the unit of baud rate cycles, the `APB_CLK` frequency is suggested not to be lower than 8 MHz.

### 37.4.6 RS485

The five regular UART controllers support RS485 communication mode. In this mode differential signals are used to transmit data, so it can communicate over longer distances at higher bit rates than RS232. RS485 has two-wire half-duplex and four-wire full-duplex options. UART controllers support two-wire half-duplex transmission and bus snooping.

#### 37.4.6.1 Driver Control

As shown in Figure 37.4-5, in a two-wire multidrop network, an external RS485 transceiver is needed for differential to single-ended conversion or the other way around. An RS485 transceiver contains a driver and a receiver. When a UART controller is not in transmitter mode, the connection to the differential line can be broken by disabling the driver. When `DE` is 1, the driver is enabled; when `DE` is 0, the driver is disabled.

The UART receiver converts differential signals to single-ended signals via an external receiver. `RE` is the enable control signal for the receiver. When `RE` is 0, the receiver is enabled; when `RE` is 1, the receiver is disabled. If `RE` is configured as 0, the UART controller is allowed to snoop data on the bus, including the data sent by itself.

DE can be controlled by either software or hardware. To reduce the cost of software, in our design DE is controlled by hardware. As shown in Figure 37.4-5, DE is connected to dtrn\_out of UART (please refer to Section 37.4.9.1 for more details).

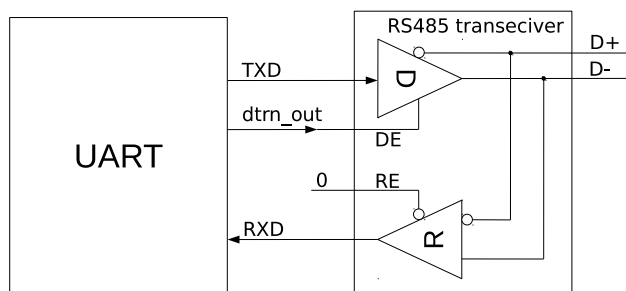

Figure 37.4-5. Driver Control Diagram in RS485 Mode

### 37.4.6.2 Turnaround Delay

By default, the UART controllers work in receiver mode. When a UART controller is switched from transmitter mode to receiver mode, the RS485 protocol requires a turnaround delay of one cycle after the stop bit. The UART transmitter supports adding a turnaround delay of one cycle before the start bit or after the stop bit. When `UART_DLO_EN` is set, a turnaround delay of one cycle is added before the start bit; when `UART_DL1_EN` is set, a turnaround delay of one cycle is added after the stop bit.

### 37.4.6.3 Bus Snooping

In a two-wire multidrop network, UART controllers support bus snooping if RE of the external RS485 transceiver is 0. By default, a UART controller is not allowed to transmit and receive data simultaneously. If `UART_RS485TX_RX_EN` is set and the external RS485 transceiver is configured as in Figure 37.4-5, a UART controller may receive data in transmitter mode and snoop the bus. If `UART_RS485RXBY_TX_EN` is set, a UART controller may transmit data in receiver mode.

The two UART controllers can snoop the data sent by themselves. In transmitter mode, when a UART controller monitors a collision between the data sent and the data received, a `UART_RS485_CLASH_INT` is generated; when a UART controller monitors a data frame error, a `UART_RS485_FRM_ERR_INT` interrupt is generated; when a UART controller monitors a parity bit error, a `UART_RS485_PARITY_ERR_INT` is generated.

## 37.4.7 IrDA

IrDA protocol consists of three layers, namely the physical layer, the link access protocol, and the link management protocol. The UART controllers implement IrDA's physical layer. In IrDA encoding, a UART controller supports data rates up to 115.2 kbit/s (SIR, or serial infrared mode). As shown in Figure 37.4-6, the IrDA encoder converts a non-return to zero code (NRZ) signal to a return to zero inverted code (RZI) signal and sends it to the external driver and infrared LED. This encoder uses modulated signals whose pulse width is 3/16 bits to indicate logic "0", and low levels to indicate logic "1". The IrDA decoder receives signals from the infrared receiver and converts them to NRZ signals. In most cases, the receiver is high when it is idle, and the parity bit of the encoder output is opposite to that of the decoder input. If a low pulse is detected, it indicates that a start bit has been received.

When IrDA function is enabled, one bit is divided into 16 clock cycles. If the bit to be sent is zero, then the 9th, 10th, and 11th clock cycle are high.

Figure 37.4-6. The Timing Diagram of Encoding and Decoding in SIR mode

The IrDA transceiver is half-duplex, meaning that it cannot send and receive data simultaneously. As shown in Figure 37.4-7, IrDA function is enabled by setting `UART_IRDA_EN`. When `UART_IRDA_TX_EN` is set to 1, the IrDA transceiver is enabled to send data and not allowed to receive data; when `UART_IRDA_TX_EN` is reset to 0, the IrDA transceiver is enabled to receive data and not allowed to send data.

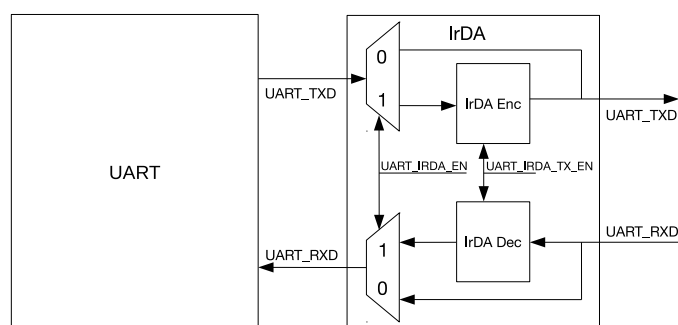

Figure 37.4-7. IrDA Encoding and Decoding Diagram

### 37.4.8 Wakeup

UART can be set as wakeup source. When a UART controller is in Light-sleep mode, a wake\_up signal can be generated in four ways and be sent to the RTC module, which then wakes up ESP32-P4.

- `UART_WK_MODE_SEL` = 0: When all the clocks are disabled, the chip can be woken up by reverting RXD for multiple cycles until the number of positive edges is greater than or equal to `UART_ACTIVE_THRESHOLD` + 3.
- `UART_WK_MODE_SEL` = 1: UART Core keeps working, so the UART receiver can still receive data and store the received data in RX FIFO. When the number of data bytes in RX FIFO is greater than `UART_RX_WAKE_UP_THRHD`, the chip can be woken up from the Light-sleep mode.
- `UART_WK_MODE_SEL` = 2: When the UART receiver detects a start bit, the chip will be woken up.

- **UART\_WK\_MODE\_SEL** = 3: When the UART receiver receives a specific character sequence, the chip will be woken up. The wakeup characters can be defined by configuring **UART\_WK\_CHAR0**, **UART\_WK\_CHAR1**, **UART\_WK\_CHAR2**, **UART\_WK\_CHAR3**, and **UART\_WK\_CHAR4**. These characters can be formed into different character sequences by configuring **UART\_CHAR\_NUM** and **UART\_WK\_CHAR\_MASK**, as shown in Table 37.4-1. Once the sequence is detected, the chip will be woken up. For the last configuration in Table 37.4-1, UART will detect for CHAR0 ~ CHAR4 in order.

Table 37.4-1. UART\_CHAR\_WAKEUP Mode Configuration

| UART_CHAR_NAME | UART_WP_CHAR_MASK | Character Sequence            |
|----------------|-------------------|-------------------------------|
| 1              | 0xF               | CHAR4                         |
| 2              | 0x7               | CHAR3/CHAR4                   |
| 3              | 0x3               | CHAR2/CHAR3/CHAR4             |
| 4              | 0x1               | CHAR1/CHAR2/CHAR3/CHAR4       |
| 5              | 0x0               | CHAR0/CHAR1/CHAR2/CHAR3/CHAR4 |

After the chip is woken up by UART, it is necessary to clear the wake\_up signal by transmitting data to UART in Active mode or resetting the whole UART, otherwise the number of rising edges required for the next wakeup will be reduced.

### 37.4.9 Flow Control

UART controllers have two ways to control data flow, namely hardware flow control and software flow control. Hardware flow control is achieved using output signal rtsn\_out and input signal ctsn\_in. Software flow control is achieved by inserting special characters in the data flow sent and detecting special characters in the data flow received.

### 37.4.9.1 Hardware Flow Control

Figure 37.4-8. Hardware Flow Control Diagram

Figure 37.4-8 shows the hardware flow control of a UART controller. Hardware flow control uses output signal `rtsn_out` and input signal `dsrn_in`. Figure 37.4-9 illustrates how these signals are connected between UART on ESP32-P4 (hereinafter referred to as IUO) and the external UART (hereinafter referred to as EUO).

When `rtsn_out` of IUO is low, EUO is allowed to send data. When `rtsn_out` of IUO is high, EUO is notified to stop sending data until `rtsn_out` of IUO returns to low. The output signal `rtsn_out` can be controlled in two ways.

- Software control: Enter this mode by clearing `UART_RX_FLOW_EN` to 0. In this mode, the level of `rtsn_out` is changed by configuring `UART_SW_RTS`.
- Hardware control: Enter this mode by setting `UART_RX_FLOW_EN` to 1. In this mode, `rtsn_out` is pulled high when data in Rx\_FIFO exceeds `UART_RX_FLOW_THRHD`.

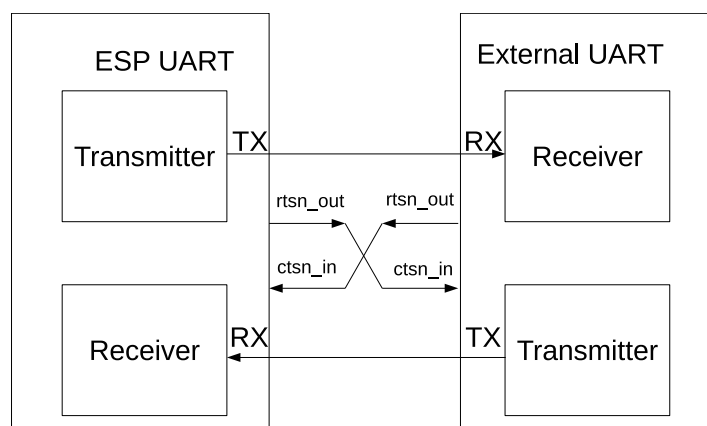

Figure 37.4-9. Connection between Hardware Flow Control Signals

When `ctsn_in` of IUO is low, IUO is allowed to send data; when `ctsn_in` is high, IUO is not allowed to send data. When IUO detects an edge change of `ctsn_in`, a `UART_CTS_CHG_INT` interrupt is generated.

If `dtrn_out` of IUO is high, it indicates that IUO is ready to transmit data. `dtrn_out` is generated by configuring the `UART_SW_DTR` field. When the IUO transmitter detects an edge change of `dtrn_in`, a `UART_DSR_CHG_INT` interrupt is generated. After this interrupt is detected, software can obtain the level of input signal `dtrn_in` by reading `UART_DSRN`. If `dtrn_in` is high, it indicates that EUO is ready to transmit data.

In a two-wire RS485 multidrop network enabled by setting `UART_RS485_EN`, `dtrn_out` is generated by hardware and used for transmit/receive turnaround. When data transmission starts, `dtrn_out` is pulled high and the external driver is enabled; when data transmission completes, `dtrn_out` is pulled low and the external driver is disabled. Please note that when there is a turnaround delay of one cycle added after the stop bit, `dtrn_out` is pulled low after the delay.

UART loopback test is enabled by setting `UART_LOOPBACK`. In the test, UART output signal `txd_out` is connected to its input signal `rx_d_in`, `rtsn_out` is connected to `ctsn_in`, and `dtrn_out` is connected to `dtrn_in`. If the data sent matches the data received, it indicates that UART controllers are working properly.

### 37.4.9.2 Software Flow Control

Instead of CTS/RTS lines, software flow control uses XON/XOFF characters to start or stop data transmission. Such flow control is enabled by setting `UART_SW_FLOW_CON_EN` to 1.

When using software flow control, hardware automatically detects if there are XON/XOFF characters in the data flow received, and generate a `UART_SW_XOFF_INT` or a `UART_SW_XON_INT` interrupt accordingly. If an XOFF character is detected, the transmitter stops data transmission once the current byte has been transmitted; if an XON character is detected, the transmitter starts data transmission. In addition, software can force the transmitter to stop sending data by setting `UART_FORCE_XOFF`, or to start sending data by setting `UART_FORCE_XON`.

Software determines whether to insert flow control characters based on the remaining room in RX FIFO. When `UART_SEND_XOFF` is set, the transmitter sends an XOFF character configured by `UART_XOFF_CHAR` after the current byte in transmission; when `UART_SEND_XON` is set, the transmitter sends an XON character configured by `UART_XON_CHAR` after the current byte in transmission. If the RX FIFO of a UART controller stores more data than `UART_XOFF_THRESHOLD`, `UART_SEND_XOFF` is set by hardware. As a result, the transmitter sends an XOFF character configured by `UART_XOFF_CHAR` after the current byte in transmission. If the RX FIFO of a

UART controller stores less data than `UART_XON_THRESHOLD`, `UART_SEND_XON` is set by hardware. As a result, the transmitter sends an XON character configured by `UART_XON_CHAR` after the current byte in transmission.

In full-duplex mode, when the UART receiver receives an XOFF character, the UART transmitter is not allowed to send any data including XOFF even if the UART receiver receives more data than its threshold. To avoid deadlocks in software flow control or overflow caused thereby, you can set `UART_XON_XOFF_STILL_SEND`. In this way, the UART transmitter can still send an XOFF character when it is not allowed to send any data.

### 37.4.10 GDMA Mode

The five UART controllers on ESP32-P4 share one TX/RX GDMA (General Direct Memory Access) channel via UHCI (Universal Host Controller Interface). In GDMA mode, UART controllers support the decoding and encoding of HCI data packets. The `UHCI_UART_SEL` field determines which UART controller occupies the GDMA TX/RX channel.

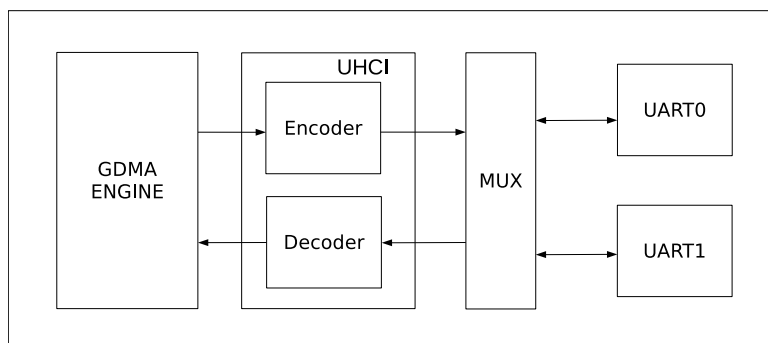

Figure 37.4-10. Data Transfer in GDMA Mode

Figure 37.4-10 shows how data is transferred using GDMA. Before GDMA receives data, software prepares an inlink. `GDMA_INLINK_ADDR_CH $n$`  points to the first receive descriptor in the inlink. After `GDMA_INLINK_START_CH $n$`  is set, UHCI sends data that UART has received to the decoder. The decoded data is then stored into the RAM pointed by the inlink under the control of GDMA.

Before GDMA sends data, software prepares an outlink and data to be sent. `GDMA_OUTLINK_ADDR_CH $n$`  points to the first transmit descriptor in the outlink. After `GDMA_OUTLINK_START_CH $n$`  is set, GDMA reads data from the RAM pointed by outlink. The data is then encoded by the encoder, and sent sequentially by the UART transmitter.

HCI data packets have separators at the beginning and the end, with data bits in the middle (separators + data bits + separators). The encoder inserts separators in front of and after data bits, and replaces data bits identical to separators with special characters. The decoder removes separators in front of and after data bits, and replaces special characters with separators. There can be more than one continuous separator at the beginning and the end of a data packet. The separator is configured by `UHCI_SEPER_CHAR`, 0xC0 by default. The special character is configured by `UHCI_ESC_SEQO_CHAR0` (0xDB by default) and `UHCI_ESC_SEQO_CHAR1` (0xDD by default). When all data has been sent, a `GDMA_OUT_TOTAL_EOF_CH $n$ _INT` interrupt is generated. When all data has been received, a `GDMA_IN_SUC_EOF_CH $n$ _INT` is generated.

### 37.4.11 Interrupts

ESP32-P4's UART<sub>n</sub> and UHCI can generate the following interrupt signals that will be sent to the [Interrupt Matrix](#).

- UART<sub>n</sub>\_INTR
- UHCI\_INTR

There are several internal interrupt sources from UART<sub>n</sub> and UHCI that can generate the above interrupt signals.

UART<sub>n</sub> interrupt sources are listed as follows:

- UART\_AT\_CMD\_CHAR\_DET\_INT: Triggered when the receiver detects an AT\_CMD character.
- UART\_RS485\_CLASH\_INT: Triggered when a collision is detected between the transmitter and the receiver in RS485 mode.
- UART\_RS485\_FRM\_ERR\_INT: Triggered when an error is detected in the data frame sent by the transmitter in RS485 mode.
- UART\_RS485\_PARITY\_ERR\_INT: Triggered when an error is detected in the parity bit sent by the transmitter in RS485 mode.
- UART\_TX\_DONE\_INT: Triggered when all data in the transmitter's TX FIFO has been sent.
- UART\_TX\_BRK\_IDLE\_DONE\_INT: Triggered when the transmitter stays idle for the minimum interval (threshold) after sending the last data bit.
- UART\_TX\_BRK\_DONE\_INT: Triggered when the transmitter has sent all NULL characters after all data in TX FIFO had been sent.
- UART\_GLITCH\_DET\_INT: Triggered when the receiver detects a glitch in the middle of the start bit.
- UART\_SW\_XOFF\_INT: Triggered when [UART\\_SW\\_FLOW\\_CON\\_EN](#) is set and the receiver receives a XOFF character.
- UART\_SW\_XON\_INT: Triggered when [UART\\_SW\\_FLOW\\_CON\\_EN](#) is set and the receiver receives a XON character.
- UART\_RXFIFO\_TOUT\_INT: Triggered when the receiver has received at least one byte, and the bus remains idle for [UART\\_RX\\_TOUT\\_THRHD](#) bit time.
- UART\_BRK\_DET\_INT: Triggered when the receiver detects a NULL character (i.e., logic 0 for one NULL character transmission) after stop bits.
- UART\_CTS\_CHG\_INT: Triggered when the receiver detects an edge change of CTS<sub>n</sub> signals.
- UART\_DSR\_CHG\_INT: Triggered when the receiver detects an edge change of DSR<sub>n</sub> signals.
- UART\_RXFIFO\_OVF\_INT: Triggered when the amount of data received by the receiver exceeds the storage capacity of the FIFO.
- UART\_FRM\_ERR\_INT: Triggered when the receiver detects a data frame error.
- UART\_PARITY\_ERR\_INT: Triggered when the receiver detects a parity error.
- UART\_TXFIFO\_EMPTY\_INT: Triggered when TX FIFO stores less data than what [UART\\_TXFIFO\\_EMPTY\\_THRHD](#) specifies.

- UART\_RXFIFO\_FULL\_INT: Triggered when the receiver receives more data than what [UART\\_RXFIFO\\_FULL\\_THRHD](#) specifies.
- UART\_WAKEUP\_INT: Triggered when UART is woken up.

UHCI interrupt sources are listed as follows:

- UHCI\_APP\_CTRL1\_INT: Triggered when software sets [UHCI\\_APP\\_CTRL1\\_INT\\_RAW](#).
- UHCI\_APP\_CTRL0\_INT: Triggered when software sets [UHCI\\_APP\\_CTRL0\\_INT\\_RAW](#).
- UHCI\_OUTLINK\_EOF\_ERR\_INT: Triggered when an EOF error is detected in a transmit descriptor.
- UHCI\_SEND\_A\_REG\_Q\_INT: Triggered when UHCI has sent a series of short packets using `always_send`.
- UHCI\_SEND\_S\_REG\_Q\_INT: Triggered when UHCI has sent a series of short packets using `single_send`.
- UHCI\_TX\_HUNG\_INT: Triggered when UHCI takes too long to read RAM using a GDMA transmit channel.
- UHCI\_RX\_HUNG\_INT: Triggered when UHCI takes too long to receive data using a GDMA receive channel.
- UHCI\_TX\_START\_INT: Triggered when GDMA detects a separator character.
- UHCI\_RX\_START\_INT: Triggered when a separator character has been sent.

Each interrupt source can be configured by a common set of registers that are described in Section [Interrupt Configuration Registers](#). The specific registers can be found in Section [37.6 Register Summary](#).

## 37.5 Programming Procedures

### 37.5.1 Register Type

All UART registers are in the APB\_CLK domain.

UART configuration registers can be classified into two groups. One group of registers are read in the APB\_CLK or AHB\_CLK domains, so once such registers are configured no extra operations are required. The other group of registers are read in the UART\_SCLK domain, and therefore need to implement the clock domain crossing design. Once these registers are configured, the configured values need to be synchronized to the UART Core's clock domain by writing to [UART\\_REG\\_UPDATE](#). Once all values have been synchronized, [UART\\_REG\\_UPDATE](#) will be automatically cleared by hardware. After configuring registers that need synchronization, it is recommended to check whether [UART\\_REG\\_UPDATE](#) is 0. This is to ensure that register values configured before have already been synchronized.

To distinguish between these two groups of registers easily, all registers that implement the clock domain crossing design have the `_SYNC` suffix, and are put together in Section [37.6](#). Those without the `_SYNC` suffix in Section [37.6](#) are configuration registers that require no clock domain crossing.

## 37.5.2 Detailed Steps

Figure 37.5-1 illustrates the process to program UART controllers, namely initialize UART, configure registers, enable the UART transmitter or receiver, and finish data transmission.

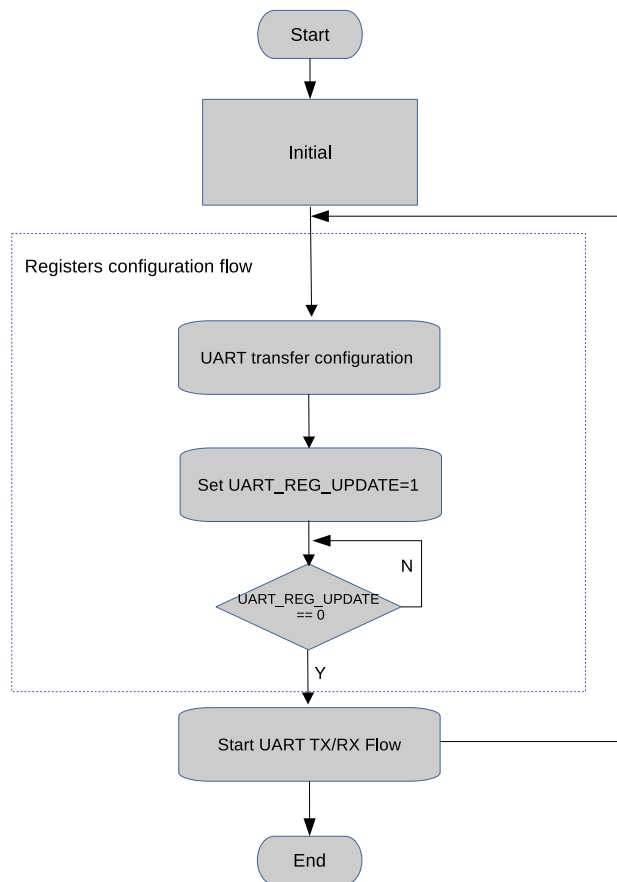

Figure 37.5-1. UART Programming Procedures

### 37.5.2.1 Initializing UART $n$

To initialize UART $n$ :

- Write 1 to `HP_SYS_CLKRST_RST_EN_UART $n$ _APB`.
- Clear `HP_SYS_CLKRST_RST_EN_UART $n$ _APB` to 0.
- Write 1 to `HP_SYS_CLKRST_RST_EN_UART $n$ _CORE`.
- Clear `HP_SYS_CLKRST_RST_EN_UART $n$ _CORE` to 0.

### 37.5.2.2 Configuring UART $n$ Communication

To configure UART $n$  communication:

- Wait for `UART_REG_UPDATE` to become 0, which indicates the completion of the last synchronization.
- Select the clock source via `HP_SYS_CLKRST_UART $n$ _CLK_SRC_SEL`.
- Configure divisor of the divider via `HP_SYS_CLKRST_UART $n$ _SCLK_DIV_NUM`, `HP_SYS_CLKRST_UART $n$ _SCLK_DIV_DENOMINATOR`, and

[HP\\_SYS\\_CLKRST\\_UARTn\\_SCLK\\_DIV\\_NUMERATOR](#).

- Configure the baud rate for transmission via [UART\\_CLKDIV](#) and [UART\\_CLKDIV\\_FRAG](#).
- Configure data length via [UART\\_BIT\\_NUM](#).
- Configure odd or even parity check via [UART\\_PARITY\\_EN](#) and [UART\\_PARITY](#).
- Optional steps depending on application ...
- Synchronize the configured values to the Core Clock domain by writing 1 to [UART\\_REG\\_UPDATE](#).

### 37.5.2.3 Enabling UARTn

To enable UARTn transmitter:

- Configure TX FIFO's empty threshold via [UART\\_TXFIFO\\_EMPTY\\_THRHD](#).
- Disable UART\_TXFIFO\_EMPTY\_INT interrupt by clearing [UART\\_TXFIFO\\_EMPTY\\_INT\\_ENA](#).
- Write data to be sent to [UART\\_RXFIFO\\_RD\\_BYTE](#).
- Clear UART\_TXFIFO\_EMPTY\_INT interrupt by setting [UART\\_TXFIFO\\_EMPTY\\_INT\\_CLR](#).
- Enable UART\_TXFIFO\_EMPTY\_INT interrupt by setting [UART\\_TXFIFO\\_EMPTY\\_INT\\_ENA](#).
- Check [UART\\_TXFIFO\\_EMPTY\\_INT\\_ST](#) and wait for the completion of data transmission.

To enable UARTn receiver:

- Configure RX FIFO's full threshold via [UART\\_RXFIFO\\_FULL\\_THRHD](#).
- Enable UART\_RXFIFO\_FULL\_INT interrupt by setting [UART\\_RXFIFO\\_FULL\\_INT\\_ENA](#).
- Check [UART\\_RXFIFO\\_FULL\\_INT\\_ST](#) and wait until the RX FIFO is full.
- Read data from RX FIFO via [UART\\_RXFIFO\\_RD\\_BYTE](#), and obtain the number of bytes received in RX FIFO via [UART\\_RXFIFO\\_CNT](#).

## 37.6 Register Summary

### 37.6.1 UART Register Summary

The addresses in this section are relative to UART Controller base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name  | Description                                   | Address | Access   |
|---|---|---------|----------|
| <b>FIFO Configuration</b>                         |   |         |          |
| <a href="#">UART_FIFO_REG</a>                     | FIFO data register                            | 0x0000  | RO       |
| <a href="#">UART_TOUT_CONF_SYNC_REG</a>           | UART threshold and allocation configuration   | 0x0064  | R/W      |
| <b>UART Interrupt Register</b>                    |   |         |          |
| <a href="#">UART_INT_RAW_REG</a>                  | Raw interrupt status                          | 0x0004  | R/WTC/SS |
| <a href="#">UART_INT_ST_REG</a>                   | Masked interrupt status                       | 0x0008  | RO       |
| <a href="#">UART_INT_ENA_REG</a>                  | Interrupt enable bits                         | 0x000C  | R/W      |
| <a href="#">UART_INT_CLR_REG</a>                  | Interrupt clear bits                          | 0x0010  | WT       |

## 37.6.2 LP UART Register Summary

The addresses in this section are relative to LP UART base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name  | Description                                    | Address | Access   |
|---|--|---------|----------|
| <b>FIFO Configuration</b>                   |  |         |          |

### 37.6.3 UHCI Register Summary

The addresses in this section are relative to UHCI base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name                                  | Description                            | Address | Access |
|---------------------------------------|--|---------|--------|
| <b>Configuration Register</b>         |  |         |        |
| <a href="#">UHCI_CONFO_REG</a>        | UHCI configuration register            | 0x0000  | R/W    |
| <a href="#">UHCI_CONF1_REG</a>        | UHCI configuration register            | 0x0014  | varies |
| <a href="#">UHCI_ESCAPE_CONF_REG</a>  | Escape character configuration         | 0x0020  | R/W    |
| <a href="#">UHCI_HUNG_CONF_REG</a>    | Timeout configuration                  | 0x0024  | R/W    |
| <a href="#">UHCI_ACK_NUM_REG</a>      | UHCI ACK number configuration          | 0x0028  | varies |
| <a href="#">UHCI_QUICK_SENT_REG</a>   | UHCI quick send configuration register | 0x0030  | varies |
| <a href="#">UHCI_REG_Q0_WORD0_REG</a> | Q0 WORD0 quick send register           | 0x0034  | R/W    |
| <a href="#">UHCI_REG_Q0_WORD1_REG</a> | Q0 WORD1 quick send register           | 0x0038  | R/W    |
| <a href="#">UHCI_REG_Q1_WORD0_REG</a> | Q1 WORD0 quick send register           | 0x003C  | R/W    |
| <a href="#">UHCI_REG_Q1_WORD1_REG</a> | Q1 WORD1 quick send register           | 0x0040  | R/W    |
| <a href="#">UHCI_REG_Q2_WORD0_REG</a> | Q2 WORD0 quick send register           | 0x0044  | R/W    |
| <a href="#">UHCI_REG_Q2_WORD1_REG</a> | Q2 WORD1 quick send register           | 0x0048  | R/W    |
| <a href="#">UHCI_REG_Q3_WORD0_REG</a> | Q3 WORD0 quick send register           | 0x004C  | R/W    |
| <a href="#">UHCI_REG_Q3_WORD1_REG</a> | Q3 WORD1 quick send register           | 0x0050  | R/W    |
| <a href="#">UHCI_REG_Q4_WORD0_REG</a> | Q4 WORD0 quick send register           | 0x0054  | R/W    |
| <a href="#">UHCI_REG_Q4_WORD1_REG</a> | Q4 WORD1 quick send register           | 0x0058  | R/W    |
| <a href="#">UHCI_REG_Q5_WORD0_REG</a> | Q5 WORD0 quick send register           | 0x005C  | R/W    |

| Name                                  | Description                              | Address | Access |
|---------------------------------------|--|---------|--------|
| <a href="#">UHCI_REG_Q5_WORD1_REG</a> | Q5 WORD1 quick send register             | 0x0060  | R/W    |
| <a href="#">UHCI_REG_Q6_WORD0_REG</a> | Q6 WORD0 quick send register             | 0x0064  | R/W    |
| <a href="#">UHCI_REG_Q6_WORD1_REG</a> | Q6 WORD1 quick register                  | 0x0068  | R/W    |
| <a href="#">UHCI_ESC_CONF0_REG</a>    | Escape sequence configuration register 0 | 0x006C  | R/W    |
| <a href="#">UHCI_ESC_CONF1_REG</a>    | Escape sequence configuration register 1 | 0x0070  | R/W    |
| <a href="#">UHCI_ESC_CONF2_REG</a>    | Escape sequence configuration register 2 | 0x0074  | R/W    |
| <a href="#">UHCI_ESC_CONF3_REG</a>    | Escape sequence configuration register 3 | 0x0078  | R/W    |
| <a href="#">UHCI_PKT_THRES_REG</a>    | Configuration register for packet length | 0x007C  | R/W    |
| <b>UHCI Interrupt Register</b>        |  |         |        |
| <a href="#">UHCI_INT_RAW_REG</a>      | Raw interrupt status                     | 0x0004  | varies |
| <a href="#">UHCI_INT_ST_REG</a>       | Masked interrupt status                  | 0x0008  | RO     |
| <a href="#">UHCI_INT_ENA_REG</a>      | Interrupt enable bits                    | 0x000C  | R/W    |
| <a href="#">UHCI_INT_CLR_REG</a>      | Interrupt clear bits                     | 0x0010  | WT     |
| <b>UHCI Status Register</b>           |  |         |        |
| <a href="#">UHCI_STATE0_REG</a>       | UHCI receive status                      | 0x0018  | RO     |
| <a href="#">UHCI_STATE1_REG</a>       | UHCI transmit status                     | 0x001C  | RO     |
| <a href="#">UHCI_RX_HEAD_REG</a>      | UHCI packet header register              | 0x002C  | RO     |
| <b>Version Register</b>               |  |         |        |
| <a href="#">UHCI_DATE_REG</a>         | UHCI version control register            | 0x0080  | R/W    |

## 37.7 Registers

### 37.7.1 UART Registers

The addresses in this section are relative to UART Controller base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section *Programming Reserved Register Field*.

**Register 37.1. UART\_FIFO\_REG (0x0000)**

|            |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |                     |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   | **UART\_RX\_TOUT\_EN** Configures whether or not to enable UART receiver's timeout function.  
0: Disable  
1: Enable  
(R/W)

**UART\_RX\_TOUT\_FLOW\_DIS** Configures whether or not to disable the idle status counter when hardware flow control is enabled.  
0: Enable  
1: Disable  
(R/W)

**UART\_RX\_TOUT\_THRHD** Configures the amount of time that the bus can remain idle before timeout.  
Measurement unit: bit time (the time to transmit 1 bit). (R/W)

Register 37.3. UART\_INT\_RAW\_REG (0x0004)

**UART\_RXFIFO\_FULL\_INT\_RAW** The raw interrupt status of UART\_RXFIFO\_FULL\_INT. (R/WTC/SS)

**UART\_TXFIFO\_EMPTY\_INT\_RAW** The raw interrupt status of UART\_TXFIFO\_EMPTY\_INT. (R/WTC/SS)

**UART\_PARITY\_ERR\_INT\_RAW** The raw interrupt status of UART\_PARITY\_ERR\_INT. (R/WTC/SS)

**UART\_FRM\_ERR\_INT\_RAW** The raw interrupt status of UART\_FRM\_ERR\_INT. (R/WTC/SS)

**UART\_RXFIFO\_OVF\_INT\_RAW** The raw interrupt status of UART\_RXFIFO\_OVF\_INT. (R/WTC/SS)

**UART\_DSR\_CHG\_INT\_RAW** The raw interrupt status of UART\_DSR\_CHG\_INT. (R/WTC/SS)

**UART\_CTS\_CHG\_INT\_RAW** The raw interrupt status of UART\_CTS\_CHG\_INT. (R/WTC/SS)

**UART\_BRK\_DET\_INT\_RAW** The raw interrupt status of UART\_BRK\_DET\_INT. (R/WTC/SS)

**UART\_RXFIFO\_TOUT\_INT\_RAW** The raw interrupt status of UART\_RXFIFO\_TOUT\_INT. (R/WTC/SS)

**UART\_SW\_XON\_INT\_RAW** The raw interrupt status of UART\_SW\_XON\_INT. (R/WTC/SS)

**UART\_SW\_XOFF\_INT\_RAW** UART\_SW\_XOFF\_INT. (R/WTC/SS)

**UART\_GLITCH\_DET\_INT\_RAW** The raw interrupt status of UART\_GLITCH\_DET\_INT. (R/WTC/SS)

**UART\_TX\_BRK\_DONE\_INT\_RAW** The raw interrupt status of UART\_TX\_BRK\_DONE\_INT. (R/WTC/SS)

**UART\_TX\_BRK\_IDLE\_DONE\_INT\_RAW** The raw interrupt status of UART\_TX\_BRK\_IDLE\_DONE\_INT.  
(R/WTC/SS)

**UART\_TX\_DONE\_INT\_RAW** The raw interrupt status of UART\_TX\_DONE\_INT. (R/WTC/SS)

**UART\_RS485\_PARITY\_ERR\_INT\_RAW** The raw interrupt status of UART\_RS485\_PARITY\_ERR\_INT.  
(R/WTC/SS)

**UART\_RS485\_FRM\_ERR\_INT\_RAW** The raw interrupt status of UART\_RS485\_FRM\_ERR\_INT.  
(R/WTC/SS)

Continued on the next page...

**Register 37.3. UART\_INT\_RAW\_REG (0x0004)**

Continued from the previous page...

**UART\_RS485\_CLASH\_INT\_RAW** The raw interrupt status of UART\_RS485\_CLASH\_INT. (R/WTC/SS)

**UART\_AT\_CMD\_CHAR\_DET\_INT\_RAW** The raw interrupt status of UART\_AT\_CMD\_CHAR\_DET\_INT.  
(R/WTC/SS)

**UART\_WAKEUP\_INT\_RAW** The raw interrupt status of UART\_WAKEUP\_INT. (R/WTC/SS)

**Register 37.4. UART\_INT\_ST\_REG (0x0008)**

- UART\_GLITCH\_FILT Configures the width of a pulse to be filtered.  
Measurement unit: UART Core's clock cycle.  
Pulses whose width is lower than this value will be ignored. (R/W)
- UART\_GLITCH\_FILT\_EN Configures whether or not to enable RX signal filter.  
0: Disable  
1: Enable  
(R/W)

**Register 37.9. UART\_CONFO\_SYNC\_REG (0x0020)**

Reset

**UART\_PARITY** Configures the parity check mode.

0: Even parity

1: Odd parity

(R/W)

**UART\_PARITY\_EN** Configures whether or not to enable UART parity check.

0: Disable

1: Enable

(R/W)

**UART\_BIT\_NUM** Configures the number of data bits.

0: 5 bits

1: 6 bits

2: 7 bits

3: 8 bits

(R/W)

**UART\_STOP\_BIT\_NUM** Configures the number of stop bits.

0: Invalid. No effect

1: 1 bit

2: 1.5 bits

3: 2 bits

(R/W)

**UART\_TXD\_BRK** Configures whether or not to send NULL characters when finishing data transmission.

0: Not send

1: Send

(R/W)

**UART\_IRDA\_DPLX** Configures whether or not to enable IrDA loopback test.

0: Disable

1: Enable

(R/W)

**UART\_IRDA\_TX\_EN** Configures whether or not to enable the IrDA transmitter.

0: Disable

1: Enable

(R/W)

Continued on the next page...

**Register 37.9. UART\_CONFO\_SYNC\_REG (0x0020)**

Continued from the previous page...

**UART\_IRDA\_WCTL** Configures the 11th bit of the IrDA transmitter.

0: This bit is 0.

1: This bit is the same as the 10th bit.

(R/W)

**UART\_IRDA\_TX\_INV** Configures whether or not to invert the level of the IrDA transmitter.

0: Not invert

1: Invert

(R/W)

**UART\_IRDA\_RX\_INV** Configures whether or not to invert the level of the IrDA receiver.

0: Not invert

1: Invert

(R/W)

**UART\_LOOPBACK** Configures whether or not to enable UART loopback test.

0: Disable

1: Enable

(R/W)

**UART\_TX\_FLOW\_EN** Configures whether or not to enable flow control for the transmitter.

0: Disable

1: Enable

(R/W)

**UART\_IRDA\_EN** Configures whether or not to enable IrDA protocol.

0: Disable

1: Enable

(R/W)

**UART\_RXD\_INV** Configures whether or not to invert the level of UART RXD signal.

0: Not invert

1: Invert

(R/W)

**UART\_TXD\_INV** Configures whether or not to invert the level of UART TXD signal.

0: Not invert

1: Invert

(R/W)

**UART\_DIS\_RX\_DAT\_OVF** Configures whether or not to disable data overflow detection for the UART receiver.

0: Enable

1: Disable

(R/W)

Continued on the next page...

**Register 37.9. UART\_CONFO\_SYNC\_REG (0x0020)**

Continued from the previous page...

**UART\_ERR\_WR\_MASK** Configures whether or not to store the received data with errors into FIFO.

- 0: Store
  - 1: Not store
- (R/W)

**UART\_AUTOBAUD\_EN** Configures whether or not to enable baud rate detection.

- 0: Disable
  - 1: Enable
- (R/W)

**UART\_MEM\_CLK\_EN** Configures whether or not to enable clock gating for UART memory.

- 0: Disable
  - 1: Enable
- (R/W)

**UART\_SW\_RTS** Configures the RTS signal used in software flow control.

- 0: The UART transmitter is not allowed to send data.
  - 1: The UART transmitted is allowed to send data.
- (R/W)

**UART\_RXFIFO\_RST** Configures whether or not to reset the UART RX FIFO.

- 0: Not reset
  - 1: Reset
- (R/W)

**UART\_TXFIFO\_RST** Configures whether or not to reset the UART TX FIFO.

- 0: Not reset
  - 1: Reset
- (R/W)

**Register 37.10. UART\_CONF1\_REG (0x0024)**

**UART\_RXFIFO\_FULL\_THRHD** Configures the threshold for RX FIFO being full.  
Measurement unit: byte. (R/W)

**UART\_TXFIFO\_EMPTY\_THRHD** Configures the threshold for TX FIFO being empty.  
Measurement unit: byte. (R/W)

**UART\_CTS\_INV** Configures whether or not to invert the level of UART CTS signal.  
0: Not invert  
1: Invert  
(R/W)

**UART\_DSR\_INV** Configures whether or not to invert the level of UART DSR signal.  
0: Not invert  
1: Invert  
(R/W)

**UART\_RTS\_INV** Configures whether or not to invert the level of UART RTS signal.  
0: Not invert  
1: Invert  
(R/W)

**UART\_DTR\_INV** Configures whether or not to invert the level of UART DTR signal.  
0: Not invert  
1: Invert  
(R/W)

**UART\_SW\_DTR** Configures the DTR signal used in software flow control.  
0: Data to be transmitted is not ready.  
1: Data to be transmitted is ready.  
(R/W)

**UART\_CLK\_EN** Configures clock gating.  
0: Support clock only when the application writes registers.  
1: Always force the clock on for registers.  
(R/W)

**Register 37.11. UART\_HWFC\_CONF\_SYNC\_REG (0x002C)**

|  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  | **UART\_ACTIVE\_THRESHOLD** Configures the number of RXD edge changes to wake up the chip in wakeup mode 0. (R/W)

**UART\_RX\_WAKE\_UP\_THRHD** Configures the number of received data bytes to wake up the chip in wakeup mode 1. (R/W)

**UART\_WK\_CHAR\_NUM** Configures the number of wakeup characters. (R/W)

**UART\_WK\_CHAR\_MASK** Configures whether or not to mask wakeup characters.

0: Not mask

1: Mask

(R/W)

**UART\_WK\_MODE\_SEL** Configures which wakeup mode to select. See Section [37.4.8 Wakeup](#) for the explanation of each mode.

0: Mode 0

1: Mode 1

2: Mode 2

3: Mode 3

(R/W)

**UART\_XON\_CHAR** Configures the XON character for flow control. (R/W)

**UART\_XOFF\_CHAR** Configures the XOFF character for flow control. (R/W)

**UART\_XON\_XOFF\_STILL\_SEND** Configures whether the UART transmitter can send XON or XOFF characters when it is disabled.

0: Cannot send

1: Can send

(R/W)

**UART\_SW\_FLOW\_CON\_EN** Configures whether or not to enable software flow control.

0: Disable

1: Enable

(R/W)

**UART\_XONOFF\_DEL** Configures whether or not to remove flow control characters from the received data.

0: Not move

1: Move

(R/W)

**UART\_FORCE\_XON** Configures whether the transmitter continues to sending data.

0: Not send

1: Send

(R/W)

**UART\_FORCE\_XOFF** Configures whether or not to stop the transmitter from sending data.

0: Not stop

1: Stop

(R/W)

**UART\_SEND\_XON** Configures whether or not to send XON characters.

0: Not send

1: Send

(R/W/SS/SC)

**UART\_SEND\_XOFF** Configures whether or not to send XOFF characters.

0: Not send

1: Send

(R/W/SS/SC)

**Register 37.16. UART\_SWFC\_CONF1\_REG (0x0040)**

**UART\_XON\_THRESHOLD** Configures the threshold for data in RX FIFO to send XON characters in software flow control.

Measurement unit: byte. (R/W)

**UART\_XOFF\_THRESHOLD** Configures the threshold for data in RX FIFO to send XOFF characters in software flow control.

Measurement unit: byte. (R/W)

**Register 37.17. UART\_TXBRK\_CONF\_SYNC\_REG (0x0044)**

**UART\_RX\_IDLE\_THRHD** Configures the threshold to generate a frame end signal when the receiver takes more time to receive one data byte data.

Measurement unit: bit time (the time to transmit 1 bit). (R/W)

**UART\_TX\_IDLE\_NUM** Configures the interval between two data transfers.

Measurement unit: bit time (the time to transmit 1 bit). (R/W)

Register 37.19. UART\_RS485\_CONF\_SYNC\_REG (0x004C)

|  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

**UART\_LOWPULSE\_MIN\_CNT** Represents the minimum duration time of a low-level pulse. It is used for baud rate detection.

Measurement unit: APB\_CLK clock cycle. (RO)

**Register 37.33. UART\_HIGHPULSE\_REG (0x0080)**

**UART\_HIGHPULSE\_MIN\_CNT** Represents the maximum duration time for a high-level pulse. It is used for baud rate detection.

Measurement unit: APB\_CLK clock cycle. (RO)

**Register 37.34. UART\_RXD\_CNT\_REG (0x0084)**

**UART\_RXD\_EDGE\_CNT** Represents the number of RXD edge changes. It is used for baud rate detection. (RO)

**Register 37.35. UART\_DATE\_REG (0x008C)**

**UART\_DATE** Version control register. (R/W)

Register 37.36. UART\_REG\_UPDATE\_REG (0x0098)

**UART\_REG\_UPDATE** Configures whether or not to synchronize registers.

- 0: Not synchronize
- 1: Synchronize (R/W/SC)

Register 37.37. UART\_ID\_REG (0x009C)

**UART\_ID** Configures the UART ID. (R/W)

### 37.7.2  LP UART Registers

The addresses in this section are relative to LP UART base address provided in Table 6.3-2 in Chapter 6 [System and Memory](#).

For how to program reserved fields, please refer to Section [Programming Reserved Register Field](#).

Register 37.38. LP\_UART\_FIFO\_REG (0x0000)

**LP\_UART\_RXFIFO\_RD\_BYTE** Represents the data LP UART *n* read from FIFO.  
Measurement unit: byte. (RO)

Register 37.39. LP\_UART\_TOUT\_CONF\_SYNC\_REG (0x0064)

**LP\_UART\_RX\_TOUT\_EN** Configures whether or not to enable LP UART receiver’s timeout function.  
0: Disable  
1: Enable  
(R/W)

**LP\_UART\_RX\_TOUT\_FLOW\_DIS** Configures whether or not to disable the idle status counter when hardware flow control is enabled.  
0: Invalid. No effect  
1: Disable  
(R/W)

**LP\_UART\_RX\_TOUT\_THRHD** Configures the amount of time that the bus can remain idle before time-out.  
Measurement unit: bit time (the time to transmit 1 bit). (R/W)

## Register 37.40. LP\_UART\_INT\_RAW\_REG (0x0004)

**LP\_UART\_GLITCH\_FILT** Configures the width of a pulse to be filtered.

Measurement unit: UART Core's clock cycle.

Pulses whose width is lower than this value will be ignored. (R/W)

**LP\_UART\_GLITCH\_FILT\_EN** Configures whether or not to enable RX signal filter.

0: Disable

1: Enable

(R/W)

**Register 37.46. LP\_UART\_CONFO\_SYNC\_REG (0x0020)**

**LP\_UART\_PARITY** Configures the parity check mode.

0: Even parity

1: Odd parity

(R/W)

**LP\_UART\_PARITY\_EN** Configures whether or not to enable LP UART parity check.

0: Disable

1: Enable

(R/W)

**LP\_UART\_BIT\_NUM** Configures the number of data bits.

0: 5 bits

1: 6 bits

2: 7 bits

3: 8 bits

(R/W)

**LP\_UART\_STOP\_BIT\_NUM** Configures the number of stop bits.

0: Invalid. No effect

1: 1 bit

2: 1.5 bits

3: 2 bits

(R/W)

**LP\_UART\_TXD\_BRK** Configures whether or not to send NULL characters when finishing data transmission.

0: Not send

1: Send

(R/W)

**LP\_UART\_LOOPBACK** Configures whether or not to enable LP UART loopback test.

0: Disable

1: Enable

(R/W)

Continued on the next page...

**Register 37.46. LP\_UART\_CONFO\_SYNC\_REG (0x0020)**

Continued from the previous page...

**LP\_UART\_TX\_FLOW\_EN** Configures whether or not to enable flow control for the transmitter.

0: Disable

1: Enable

(R/W)

**LP\_UART\_RXD\_INV** Configures whether or not to invert the level of LP UART RXD signal.

0: Not invert

1: Invert

(R/W)

**LP\_UART\_TXD\_INV** Configures whether or not to invert the level of LP UART TXD signal.

0: Not invert

1: Invert

(R/W)

**LP\_UART\_DIS\_RX\_DAT\_OVF** Configures whether or not to disable data overflow detection for the LP UART receiver.

0: Enable

1: Disable

(R/W)

**LP\_UART\_ERR\_WR\_MASK** Configures whether or not to store the received data with errors into FIFO.

0: Store

1: Not store

(R/W)

**LP\_UART\_MEM\_CLK\_EN** Configures whether or not to enable clock gating for LP UART memory.

0: Disable

1: Enable

(R/W)

**LP\_UART\_SW\_RTS** Configures the RTS signal used in software flow control.

0: The LP UART transmitter is not allowed to send data.

1: The LP UART transmitted is allowed to send data.

(R/W)

**LP\_UART\_RXFIFO\_RST** Configures whether or not to reset the LP UART RX FIFO.

0: Not reset

1: Reset

(R/W)

**LP\_UART\_TXFIFO\_RST** Configures whether or not to reset the LP UART TX FIFO.

0: Not reset

1: Reset

(R/W)

**Register 37.47. LP\_UART\_CONF1\_REG (0x0024)**

**LP\_UART\_RXFIFO\_FULL\_THRHD** Configures the threshold for RX FIFO being full.

Measurement unit: byte. (R/W)

**LP\_UART\_TXFIFO\_EMPTY\_THRHD** Configures the threshold for TX FIFO being empty.

Measurement unit: byte. (R/W)

**LP\_UART\_CTS\_INV** Configures whether or not to invert the level of LP UART CTS signal.

0: Not invert

1: Invert

(R/W)

**LP\_UART\_DSR\_INV** Configures whether or not to invert the level of LP UART DSR signal.

0: Not invert

1: Invert

(R/W)

**LP\_UART\_RTS\_INV** Configures whether or not to invert the level of LP UART RTS signal.

0: Not invert

1: Invert

(R/W)

**LP\_UART\_DTR\_INV** Configures whether or not to invert the level of LP UART DTR signal.

0: Not invert

1: Invert

(R/W)

**LP\_UART\_SW\_DTR** Configures the DTR signal used in software flow control.

0: Data to be transmitted is not ready.

1: Data to be transmitted is ready.

(R/W)

**LP\_UART\_CLK\_EN** Configures clock gating.

0: Support clock only when the application writes registers.

1: Always force the clock on for registers.

(R/W)

**Register 37.48. LP\_UART\_HWFC\_CONF\_SYNC\_REG (0x002C)**

**LP\_UART\_XON\_CHAR** Configures the XON character for flow control. (R/W)

**LP\_UART\_XOFF\_CHAR** Configures the XOFF character for flow control. (R/W)

**LP\_UART\_XON\_XOFF\_STILL\_SEND** Configures whether the LP UART transmitter can send XON or XOFF characters when it is disabled.

0: Cannot send

1: Can send

(R/W)

**LP\_UART\_SW\_FLOW\_CON\_EN** Configures whether or not to enable software flow control.

0: Disable

1: Enable

(R/W)

**LP\_UART\_XONOFF\_DEL** Configures whether or not to remove flow control characters from the received data.

0: Not move

1: Move

(R/W)

**LP\_UART\_FORCE\_XON** Configures whether the transmitter continues to sending data.

0: Not send

1: Send

(R/W)

**LP\_UART\_FORCE\_XOFF** Configures whether or not to stop the transmitter from sending data.

0: Not stop

1: Stop

(R/W)

**LP\_UART\_SEND\_XON** Configures whether or not to send XON characters.

0: Not send

1: Send

(R/W/SS/SC)

**LP\_UART\_SEND\_XOFF** Configures whether or not to send XOFF characters.

0: Not send

1: Send

(R/W/SS/SC)

| (reserved)                      |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | LP_UART_POST_IDLE_NUM |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| 31                              |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0                     |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0x901                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

Reset

**LP\_UART\_POST\_IDLE\_NUM** Configures the interval between the last AT\_CMD and subsequent data.  
Measurement unit: bit time (the time to transmit 1 bit). (R/W)

### Register 37.64. LP\_UART\_AT\_CMD\_GAPTOUT\_SYNC\_REG (0x0058)

|                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                                       |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|---------------------------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|---------------------------------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|
| (reserved)                      |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | LP_UART_RX_GAP_TOUT                   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| 31                              |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0                                     |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 11<br>0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

**LP\_UART\_RX\_GAP\_TOUT** Configures the interval between two AT\_CMD characters.  
Measurement unit: bit time (the time to transmit 1 bit). (R/W)

### Register 37.65. LP\_UART\_AT\_CMD\_CHAR\_SYNC\_REG (0x005C)

|                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |                     |  |  |  |  |  |  |  |       |  |  |  |  |  |  |  |
|---------------------------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|------------------|--|--|--|--|--|--|--|---------------------|--|--|--|--|--|--|--|-------|--|--|--|--|--|--|--|
| (reserved)                      |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | LP_UART_CHAR_NUM |  |  |  |  |  |  |  | LP_UART_AT_CMD_CHAR |  |  |  |  |  |  |  |       |  |  |  |  |  |  |  |
| 31                              |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 15               |  |  |  |  |  |  |  | 7                   |  |  |  |  |  |  |  | 0     |  |  |  |  |  |  |  |
| 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0x3              |  |  |  |  |  |  |  | 0x2b                |  |  |  |  |  |  |  | Reset |  |  |  |  |  |  |  |

**LP\_UART\_AT\_CMD\_CHAR** Configures the AT\_CMD character. (R/W)

**LP\_UART\_CHAR\_NUM** Configures the number of continuous AT\_CMD characters a receiver can receive. (R/W)

Register 37.66. LP\_UART\_DATE\_REG (0x008C)

LP\_UART\_DATE   Version control register. (R/W)

Register 37.67. LP\_UART\_REG\_UPDATE\_REG (0x0098)

LP\_UART\_REG\_UPDATE   Configures whether or not to synchronize registers.

- 0: Not synchronize
- 1: Synchronize

(R/W/SC)

Register 37.68. LP\_UART\_ID\_REG (0x009C)

LP\_UART\_ID   Configures the LP UART ID. (R/W)

### 37.7.3 UHCI Registers

The addresses in this section are relative to UHCI base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section *Programming Reserved Register Field*.

**Register 37.69. UHCI\_CONFO\_REG (0x0000)**

|            |   |   |   |   |   |   |   |   |   |   |   |   |    |    |    |    |   |   |   |   |   |   |   |  |   |   |       |  |  |
|------------|---|---|---|---|---|---|---|---|---|---|---|---|----|----|----|----|---|---|---|---|---|---|---|--|---|---|-------|--|--|
| (reserved) |   |   |   |   |   |   |   |   |   |   |   |   |    |    |    |    |   |   |   | UHCI_UART_RX_BRK_EOF_EN<br>UHCI_CLK_EN<br>UHCI_ENCODE_CRC_EN<br>UHCI_LEN_EOF_EN<br>UHCI_UART_IDLE_EOF_EN<br>UHCI_CRC_REC_EN<br>UHCI_HEAD_EN<br>UHCI_SEPER_EN<br>UHCI_UART_SEL<br>UHCI_RX_RST<br>UHCI_TX_RST |   |   |   |  |   |   |       |  |  |
| 31         |   |   |   |   |   |   |   |   |   |   |   |   | 13 | 12 | 11 | 10 | 9 | 8 | 7 | 6   | 5 | 4 |   |  | 2 | 1 | 0     |  |  |

Reset

**UHCI\_TX\_RST** Write 1 and then write 0 to reset the decoder state machine. (R/W)

**UHCI\_RX\_RST** Write 1 and then write 0 to reset the encoder state machine. (R/W)

**UHCI\_UART0\_CE** Select one UART from UART 0 ~ 4 to connect with UHCI.

0: Select UART0

1: Select UART1

2: Select UART2

3: Select UART3

4: Select UART4

5 ~ 7: No effect, as no UART will connect with UHCI

(R/W)

**UHCI\_UART1\_CE** Configures whether or not to connect UHCI with UART1.

0: Not connect

1: Connect

(R/W)

**UHCI\_SEPER\_EN** Configures whether or not to separate the data frame with a special character.

0: Not separate

1: Separate

(R/W)

**UHCI\_HEAD\_EN** Configures whether or not to encode the data packet with a formatting header.

0: Not use formatting header

1: Use formatting header

(R/W)

Continued on the next page...

**Register 37.69. UHCI\_CONFO\_REG (0x0000)**

Continued from the previous page...

**UHCI\_CRC\_REC\_EN** Configures whether or not to enable the reception of the 16-bit CRC.

0: Disable

1: Enable

(R/W)

**UHCI\_UART\_IDLE\_EOF\_EN** Configures whether or not to stop receiving data when UART is idle.

0: Not stop

1: Stop

(R/W)

**UHCI\_LEN\_EOF\_EN** Configures when the UHCI decoder stops receiving data.

0: Stops after receiving 0xC0

1: Stops when the number of received data bytes reach the specified value. When UHCI\_HEAD\_EN is 1, the specified value is the data length indicated by the UHCI packet header; when UHCI\_HEAD\_EN is 0, the specified value is the configured value.

(R/W)

**UHCI\_ENCODE\_CRC\_EN** Configures whether or not to enable data integrity check by appending a 16 bit CCITT-CRC to the end of the data.

0: Disable

1: Enable

(R/W)

**UHCI\_CLK\_EN** Configures clock gating.

0: Support clock only when the application writes registers.

1: Always force the clock on for registers.

(R/W)

**UHCI\_UART\_RX\_BRK\_EOF\_EN** Configures whether or not to stop UHCI from receiving data after UART has received a NULL frame.

0: Not stop

1: Stop

(R/W)

### Register 37.70. UHCI\_CONF1\_REG (0x0014)

[illegible]

**UHCI\_CHECK\_SUM\_EN** Configures whether or not to enable header checksum validation when UHCI receives a data packet.

0: Disable

1: Enable

(R/W)

**UHCI\_CHECK\_SEQ\_EN** Configures whether or not to enable the sequence number check when UHCI receives a data packet.

0: Disable

1: Enable

(R/W)

**UHCI\_CRC\_DISABLE** Configures whether or not to enable CRC calculation.

0: Disable

1: Enable

Valid only when the Data Integrity Check Present bit in UHCI packet is 1.

(R/W)

**UHCI\_SAVE\_HEAD** Configures whether or not to save the packet header when UHCI receives a data packet.

0: Not save

1: Save

(R/W)

**UHCI\_TX\_CHECK\_SUM\_RE** Configures whether or not to encode the data packet with a checksum.

0: Not use checksum

1: Use checksum

(R/W)

**UHCI\_TX\_ACK\_NUM\_RE** Configures whether or not to encode the data packet with an acknowledgment when a reliable packet is to be transmitted.

0: Not use acknowledgement

1: Use acknowledgement

(R/W)

Continued on the next page...

**Register 37.70. UHCI\_CONF1\_REG (0x0014)**

Continued from the previous page...

**UHCI\_WAIT\_SW\_START** Configures whether or not to put the UHCI encoder state machine to ST\_SW\_WAIT state.

0: No

1: Yes

(R/W)

**UHCI\_SW\_START** Configures whether or not to send data packets when the encoder state machine is in ST\_SW\_WAIT state.

0: Not send

1: Send

(R/W/SC)

### Register 37.71. UHCI\_ESCAPE\_CONF\_REG (0x0020)

[illegible]

**UHCI\_TX\_CO\_ESC\_EN** Configures whether or not to decode character 0xC0 when DMA receives data.

0: Not decode

1: Decode

(R/W)

**UHCI\_TX\_DB\_ESC\_EN** Configures whether or not to decode character 0xDB when DMA receives data.

0: Not decode

1: Decode

(R/W)

**UHCI\_TX\_11\_ESC\_EN** Configures whether or not to decode flow control character 0x11 when DMA receives data.

0: Not decode

1: Decode

(R/W)

|                          |   |
|--------------------------|---|
| <b>UHCI_TX_13_ESC_EN</b> | Configures whether or not to decode flow control character 0x13 when DMA receives data. |
|--------------------------|---|

0: Not decode

1: Decode

(R/W)

**UHCI\_RX\_CO\_ESC\_EN** Configures whether or not to replace 0xC0 by special characters when DMA sends data.

0: Not replace

1: Replace

(R/W)

**UHCI\_RX\_DB\_ESC\_EN** Configures whether or not to replace 0xDB by special characters when DMA sends data.

0: Not replace

1: Replace

(R/W)

Continued on the next page...

**Register 3771. UHCI\_ESCAPE\_CONF\_REG (0x0020)**

Continued from the previous page...

**UHCI\_RX\_11\_ESC\_EN** Configures whether or not to replace flow control character 0x11 by special characters when DMA sends data.

0: Not replace

1: Replace

(R/W)

**UHCI\_RX\_13\_ESC\_EN** Configures whether or not to replace flow control character 0x13 by special characters when DMA sends data.

0: Not replace

1: Replace

(R/W)

**Register 37.72. UHCI\_HUNG\_CONF\_REG (0x0024)**

|            |   |   |   |   |   |   |    |                         |    |   |    |                           |  |  |      |                     |    |    |   |                         |   |  |  |                           |  |  |      |                     |  |  |  |

**UHCI\_TXFIFO\_TIMEOUT** Configures the timeout value for DMA data reception.

Measurement unit: ms. (R/W)

**UHCI\_TXFIFO\_TIMEOUT\_SHIFT** Configures the upper limit of the timeout counter for TX FIFO. (R/W)

**UHCI\_TXFIFO\_TIMEOUT\_ENA** Configures whether or not to enable the data reception timeout for TX FIFO.

0: Disable

1: Enable

(R/W)

**UHCI\_RXFIFO\_TIMEOUT** Configures the timeout value for DMA to read data from RAM.

Measurement unit: ms. (R/W)

**UHCI\_RXFIFO\_TIMEOUT\_SHIFT** Configures the upper limit of the timeout counter for RX FIFO. (R/W)

**UHCI\_RXFIFO\_TIMEOUT\_ENA** Configures whether or not to enable the DMA data transmission timeout.

0: Disable

1: Enable

(R/W)

Register 37.73. UHCI\_ACK\_NUM\_REG (0x0028)

**UHCI\_ACK\_NUM** Configures the number of acknowledgements used in software flow control.  
(R/W)

**UHCI\_ACK\_NUM\_LOAD** Configures whether or not load acknowledgements.  
0: Not load  
1: Load  
(WT)

**Register 37.74. UHCI\_QUICK\_SENT\_REG (0x0030)**

**UHCI\_SINGLE\_SEND\_NUM** Configures the source of data to be transmitted in single\_send mode.

- 0: Q0 register
  - 1: Q1 register
  - 2: Q2 register
  - 3: Q3 register
  - 4: Q4 register
  - 5: Q5 register
  - 6: Q6 register
  - 7: Invalid. No effect
- (R/W)

**UHCI\_SINGLE\_SEND\_EN** Configures whether or not to enable single\_send mode.

- 0: Disable
  - 1: Enable
- (R/W/SC)

**UHCI\_ALWAYS\_SEND\_NUM** Configures the source of data to be transmitted in always\_send mode.

- 0: Q0 register
  - 1: Q1 register
  - 2: Q2 register
  - 3: Q3 register
  - 4: Q4 register
  - 5: Q5 register
  - 6: Q6 register
  - 7: Invalid. No effect
- (R/W)

**UHCI\_ALWAYS\_SEND\_EN** Configures whether or not to enable always\_send mode.

- 0: Disable
  - 1: Enable
- (R/W)

Register 37.75. UHCI\_REG\_Q0\_WORD0\_REG (0x0034)

**UHCI\_ESC\_SEQ0** Configures the character that needs to be encoded. The default value is 0xDB used as the first character of SLIP escape sequence. (R/W)

**UHCI\_ESC\_SEQ0\_CHAR0** Configures the first character of SLIP escape sequence. The default value is 0xDB. (R/W)

**UHCI\_ESC\_SEQ0\_CHAR1** Configures the second character of SLIP escape sequence. The default value is 0xDD. (R/W)

**Register 37.91. UHCI\_ESC\_CONF2\_REG (0x0074)**

**UHCI\_ESC\_SEQ1** Configures a character that need to be encoded. The default value is 0x11 used as a flow control character. (R/W)

**UHCI\_ESC\_SEQ1\_CHAR0** Configures the first character of SLIP escape sequence. The default value is 0xDB. (R/W)

**UHCI\_ESC\_SEQ1\_CHAR1** Configures the second character of SLIP escape sequence. The default value is 0xDE. (R/W)

**UHCI\_RX\_HEAD** Represents the header of the current received packet. (RO)

Register 37.101. UHCI\_DATE\_REG (0x0080)

**UHCI\_DATE** Version control register. (R/W)

## Chapter 38

## SPI Controller (SPI)

### 38.1 Overview

The Serial Peripheral Interface (SPI) is a synchronous serial interface useful for communication with external peripherals. The ESP32-P4 chip integrates four SPI controllers:

- MSPI controller, including two sub-controllers
  - FLASH MSPI controller
    - \* FLASH MSPI SPI0
    - \* FLASH MSPI SPI1
  - PSRAM MSPI controller
    - \* PSRAM MSPI SPI0
    - \* PSRAM MSPI SPI1
- General Purpose SPI2 (GP-SPI2)
- General Purpose SPI3 (GP-SPI3)
- Low-Power SPI (LP-SPI)

MSPI controller is primarily reserved for internal use to communicate with external flash and PSRAM memory. This chapter mainly focuses on the GP-SPI and LP-SPI. **In this chapter unless otherwise stated, GP-SPI refers to both GP-SPI2 and GP-SPI3.**

### 38.2 Glossary

To better illustrate the functions of GP-SPI and LP-SPI, the following terms are used in this chapter.

|                    |   |
|--------------------|---|
| <b>Master Mode</b> | GP-SPI or LP-SPI acts as an SPI master and initiates SPI transactions.  |
| <b>Slave Mode</b>  | GP-SPI or LP-SPI acts as an SPI slave and exchanges data with its master when its CS is asserted.   |
| <b>MISO</b>        | Master in, slave out, data transmission from a slave to a master.   |
| <b>MOSI</b>        | Master out, slave in, data transmission from a master to a slave.   |
| <b>Transaction</b> | One instance of a master asserting a CS line, transferring data to and from a slave, and de-asserting the CS line. Transactions are atomic, which means they can never be interrupted by another transaction. |

|  |  |
|--|--|
| <b>SPI Transfer</b>                    | The whole process of an SPI master exchanging data with a slave. One SPI transfer consists of one or more SPI transactions.  |
| <b>Single Transfer</b>                 | An SPI transfer that consists of only one transaction.   |
| <b>CPU-Controlled Transfer</b>         | A data transfer that happens between CPU configured buffer <a href="#">SPI_WO_REG~SPI_W15_REG</a> ( <a href="#">LP_SPI_WO_REG~LP_SPI_W15_REG</a> ) and SPI peripherals.                |
| <b>DMA-Controlled Transfer</b>         | A data transfer that happens between DMA and SPI peripherals, controlled by the DMA engine.  |
| <b>Configurable Segmented Transfer</b> | A data transfer controlled by DMA when GP-SPI2 works as a master. Such transfer consists of multiple transactions (segments), and each of transaction can be configured independently. |
| <b>Slave Segmented Transfer</b>        | A data transfer controlled by DMA when GP-SPI works as a slave. Such transfer consists of multiple transactions (segments).  |
| <b>Full-duplex</b>                     | The sending line and receiving line between the master and the slave are independent. Sending data and receiving data happen at the same time.   |
| <b>Half-duplex</b>                     | Only one side, the master or the slave, sends data first, and the other side receives data. Sending data and receiving data can not happen at the same time.                           |
| <b>4-line full-duplex</b>              | 4-line here means: clock line, CS line, and two data lines. The two data lines can be used to send or receive data simultaneously.   |
| <b>4-line half-duplex</b>              | 4-line here means: clock line, CS line, and two data lines. The two data lines can not be used simultaneously.   |
| <b>3-line half-duplex</b>              | 3-line here means: clock line, CS line, and one data line. The data line is used to transmit or receive data.  |
| <b>1-bit SPI</b>                       | In one clock cycle, one bit can be transferred.  |
| <b>(2-bit) Dual SPI</b>                | In one clock cycle, two bits can be transferred.   |
| <b>Dual Output Read</b>                | A data mode of Dual SPI. In one clock cycle, one bit of a command, or one bit of an address, or two bits of data can be transferred.   |
| <b>Dual I/O Read</b>                   | Another data mode of Dual SPI. In one clock cycle, one bit of a command, or two bits of an address, or two bits of data can be transferred.  |
| <b>(4-bit) Quad SPI</b>                | In one clock cycle, four bits can be transferred.  |
| <b>Quad Output Read</b>                | A data mode of Quad SPI. In one clock cycle, one bit of a command, or one bit of an address, or four bits of data can be transferred.  |
| <b>Quad I/O Read</b>                   | Another data mode of Quad SPI. In one clock cycle, one bit of a command, or four bits of an address, or four bits of data can be transferred.  |
| <b>QPI</b>                             | In one clock cycle, four bits of a command, or four bits of an address, or four bits of data can be transferred.   |
| <b>(8-bit) Octal SPI</b>               | In one clock cycle, eight bits can be transferred.   |
| <b>Octal Output Read</b>               | A data mode of Octal SPI. In one clock cycle, one bit of a command, or one bit of an address, or eight bits of data can be transferred.  |

|                       |  |
|-----------------------|--|
| <b>Octal I/O Read</b> | Another data mode of Octal SPI. In one clock cycle, one bit of a command, or eight bits of an address, or eight bits of data can be transferred. |
| <b>OPI</b>            | In one clock cycle, eight bits of a command, or eight bits of an address, or eight bits of data can be transferred.                              |
| <b>SPI2</b>           | The prefix of the signals for GP-SPI2. SPI2 bus signals are routed to GPIO pins via HP GPIO matrix or HP IO MUX.                                 |
| <b>SPI3</b>           | The prefix of the signals for GP-SPI3. SPI3 bus signals are routed to GPIO pins via HP GPIO matrix only.   |
| <b>LP_SPI</b>         | The prefix of the signals for LP-SPI. LP_SPI bus signals are routed to GPIO pins via LP GPIO matrix only.  |

## 38.3 Features

GP-SPI has the following features:

- Works as master or as slave
- Half- and full-duplex communications
- CPU- and DMA-controlled transfers
- Various data modes
  - **GP-SPI2**
    - \* 1-bit SPI mode
    - \* 2-bit Dual SPI mode
    - \* 4-bit Quad SPI mode
    - \* QPI mode
    - \* 8-bit Octal SPI mode (available only when GP-SPI2 works as a master)
    - \* OPI mode (available only when GP-SPI2 works as a master)
  - **GP-SPI3**
    - \* 1-bit SPI mode
    - \* 2-bit Dual SPI mode
    - \* 4-bit Quad SPI mode
    - \* QPI mode
- Configurable module clock frequency
  - Master: up to 80 MHz
  - Slave: up to 60 MHz
- Configurable data length
  - CPU-controlled transfer as master or as slave: 1~64 bytes
  - DMA-controlled single transfer as master: 1~32 KB

- DMA-controlled configurable segmented transfer as master: data length is unlimited
  - DMA-controlled single transfer or segmented transfer as slave: data length is unlimited
- Configurable bit read/write order
- Independent interrupts for CPU-controlled transfer and DMA-controlled transfer
- Configurable clock polarity and phase
- Four SPI clock modes: mode 0~mode 3
- Multiple CS lines as master
  - **GP-SPI2**: CS0~CS5
  - **GP-SPI3**: CS0~CS2
- Able to communicate with SPI devices, such as a sensor, a screen controller, as well as a flash or RAM chip

**LP-SPI is a simplified version of GP-SPI and has a subset of GP-SPI's features:**

- Works as a master or as a slave
- Half- and full-duplex communications
- CPU-controlled transfer
- 1-bit SPI data mode
- Configurable module clock frequency:
  - Master: up to 40 MHz
  - Slave: up to 40 MHz
- Configurable data length:
  - CPU-controlled transfer as master or as slave: 1~64 bytes
- Configurable bit read/write order
- Interrupts for CPU-controlled transfer
- Configurable clock polarity and phase
- Four SPI clock modes: mode 0~mode 3
- One CS line as master: CS0
- Wake-up feature as slave (the only new feature compared with GP-SPI)

## 38.4 Architectural Overview

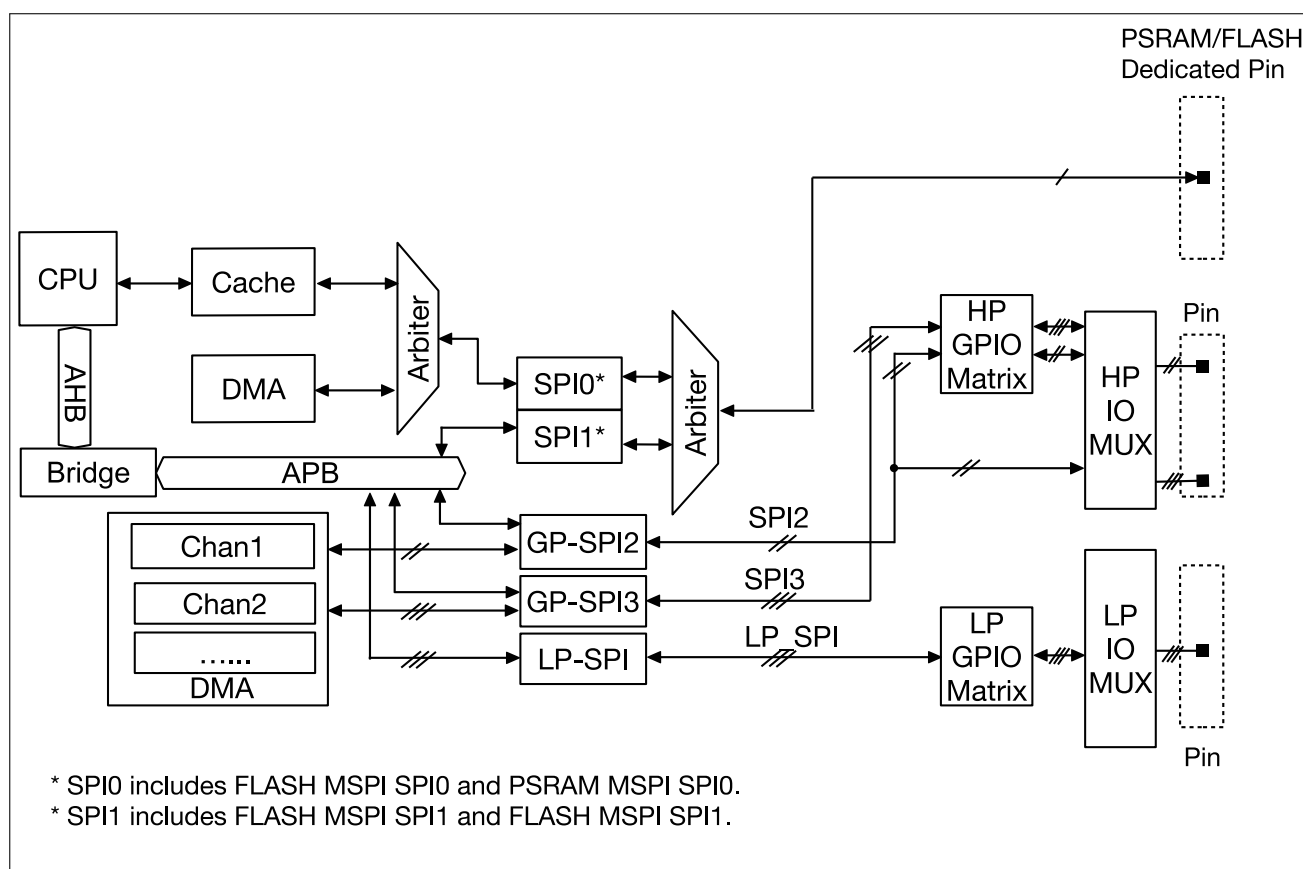

Figure 38.4-1. SPI Module Overview

Figure 38.4-1 shows an overview of this SPI module. GP-SPI2, GP-SPI3, and LP-SPI exchange data with SPI devices by the following ways:

- CPU-controlled transfer:
  - CPU ↔ LP-SPI ↔ SPI devices
  - CPU ↔ GP-SPI2 (GP-SPI3) ↔ SPI devices
- DMA-controlled transfer: DMA ↔ GP-SPI2 (GP-SPI3) ↔ SPI devices

In this chip, “SPI2”, “SPI3”, and “LP\_SPI” are used as prefixes of GP-SPI2, GP-SPI3, and LP-SPI input and output signal buses to illustrate the SPI bus functions.

SPI2 bus signals are routed to GPIO pins via either the HP GPIO matrix or the HP IO MUX, while SPI3 bus signals are routed to GPIO pins via the HP GPIO matrix only. LP\_SPI bus signals are routed via the LP GPIO matrix only. For more information, see Chapter 8 *GPIO Matrix and IO MUX*.

The functionalities of GP-SPI3 are nearly the same as those of GP-SPI2. The functionalities of LP-SPI are a subset of the GP-SPI functionalities. GP-SPI2’s functionalities are described in Section 38.5. The differences among GP-SPI2, GP-SPI3, and LP-SPI are described in Section 38.5.1 and Section 38.10.

## 38.5 Functional Description

### 38.5.1 Data Modes

GP-SPI and LP-SPI can be configured as either a master or a slave to communicate with other SPI devices in the following data modes, see Table 38.5-1. For more information about the data modes used when GP-SPI or LP-SPI works as a master, see Section 38.5.9, and Section 38.5.10 for GP-SPI working as a slave.

**Table 38.5-1. Data Modes Supported by GP-SPI and LP-SPI**

| Data Mode |                   | CMD State | Address State | Data State | GP-SPI2 | GP-SPI3 | LP-SPI |
|-----------|-------------------|-----------|---------------|------------|---------|---------|--------|
| 1-bit SPI |                   | 1-bit     | 1-bit         | 1-bit      | Y       | Y       | Y      |
| Dual SPI  | Dual Output Read  | 1-bit     | 1-bit         | 2-bit      | Y       | Y       | —      |
|           | Dual I/O Read     | 1-bit     | 2-bit         | 2-bit      | Y       | Y       | —      |
| Quad SPI  | Quad Output Read  | 1-bit     | 1-bit         | 4-bit      | Y       | Y       | —      |
|           | Quad I/O Read     | 1-bit     | 4-bit         | 4-bit      | Y       | Y       | —      |
| Octal SPI | Octal Output Read | 1-bit     | 1-bit         | 8-bit      | Y       | —       | —      |
|           | Octal I/O Read    | 1-bit     | 8-bit         | 8-bit      | Y       | —       | —      |
| QPI       |                   | 4-bit     | 4-bit         | 4-bit      | Y       | Y       | —      |
| OPI       |                   | 8-bit     | 8-bit         | 8-bit      | Y       | —       | —      |

### 38.5.2 Introduction to Bus Signals

The functional description of SPI2/SPI3 and LP\_SPI bus signals is shown in Table 38.5-2. Tables 38.5-3, 38.5-4, and 38.5-5 list the signals used in various SPI modes.

**Table 38.5-2. Functional Description of SPI2/SPI3 and LP\_SPI Bus Signals**

| SPI2 Bus Signal | SPI3 Bus Signal | LP-SPI Bus Signal | Function                                       |
|-----------------|-----------------|-------------------|--|
| SPI2CLK         | SPI3_CLK        | LP_SPI_CLK        | Input and output clock as master/slave         |
| SPI2CS0         | SPI3_CS0        | LP_SPI_CS         | Input and output CS signal as master/slave     |
| SPI2CS1~5       | SPI3_CS1~2      | —                 | Output CS signal as master                     |
| SPI2D           | SPI3_D          | LP_SPI_D          | MOSI/SIO0 (serial data input and output, bit0) |
| SPI2Q           | SPI3_Q          | LP_SPI_Q          | MISO/SIO1 (serial data input and output, bit1) |
| SPI2WP          | SPI3_WP         | —                 | SIO2 (serial data input and output, bit2)      |
| SPI2HD          | SPI3_HD         | —                 | SIO3 (serial data input and output, bit3)      |
| SPI2D4~7        | —               | —                 | SIO4~7 (serial data input and output, bit4~7)  |
| SPI2DQS         | —               | —                 | Output data mask signal as master              |

Table 38.5-3. SPI2 Bus Signals Used in Various SPI Modes

<sup>1</sup> FD: full-duplex<sup>2</sup> HD: half-duplex<sup>3</sup> Only one of the two signals is used at a time.

### 38.5.3 Bit Read/Write Order Control

- GP-SPI
  - When operating as a master:
    - \* The bit order of the command, address and data sent by the GP-SPI master is controlled by [SPI\\_WR\\_BIT\\_ORDER](#).
    - \* The bit order of the data received by the master is controlled by [SPI\\_RD\\_BIT\\_ORDER](#).
  - When operating as a slave:
    - \* The bit order of the data sent by the GP-SPI slave is controlled by [SPI\\_WR\\_BIT\\_ORDER](#).
    - \* The bit order of the command, address and data received by the slave is controlled by [SPI\\_RD\\_BIT\\_ORDER](#).
- LP-SPI
  - When operating as a master:
    - \* The bit order of the command, address and data sent by the LP-SPI master is controlled by [LP\\_SPI\\_WR\\_BIT\\_ORDER](#).
    - \* The bit order of the data received by the master is controlled by [LP\\_SPI\\_RD\\_BIT\\_ORDER](#).
  - When operating as a slave:
    - \* The bit order of the data sent by the LP-SPI slave is controlled by [LP\\_SPI\\_WR\\_BIT\\_ORDER](#).
    - \* The bit order of the command, address and data received by the slave is controlled by [LP\\_SPI\\_RD\\_BIT\\_ORDER](#).

Tables [38.5-6](#) and [38.5-7](#) show the functions of [SPI\\_RD/WR\\_BIT\\_ORDER](#) and [LP\\_SPI\\_RD/WR\\_BIT\\_ORDER](#).

Table 38.5-6. Bit Order Control in GP-SPI (Take GP-SPI2 as an Example)

| Bit Mode   | SPI2 Bus Data  | <a href="#">SPI_RD/WR_BIT_ORDER</a> = 0 (MSB) | <a href="#">SPI_RD/WR_BIT_ORDER</a> = 2 (MSB) | <a href="#">SPI_RD/WR_BIT_ORDER</a> = 1 (LSB) | <a href="#">SPI_RD/WR_BIT_ORDER</a> = 3 (LSB) |
|------------|----------------|---|---|---|---|
| 1-bit mode | SPI2D or SPI2Q | B7→B6→B5→B4→B3→B2→B1→B0                       | B7→B6→B5→B4→B3→B2→B1→B0                       | B0→B1→B2→B3→B4→B5→B6→B7                       | B0→B1→B2→B3→B4→B5→B6→B7                       |
| 2-bit mode | SPI2Q          | B7→B5→B3→B1                                   | B6→B4→B2→B0                                   | B1→B3→B5→B7                                   | B0→B2→B4→B6                                   |
|            | SPI2D          | B6→B4→B2→B0                                   | B7→B5→B3→B1                                   | B0→B2→B4→B6                                   | B1→B3→B5→B7                                   |

|            | SPI2HD         | B3  | B3  | B4  | B4  |
|            | SPI2WP         | B2  | B2  | B5  | B5  |
|            | SPI2Q          | B1  | B1  | B6  | B6  |
|            | SPI2D          | B0  | B0  | B7  | B7  |

Table 38.5-7. Bit Order Control in LP-SPI

| Bit Mode   | LP_SPI Bus Signal    | <a href="#">LP_SPI_RD/WR_BIT_ORDER</a> = 0 (MSB) | <a href="#">LP_SPI_RD/WR_BIT_ORDER</a> = 1 (LSB) |
|------------|----------------------|--|--|
| 1-bit mode | LP_SPI_D or LP_SPI_Q | B7→B6→B5→B4→B3→B2→B1→B0                          | B0→B1→B2→B3→B4→B5→B6→B7                          |

### 38.5.4 Unaligned Byte Transfer

- When operating as a master, GP-SPI sends and receives data in bits. The bit length is equal to `SPI_MS_DATA_BITLEN` + 1, a multiple of 1/2/4/8 in 1/2/4/8-bit mode.
  - When sending data whose length is not an integer multiple of 8 bits, the software needs to fill the last part of the data less than 8 bits into a full 1-byte data.
  - When receiving data whose length is not an integer multiple of 8 bits, the part less than 1 byte is still received as 1 byte.
- When operating as slave, GP-SPI sends and receives data in bits. The bit length is a multiple of 1/2/4/8 in 1/2/4/8-bit mode.
  - When sending data whose length is not an integer multiple of 8 bits, the software needs to fill the last part of the data less than 8 bits into a full 1-byte data.
  - When receiving data whose length is not an integer multiple of 8 bits, the part less than 1 byte is still received as 1 byte. The total bit length received can be read from `SPI_SLV_DATA_BITLEN`. The valid bits in the last 1 byte is indicated by `SPI_SLV_LAST_BYTE_STRB`.

**Note:**

- No matter working as master or slave, GP-SPI sends and receives the data parts less than 1 byte following the same bit order as the other data bits as configured.
- LP-SPI does not support this unaligned byte transfer.

### 38.5.5 Transfer Types

The transfer types supported by GP-SPI working as a master or a slave are shown in Table 38.5-8.

Table 38.5-8. Supported Transfer Types as Master or Slave

| Mode   |             | CPU-Controlled<br>Single Transfer<br>1 | DMA-Controlled<br>Single Transfer | DMA-Controlled<br>Configurable<br>Segmented Transfer<br>2 | DMA-Controlled<br>Slave Segmented<br>Transfer |
|--------|-------------|--|-----------------------------------|---|---|
| Master | Full-Duplex | Y                                      | Y                                 | Y   | —   |
|        | Half-Duplex | Y                                      | Y                                 | Y   | —   |
| Slave  | Full-Duplex | Y                                      | Y                                 | —   | Y   |
|        | Half-Duplex | Y                                      | Y                                 | —   | Y   |

<sup>1</sup> LP-SPI supports only the CPU-controlled single transfer.

<sup>2</sup> GP-SPI3 does not support DMA-controlled configurable segmented transfer.

The following sections provide detailed information about the transfer types listed in the table above.

### 38.5.6 CPU-Controlled Data Transfer

**Note:**

Both GP-SPI and LP-SPI provide 16 x 32-bit data buffers:

- GP-SPI: [SPI\\_W0\\_REG~SPI\\_W15\\_REG](#)
- LP-SPI: [LP\\_SPI\\_W0\\_REG~LP\\_SPI\\_W15\\_REG](#)

The following section illustrates the buffer's structure using GP-SPI data buffer as an example.

Figure 38.5-1 shows the buffer's structure. CPU-controlled transfer indicates the transfer, in which the data to send is from GP-SPI data buffer and the received data is stored to GP-SPI data buffer. In such transfer, every single transaction needs to be triggered by the CPU, after its related registers are configured. For such reason, the CPU-controlled transfer is always single transfer (consisting of only one transaction). CPU-controlled transfer supports full-duplex communication and half-duplex communication.

Figure 38.5-1. Data Buffer Used in CPU-Controlled Transfer

### 38.5.6.1 CPU-Controlled Master Transfer

In a CPU-controlled master full-duplex or half-duplex transfer, the RX or TX data is saved to or sent from [SPI\\_W0\\_REG~SPI\\_W15\\_REG](#). The bits [SPI\\_USR\\_MOSI\\_HIGHPART](#) and [SPI\\_USR\\_MISO\\_HIGHPART](#) control which buffers are used. See the description below.

- TX data

- When [SPI\\_USR\\_MOSI\\_HIGHPART](#) is cleared, i.e., high part mode is disabled, TX data is read from [SPI\\_W0\\_REG~SPI\\_W15\\_REG](#) and the data address is incremented by 1 on each byte transferred. **If the data byte length is larger than 64, the data in [SPI\\_W0\\_REG~SPI\\_W15\\_REG](#) may be sent more than once.**

Take each 256 bytes as a cycle:

- \* The first 64 bytes (Byte 0~Byte 63) are read from [SPI\\_W0\\_REG~SPI\\_W15\\_REG](#), sequentially.
- \* Byte 64~Byte 255 are read from [SPI\\_W15\\_REG\[31:24\]](#) repeatedly.
- \* Byte 256~Byte 319 (the first 64 bytes in another 256 bytes) are read from [SPI\\_W0\\_REG~SPI\\_W15\\_REG](#) again, sequentially, same as the behaviors described above.

**For instance:** to send 258 bytes (Byte 0~Byte 257), the data is read from the registers as follows:

- \* The first 64 bytes (Byte 0~Byte 63) are read from [SPI\\_W0\\_REG~SPI\\_W15\\_REG](#), sequentially.
- \* Byte 64~Byte 255 are read from [SPI\\_W15\\_REG\[31:24\]](#) repeatedly.

- \* The other bytes (*Byte 256* and *Byte 257*) are read from [SPI\\_WO\\_REG\[7:0\]](#) and [SPI\\_WO\\_REG\[15:8\]](#) again, sequentially. The logic is:
  - The address to read data for *Byte 256* is the result of  $(256 \% 64 = 0)$ , i.e., [SPI\\_WO\\_REG\[7:0\]](#).
  - The address to read data for *Byte 257* is the result of  $(257 \% 64 = 1)$ , i.e., [SPI\\_WO\\_REG\[15:8\]](#).
- When [SPI\\_USR\\_MOSI\\_HIGHPART](#) is set, i.e., high part mode is enabled, TX data is read from [SPI\\_W8\\_REG~SPI\\_W15\\_REG](#) and the data address is incremented by 1 on each byte transferred. **If the data byte length is larger than 32, the data in [SPI\\_W8\\_REG~SPI\\_W15\\_REG](#) may be sent more than once.**

Take each 256 bytes as a cycle:

- \* The first 32 bytes (*Byte 0~Byte 31*) are read from [SPI\\_W8\\_REG~SPI\\_W15\\_REG](#), sequentially.
- \* *Byte 32~Byte 255* are read from [SPI\\_W15\\_REG\[31:24\]](#) repeatedly.
- \* *Byte 256~Byte 287* (the first 32 bytes in the another 256 bytes) are read from [SPI\\_W8\\_REG~SPI\\_W15\\_REG](#) again, sequentially, same as the behaviors described above.

**For instance:** to send 258 bytes (*Byte 0~Byte 257*), the data is read from the registers as follows:

- \* The first 32 bytes (*Byte 0~Byte 31*) are read from [SPI\\_W8\\_REG~SPI\\_W15\\_REG](#), sequentially.
- \* *Byte 32~Byte 255* are read from [SPI\\_W15\\_REG\[31:24\]](#) repeatedly.
- \* The other bytes (*Byte 256* and *Byte 257*) are read from [SPI\\_W8\\_REG\[7:0\]](#) and [SPI\\_W8\\_REG\[15:8\]](#) again, sequentially. The logic is:
  - The address to read data for *Byte 256* is the result of  $(256 \% 32 = 0)$ , i.e., [SPI\\_W8\\_REG\[7:0\]](#).
  - The address to read data for *Byte 257* is the result of  $(257 \% 32 = 1)$ , i.e., [SPI\\_W8\\_REG\[15:8\]](#).

#### • RX data

- When [SPI\\_USR\\_MISO\\_HIGHPART](#) is cleared, i.e., high part mode is disabled, RX data is saved to [SPI\\_WO\\_REG~SPI\\_W15\\_REG](#), and the data address is incremented by 1 on each byte transferred. **If the data byte length is larger than 64, the data in [SPI\\_WO\\_REG~SPI\\_W15\\_REG](#) may be overwritten.**

Take each 256 bytes as a cycle:

- \* The first 64 bytes (*Byte 0~Byte 63*) are saved to [SPI\\_WO\\_REG~SPI\\_W15\\_REG](#), sequentially.
- \* *Byte 64~Byte 255* are saved to [SPI\\_W15\\_REG\[31:24\]](#) repeatedly.
- \* *Byte 256~Byte 319* (the first 64 bytes in the another 256 bytes) are saved to [SPI\\_WO\\_REG~SPI\\_W15\\_REG](#) again, sequentially, same as the behaviors described above.

**For instance:** to receive 258 bytes (*Byte 0~Byte 257*), the data is saved to the registers as follows:

- \* The first 64 bytes (*Byte 0~Byte 63*) are saved to [SPI\\_WO\\_REG~SPI\\_W15\\_REG](#), sequentially.
- \* *Byte 64~Byte 255* are saved to [SPI\\_W15\\_REG\[31:24\]](#) repeatedly.

- \* The other bytes (*Byte 256* and *Byte 257*) are saved to [SPI\\_WO\\_REG\[7:0\]](#) and [SPI\\_WO\\_REG\[15:8\]](#) again, sequentially. The logic is:
  - The address to save *Byte 256* is the result of  $(256 \% 64 = 0)$ , i.e., [SPI\\_WO\\_REG\[7:0\]](#).
  - The address to save *Byte 257* is the result of  $(257 \% 64 = 1)$ , i.e., [SPI\\_WO\\_REG\[15:8\]](#).
- When [SPI\\_USR\\_MISO\\_HIGHPART](#) is set, i.e., high part mode is enabled, the RX data is saved to [SPI\\_W8\\_REG~SPI\\_W15\\_REG](#), and the data address is incremented by 1 on each byte transferred. **If the data byte length is larger than 32, the content of [SPI\\_W8\\_REG~SPI\\_W15\\_REG](#) may be overwritten.**

Take each 256 bytes as a cycle:

- \* *Byte 0~Byte 31* are saved to [SPI\\_W8\\_REG~SPI\\_W15\\_REG](#), sequentially.
- \* *Byte 32~Byte 255* are saved to [SPI\\_W15\\_REG\[31:24\]](#) repeatedly.
- \* *Byte 256~Byte 287* (the first 32 bytes in the another 256 bytes) are saved to [SPI\\_W8\\_REG~SPI\\_W15\\_REG](#) again, sequentially.

**For instance:** to receive 258 bytes (*Byte 0~Byte 257*), the data is saved to the registers as follows:

- \* The first 32 bytes (*Byte 0~Byte 31*) are saved to [SPI\\_W8\\_REG~SPI\\_W15\\_REG](#), sequentially.
- \* *Byte 32~Byte 255* are saved to [SPI\\_W15\\_REG\[31:24\]](#) repeatedly.
- \* The other bytes (*Byte 256* and *Byte 257*) are saved to [SPI\\_W8\\_REG\[7:0\]](#) and [SPI\\_W8\\_REG\[15:8\]](#) again, sequentially. The logic is:
  - The address to save *Byte 256* is the result of  $(256 \% 32 = 0)$ , i.e., [SPI\\_W8\\_REG\[7:0\]](#).
  - The address to save *Byte 257* is the result of  $(257 \% 32 = 1)$ , i.e., [SPI\\_W8\\_REG\[15:8\]](#).

**Note:**

- TX/RX data address mentioned above both are byte-addressable.
  - If high part mode is disabled, Address 0 stands for [SPI\\_WO\\_REG\[7:0\]](#), and Address 1 for [SPI\\_WO\\_REG\[15:8\]](#), and so on.
  - If high part mode is enabled, Address 0 stands for [SPI\\_W8\\_REG\[7:0\]](#), and Address 1 for [SPI\\_W8\\_REG\[15:8\]](#), and so on.

The largest address points to [SPI\\_W15\\_REG\[31:24\]](#).

- To avoid any possible error in TX/RX data, such as TX data being sent more than once or RX data being overwritten, please make sure the registers are configured correctly.
- LP-SPI functions similarly, but uses LP-SPI registers and LP-SPI data buffers, as shown in Section [38.12.3](#).

### 38.5.6.2 CPU-Controlled Slave Transfer

In a CPU-controlled slave full-duplex or half-duplex transfer, the RX or TX data is saved to or sent from [SPI\\_WO\\_REG~SPI\\_W15\\_REG](#), which are byte-addressable.

- In full-duplex communication, the address of [SPI\\_WO\\_REG~SPI\\_W15\\_REG](#) starts from 0 and is incremented by 1 on each byte transferred. If the data address is larger than 63, the data in [SPI\\_WO\\_REG~SPI\\_W15\\_REG](#) will be overwritten, same as the behaviors described in the master transfer when high part mode is disabled.

- In half-duplex communication, the *ADDR* value in [transmission format](#) is the start address of the RX or TX data, corresponding to the registers [SPI\\_W0\\_REG~SPI\\_W15\\_REG](#). The RX or TX address is incremented by 1 on each byte transferred. If the address is larger than 63 (the highest byte address, i.e., [SPI\\_W15\\_REG\[31:24\]](#)), the data in [SPI\\_W8\\_REG~SPI\\_W15\\_REG](#) will be overwritten, same as the behaviors described in the master transfer when high part mode is enabled.

According to your applications, the registers [SPI\\_W0\\_REG~SPI\\_W15\\_REG](#) can be used as:

- data buffers only
- data buffers and status buffers
- status buffers only

## 38.5.7 DMA-Controlled Data Transfer

### Note:

LP-SPI does not support this transfer. The description below is for GP-SPI only.

DMA-controlled transfer refers to the transfer in which the DMA RX module receives data and the DMA TX module sends data. This transfer is supported both as master and as slave.

A DMA-controlled transfer can be:

- a single transfer, consisting of only one transaction. GP-SPI supports this transfer both as master and as slave.
- a configurable segmented transfer, consisting of several transactions (segments). Only GP-SPI2 supports this transfer when working as a master. For more information, see [Section 38.5.9.5](#).
- a slave segmented transfer, consisting of several transactions (segments). GP-SPI supports this transfer only when working as a slave. For more information, see [Section 38.5.10.3](#).

A DMA-controlled transfer only needs to be triggered once by CPU. When such a transfer is triggered, data is transferred by the DMA engine from or to the DMA-linked memory, without CPU operation.

DMA-controlled transfer supports full-duplex communication, half-duplex communication and functions described in [Section 38.5.9](#) and [Section 38.5.10](#). Meanwhile, the DMA RX module is independent from the DMA TX module, which means that there are four kinds of full-duplex communications:

- Data is received in DMA-controlled mode and sent in DMA-controlled mode.
- Data is received in DMA-controlled mode but sent in CPU-controlled mode.
- Data is received in CPU-controlled mode but sent in DMA-controlled mode.
- Data is received in CPU-controlled mode and sent in CPU-controlled mode.

### 38.5.7.1 DMA Configuration

- Select a DMA channel *n* and configure DMA TX/RX descriptor. See [Chapter 3 GDMA Controller \(GDMA-AHB, GDMA-AXI\)](#).

- Set [AXI\\_DMA\\_INLINK\\_START\\_CH \$n\$](#)  or [AXI\\_DMA\\_OUTLINK\\_START\\_CH \$n\$](#)  to start DMA RX or TX engine, respectively.
- Before all the DMA TX buffer is used or the DMA TX engine is reset, if [AXI\\_DMA\\_OUTLINK\\_RESTART\\_CH \$n\$](#)  is set, a new TX buffer will be added to the end of the last TX buffer in use.
- DMA RX buffer is linked in the same way as the DMA TX buffer, by setting [AXI\\_DMA\\_INLINK\\_START\\_CH \$n\$](#)  or [AXI\\_DMA\\_INLINK\\_RESTART\\_CH \$n\$](#) .
- The TX and RX data lengths are determined by the configured DMA TX and RX buffer respectively, both of which are 0~32 KB.
- Initialize DMA inlink and outlink before DMA starts. The bits [SPI\\_DMA\\_RX\\_ENA](#) and [SPI\\_DMA\\_TX\\_ENA](#) in register [SPI\\_DMA\\_CONF\\_REG](#) should be set, otherwise the read/write data will be stored to/sent from the registers [SPI\\_WO\\_REG~SPI\\_W15\\_REG](#).

When GP-SPI operating as master, if [AXI\\_DMA\\_IN\\_SUC\\_EOF\\_CH \$n\$ \\_INT\\_ENA](#) is set, then the interrupt [AXI\\_DMA\\_IN\\_SUC\\_EOF\\_CH \$n\$ \\_INT](#) will be triggered when one single transfer or one configurable segmented transfer is finished.

When GP-SPI operating as slave, if [AXI\\_DMA\\_IN\\_SUC\\_EOF\\_CH \$n\$ \\_INT\\_ENA](#) is set, then the interrupt [AXI\\_DMA\\_IN\\_SUC\\_EOF\\_CH \$n\$ \\_INT](#) will be triggered when one of the following conditions are met.

**Table 38.5-9. Interrupt Trigger Condition on GP-SPI Data Transfer as Slave**

| Transfer Type            | Control Bit <sup>1</sup> | Control Bit <sup>2</sup> | Condition   |
|--------------------------|--------------------------|--------------------------|---|
| Slave Single Transfer    | 0                        | 0                        | A single transfer is done.  |
|                          | 1                        | 0                        | A single transfer is done. Or the length of the received data is equal to ( <a href="#">SPI_MS_DATA_BITLEN</a> + 1 ).   |
| Slave Segmented Transfer | 0                        | 1                        | <a href="#">CMD7</a> or <a href="#">End_SEG_TRANS</a> is received correctly.  |
|                          | 1                        | 1                        | <a href="#">CMD7</a> or <a href="#">End_SEG_TRANS</a> is received correctly. Or the length of the received data is equal to ( <a href="#">SPI_MS_DATA_BITLEN</a> + 1 ). |

<sup>1</sup> [SPI\\_RX\\_EOF\\_EN](#)

<sup>2</sup> [SPI\\_DMA\\_SLV\\_SEG\\_TRANS\\_EN](#)

### 38.5.7.2 DMA TX/RX Buffer Length Control

It is recommended that the length of the configured DMA TX/RX buffer is equal to the length of actual data transferred.

- If the length of the configured DMA TX buffer is shorter than that of the actual data transferred, the extra data will be the same as the last transferred data. [SPI\\_OUTFIFO\\_EMPTY\\_ERR\\_INT](#) and [AXI\\_DMA\\_OUT\\_EOF\\_CH \$n\$ \\_INT](#) are triggered.
- If the length of the configured DMA TX buffer is longer than that of actual data transferred, the TX buffer is not fully used, and the remaining buffer will be used for the following transaction even if a new TX buffer is linked later. Please keep it in mind. Or save the unused data and reset the DMA.
- If the length of the configured DMA RX buffer is shorter than that of the actual data transferred, the extra data will be lost. [SPI\\_INFIFO\\_FULL\\_ERR\\_INT](#) and [SPI\\_TRANS\\_DONE\\_INT](#) are triggered. But [AXI\\_DMA\\_IN\\_SUC\\_EOF\\_CH \$n\$ \\_INT](#) is not triggered.

- If the length of the configured DMA RX buffer is longer than that of the actual data transferred, the RX buffer is not fully used, and the remaining buffer is discarded. In the following transaction, a new linked buffer will be used directly.

### 38.5.8 Data Flow Control (Take GP-SPI as an Example)

CPU-controlled and DMA-controlled transfers are supported in GP-SPI both as master and as slave. CPU-controlled transfer means that data is transferred between registers [SPI\\_WO\\_REG~SPI\\_W15\\_REG](#) and the SPI device. DMA-controlled transfer means that data is transferred between the configured DMA TX/RX buffer and the SPI device. To select between the two transfer types, configure [SPI\\_DMA\\_RX\\_ENA](#) and [SPI\\_DMA\\_TX\\_ENA](#) before the transfer starts.

#### 38.5.8.1 GP-SPI Functional Blocks

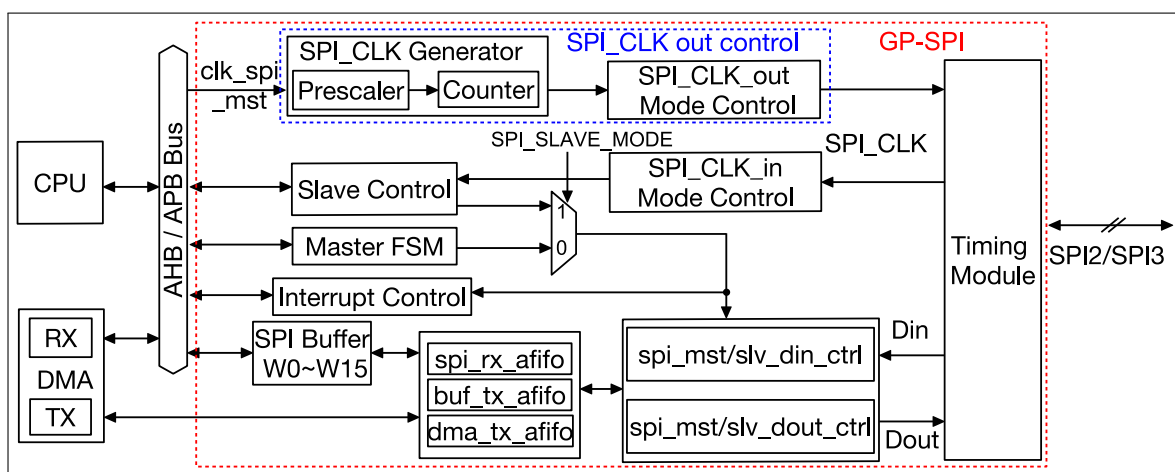

Figure 38.5-2. GP-SPI Functional Blocks

Figure 38.5-2 shows the main functional blocks in GP-SPI, including:

- **Master FSM:** all the features supported in GP-SPI as master are controlled by this state machine together with register configuration.
- **SPI Buffer:** [SPI\\_WO\\_REG~SPI\\_W15\\_REG](#). See Figure 38.5-1. The data in CPU-controlled transfer is prepared in this buffer.
- **Timing Module:** captures data on SPI2/SPI3 bus.
- **spi\_mst/slv\_din\_ctrl** and **spi\_mst/slv\_dout\_ctrl:** converts the TX/RX data into bytes.
- **spi\_rx\_afifo:** stores the received data.
- **buf\_tx\_afifo:** stores the data to send.
- **dma\_tx\_afifo:** stores the data from DMA.
- **clk\_spi\_mst:** this clock is the module clock of GP-SPI and is used in GP-SPI as master to generate SPI\_CLK signal for data transfer and for slaves.
- **SPI\_CLK Generator:** generates SPI\_CLK by dividing clk\_spi\_mst. The divider is determined by [SPI\\_CLKCNT\\_N](#) and [SPI\\_CLKDIV\\_PRE](#).

- SPI\_CLK\_out Mode Control: outputs the SPI\_CLK signal for data transfer and for slaves.
- SPI\_CLK\_in Mode Control: captures the SPI\_CLK signal from SPI master when GP-SPI works as a slave.

### 38.5.8.2 Data Flow Control as Master

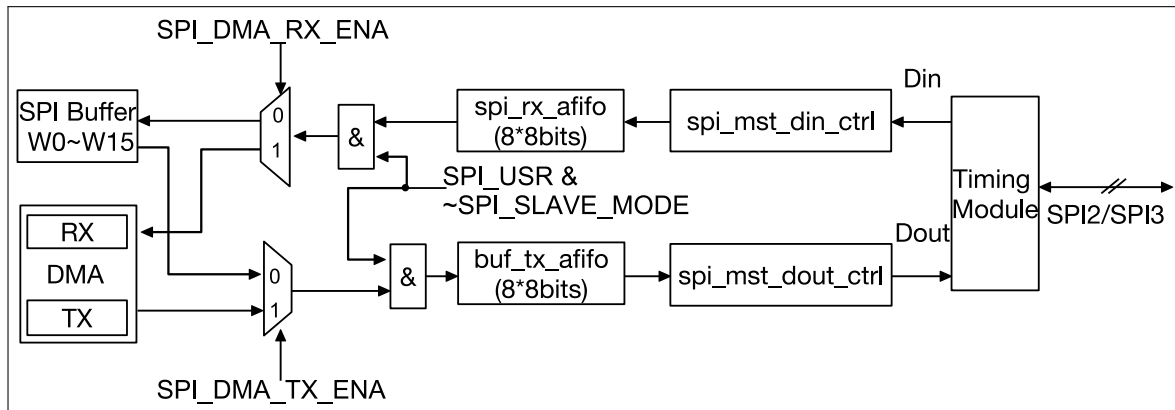

Figure 38.5-3. Data Flow Control in GP-SPI as Master

Figure 38.5-3 shows the data flow of GP-SPI as master. Its control logic is as follows:

- RX data: data bits in SPI2/SPI3 bus is captured by *Timing Module*, converted into bytes by *spi\_mst\_din\_ctrl* module, then buffered in *spi\_rx\_afifo*, and finally stored in corresponding addresses according to the transfer types.
  - CPU-controlled transfer: the data is stored to registers [SPI\\_W0\\_REG ~SPI\\_W15\\_REG](#).
  - DMA-controlled transfer: the data is stored to DMA RX buffer.
- TX data: the TX data is from corresponding addresses according to transfer modes and is saved to *buf\_tx\_afifo*.
  - CPU-controlled transfer: TX data is from [SPI\\_W0\\_REG~SPI\\_W15\\_REG](#).
  - DMA-controlled transfer: TX data is from DMA TX buffer.

The data in *buf\_tx\_afifo* is sent out to *Timing Module* in 1/2/4/(8)-bit modes, controlled by GP-SPI state machine. The *Timing Module* can be used for timing compensation. For more information, see Section [38.8](#).

### 38.5.8.3 Data Flow Control as Slave

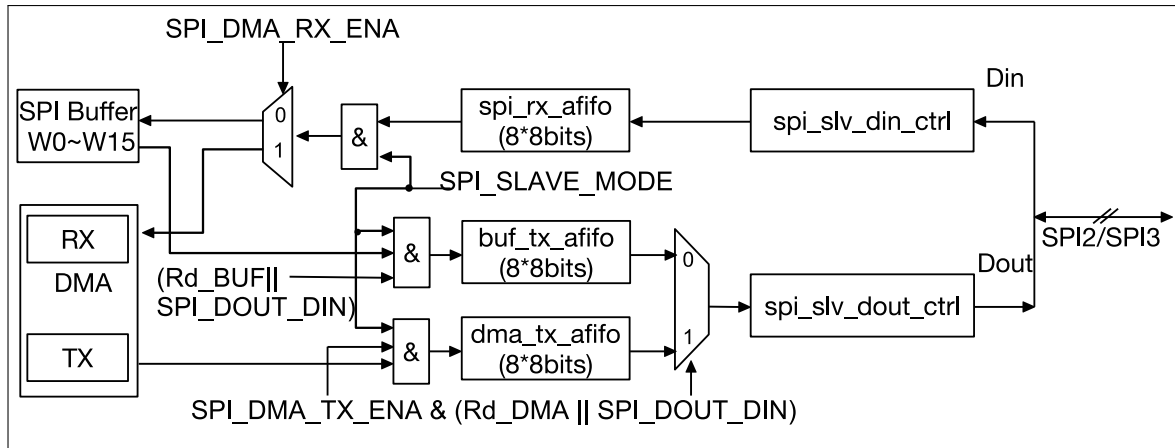

Figure 38.5-4. Data Flow Control in GP-SPI as Slave

Figure 38.5-4 shows the data flow of GP-SPI as slave. Its control logic is as follows:

- In CPU/DMA-controlled full-/half-duplex transfer, when an external SPI master starts the SPI transfer, data on the SPI2/SPI3 bus is captured, converted into bytes by the *spi\_slv\_din\_ctrl* module, and then is stored in *spi\_rx\_afifo*.
  - In CPU-controlled full-duplex transfer, the received data in *spi\_rx\_afifo* will be later stored into registers *SPI\_WO\_REG~SPI\_W15\_REG*, successively.
  - In half-duplex *Wr\_BUF* transfer, when the value of address (*SLV\_ADDR[7:0]*) is received, the received data in *spi\_rx\_afifo* will be stored in the related address of registers *SPI\_WO\_REG~SPI\_W15\_REG*.
  - In DMA-controlled full-duplex transfer or in half-duplex *Wr\_DMA* transfer, the received data in *spi\_rx\_afifo* will be stored in the configured DMA RX buffer.
- In CPU-controlled full-/half-duplex transfer, the data to send is stored in *buf\_tx\_afifo*. In DMA-controlled full-/half-duplex transfer, the data to send is stored in *dma\_tx\_afifo*. Therefore, *Rd\_BUF* transaction controlled by CPU and *Rd\_DMA* transaction controlled by DMA can be done in one slave segmented transfer.
  - In CPU-controlled full-duplex transfer, when *SPI\_SLAVE\_MODE* and *SPI\_DOUTDIN* are set and *SPI\_DMA\_TX\_ENA* is cleared, the data in *SPI\_WO\_REG~SPI\_W15\_REG* will be stored into *buf\_tx\_afifo*.
  - In CPU-controlled half-duplex transfer, when *SPI\_SLAVE\_MODE* is set, *SPI\_DOUTDIN* is cleared, *Rd\_BUF* command and *SLV\_ADDR[7:0]* are received, the data started from the related address of *SPI\_WO\_REG~SPI\_W15\_REG* will be stored into *buf\_tx\_afifo*.
  - In DMA-controlled full-duplex transfer, when *SPI\_SLAVE\_MODE*, *SPI\_DOUTDIN*, and *SPI\_DMA\_TX\_ENA* are set, the data in the configured DMA TX buffer will be stored into *dma\_tx\_afifo*.
  - In DMA-controlled half-duplex transfer, when *SPI\_SLAVE\_MODE* is set, *SPI\_DOUTDIN* is cleared, and *Rd\_DMA* command is received, the data in the configured DMA TX buffer will be stored into *dma\_tx\_afifo*.

The data in *buf\_tx\_afifo* or *dma\_tx\_afifo* is sent out by *splv\_dout\_ctrl* module in 1/2/4(8)-bit modes.

## 38.5.9 GP-SPI as a Master

GP-SPI can be configured as a SPI master by clearing the bit [SPI\\_SLAVE\\_MODE](#) in [SPI\\_SLAVE\\_REG](#). In this operation mode, GP-SPI provides clock signal (the divided clock from GP-SPI module clock) and CS signal.

### 38.5.9.1 State Machine

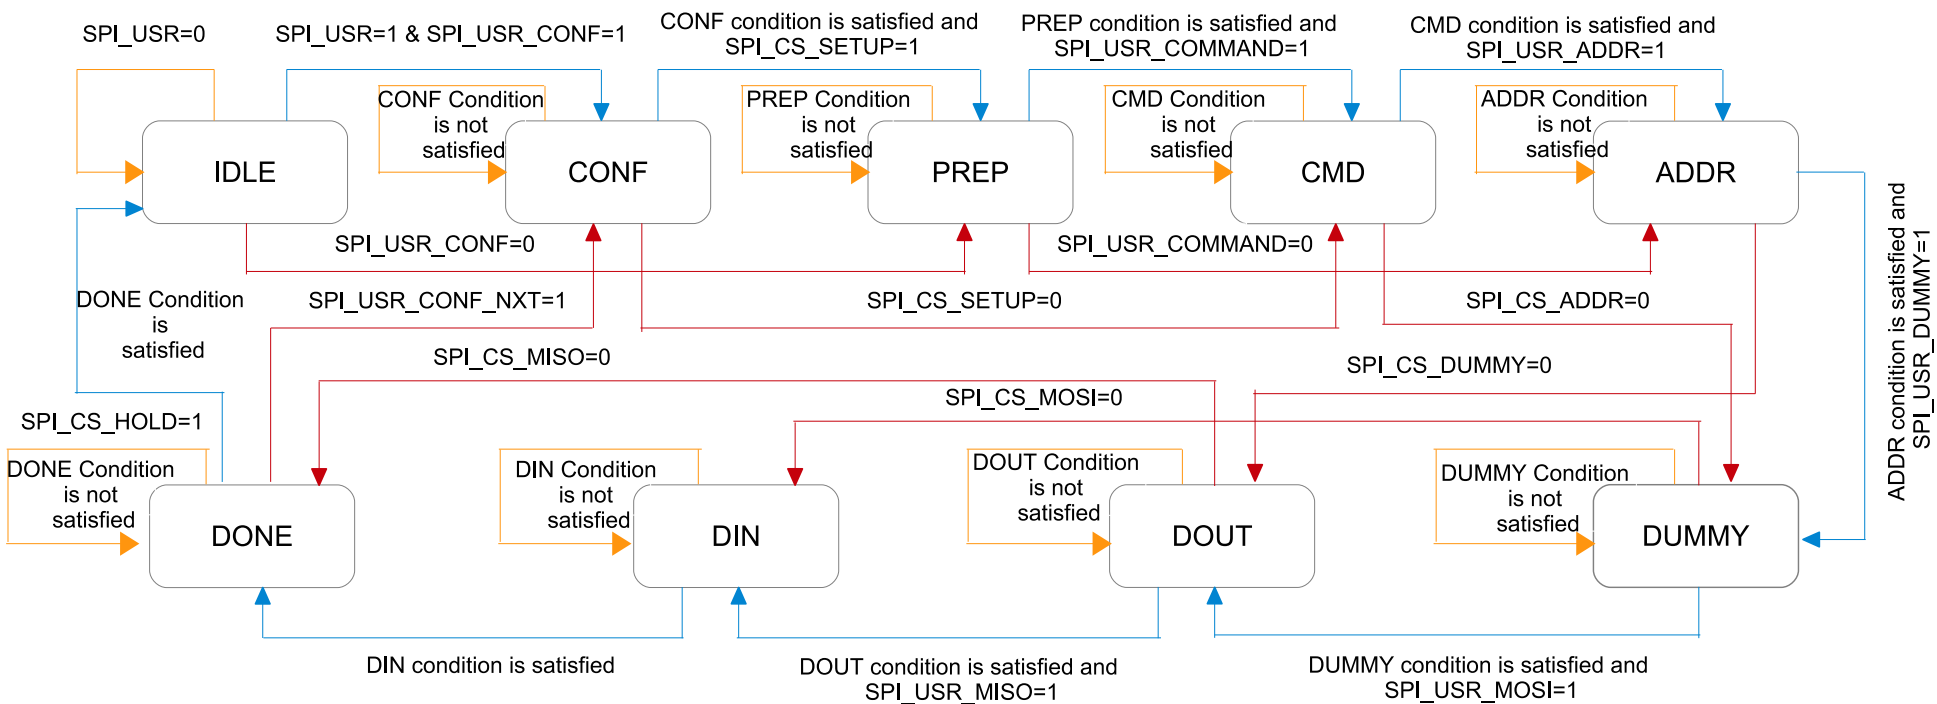

When GP-SPI works as a master, the state machine controls GP-SPI's various states during data transfer, including configuration (CONF), preparation (PREP), command (CMD), address (ADDR), dummy (DUMMY), data out (DOUT), and data in (DIN) states. GP-SPI is mainly used to access 1/2/4/8-bit SPI devices, such as flash and external RAM, thus the naming of GP-SPI states keeps consistent with the sequence naming of flash and external RAM. The meaning of each state is described as follows and Figure [38.5-5](#) shows the workflow of GP-SPI state machine.

1. IDLE: GP-SPI is not active or is operating as a slave.
2. CONF (valid for GP-SPI2 only): only used in DMA-controlled [configurable segmented transfer](#). Set [SPI\\_USR](#) and [SPI\\_USR\\_CONF](#) to enable this state. If this state is not enabled, it means the current transfer is a single transfer.
3. PREP: prepare an SPI transaction and control SPI CS setup time. Set [SPI\\_USR](#) and [SPI\\_CS\\_SETUP](#) to enable this state.
4. CMD: send command sequence. Set [SPI\\_USR](#) and [SPI\\_USR\\_COMMAND](#) to enable this state.
5. ADDR: send address sequence. Set [SPI\\_USR](#) and [SPI\\_USR\\_ADDR](#) to enable this state.
6. DUMMY (wait cycle): send dummy sequence. set [SPI\\_USR](#) and [SPI\\_USR\\_DUMMY](#) to enable this state.
7. DATA: transfer data.
  - DOUT: send data sequence. Set [SPI\\_USR](#) and [SPI\\_USR\\_MOSI](#) to enable this state.
  - DIN: receive data sequence. Set [SPI\\_USR](#) and [SPI\\_USR\\_MISO](#) to enable this state.
8. DONE: control SPI CS hold time. Set [SPI\\_USR](#) to enable this state.

#### Note:

To start this state machine, set [SPI\\_USR](#) first. [SPI\\_MST\\_FD\\_WAIT\\_DMA\\_TX\\_DATA](#) controls when [SPI\\_USR](#) takes effect:

- 0: the configured state takes effect immediately after [SPI\\_USR](#) and other control registers are configured.
- 1: if DOUT state is configured, the [SPI\\_USR](#) and other control registers will take effect, and the state machine will start, only when the data is ready in *buf\_tx\_afifo*.

Legend to state flow:

- —: indicates corresponding state condition is not satisfied; repeats current state.
- —: corresponding registers are set and conditions are satisfied; goes to next state.
- —: state registers are not set; skips one or more following states, depending on the registers of the following states are set or not.

Explanation to the conditions listed in the figure above:

- CONF condition:  $\text{gpc}[17:0] \geq \text{SPI\_CONF\_BITLEN}[17:0]$
- PREP condition:  $\text{gpc}[4:0] \geq \text{SPI\_CS\_SETUP\_TIME}[4:0]$
- CMD condition:  $\text{gpc}[3:0] \geq \text{SPI\_USR\_COMMAND\_BITLEN}[3:0]$
- ADDR condition:  $\text{gpc}[4:0] \geq \text{SPI\_USR\_ADDR\_BITLEN}[4:0]$
- DUMMY condition:  $\text{gpc}[7:0] \geq \text{SPI\_USR\_DUMMY\_CYCLELEN}[7:0]$
- DOUT condition:  $\text{gpc}[17:0] \geq \text{SPI\_MS\_DATA\_BITLEN}[17:0]$
- DIN condition:  $\text{gpc}[17:0] \geq \text{SPI\_MS\_DATA\_BITLEN}[17:0]$
- DONE condition:  $(\text{gpc}[4:0] \geq \text{SPI\_CS\_HOLD\_TIME}[4:0] \parallel \text{SPI\_CS\_HOLD} == 1'b0)$

A counter ( $\text{gpc}[17:0]$ ) is used in the state machine to control the cycle length of each state. The states CONF, PREP, CMD, ADDR, DUMMY, DOUT, and DIN can be enabled or disabled independently. The cycle length of each state can also be configured independently.

### 38.5.9.2 Register Configuration for State and Bit Mode Control

#### Introduction

The registers, related to GP-SPI state control, are listed in Table 38.5-10. Users can enable QPI mode for GP-SPI by setting the bit [SPI\\_QPI\\_MODE](#) in register [SPI\\_USER\\_REG](#).

Table 38.5-10. Registers Used for State Control in 1/2/4/8-bit Modes

| State | Control Registers for 1-bit Mode<br>SPI2/SPI3 Bus                  | Control Registers for 2-bit Mode<br>SPI2/SPI3 Bus                                   | Control Registers for 4-bit Mode<br>SPI2/SPI3 Bus                                   | Control Registers for 8-bit Mode<br>SPI2 Bus                                       |
|-------|--|---|---|--|
| CMD   | SPI_USR_COMMAND_VALUE<br>SPI_USR_COMMAND_BITLEN<br>SPI_USR_COMMAND | SPI_USR_COMMAND_VALUE<br>SPI_USR_COMMAND_BITLEN<br>SPI_FCMD_DUAL<br>SPI_USR_COMMAND | SPI_USR_COMMAND_VALUE<br>SPI_USR_COMMAND_BITLEN<br>SPI_FCMD_QUAD<br>SPI_USR_COMMAND | SPI_USR_COMMAND_VALUE<br>SPI_USR_COMMAND_BITLEN<br>SPI_FCMD_OCT<br>SPI_USR_COMMAND |
| ADDR  | SPI_USR_ADDR_VALUE<br>SPI_USR_ADDR_BITLEN<br>SPI_USR_ADDR          | SPI_USR_ADDR_VALUE<br>SPI_USR_ADDR_BITLEN<br>SPI_USR_ADDR<br>SPI_FADDR_DUAL         | SPI_USR_ADDR_VALUE<br>SPI_USR_ADDR_BITLEN<br>SPI_USR_ADDR<br>SPI_FADDR_QUAD         | SPI_USR_ADDR_VALUE<br>SPI_USR_ADDR_BITLEN<br>SPI_USR_ADDR SPI_FADDR_OCT            |
| DUMMY | SPI_USR_DUMMY_CYCLELEN<br>SPI_USR_DUMMY                            | SPI_USR_DUMMY_CYCLELEN<br>SPI_USR_DUMMY   | SPI_USR_DUMMY_CYCLELEN<br>SPI_USR_DUMMY   | SPI_USR_DUMMY_CYCLELEN<br>SPI_USR_DUMMY  |
| DIN   | SPI_USR_MISO<br>SPI_MS_DATA_BITLEN                                 | SPI_USR_MISO<br>SPI_MS_DATA_BITLEN<br>SPI_FREAD_DUAL                                | SPI_USR_MISO<br>SPI_MS_DATA_BITLEN<br>SPI_FREAD_QUAD                                | SPI_USR_MISO<br>SPI_MS_DATA_BITLEN<br>SPI_FREAD_OCT                                |
| DOUT  | SPI_USR_MOSI<br>SPI_MS_DATA_BITLEN                                 | SPI_USR_MOSI<br>SPI_MS_DATA_BITLEN<br>SPI_FWRITE_DUAL                               | SPI_USR_MOSI<br>SPI_MS_DATA_BITLEN<br>SPI_FWRITE_QUAD                               | SPI_USR_MOSI<br>SPI_MS_DATA_BITLEN<br>SPI_FWRITE_OCT                               |

As shown in Table 38.5-10, the registers in each cell should be configured to set the SPI2/SPI3 bus to corresponding bit mode, i.e., the mode shown in the table header, at a specific state (corresponding to the first column).

### Configuration

For instance, when GP-SPI2 reads data, and

- CMD is in 1-bit mode
- ADDR is in 2-bit mode
- DUMMY lasts for 8 clock cycles
- DIN is in 4-bit mode

The register configuration can be as follows:

1. Configure CMD state related registers.
  - Configure the required command value in [SPI\\_USR\\_COMMAND\\_VALUE](#).
  - Configure command bit length in [SPI\\_USR\\_COMMAND\\_BITLEN](#). [SPI\\_USR\\_COMMAND\\_BITLEN](#) = expected bit length - 1.
  - Set [SPI\\_USR\\_COMMAND](#).
  - Clear [SPI\\_FCMD\\_DUAL](#), [SPI\\_FCMD\\_QUAD](#), and [SPI\\_FCMD\\_OCT](#).
2. Configure ADDR state related registers.
  - Configure the required address value in [SPI\\_USR\\_ADDR\\_VALUE](#).
  - Configure address bit length in [SPI\\_USR\\_ADDR\\_BITLEN](#). [SPI\\_USR\\_ADDR\\_BITLEN](#) = expected bit length - 1.
  - Set [SPI\\_USR\\_ADDR](#) and [SPI\\_FADDR\\_DUAL](#).
  - Clear [SPI\\_FADDR\\_QUAD](#) and [SPI\\_FCMD\\_OCT](#).
3. Configure DUMMY state related registers.
  - Configure DUMMY cycles in [SPI\\_USR\\_DUMMY\\_CYCLELEN](#). [SPI\\_USR\\_DUMMY\\_CYCLELEN](#) = expected clock cycles - 1.
  - Set [SPI\\_USR\\_DUMMY](#).
4. Configure DIN state related registers.
  - Configure read data bit length in [SPI\\_MS\\_DATA\\_BITLEN](#). [SPI\\_MS\\_DATA\\_BITLEN](#) = expected bit length - 1.
  - Set [SPI\\_FREAD\\_QUAD](#) and [SPI\\_USR\\_MISO](#).
  - Clear [SPI\\_FREAD\\_DUAL](#) and [SPI\\_FCMD\\_OCT](#).
  - Configure DMA for DMA-controlled transfer. For CPU controlled transfer, no action is needed.
5. Clear [SPI\\_USR\\_MOSI](#).
6. Set [SPI\\_DMA\\_AFIFO\\_RST](#), [SPI\\_BUF\\_AFIFO\\_RST](#), and [SPI\\_RX\\_AFIFO\\_RST](#) to reset these buffers.
7. Set [SPI\\_USR](#) to start GP-SPI2 transfer.

**Note:**

Updating the configuration when the GP-SPI works as master described in this and subsequent sections requires to set [SPI\\_UPDATE](#) accordingly to synchronize the configuration from AHB\_CLK domain to clk\_spi\_mst domain. For more detailed configuration, see the sections above. No operation is required when the GP-SPI works as slave.

When writing data (DOUT state), [SPI\\_USR\\_MOSI](#) should be configured instead, while [SPI\\_USR\\_MISO](#) should be cleared. The output data bit length is the value of [SPI\\_MS\\_DATA\\_BITLEN](#) + 1. Output data should be configured in GP-SPI2 data buffer ([SPI\\_WO\\_REG](#)~[SPI\\_W15\\_REG](#)) for CPU-controlled transfer, or DMA TX buffer for DMA-controlled transfer.

Pay special attention to the command value in [SPI\\_USR\\_COMMAND\\_VALUE](#) and to address value in [SPI\\_USR\\_ADDR\\_VALUE](#).

The configuration of command value is as follows:

**Table 38.5-11. Sending Sequence of Command Value**

| COMMAND_BITLEN <sup>1</sup> | COMMAND_VALUE <sup>2</sup> | BIT_ORDER <sup>3</sup> | Sending Sequence of Command Value   |
|-----------------------------|----------------------------|------------------------|---|
| 0~7                         | [7:0]                      | 1                      | <a href="#">COMMAND_VALUE</a> [ <a href="#">COMMAND_BITLEN</a> :0] is sent first.   |
|                             |                            | 0                      | <a href="#">COMMAND_VALUE</a> [7:7- <a href="#">COMMAND_BITLEN</a> ] is sent first.   |
| 8~15                        | [15:0]                     | 1                      | <a href="#">COMMAND_VALUE</a> [7:0] is sent first, and then <a href="#">COMMAND_VALUE</a> [ <a href="#">COMMAND_BITLEN</a> :8].     |
|                             |                            | 0                      | <a href="#">COMMAND_VALUE</a> [7:0] is sent first, and then <a href="#">COMMAND_VALUE</a> [15:15- <a href="#">COMMAND_BITLEN</a> ]. |

<sup>1</sup> [SPI\\_USR\\_COMMAND\\_BITLEN](#): this field is used to configure the bit length of the command.

<sup>2</sup> [SPI\\_USR\\_COMMAND\\_VALUE](#): command value is written into this field. For which part of this field is used, see the table above.

<sup>3</sup> [SPI\\_WR\\_BIT\\_ORDER](#): 0: LSB first; 1: MSB first.

The configuration of address value is as follows:

**Table 38.5-12. Sending Sequence of Address Value**

| ADDR_BITLEN <sup>1</sup> | ADDR_VALUE <sup>2</sup> | BIT_ORDER <sup>3</sup> | Sending Sequence of Address Value  |
|--------------------------|-------------------------|------------------------|--|
| 0~7                      | [31:24]                 | 1                      | <a href="#">ADDR_VALUE</a> [ <a href="#">ADDR_BITLEN</a> + 24:24] is sent first.   |
|                          |                         | 0                      | <a href="#">ADDR_VALUE</a> [31:31- <a href="#">ADDR_BITLEN</a> ] is sent first.  |
| 8~15                     | [31:16]                 | 1                      | <a href="#">ADDR_VALUE</a> [31:24] is sent first, and then <a href="#">ADDR_VALUE</a> [ <a href="#">ADDR_BITLEN</a> + 8:16]. |
|                          |                         | 0                      | <a href="#">ADDR_VALUE</a> [31:24] is sent first, and then <a href="#">ADDR_VALUE</a> [23:31- <a href="#">ADDR_BITLEN</a> ]. |
| 16~23                    | [31:8]                  | 1                      | <a href="#">ADDR_VALUE</a> [31:16] is sent first, and then <a href="#">ADDR_VALUE</a> [ <a href="#">ADDR_BITLEN</a> -8:8].   |

|       |        |   |   |
|-------|--------|---|---|
|       |        | 0 | <a href="#">ADDR_VALUE[31:16]</a> is sent first, and then <a href="#">ADDR_VALUE[15:31-ADDR_BITLEN]</a> . |
| 24~31 | [31:0] | 1 | <a href="#">ADDR_VALUE[31:8]</a> is sent first, and then <a href="#">ADDR_VALUE[ADDR_BITLEN-24:0]</a> .   |
|       |        | 0 | <a href="#">ADDR_VALUE[31:8]</a> is sent first, and then <a href="#">ADDR_VALUE[7:31-ADDR_BITLEN]</a> .   |

<sup>1</sup> [SPI\\_USR\\_ADDR\\_BITLEN](#): this field is used to configure the bit length of the address.

<sup>2</sup> [SPI\\_USR\\_ADDR\\_VALUE](#): address value is written into this field. For which part of this field is used, see the table above.

<sup>3</sup> [SPI\\_WR\\_BIT\\_ORDER](#): 0: LSB first; 1: MSB first.

### 38.5.9.3 Full-Duplex Communication (1-bit Mode Only)

#### Introduction

GP-SPI supports SPI full-duplex communication. In this mode, SPI master provides CLK and CS signals, exchanging data with SPI slave in 1-bit mode via MOSI (SPI2D/SPI3\_D, sending) and MISO (SPI2Q/SPI3\_Q, receiving) at the same time. To enable this communication mode, set the bit [SPI\\_DOUTDIN](#) in register [SPI\\_USER\\_REG](#). Figure 38.5-6 illustrates the connection of GP-SPI2 with its slave in full-duplex communication.

Figure 38.5-6. Full-Duplex Communication Between GP-SPI2 Master and a Slave

In full-duplex communication, the behavior of states CMD, ADDR, DUMMY, DOUT and DIN are configurable. Usually, the states CMD, ADDR and DUMMY are not used in this communication. The bit length of transferred data is configured in [SPI\\_MS\\_DATA\\_BITLEN](#). The actual bit length used in communication equals to ([SPI\\_MS\\_DATA\\_BITLEN](#) + 1).

#### Configuration (Take GP-SPI2 as an example)

To start a data transfer, follow the steps below:

- Configure the IO path via IO MUX or GPIO matrix between GP-SPI2 and an external SPI device.
- Configure AHB clock (AHB\_CLK, see Chapter 9 [Reset and Clock](#)) and module clock (clk\_spi\_mst) for the GP-SPI2 module.
- Set [SPI\\_DOUTDIN](#) and clear [SPI\\_SLAVE\\_MODE](#), to enable master full-duplex communication.
- Configure GP-SPI2 registers listed in Table 38.5-10.
- Configure SPI CS setup time and hold time according to Section 38.6.

- Set the property of SPI2CLK according to Section 38.7.
- Prepare data according to the selected transfer type:
  - In CPU-controlled MOSI transfer, prepare data in registers [SPI\\_WO\\_REG~SPI\\_W15\\_REG](#).
  - In DMA-controlled transfer,
    - \* configure [SPI\\_DMA\\_TX\\_ENA/SPI\\_DMA\\_RX\\_ENA](#),
    - \* configure DMA TX/RX link,
    - \* and start DMA TX/RX engine, as described in Section 38.5.7 and Section 38.5.8.
- Configure interrupts and wait for SPI slave to get ready for transfer.
- Set [SPI\\_DMA\\_AFIFO\\_RST](#), [SPI\\_BUF\\_AFIFO\\_RST](#), and [SPI\\_RX\\_AFIFO\\_RST](#) to reset these buffers.
- Set [SPI\\_USR](#) in register [SPI\\_CMD\\_REG](#) to start the transfer and wait for the configured interrupts.

#### 38.5.9.4 Half-Duplex Communication (1/2/4/(8)-bit Mode)

##### Introduction

In this mode, GP-SPI provides CLK and CS signals. Only one side (SPI master or slave) can send data at a time, while the other side receives the data. To enable this communication mode, clear the bit [SPI\\_DOUTDIN](#) in register [SPI\\_USER\\_REG](#). The standard format of SPI half-duplex communication is CMD + [ADDR +] [DUMMY +] [DOUT or DIN]. The states ADDR, DUMMY, DOUT, and DIN are optional, and can be disabled or enabled independently.

As described in Section 38.5.9.2, the properties of GP-SPI states: CMD, ADDR, DUMMY, DOUT and DIN, such as cycle length, value, and parallel bus bit mode, can be set independently. For the register configuration, see Table 38.5-10.

The detailed properties of half-duplex GP-SPI are as follows:

1. CMD: 0~16 bits, master output, slave input.
2. ADDR: 0~32 bits, master output, slave input.
3. DUMMY: 0~256 SPI2CLK/SPI3\_CLK cycles, master output, slave input.
4. DOUT: 0~512 bits (64 bytes) in CPU-controlled transfer, 0~256 Kbits (32 KB) in DMA-controlled single transfer, and unlimited length in DMA-controlled configurable segmented transfer, master output, slave input.
5. DIN: 0~512 bits (64 bytes) in CPU-controlled transfer, 0~256 Kbits (32 KB) in DMA-controlled single transfer, and unlimited length in DMA-controlled configurable segmented transfer, slave output, master input.

GP-SPI2 also supports Double Transfer Rate (DTR) in 1/2/4/8-bit modes, in which data is sent and received at the rising and the falling edges of SPI clock:

- If [SPI\\_CMD\\_DTR\\_EN](#) is set, the CMD value will be sent in DTR mode; otherwise CMD phase will be in Single Transfer Rate (STR) mode.
- If [SPI\\_ADDR\\_DTR\\_EN](#) is set, the ADDR value will be sent in DTR mode; otherwise ADDR phase will be in STR mode.

- If [SPI\\_DATA\\_DTR\\_EN](#) is set, the input data in state DIN or output data in state DOUT will be sent in DTR mode; otherwise the data will be in STR mode.

The control bits [SPI\\_CMD\\_DTR\\_EN](#), [SPI\\_ADDR\\_DTR\\_EN](#), and [SPI\\_DATA\\_DTR\\_EN](#) can be configured independently, which means CMD in STR mode, ADDR and DOUT or DIN in DTR mode are supported.

GP-SPI2 can only output SPI2DQS signal, but can not receive the signal. Therefore, only flash or external RAM working in fixed dummy mode (dummy cycles in a read sequence is fixed) are supported.

#### Configuration (Take GP-SPI2 as an example)

The register configuration can be as follows:

1. Configure the IO path via HP IO MUX or HP GPIO matrix between GP-SPI2 and an external SPI device.
2. Configure AHB clock (AHB\_CLK) and module clock (clk\_spi\_mst) for the GP-SPI2 module.
3. Clear [SPI\\_DOUTDIN](#) and [SPI\\_SLAVE\\_MODE](#), to enable master half-duplex communication.
4. Configure GP-SPI2 registers listed in Table [38.5-10](#).
5. Configure SPI CS setup time and hold time according to Section [38.6](#).
6. Set the property of SPI2CLK according to Section [38.7](#).
7. Prepare data according to the selected transfer type:
  - In CPU-controlled MOSI transfer, prepare data in registers [SPI\\_W0\\_REG~SPI\\_W15\\_REG](#).
  - In DMA-controlled transfer,
    - configure [SPI\\_DMA\\_TX\\_ENA/SPI\\_DMA\\_RX\\_ENA](#),
    - configure DMA TX/RX link,
    - and start DMA TX/RX engine, as described in Section [38.5.7](#) and Section [38.5.8](#).
8. Configure interrupts and wait for SPI slave to get ready for transfer.
9. Set [SPI\\_DMA\\_AFIFO\\_RST](#), [SPI\\_BUF\\_AFIFO\\_RST](#), and [SPI\\_RX\\_AFIFO\\_RST](#) to reset these buffers.
10. Set [SPI\\_USR](#) in register [SPI\\_CMD\\_REG](#) to start the transfer and wait for the configured interrupts.

#### Application Example (Take GP-SPI2 as an example)

The following example shows how GP-SPI2 accesses flash and external RAM in master half-duplex communication.

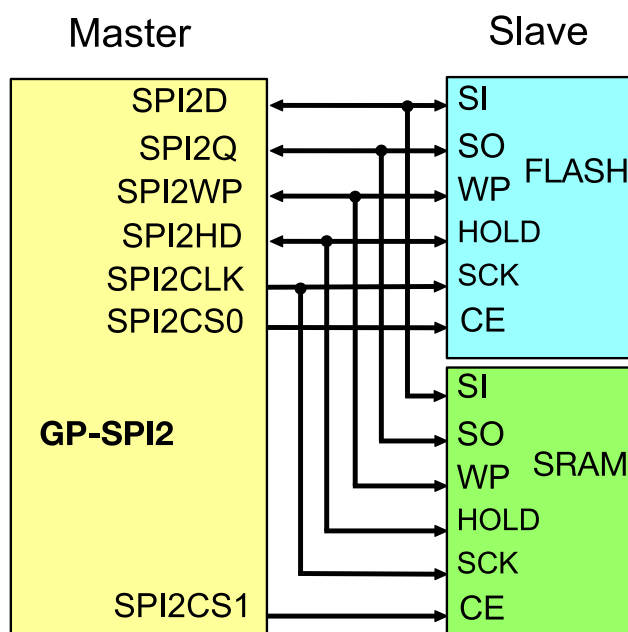

Figure 38.5-7. Connection of GP-SPI2 to Flash and External RAM in 4-bit Mode

Figure 38.5-8 indicates GP-SPI2 Quad I/O Read sequence according to standard flash specification. Other GP-SPI2 command sequences are implemented in accordance with the requirements of SPI slaves.

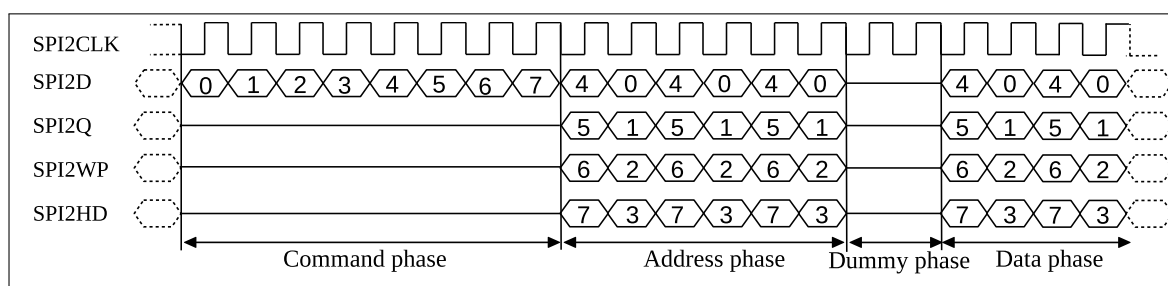

Figure 38.5-8. SPI Quad I/O Read Command Sequence Sent by GP-SPI2 to Flash

### 38.5.9.5 DMA-Controlled Configurable Segmented Transfer

#### Note:

- LP-SPI and GP-SPI3 do not support DMA-controlled configurable segmented transfer.
- Note that there is no separate section on how to configure a single transfer as master, since the CONF state of a configurable segmented transfer can be skipped to implement a single transfer.

#### Introduction

When GP-SPI2 works as a master, it provides a feature named configurable segmented transfer controlled by DMA.

A DMA-controlled transfer as master can be:

- a single transfer, consisting of only one transaction;
- or a configurable segmented transfer, consisting of several transactions (segments).

In a configurable segmented transfer, the registers of each single transaction (segment) are configurable. This feature enables GP-SPI2 to do as many transactions (segments) as configured after such transfer is triggered once by the CPU. Figure 38.5-9 shows how this feature works.

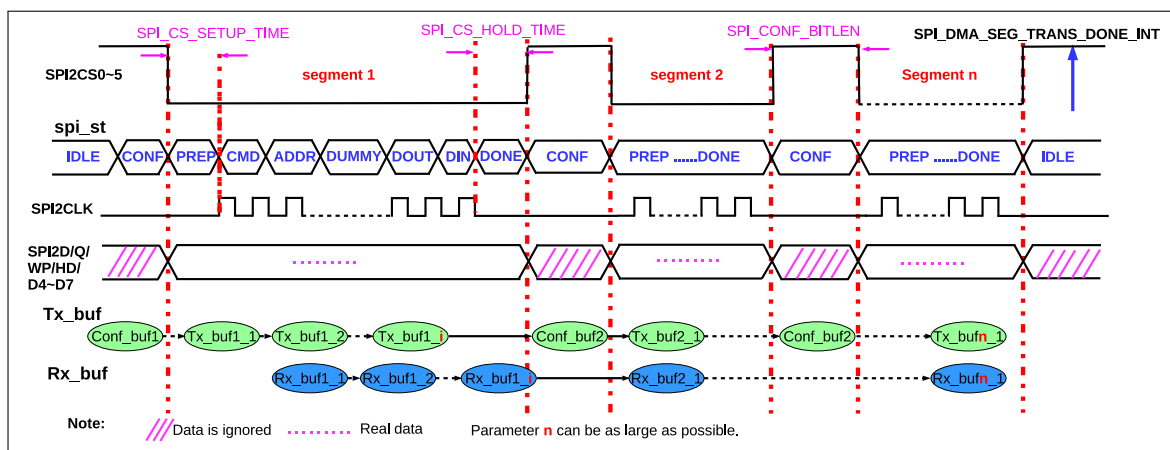

Figure 38.5-9. Configurable Segmented Transfer as Master

As shown in Figure 38.5-9, the registers for one transaction (segment *n*) can be reconfigured by GP-SPI2 hardware according to the content in its Conf\_buf*n* during the CONF state, before this segment starts.

It is recommended to provide separate DMA CONF links and CONF buffers (Conf\_buf*i* in Figure 38.5-9) for each CONF state. A DMA TX link is used to connect all the CONF buffers and TX data buffers (Tx\_buf*i* in Figure 38.5-9) into a chain. Hence, the behavior of the SPI2 bus in each segment can be controlled independently.

For example, in a configurable segmented transfer, its segment *i*, segment *j*, and segment *k* can be configured to full-duplex, half-duplex MISO, and half-duplex MOSI, respectively. *i*, *j*, and *k* represent different segment numbers.

Meanwhile, the state of GP-SPI2, the data length and cycle length of the SPI2 bus, and the behavior of the DMA, can be configured independently for each segment. When this whole DMA-controlled transfer (consisting of several segments) has finished, a GP-SPI2 interrupt, SPI\_DMA\_SEG\_TRANS\_DONE\_INT, is triggered.

### Configuration

1. Configure the IO path via HP IO MUX or HP GPIO matrix between GP-SPI2 and an external SPI device.
2. Configure AHB clock (AHB\_CLK) and module clock (clk\_spi\_mst) for the GP-SPI2 module.
3. Clear SPI\_DOUTDIN and SPI\_SLAVE\_MODE, to enable master half-duplex communication.
4. Configure GP-SPI2 registers listed in Table 38.5-10.
5. Configure SPI CS setup time and hold time according to Section 38.6.
6. Set the property of SPI2CLK according to Section 38.7.
7. Prepare descriptors for DMA CONF buffer and TX data (optional) for each segment. Chain the descriptors of CONF buffer and TX buffers of several segments into one linked list.
8. Similarly, prepare descriptors for RX buffers for each segment and chain them into one linked list.

9. Configure all the needed CONF buffers, TX buffers and RX buffers, respectively for each segment before this DMA-controlled transfer begins.
10. Point [AXI\\_DMA\\_OUTLINK\\_ADDR\\_CH\*n\*](#) to the head address of the CONF and TX buffer descriptor linked list, and then set [AXI\\_DMA\\_OUTLINK\\_START\\_CH\*n\*](#) to start the TX DMA.
11. Clear the bit [SPI\\_RX\\_EOF\\_EN](#) in register [SPI\\_DMA\\_CONF\\_REG](#). Point [AXI\\_DMA\\_INLINK\\_ADDR\\_CH\*n\*](#) to the head address of the CONF and RX buffer descriptor linked list, and then set [AXI\\_DMA\\_INLINK\\_START\\_CH\*n\*](#) to start the RX DMA.
12. Set [SPI\\_USR\\_CONF](#) to enable CONF state.
13. Set [SPI\\_DMA\\_SEG\\_TRANS\\_DONE\\_INT\\_ENA](#) to enable the [SPI\\_DMA\\_SEG\\_TRANS\\_DONE\\_INT](#) interrupt. Configure other interrupts if needed according to Section 38.11.
14. Wait for all the slaves to get ready for transfer.
15. Set [SPI\\_DMA\\_AFIFO\\_RST](#), [SPI\\_BUF\\_AFIFO\\_RST](#), and [SPI\\_RX\\_AFIFO\\_RST](#) to reset these buffers.
16. Set [SPI\\_USR](#) to start this DMA-controlled transfer.
17. Wait for [SPI\\_DMA\\_SEG\\_TRANS\\_DONE\\_INT](#) interrupt, which means this transfer has finished and the data has been stored into corresponding memory.

**Note:**

Prepare the data to send for each segment in its PREP state. Shall ensure that:

$$(SPI\_CS\_SETUP\_TIME + 1) \times T_{SPI\_CLK} \geq 4 \times (T_{AHB\_CLK} + T_{clk\_spi\_mst})$$

### Configuration of CONF Buffer and Magic Value

In a configurable segmented transfer, only registers which change from the last transaction (segment) need to be re-configured to new values in CONF state. The configuration of other registers can be skipped (i.e., kept the same) to save time and chip resources.

The first word in DMA CONF buffer *i*, called SPI\_BIT\_MAP\_WORD, defines whether given GP-SPI2 register is to be updated or not in segment *i*. The relation of SPI\_BIT\_MAP\_WORD and GP-SPI2 registers to update can be seen in Table 38.5-13 Bitmap (BM) Table. If a bit in the BM table is set to 1, its corresponding register value will be updated in this segment. Otherwise, if some registers should be kept from being changed, the related bits should be set to 0.

**Table 38.5-13. BM Table for CONF State**

| BM Bit | Register                        | BM Bit | Register                            |
|--------|---------------------------------|--------|-------------------------------------|
| 0      | <a href="#">SPI_ADDR_REG</a>    | 7      | <a href="#">SPI_MISC_REG</a>        |
| 1      | <a href="#">SPI_CTRL_REG</a>    | 8      | <a href="#">SPI_DIN_MODE_REG</a>    |
| 2      | <a href="#">SPI_CLOCK_REG</a>   | 9      | <a href="#">SPI_DIN_NUM_REG</a>     |
| 3      | <a href="#">SPI_USER_REG</a>    | 10     | <a href="#">SPI_DOUT_MODE_REG</a>   |
| 4      | <a href="#">SPI_USER1_REG</a>   | 11     | <a href="#">SPI_DMA_CONF_REG</a>    |
| 5      | <a href="#">SPI_USER2_REG</a>   | 12     | <a href="#">SPI_DMA_INT_ENA_REG</a> |
| 6      | <a href="#">SPI_MS_DLEN_REG</a> | 13     | <a href="#">SPI_DMA_INT_CLR_REG</a> |

Then new values of all the registers to be modified should be placed right after SPI\_BIT\_MAP\_WORD, in consecutive words in the CONF buffer.

To ensure the correctness of the content in each CONF buffer, the value in SPI\_BIT\_MAP\_WORD[31:28] is used as a “magic value”, and will be compared with SPI\_DMA\_SEG\_MAGIC\_VALUE in register SPI\_SLAVE\_REG. The value of SPI\_DMA\_SEG\_MAGIC\_VALUE should be configured before this DMA-controlled transfer starts, and can not be changed during these segments.

- If SPI\_BIT\_MAP\_WORD[31:28] == SPI\_DMA\_SEG\_MAGIC\_VALUE, this DMA-controlled transfer continues normally. SPI\_DMA\_SEG\_TRANS\_DONE\_INT is triggered at the end of this DMA-controlled transfer.
- If SPI\_BIT\_MAP\_WORD[31:28] != SPI\_DMA\_SEG\_MAGIC\_VALUE, GP-SPI2 state (spi\_st) goes back to IDLE and the transfer is ended immediately. The interrupt SPI\_DMA\_SEG\_TRANS\_DONE\_INT is still triggered, with SPI\_SEG\_MAGIC\_ERR\_INT\_RAW bit set to 1.

### CONF Buffer Configuration Example

Table 38.5-14 and Table 38.5-15 provide an example to show how to configure a CONF buffer for a transaction (segment *i*) in which SPI\_ADDR\_REG, SPI\_CTRL\_REG, SPI\_CLOCK\_REG, SPI\_USER\_REG, and SPI\_USER1\_REG need to be updated.

**Table 38.5-14. An Example of CONF buffer *i* in Segment *i***

| CONF buffer <i>i</i> | Note  |
|----------------------|---|
| SPI_BIT_MAP_WORD     | The first word in this buffer. Its value is 0xA000001F in this example when the SPI_DMA_SEG_MAGIC_VALUE is set to 0xA. As shown in Table 38.5-15, bits 0, 1, 2, 3, and 4 are set, indicating the following registers will be updated. |
| SPI_ADDR_REG         | The second word, stores the new value to SPI_ADDR_REG.  |
| SPI_CTRL_REG         | The third word, stores the new value to SPI_CTRL_REG.   |
| SPI_CLOCK_REG        | The fourth word, stores the new value to SPI_CLOCK_REG.   |
| SPI_USER_REG         | The fifth word, stores the new value to SPI_USER_REG.   |
| SPI_USER1_REG        | The sixth word, stores the new value to SPI_USER1_REG.  |

**Table 38.5-15. BM Bit Value and Register to Be Updated in This Example**

| BM Bit | Value | Register        | BM Bit | Value | Register            |
|--------|-------|-----------------|--------|-------|---------------------|
| 0      | 1     | SPI_ADDR_REG    | 7      | 0     | SPI_MISC_REG        |
| 1      | 1     | SPI_CTRL_REG    | 8      | 0     | SPI_DIN_MODE_REG    |
| 2      | 1     | SPI_CLOCK_REG   | 9      | 0     | SPI_DIN_NUM_REG     |
| 3      | 1     | SPI_USER_REG    | 10     | 0     | SPI_DOUT_MODE_REG   |
| 4      | 1     | SPI_USER1_REG   | 11     | 0     | SPI_DMA_CONF_REG    |
| 5      | 0     | SPI_USER2_REG   | 12     | 0     | SPI_DMA_INT_ENA_REG |
| 6      | 0     | SPI_MS_DLEN_REG | 13     | 0     | SPI_DMA_INT_CLR_REG |

### Notes

In a DMA-controlled configurable segmented transfer, please pay special attention to the following bits:

- **SPI\_USR\_CONF**: set **SPI\_USR\_CONF** before **SPI\_USR** is set, to enable this transfer.
- **SPI\_USR\_CONF\_NEXT**: if segment *i* is not the final transaction of this whole DMA-controlled transfer, its **SPI\_USR\_CONF\_NEXT** bit should be set to 1.
- **SPI\_CONF\_BITLEN**: GP-SPI2 CS setup time and hold time are programmable independently in each segment, see Section 38.6 for detailed configuration. The CS high time in each segment is about:

$$(\text{SPI\_CONF\_BITLEN} + 5) \times T_{\text{AHB\_CLK}}$$

The CS high time in CONF state can be set from 62.5  $\mu\text{s}$ ~3.2768 ms when  $f_{\text{AHB\_CLK}}$  is 80 MHz.

(**SPI\_CONF\_BITLEN** + 5) will overflow from (0x40000 - **SPI\_CONF\_BITLEN** - 5) if **SPI\_CONF\_BITLEN** is larger than 0x3FFFA.

### 38.5.10 GP-SPI Works as a Slave

GP-SPI can be used as a slave to communicate with an SPI master. As a slave, GP-SPI supports 1-bit SPI, 2-bit dual SPI, 4-bit quad SPI, and QPI modes, with specific communication formats. To enable this mode, set **SPI\_SLAVE\_MODE** in register **SPI\_SLAVE\_REG**.

The CS signal must be held low during the transfer, and its falling/rising edges indicate the start/end of a single or segmented transfer. Take CS low-level effective as an example, when GP-SPI is used as a slave, the CS invalid duration (high-level) between each SPI transfer should not be less than  $8 T_{\text{AHB\_CLK}}$  to ensure that each transfer can end normally.

#### 38.5.10.1 Configurable Communication Formats

When GP-SPI works as a slave, SPI full-duplex and half-duplex communications are available. To select from the two communications, configure **SPI\_DOUTDIN** in register **SPI\_USER\_REG**.

Full-duplex communication means that input data and output data are transmitted simultaneously throughout the entire transaction. All bits are treated as input or output data, which means no command, address or dummy states are expected. The interrupt **SPI\_TRANS\_DONE\_INT** is triggered once the transaction ends.

In half-duplex communication, the format is CMD+ADDR+DUMMY+DATA (DIN or DOUT).

- “DIN” means that an SPI master reads data from GP-SPI.
- “DOUT” means that an SPI master writes data to GP-SPI.

The detailed properties of each state are as follows:

##### 1. CMD:

- Indicate the function of SPI slave.
- One byte from master to slave.
- Only the values in Table 38.5-16 and Table 38.5-17 are valid.
- Can be sent in 1-bit SPI mode or 4-bit QPI mode.

##### 2. ADDR:

- The address for **Wr\_BUF** and **Rd\_BUF** commands in CPU-controlled transfer, or placeholder bits in other transfers and can be defined by application.

- One byte from master to slave.
- Can be sent in 1-bit, 2-bit or 4-bit modes according to the command.

### 3. DUMMY:

- Its value is meaningless. SPI slave prepares data in this state.
- Bit mode of SPI2 bus is also meaningless here.
- Last for eight SPI\_CLK cycles.

### 4. DIN or DOUT:

- Data length can be 0~64 bytes in CPU-controlled transfer and unlimited in DMA-controlled transfer.
- Can be sent in 1-bit, 2-bit or 4-bit modes according to the CMD value.

#### Note:

The states of ADDR and DUMMY can never be skipped in any half-duplex communications.

When a half-duplex transaction is complete, the transferred CMD and ADDR values are latched into [SPI\\_SLV\\_LAST\\_COMMAND](#) and [SPI\\_SLV\\_LAST\\_ADDR](#), respectively. [SPI\\_SLV\\_CMD\\_ERR\\_INT\\_RAW](#) will be set if the transferred CMD value is not supported by GP-SPI as slave. [SPI\\_SLV\\_CMD\\_ERR\\_INT\\_RAW](#) can only be cleared by software.

### 38.5.10.2 CMD Values Supported in Half-Duplex Communication

In half-duplex communication, the defined values of CMD determine the transfer types. Unsupported CMD values are disregarded, meanwhile the related transfer is ignored and [SPI\\_SLV\\_CMD\\_ERR\\_INT\\_RAW](#) is set. The transfer format is CMD (8 bits) + ADDR (8 bits) + DUMMY (8 SPI\_CLK cycles) + DATA (unit in bytes). The detailed description of CMD[3:0] is as follows:

- 0x1 (Wr\_BUF): CPU-controlled write operation. Master sends data and GP-SPI receives data. The data is stored in the related address of [SPI\\_WO\\_REG~SPI\\_W15\\_REG](#).
- 0x2 (Rd\_BUF): CPU-controlled read operation. Master receives the data sent by GP-SPI. The data comes from the related address of [SPI\\_WO\\_REG~SPI\\_W15\\_REG](#).
- 0x3 (Wr\_DMA): DMA-controlled write operation. Master sends data and GP-SPI receives data. The data is stored in GP-SPI DMA RX buffer.
- 0x4 (Rd\_DMA): DMA-controlled read operation. Master receives the data sent by GP-SPI. The data comes from GP-SPI DMA TX buffer.
- 0x7 (CMD7): used to generate an [SPI\\_SLV\\_CMD7\\_INT](#) interrupt. It can also generate a [AXI\\_DMA\\_IN\\_SUC\\_EOF\\_CHn\\_INT](#) interrupt in a slave segmented transfer when DMA RX link is used. But it will not end GP-SPI's slave segmented transfer.
- 0x8 (CMD8): only used to generate an [SPI\\_SLV\\_CMD8\\_INT](#) interrupt, which will not end GP-SPI's slave segmented transfer.
- 0x9 (CMD9): only used to generate an [SPI\\_SLV\\_CMD9\\_INT](#) interrupt, which will not end GP-SPI's slave segmented transfer.

- 0xA (CMDA): only used to generate an [SPI\\_SLV\\_CMDA\\_INT](#) interrupt, which will not end GP-SPI's slave segmented transfer.

CMD7, CMD8, CMD9, and CMDA commands are reserved for user definition. These commands can be used as handshake signals, as passwords of some specific functions, as trigger signals of some user defined actions, and so on.

1/2/4-bit modes in states of CMD, ADDR, DATA are supported, which are determined by value of CMD[7:4]. The DUMMY state is always in 1-bit mode and lasts for eight SPI\_CLK cycles. The definition of CMD[7:4] is as follows:

- 0x0: CMD, ADDR, and DATA states all are in 1-bit mode.
- 0x1: CMD and ADDR are in 1-bit mode. DATA is in 2-bit mode.
- 0x2: CMD and ADDR are in 1-bit mode. DATA is in 4-bit mode.
- 0x5: CMD is in 1-bit mode. ADDR and DATA are in 2-bit mode.
- 0xA: CMD is in 1-bit mode, ADDR and DATA are in 4-bit mode or in QPI mode.

In addition, if the value of CMD[7:0] is 0x05, 0xA5, 0x06, or 0xDD, DUMMY and DATA states are skipped. The definition of CMD[7:0] is as follows:

- 0x05 (End\_SEG\_TRANS): master sends this command to end slave segmented transfer in SPI mode.
- 0xA5 (End\_SEG\_TRANS): master sends this command to end slave segmented transfer in QPI mode.
- 0x06 (En\_QPI): GP-SPI enters QPI mode when receiving this command and the bit [SPI\\_QPI\\_MODE](#) in register [SPI\\_USER\\_REG](#) is set.
- 0xDD (Ex\_QPI): GP-SPI exits QPI mode when receiving this command and the bit [SPI\\_QPI\\_MODE](#) is cleared.

All the CMD values supported by GP-SPI are listed in Table [38.5-16](#) and Table [38.5-17](#). Note that the DUMMY state is always in 1-bit mode and lasts for eight SPI\_CLK cycles.

**Table 38.5-16. CMD Values Supported in SPI Mode**

| Transfer Type | CMD[7:0] | CMD State  | ADDR State | DATA State |
|---------------|----------|------------|------------|------------|
| Wr_BUF        | 0x01     | 1-bit mode | 1-bit mode | 1-bit mode |
|               | 0x11     | 1-bit mode | 1-bit mode | 2-bit mode |
|               | 0x21     | 1-bit mode | 1-bit mode | 4-bit mode |
|               | 0x51     | 1-bit mode | 2-bit mode | 2-bit mode |
|               | 0xA1     | 1-bit mode | 4-bit mode | 4-bit mode |
| Rd_BUF        | 0x02     | 1-bit mode | 1-bit mode | 1-bit mode |
|               | 0x12     | 1-bit mode | 1-bit mode | 2-bit mode |
|               | 0x22     | 1-bit mode | 1-bit mode | 4-bit mode |
|               | 0x52     | 1-bit mode | 2-bit mode | 2-bit mode |
|               | 0xA2     | 1-bit mode | 4-bit mode | 4-bit mode |
| Wr_DMA        | 0x03     | 1-bit mode | 1-bit mode | 1-bit mode |
|               | 0x13     | 1-bit mode | 1-bit mode | 2-bit mode |
|               | 0x23     | 1-bit mode | 1-bit mode | 4-bit mode |
|               | 0x53     | 1-bit mode | 2-bit mode | 2-bit mode |

Table 38.5-16. CMD Values Supported in SPI Mode

| Transfer Type | CMD[7:0] | CMD State  | ADDR State | DATA State |
|---------------|----------|------------|------------|------------|
|               | 0xA3     | 1-bit mode | 4-bit mode | 4-bit mode |
| Rd_DMA        | 0x04     | 1-bit mode | 1-bit mode | 1-bit mode |
|               | 0x14     | 1-bit mode | 1-bit mode | 2-bit mode |
|               | 0x24     | 1-bit mode | 1-bit mode | 4-bit mode |
|               | 0x54     | 1-bit mode | 2-bit mode | 2-bit mode |
|               | 0xA4     | 1-bit mode | 4-bit mode | 4-bit mode |
| CMD7          | 0x07     | 1-bit mode | 1-bit mode | -          |
|               | 0x17     | 1-bit mode | 1-bit mode | -          |
|               | 0x27     | 1-bit mode | 1-bit mode | -          |
|               | 0x57     | 1-bit mode | 2-bit mode | -          |
|               | 0xA7     | 1-bit mode | 4-bit mode | -          |
| CMD8          | 0x08     | 1-bit mode | 1-bit mode | -          |
|               | 0x18     | 1-bit mode | 1-bit mode | -          |
|               | 0x28     | 1-bit mode | 1-bit mode | -          |
|               | 0x58     | 1-bit mode | 2-bit mode | -          |
|               | 0xA8     | 1-bit mode | 4-bit mode | -          |
| CMD9          | 0x09     | 1-bit mode | 1-bit mode | -          |
|               | 0x19     | 1-bit mode | 1-bit mode | -          |
|               | 0x29     | 1-bit mode | 1-bit mode | -          |
|               | 0x59     | 1-bit mode | 2-bit mode | -          |
|               | 0xA9     | 1-bit mode | 4-bit mode | -          |
| CMDA          | 0x0A     | 1-bit mode | 1-bit mode | -          |
|               | 0x1A     | 1-bit mode | 1-bit mode | -          |
|               | 0x2A     | 1-bit mode | 1-bit mode | -          |
|               | 0x5A     | 1-bit mode | 2-bit mode | -          |
|               | 0xAA     | 1-bit mode | 4-bit mode | -          |
| End_SEG_TRANS | 0x05     | 1-bit mode | -          | -          |
| En_QPI        | 0x06     | 1-bit mode | -          | -          |

Table 38.5-17. CMD Values Supported in QPI Mode

| Transfer Type | CMD[7:0] | CMD State  | ADDR State | DATA State |
|---------------|----------|------------|------------|------------|
| Wr_BUF        | 0xA1     | 4-bit mode | 4-bit mode | 4-bit mode |
| Rd_BUF        | 0xA2     | 4-bit mode | 4-bit mode | 4-bit mode |
| Wr_DMA        | 0xA3     | 4-bit mode | 4-bit mode | 4-bit mode |
| Rd_DMA        | 0xA4     | 4-bit mode | 4-bit mode | 4-bit mode |
| CMD7          | 0xA7     | 4-bit mode | 4-bit mode | -          |
| CMD8          | 0xA8     | 4-bit mode | 4-bit mode | -          |
| CMD9          | 0xA9     | 4-bit mode | 4-bit mode | -          |
| CMDA          | 0xAA     | 4-bit mode | 4-bit mode | -          |
| End_SEG_TRANS | 0xA5     | 4-bit mode | 4-bit mode | -          |
| Ex_QPI        | 0xDD     | 4-bit mode | 4-bit mode | -          |

Master sends 0x06 CMD (En\_QPI) to set GP-SPI slave to QPI mode and all the states of supported transfer will be in 4-bit mode afterwards. If 0xDD CMD (Ex\_QPI) is received, GP-SPI slave will be back to SPI mode.

Other transfer types than these described in Table 38.5-16 and Table 38.5-17 are ignored. But if the CS low-level duration is longer than two APB\_CLK cycles, [SPI\\_TRANS\\_DONE\\_INT](#) will be triggered. For more information on interrupts triggered at the end of transmissions, please refer to Section 38.11.

### 38.5.10.3 Slave Single Transfer and Slave Segmented Transfer

When GP-SPI works as a slave, it supports full-duplex and half-duplex communications controlled by DMA and by CPU. DMA-controlled transfer can be a single transfer, or a slave segmented transfer consisting of several transactions (segments). The CPU-controlled transfer can only be one single transfer, since each CPU-controlled transaction needs to be triggered by CPU.

In a slave segmented transfer, all transfer types listed in Table 38.5-16 and Table 38.5-17 are supported in a single transaction (segment). It means that CPU-controlled transaction and DMA-controlled transaction can be mixed in one slave segmented transfer.

It is recommended that in a slave segmented transfer:

- CPU-controlled transaction is used for handshake communication and short data transfers.
- DMA-controlled transaction is used for large data transfers.

### 38.5.10.4 Configuration of Slave Single Transfer

When operating as slave, GP-SPI supports CPU/DMA-controlled full-duplex/half-duplex single transfers.

The register configuration procedure is as follows (take GP-SPI2 as an example):

1. Configure the IO path via HP IO MUX or HP GPIO matrix between GP-SPI2 and an external SPI device.
2. Configure AHB clock (AHB\_CLK).
3. Set [SPI\\_SLAVE\\_MODE](#) to enable slave mode.
4. Configure [SPI\\_DOUTDIN](#):
  - 1: enable full-duplex communication.
  - 0: enable half-duplex communication.
5. Prepare data:
  - if CPU-controlled transfer is selected and GP-SPI2 is used to send data, then prepare data in registers [SPI\\_W0\\_REG~SPI\\_W15\\_REG](#).
  - if DMA-controlled transfer is selected,
    - configure [SPI\\_DMA\\_TX\\_ENA/SPI\\_DMA\\_RX\\_ENA](#) and [SPI\\_RX\\_EOF\\_EN](#).
    - configure DMA TX/RX link,
    - and start DMA TX/RX engine, as described in Section 38.5.7 and Section 38.5.8.
6. Set [SPI\\_DMA\\_AFIFO\\_RST](#), [SPI\\_BUF\\_AFIFO\\_RST](#), and [SPI\\_RX\\_AFIFO\\_RST](#) to reset these buffers.

7. Clear `SPI_DMA_SLV_SEG_TRANS_EN` in register `SPI_DMA_CONF_REG` to enable slave single transfer.
8. Set `SPI_TRANS_DONE_INT_ENA` in register `SPI_DMA_INT_ENA_REG` and wait for the interrupt `SPI_TRANS_DONE_INT`. In DMA-controlled mode, it is recommended to wait for the interrupt `AXI_DMA_IN_SUC_EOF_CHn_INT` when DMA RX buffer is used, which means that data has been stored in the related memory. Other interrupts described in Section 38.11 are optional.

### 38.5.10.5 Configuration of Slave Segmented Transfer in Half-Duplex

DMA must be used in this mode. The register configuration procedure is as follows (take GP-SPI2 as an example):

1. Configure the IO path via HP IO MUX or HP GPIO matrix between GP-SPI2 and an external SPI device.
2. Configure APB clock (APB\_CLK).
3. Set `SPI_SLAVE_MODE` to enable slave mode.
4. Clear `SPI_DOUTDIN` to enable half-duplex communication.
5. Prepare data in registers `SPI_WO_REG~SPI_W15_REG`, if needed.
6. Set `SPI_DMA_AFIFO_RST`, `SPI_BUF_AFIFO_RST`, and `SPI_RX_AFIFO_RST` to reset these buffers.
7. Set bits `SPI_DMA_RX_ENA` and `SPI_DMA_TX_ENA`. Clear the bit `SPI_RX_EOF_EN`. Configure DMA TX/RX link and start DMA TX/RX engine, as shown in Section 38.5.7 and Section 38.5.8.
8. Set `SPI_DMA_SLV_SEG_TRANS_EN` in register `SPI_DMA_CONF_REG` to enable slave segmented transfer.
9. Set `SPI_DMA_SEG_TRANS_DONE_INT_ENA` in register `SPI_DMA_INT_ENA_REG` and wait for the interrupt `SPI_DMA_SEG_TRANS_DONE_INT`, which means that the segmented transfer has finished and data has been put into the related memory. Other interrupts described in Section 38.11 are optional.

When `End_SEG_TRANS` (0x05 in SPI mode, 0xA5 in QPI mode) is received by GP-SPI, this slave segmented transfer is ended and the interrupt `SPI_DMA_SEG_TRANS_DONE_INT` is triggered.

### 38.5.10.6 Configuration of Slave Segmented Transfer in Full-Duplex

DMA must be used in this mode. In such transfer, the data is transferred from and to the DMA buffer. The interrupt `AXI_DMA_IN_SUC_EOF_CHn_INT` is triggered when the transfer ends.

The register configuration procedure is as follows (take GP-SPI2 as an example):

1. Configure the IO path via HP IO MUX or HP GPIO matrix between GP-SPI2 and an external SPI device.
2. Configure APB clock (APB\_CLK).
3. Set `SPI_SLAVE_MODE` and `SPI_DOUTDIN`, to enable slave full-duplex communication.
4. Set `SPI_DMA_AFIFO_RST`, `SPI_BUF_AFIFO_RST`, and `SPI_RX_AFIFO_RST` to reset these buffers.
5. Set `SPI_DMA_TX_ENA/SPI_DMA_RX_ENA`. Configure DMA TX/RX link and start DMA TX/RX engine, as shown in Section 38.5.7 and Section 38.5.8.
6. Set `SPI_RX_EOF_EN` in register `SPI_DMA_CONF_REG`. Configure `SPI_MS_DATA_BITLEN`[17:0] in register `SPI_MS_DLEN_REG` to the bit length of the received DMA data.
7. Set `SPI_DMA_SLV_SEG_TRANS_EN` in register `SPI_DMA_CONF_REG` to enable slave segmented transfer.

8. Set `AXI_DMA_IN_SUC_EOF_CH $n$ _INT_ENA` and wait for the interrupt `AXI_DMA_IN_SUC_EOF_CH $n$ _INT`.

## 38.6 CS Setup Time and Hold Time Control

SPI bus CS (SPI\_CS) setup time and hold time are very important to meet the timing requirements of various SPI devices (e.g., flash or PSRAM).

CS setup time is the time between the CS falling edge and the first latch edge of SPI bus CLK (SPI\_CLK). The first latch edge for mode 0 and mode 3 is rising edge, and falling edge for mode 2 and mode 4.

CS hold time is the time between the last latch edge of SPI\_CLK and the CS rising edge.

When operating as slave, the CS setup time and hold time should be longer than  $0.5 \times T_{\text{SPI\_CLK}}$ , otherwise the SPI transfer may be incorrect.  $T_{\text{SPI\_CLK}}$  is one cycle of SPI\_CLK.

When operating as master, set the CS setup time by specifying `SPI_CS_SETUP` in register `SPI_USER_REG` and `SPI_CS_SETUP_TIME` in register `SPI_USER1_REG`.

- If `SPI_CS_SETUP` is cleared, the SPI CS setup time is  $0.5 \times T_{\text{SPI\_CLK}}$ .
- If `SPI_CS_SETUP` is set, the SPI CS setup time is  $(\text{SPI\_CS\_SETUP\_TIME} + 1.5) \times T_{\text{SPI\_CLK}}$ .

Set the CS hold time by specifying `SPI_CS_HOLD` in register `SPI_USER_REG` and `SPI_CS_HOLD_TIME` in register `SPI_USER1_REG`.

- If `SPI_CS_HOLD` is cleared, the SPI CS hold time is  $0.5 \times T_{\text{SPI\_CLK}}$ .
- If `SPI_CS_HOLD` is set, the SPI CS hold time is  $(\text{SPI\_CS\_HOLD\_TIME} + 1.5) \times T_{\text{SPI\_CLK}}$ .

Figure 38.6-1 and Figure 38.6-2 show the recommended CS timing and register configuration to access external RAM and flash.

Register Configurations:

```
SPI_CS_SETUP = 1; SPI_CS_SETUP_TIME = 0;
SPI_CS_HOLD = 1; SPI_CS_HOLD_TIME = 1.
```

Figure 38.6-1. Recommended CS Timing and Settings When Accessing External RAM

Register Configurations:

SPI\_CS\_SETUP = 1; SPI\_CS\_SETUP\_TIME = 0;  
SPI\_CS\_HOLD = 1; SPI\_CS\_HOLD\_TIME = 0.

Figure 38.6-2. Recommended CS Timing and Settings When Accessing Flash

## 38.7 GP-SPI Clock Control

GP-SPI has the following clocks:

- `clk_spi_mst`: module clock of GP-SPI, derived from the following clock sources, depending on the configuration of `HP_SYS_CLKRST_GPSPI2/3_CLK_SRC_SEL`:
  - 0: `XTAL_CLK`
  - 1: `RC_FAST_CLK`
  - 2: `SDIO_PLLO_CLK`
  - 3: `APLL_CLK`
  - 4: `SPLL_CLK` (480 MHz)

The divider value is equal to `HP_SYS_CLKRST_GPSPI2/3_MST_CLK_DIV_NUM + 1`.

`HP_SYS_CLKRST_GPSPI2/3_SYS_CLK_EN` is used to enable the selected clock source. `clk_spi_mst` is used in GP-SPI as master to generate `SPI_CLK` signal for data transfer and for slaves.

- `clk_hclk`: module timing compensation clock of GP-SPI, which is a frequency-doubled clock derived from the same source as `clk_spi_mst`. Its clock source is also determined by `HP_SYS_CLKRST_GPSPI2/3_CLK_SRC_SEL`. To use this clock, `HP_SYS_CLKRST_GPSPI2/3_HS_CLK_EN` must be set, and the divider value is equal to `HP_SYS_CLKRST_GPSPI2/3_HS_CLK_DIV_NUM + 1`.
- `SPI_CLK`: this is the output clock when the GP-SPI works as master, or IO input clock when the GP-SPI works as slave.
- `AHB_CLK`: clock for register configuration.

When operating as master, the maximum output clock frequency of GP-SPI is  $f_{\text{clk\_spi\_mst}}$ . To have slower frequencies, the output clock frequency can be divided as follows:

$$f_{\text{SPI\_CLK}} = \frac{f_{\text{clk\_spi\_mst}}}{(\text{SPI\_CLKCNT\_N} + 1)(\text{SPI\_CLKDIV\_PRE} + 1)}$$

The divider is configured by `SPI_CLKCNT_N` and `SPI_CLKDIV_PRE` in register `SPI_CLOCK_REG`. When the bit `SPI_CLK_EQU_SYSCLK` in register `SPI_CLOCK_REG` is set, the output clock frequency of GP-SPI will be  $f_{clk\_spi\_mst}$ . For other integral clock divisions, `SPI_CLK_EQU_SYSCLK` should be cleared.

When operating as slave, the supported input clock frequency ( $f_{SPI\_CLK}$ ) of GP-SPI is:

- If  $f_{AHB\_CLK} \geq 60$  MHz,  $f_{SPI\_CLK} \leq 60$  MHz.
- If  $f_{AHB\_CLK} < 60$  MHz,  $f_{SPI\_CLK} \leq f_{AHB\_CLK}$ .

### 38.7.1 LP-SPI Clock Control

LP-SPI has the following clocks:

- `lp_spi_pclk`: LP-SPI module clock and clock for register configuration. `lp_spi_pclk` is used to generate `LP_SPI_CLK` for data transfer and for slaves when LP-SPI works as master. `LPPERI_CK_EN_LP_SPI` is used to enable this `lp_spi_pclk`.
- `LP_SPI_CLK`: output clock as master.

### 38.7.2 Clock Phase and Polarity

SPI protocol has four clock modes, i.e., modes 0~3. See Figure 38.7-1 and Figure 38.7-2 (excerpted from SPI protocol):

Figure 38.7-1. SPI Clock Mode 0 or 2

Figure 38.7-2. SPI Clock Mode 1 or 3

1. Mode 0: CPOL = 0, CPHA = 0; SCK is 0 when the SPI is in idle state; data is changed on the falling edge of SCK and sampled on the rising edge. The first data is shifted out before the first falling edge of SCK.
2. Mode 1: CPOL = 0, CPHA = 1; SCK is 0 when the SPI is in idle state; data is changed on the rising edge of SCK and sampled on the falling edge.
3. Mode 2: CPOL = 1, CPHA = 0; SCK is 1 when the SPI is in idle state; data is changed on the rising edge of SCK and sampled on the falling edge. The first data is shifted out before the first rising edge of SCK.
4. Mode 3: CPOL = 1, CPHA = 1; SCK is 1 when the SPI is in idle state; data is changed on the falling edge of SCK and sampled on the rising edge.

### 38.7.3 Clock Control as Master

The four clock modes 0~3 are supported in GP-SPI as master. The polarity and phase of GP-SPI clock are controlled by the bit [SPI\\_CLK\\_IDLE\\_EDGE](#) in register [SPI\\_MISC\\_REG](#) and the bit [SPI\\_CLK\\_OUT\\_EDGE](#) in register [SPI\\_USER\\_REG](#). The register configuration for SPI clock modes 0~3 is provided in Table 38.7-1, and can be changed according to the path delay in the application.

Table 38.7-1. Clock Phase and Polarity Configuration as Master

| Control Bit                       | Mode 0 | Mode 1 | Mode 2 | Mode 3 |
|-----------------------------------|--------|--------|--------|--------|
| <a href="#">SPI_CLK_IDLE_EDGE</a> | 0      | 0      | 1      | 1      |
| <a href="#">SPI_CLK_OUT_EDGE</a>  | 0      | 1      | 1      | 0      |

$\square$  [SPI\\_CLK\\_MODE](#) is used to select the number of rising edges of SPI\_CLK when SPI\_CS raises high to be 0, 1, 2 or SPI\_CLK always on.

**Note:**

When [SPI\\_CLK\\_MODE](#) is configured to 1 or 2, the bit [SPI\\_CS\\_HOLD](#) must be set and the value of [SPI\\_CS\\_HOLD\\_TIME](#) should be larger than 1.

### 38.7.4 Clock Control as Slave

GP-SPI as slave also supports clock modes 0~3. The polarity and phase are configured by the bits [SPI\\_TSCK\\_I\\_EDGE](#) and [SPI\\_RSCK\\_I\\_EDGE](#) in register [SPI\\_USER\\_REG](#). The output edge of data is controlled by [SPI\\_CLK\\_MODE\\_13](#) in register [SPI\\_SLAVE\\_REG](#). The detailed register configuration is shown in Table 38.7-2:

Table 38.7-2. Clock Phase and Polarity Configuration as Slave

| Control Bit                     | Mode 0 | Mode 1 | Mode 2 | Mode 3 |
|---------------------------------|--------|--------|--------|--------|
| <a href="#">SPI_TSCK_I_EDGE</a> | 0      | 1      | 1      | 0      |
| <a href="#">SPI_RSCK_I_EDGE</a> | 0      | 1      | 1      | 0      |
| <a href="#">SPI_CLK_MODE_13</a> | 0      | 1      | 0      | 1      |

## 38.8 GP-SPI Timing Compensation

### Introduction

The I/O lines are mapped via GPIO matrix or IO MUX. But there is no timing adjustment in IO MUX. The input data and output data can be delayed for 1 or 2 IO MUX operating clock cycles at the rising or falling edge in GPIO matrix. For detailed register configuration, see Chapter 8 [GPIO Matrix and IO MUX](#). Timing compensation is supported only by GP-SPI.

Figure 38.8-1 shows the timing compensation control for GP-SPI as master, including the following paths:

- “CLK”: the output path of GP-SPI bus clock. The clock is sent out by [SPI\\_CLK](#) out control module, passes through GPIO matrix or IO MUX and then goes to an external SPI device.
- “IN”: data input path of GP-SPI (see line 3 path in color purple in Figure 38.8-1). The input data from an external SPI device passes through GPIO matrix or IO MUX, then is adjusted by the Timing Module (see Figure 38.5-2) and finally is stored into [spi\\_rx\\_afifo](#).
- “OUT”: data output path of GP-SPI (see line 2 path in color rose-red in Figure 38.8-1). The output data is sent out to the Timing Module, passes through GPIO matrix or IO MUX and is then captured by an external SPI device.

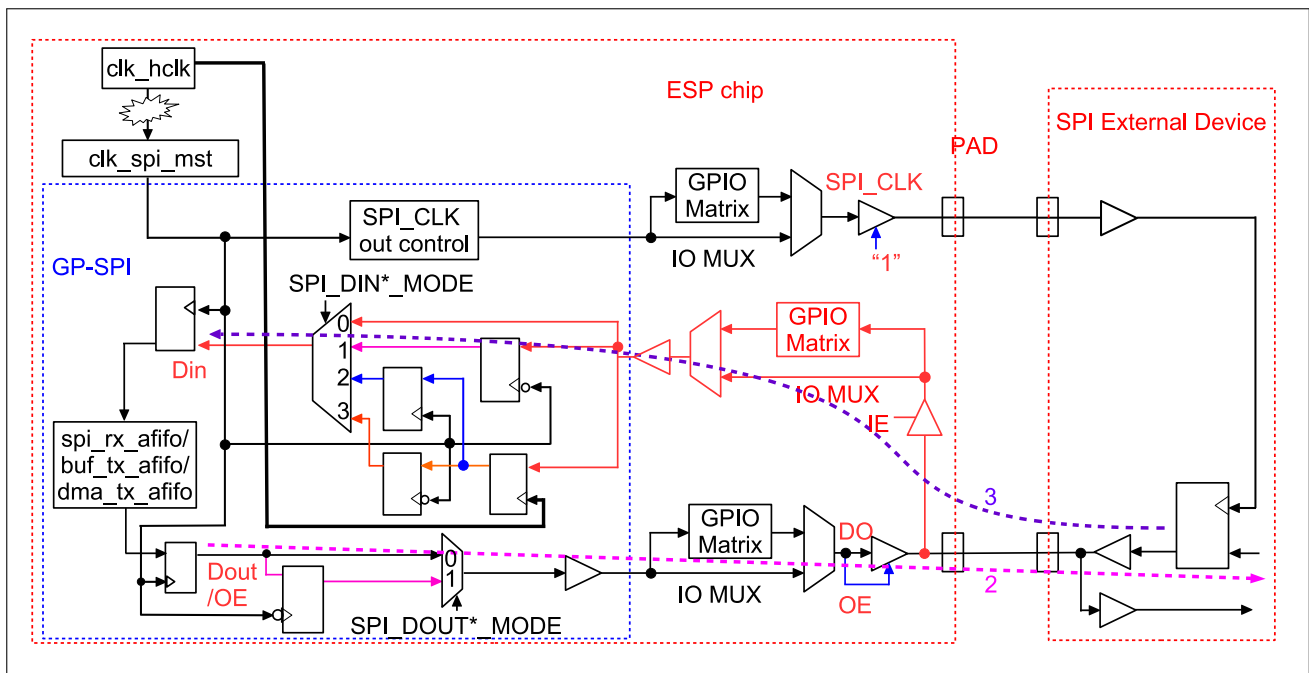

Figure 38.8-1. Timing Compensation Control Diagram in GP-SPI as Master

Every input and output data is passing through the Timing Module and the module can be used to apply delay in units of  $T_{\text{clk\_spi\_mst}}$  (one cycle of `clk_spi_mst`) on rising or falling edge.

### Key Registers

- `SPI_DIN_MODE_REG`: select the latch edge of input data
- `SPI_DIN_NUM_REG`: select the delay cycles of input data
- `SPI_DOUT_MODE_REG`: select the latch edge of output data

### Timing Compensation Example

Figure 38.8-2 shows a timing compensation example in GP-SPI2 as master. Note that DUMMY cycle length is configurable to compensate the delay in I/O lines, so as to enhance the performance of GP-SPI2.

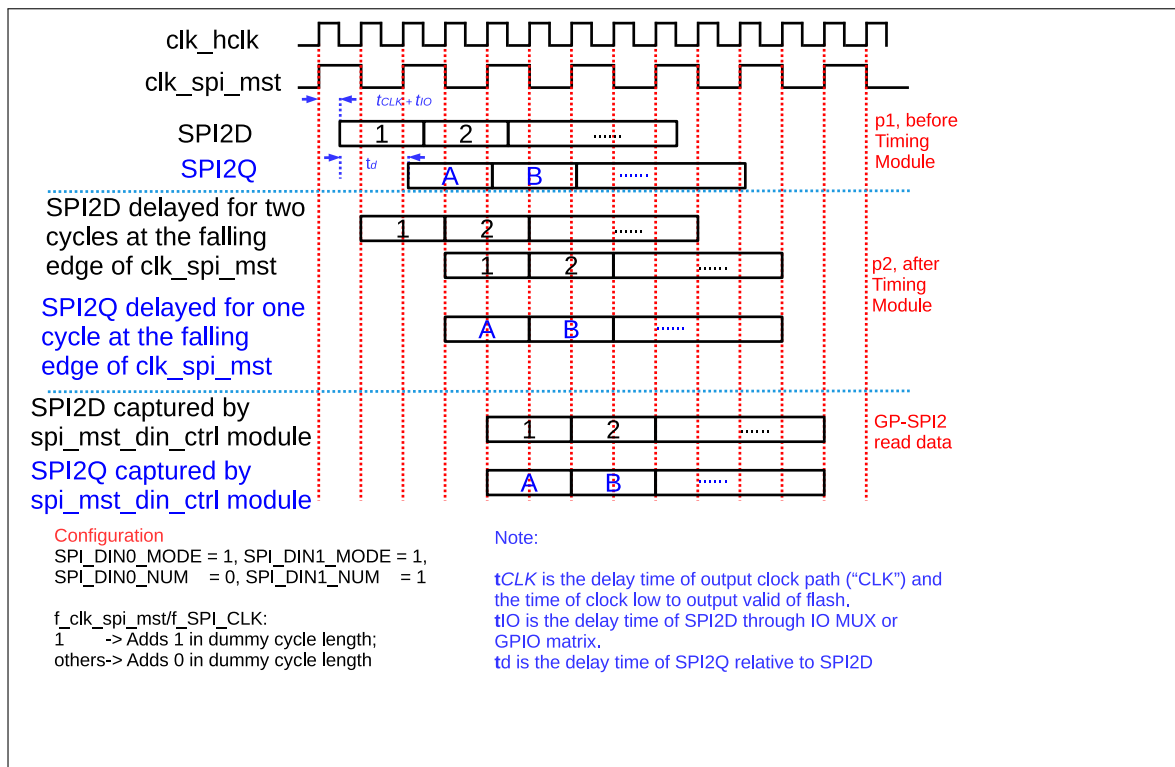

Figure 38.8-2. Timing Compensation Example in GP-SPI2 as Master

In Figure 38.8-2, "p1" is the point of input data of Timing Module, "p2" is the point of output data of Timing Module. Since the input data  $SPI2Q$  is unaligned to  $SPI2D$ , the read data of GP-SPI2 will be wrong without the timing compensation.

To get the correct read data, follow the settings below. Assuming  $f_{clk\_spi\_mst}$  equals to  $f_{SPI\_CLK}$ :

- Delay  $SPI2D$  for two cycles at the falling edge of  $clk\_spi\_mst$ .
- Delay  $SPI2Q$  for one cycle at the falling edge of  $clk\_spi\_mst$ .
- Add one extra dummy cycle.

When GP-SPI works as slave, if the bit `SPI_RSCK_DATA_OUT` in register `SPI_SLAVE_REG` is set to 1, the output data is sent at latch edge, which is half an SPI clock cycle earlier. This can be used for slave mode timing compensation.

## 38.9 LP-SPI Wake-Up

LP-SPI supports wake-up feature when working as a slave. When LP-SPI is in a sleep state (set `LP_SPI_SLEEP_EN` to 1), it can generate a wake\_up signal and trigger PMU to wake up the chip by configuring `LP_SPI_SLV_WK_MODE_SEL` to select the wake up mode. For the detailed wake-up flow, see Chapter 13 *Low-Power Management*.

- When `LP_SPI_SLV_WK_MODE_SEL` = 0, LP-SPI wakes up the chip after detecting the start bit.
- When `LP_SPI_SLV_WK_MODE_SEL` = 1, LP-SPI wakes up the chip after receiving a specific character sequence.

- [LP\\_SPI\\_SLEEP\\_WK\\_DATA\\_SEL](#) selects to monitor the specific character starting from the CMD state or DIN state.
- [LP\\_SPI\\_SLEEP\\_DIS\\_RXFIFO\\_WR\\_EN](#) selects whether to save data before waking up.
- [LP\\_SPI\\_SLV\\_WK\\_CHAR0~LP\\_SPI\\_SLV\\_WK\\_CHAR4](#) define wake up characters. LP-SPI wakes up the chip once it detects the character sequence consisting of CHAR0/CHAR1/CHAR2/CHAR3/CHAR4.
- [LP\\_SPI\\_SLV\\_WK\\_CHAR\\_NUM](#) and [LP\\_SPI\\_SLV\\_WK\\_CHAR\\_MASK](#) configure various character sequences, see Table 38.9-1. LP-SPI also supports fuzzy detection. For example, [LP\\_SPI\\_WK\\_SLV\\_CHAR\\_NUM](#) = 5 and [LP\\_SPI\\_SLV\\_WK\\_MASK](#) = 0x15 (binary 10101), then the character sequence will be \*/CHAR1\*/CHAR3/\*.

Table 38.9-1. LP-SPI Wake-Up Configuration When Working as a Slave

| LP_SPI_WK_SLV_CHAR_NUM | LP_SPI_SLV_WK_MASK | Character Sequence            |
|------------------------|--------------------|-------------------------------|
| 1                      | 0xF                | CHAR4                         |
| 2                      | 0x7                | CHAR3/CHAR4                   |
| 3                      | 0x3                | CHAR2/CHAR3/CHAR4             |
| 4                      | 0x1                | CHAR1/CHAR2/CHAR3/CHAR4       |
| 5                      | 0x0                | CHAR0/CHAR1/CHAR2/CHAR3/CHAR4 |

## 38.10 Differences Among LP-SPI, GP-SPI2, and GP-SPI3

### 38.10.1 Feature Differences

Table 38.10-1 lists the differences among GP-SPI2, GP-SPI3, and LP-SPI on their supported features.

Table 38.10-1. Feature Differences Among GP-SPI2, GP-SPI3, and LP-SPI

| Feature   | GP-SPI2                              | GP-SPI3  | LP-SPI                                |
|---|--------------------------------------|--|---------------------------------------|
| Data modes supported in CMD/ADDR/DOUT/DIN states when working as a master | 1/2/4/8-bit                          | 1/2/4-bit  | 1-bit                                 |
| Data modes supported in CMD/ADDR/DOUT/DIN states when working as a slave  | 1/2/4-bit                            | 1/2/4-bit  | 1-bit                                 |
| DMA-controlled transfers  | Support all DMA-controlled transfers | Not support DMA-controlled configurable segmented transfer | Not support any DMA related transfers |
| I/O mapping   | Via HP GPIO matrix or HP IO MUX      | Via HP GPIO matrix   | Via LP GPIO matrix or LP IO MUX       |
| CS line amount  | 6                                    | 3  | 1                                     |
| Unaligned byte transfer   | Support                              | Support  | Not support                           |
| DTR feature   | Support                              | Not support  | Not support                           |

## 38.11 Interrupt

### 38.11.1 Interrupt Description

ESP32-P4 LP-SPI and GP-SPI can generate the following external interrupt signals:

- LP-SPI: `LP_SPI_INTR`
- GP-SPI2: `SPI_INTR_2`
- GP-SPI3: `SPI_INTR_3`

`LP_SPI_INTR` is directly mapped to LP CPU (see [Low-Power CPU](#)), and `SPI_INTR_2/SPI_INTR_3` can be mapped to HP CPU0/1 through the [Interrupt Matrix](#). These interrupt signals are generated by internal interrupt sources of LP-SPI and GP-SPI. Table 38.11-1 lists the internal interrupt sources, interrupt trigger conditions, and generated interrupt signals of LP-SPI and GP-SPI.

Table 38.11-1. Internal Interrupt Sources of LP-SPI and GP-SPI

| Internal Interrupt Source                     | Trigger Condition   | Interrupt Signal                   |
|---|---|------------------------------------|
| <a href="#">SPI_DMA_INFIFO_FULL_ERR_INT</a>   | The length of DMA RX FIFO is shorter than that of actual data transferred               | <code>SPI_INTR_2/SPI_INTR_3</code> |
| <a href="#">SPI_DMA_OUTFIFO_EMPTY_ERR_INT</a> | The length of DMA TX FIFO is shorter than that of actual data transferred               | <code>SPI_INTR_2/SPI_INTR_3</code> |
| <a href="#">SPI_SLV_EX_QPI_INT</a>            | <code>Ex_QPI</code> is received correctly in GP-SPI2 as slave and the SPI transfer ends | <code>SPI_INTR_2/SPI_INTR_3</code> |
| <a href="#">SPI_SLV_EN_QPI_INT</a>            | <code>En_QPI</code> is received correctly in GP-SPI2 as slave and the SPI transfer ends | <code>SPI_INTR_2/SPI_INTR_3</code> |

Table 38.11-1 – cont'd from previous page

| Internal Interrupt Source      | Trigger Condition   | Interrupt Signal                      |
|--------------------------------|---|---------------------------------------|
| SPI_SLV_CMD7_INT               | CMD7 is received correctly in GP-SPI2 as slave and the SPI transfer ends  | SPI_INTR_2/SPI_INTR_3                 |
| SPI_SLV_CMD8_INT               | CMD8 is received correctly in GP-SPI2 as slave and the SPI transfer ends  | SPI_INTR_2/SPI_INTR_3                 |
| SPI_SLV_CMD9_INT               | CMD9 is received correctly in GP-SPI2 as slave and the SPI transfer ends  | SPI_INTR_2/SPI_INTR_3                 |
| SPI_SLV_CMDA_INT               | CMDA is received correctly in GP-SPI2 as slave and the SPI transfer ends  | SPI_INTR_2/SPI_INTR_3                 |
| SPI_SLV_RD_DMA_DONE_INT        | At the end of Rd_DMA transfer as slave  | SPI_INTR_2/SPI_INTR_3                 |
| SPI_SLV_WR_DMA_DONE_INT        | At the end of Wr_DMA transfer as slave  | SPI_INTR_2/SPI_INTR_3                 |
| SPI_SLV_RD_BUF_DONE_INT        | At the end of Rd_BUF transfer as slave  | LP_SPI_INTR/SPI_INTR_2/<br>SPI_INTR_3 |
| SPI_SLV_WR_BUF_DONE_INT        | At the end of Wr_BUF transfer as slave  | LP_SPI_INTR/SPI_INTR_2/<br>SPI_INTR_3 |
| SPI_TRANS_DONE_INT             | At the end of SPI bus transfer in both as master and as slave.  | LP_SPI_INTR/SPI_INTR_2/<br>SPI_INTR_3 |
| SPI_DMA_SEG_TRANS_DONE_INT     | At the end of End_SEG_TRANS transfer in GP-SPI slave segmented transfer mode or at the end of configurable segmented transfer as master | SPI_INTR_2/SPI_INTR_3                 |
| SPI_SEG_MAGIC_ERR_INT          | A Magic error occurs in CONF buffer during configurable segmented transfer as master  | SPI_INTR_2                            |
| SPI_MST_RX_AFIFO_WFULL_ERR_INT | RX AFIFO write-full error in GP-SPI as master   | LP_SPI_INTR/SPI_INTR_2/<br>SPI_INTR_3 |
| SPI_MST_TX_AFIFO_EMPTY_ERR_INT | TX AFIFO read-empty error in GP-SPI as master   | LP_SPI_INTR/SPI_INTR_2/<br>SPI_INTR_3 |
| SPI_SLV_CMD_ERR_INT            | A received command value is not supported in GP-SPI as slave  | LP_SPI_INTR/SPI_INTR_2/<br>SPI_INTR_3 |
| SPI_APP2_INT                   | Set <a href="#">SPI_APP2_INT_SET</a> (Only used for user defined function)  | LP_SPI_INTR/SPI_INTR_2/<br>SPI_INTR_3 |
| SPI_APP1_INT                   | Set <a href="#">SPI_APP1_INT_SET</a> (Only used for user defined function)  | LP_SPI_INTR/SPI_INTR_2/<br>SPI_INTR_3 |

Table 38.11-1 – cont'd from previous page

| Internal Interrupt Source | Trigger Condition  | Interrupt Signal |
|---------------------------|--|------------------|
| LP_SPI_WAKEUP_INT         | Pre-defined chars are received and wake_up signal is generated | LP_SPI_INTR      |

LP-SPI is a simplified version of GP-SPI, which contains only some GP-SPI interrupt sources. Each interrupt source has a common set of configuration registers, see the *Interrupt Registers* in Section [Register Summary](#).

### 38.11.2 Interrupts Used in Master and in Slave (Take GP-SPI as an Example)

Table 38.11-2 and Table 38.11-3 show the interrupts used in GP-SPI master and slave modes. Set the interrupt enable bit SPI\_\*\_INT\_ENA in [SPI\\_DMA\\_INT\\_ENA\\_REG](#) and wait for the interrupt. When the transfer ends, the related interrupt is triggered and should be cleared by software before the next transfer.

Table 38.11-2. GP-SPI Master Mode Interrupts

| Transfer Type                   | Communication Mode    | Controlled by | Interrupt  |
|---------------------------------|-----------------------|---------------|--|
| Single Transfer                 | Full-duplex           | DMA           | <a href="#">AXI_DMA_IN_SUC_EOF_CH<sub>n</sub>_INT</a> <sup>1</sup> |
|                                 |                       | CPU           | <a href="#">SPI_TRANS_DONE_INT</a> <sup>2</sup>                    |
|                                 | Half-duplex MOSI Mode | DMA           | <a href="#">SPI_TRANS_DONE_INT</a>                                 |
|                                 |                       | CPU           | <a href="#">SPI_TRANS_DONE_INT</a>                                 |
|                                 | Half-duplex MISO Mode | DMA           | <a href="#">AXI_DMA_IN_SUC_EOF_CH<sub>n</sub>_INT</a>              |
|                                 |                       | CPU           | <a href="#">SPI_TRANS_DONE_INT</a>                                 |
| Configurable Segmented Transfer | Full-duplex           | DMA           | <a href="#">SPI_DMA_SEG_TRANS_DONE_INT</a> <sup>3</sup>            |
|                                 |                       | CPU           | Not supported  |
|                                 | Half-duplex MOSI Mode | DMA           | <a href="#">SPI_DMA_SEG_TRANS_DONE_INT</a>                         |
|                                 |                       | CPU           | Not supported  |
|                                 | Half-duplex MISO      | DMA           | <a href="#">SPI_DMA_SEG_TRANS_DONE_INT</a>                         |
|                                 |                       | CPU           | Not supported  |

<sup>1</sup> If [AXI\\_DMA\\_IN\\_SUC\\_EOF\\_CH<sub>n</sub>\\_INT](#) is triggered, it means all the RX data of GP-SPI has been stored in the RX buffer, and the TX data has been transferred to the slave.

<sup>2</sup> [SPI\\_TRANS\\_DONE\\_INT](#) is triggered when CS is high, which indicates that master has completed the data exchange in [SPI\\_WO\\_REG~SPI\\_W15\\_REG](#) with slave in this mode.

<sup>3</sup> If [SPI\\_DMA\\_SEG\\_TRANS\\_DONE\\_INT](#) is triggered, it means that the whole configurable segmented transfer (consisting of several segments) has finished, i.e., the RX data has been stored in the RX buffer completely and all the TX data has been sent out.

Table 38.11-3. GP-SPI Slave Mode Interrupts

| Transfer Type            | Communication Mode    | Controlled by | Interrupt  |
|--------------------------|-----------------------|---------------|--|
| Single Transfer          | Full-duplex           | DMA           | <a href="#">AXI_DMA_IN_SUC_EOF_CHn_INT</a> <sup>1</sup>  |
|                          |                       | CPU           | <a href="#">SPI_TRANS_DONE_INT</a> <sup>2</sup>          |
|                          | Half-duplex MOSI Mode | DMA (Wr_DMA)  | <a href="#">AXI_DMA_IN_SUC_EOF_CHn_INT</a> <sup>3</sup>  |
|                          |                       | CPU (Wr_BUF)  | <a href="#">SPI_TRANS_DONE_INT</a> <sup>4</sup>          |
|                          | Half-duplex MISO Mode | DMA (Rd_DMA)  | <a href="#">SPI_TRANS_DONE_INT</a> <sup>5</sup>          |
|                          |                       | CPU (Rd_BUF)  | <a href="#">SPI_TRANS_DONE_INT</a> <sup>6</sup>          |
| Slave Segmented Transfer | Full-duplex           | DMA           | <a href="#">AXI_DMA_IN_SUC_EOF_CHn_INT</a> <sup>7</sup>  |
|                          |                       | CPU           | Not supported <sup>8</sup>                               |
|                          | Half-duplex MOSI Mode | DMA (Wr_DMA)  | <a href="#">SPI_DMA_SEG_TRANS_DONE_INT</a> <sup>9</sup>  |
|                          |                       | CPU (Wr_BUF)  | Not supported <sup>10</sup>                              |
|                          | Half-duplex MISO Mode | DMA (Rd_DMA)  | <a href="#">SPI_DMA_SEG_TRANS_DONE_INT</a> <sup>11</sup> |
|                          |                       | CPU (Rd_BUF)  | Not supported <sup>12</sup>                              |

<sup>1</sup> If [AXI\\_DMA\\_IN\\_SUC\\_EOF\\_CHn\\_INT](#) is triggered, it means all the RX data has been stored in the RX buffer, and the TX data has been sent to the slave.

<sup>2</sup> [SPI\\_TRANS\\_DONE\\_INT](#) is triggered when CS is high, which indicates that master has completed the data exchange in [SPI\\_WO\\_REG~SPI\\_W15\\_REG](#) with slave in this mode.

<sup>3</sup> [SPI\\_SLV\\_WR\\_DMA\\_DONE\\_INT](#) just means that the transmission on the SPI bus is done, but can not ensure that all the push data has been stored in the RX buffer. For this reason, [AXI\\_DMA\\_IN\\_SUC\\_EOF\\_CHn\\_INT](#) is recommended.

<sup>4</sup> Or wait for [SPI\\_SLV\\_WR\\_BUF\\_DONE\\_INT](#).

<sup>5</sup> Or wait for [SPI\\_SLV\\_RD\\_DMA\\_DONE\\_INT](#).

<sup>6</sup> Or wait for [SPI\\_SLV\\_RD\\_BUF\\_DONE\\_INT](#).

<sup>7</sup> Slave should set the total read data byte length in [SPI\\_MS\\_DATA\\_BITLEN](#) before the transfer begins. Set [SPI\\_RX\\_EOF\\_EN](#) to 1 before the end of the interrupt program.

<sup>8</sup> Master and slave should define a method to end the segmented transfer, such as via GPIO interrupt.

<sup>9</sup> Master sends End\_SEG\_TRAN to end the segmented transfer or slave sets the total read data byte length in [SPI\\_MS\\_DATA\\_BITLEN](#) and waits for [AXI\\_DMA\\_IN\\_SUC\\_EOF\\_CHn\\_INT](#).

<sup>10</sup> Half-duplex Wr\_BUF single transfer can be used in a slave segmented transfer.

<sup>11</sup> Master sends End\_SEG\_TRAN to end the segmented transfer.

<sup>12</sup> Half-duplex Rd\_BUF single transfer can be used in a slave segmented transfer.

## 38.12 Register Summary

### 38.12.1 GP-SPI2 Register Summary

The addresses in this section are relative to GP-SPI2 base address provided in Table 6.3-2 in Chapter 6 [System and Memory](#).

The abbreviations given in Column Access are explained in Section [Access Types for Registers](#).

| Name                           | Description | Address | Access |
|--------------------------------|-------------|---------|--------|
| User-defined control registers |             |         |        |

| Name                                       | Description                                 | Address | Access   |
|--|---|---------|----------|
| <a href="#">SPI_CMD_REG</a>                | Command control register                    | 0x0000  | varies   |
| <a href="#">SPI_ADDR_REG</a>               | Address value register                      | 0x0004  | R/W      |
| <a href="#">SPI_USER_REG</a>               | SPI USER control register                   | 0x0010  | varies   |
| <a href="#">SPI_USER1_REG</a>              | SPI USER control register 1                 | 0x0014  | R/W      |
| <a href="#">SPI_USER2_REG</a>              | SPI USER control register 2                 | 0x0018  | R/W      |
| <b>Control and configuration registers</b> |   |         |          |
| <a href="#">SPI_CTRL_REG</a>               | SPI control register                        | 0x0008  | R/W      |
| <a href="#">SPI_MS_DLEN_REG</a>            | SPI data bit length control register        | 0x001C  | R/W      |
| <a href="#">SPI_MISC_REG</a>               | SPI misc register                           | 0x0020  | R/W      |
| <a href="#">SPI_DMA_CONF_REG</a>           | SPI DMA control register                    | 0x0030  | varies   |
| <a href="#">SPI_SLAVE_REG</a>              | SPI slave control register                  | 0x00E0  | varies   |
| <a href="#">SPI_SLAVE1_REG</a>             | SPI slave control register 1                | 0x00E4  | R/W/SS   |
| <b>Clock control registers</b>             |   |         |          |
| <a href="#">SPI_CLOCK_REG</a>              | SPI clock control register                  | 0x000C  | R/W      |
| <a href="#">SPI_CLK_GATE_REG</a>           | SPI module clock and register clock control | 0x00E8  | R/W      |
| <b>Timing registers</b>                    |   |         |          |
| <a href="#">SPI_DIN_MODE_REG</a>           | SPI input delay mode configuration          | 0x0024  | R/W      |
| <a href="#">SPI_DIN_NUM_REG</a>            | SPI input delay number configuration        | 0x0028  | R/W      |
| <a href="#">SPI_DOUT_MODE_REG</a>          | SPI output delay mode configuration         | 0x002C  | R/W      |
| <b>Interrupt registers</b>                 |   |         |          |
| <a href="#">SPI_DMA_INT_ENA_REG</a>        | SPI interrupt enable register               | 0x0034  | R/W      |
| <a href="#">SPI_DMA_INT_CLR_REG</a>        | SPI interrupt clear register                | 0x0038  | WT       |
| <a href="#">SPI_DMA_INT_RAW_REG</a>        | SPI interrupt raw register                  | 0x003C  | R/WTC/SS |
| <a href="#">SPI_DMA_INT_ST_REG</a>         | SPI interrupt status register               | 0x0040  | RO       |
| <a href="#">SPI_DMA_INT_SET_REG</a>        | SPI interrupt software set register         | 0x0044  | WT       |
| <b>CPU-controlled data buffer</b>          |   |         |          |
| <a href="#">SPI_W0_REG</a>                 | SPI CPU-controlled buffer 0                 | 0x0098  | R/W/SS   |
| <a href="#">SPI_W1_REG</a>                 | SPI CPU-controlled buffer 1                 | 0x009C  | R/W/SS   |
| <a href="#">SPI_W2_REG</a>                 | SPI CPU-controlled buffer 2                 | 0x00A0  | R/W/SS   |
| <a href="#">SPI_W3_REG</a>                 | SPI CPU-controlled buffer 3                 | 0x00A4  | R/W/SS   |
| <a href="#">SPI_W4_REG</a>                 | SPI CPU-controlled buffer 4                 | 0x00A8  | R/W/SS   |
| <a href="#">SPI_W5_REG</a>                 | SPI CPU-controlled buffer 5                 | 0x00AC  | R/W/SS   |
| <a href="#">SPI_W6_REG</a>                 | SPI CPU-controlled buffer 6                 | 0x00B0  | R/W/SS   |
| <a href="#">SPI_W7_REG</a>                 | SPI CPU-controlled buffer 7                 | 0x00B4  | R/W/SS   |
| <a href="#">SPI_W8_REG</a>                 | SPI CPU-controlled buffer 8                 | 0x00B8  | R/W/SS   |
| <a href="#">SPI_W9_REG</a>                 | SPI CPU-controlled buffer 9                 | 0x00BC  | R/W/SS   |
| <a href="#">SPI_W10_REG</a>                | SPI CPU-controlled buffer 10                | 0x00C0  | R/W/SS   |
| <a href="#">SPI_W11_REG</a>                | SPI CPU-controlled buffer 11                | 0x00C4  | R/W/SS   |
| <a href="#">SPI_W12_REG</a>                | SPI CPU-controlled buffer 12                | 0x00C8  | R/W/SS   |
| <a href="#">SPI_W13_REG</a>                | SPI CPU-controlled buffer 13                | 0x00CC  | R/W/SS   |
| <a href="#">SPI_W14_REG</a>                | SPI CPU-controlled buffer 14                | 0x00D0  | R/W/SS   |
| <a href="#">SPI_W15_REG</a>                | SPI CPU-controlled buffer 15                | 0x00D4  | R/W/SS   |

| <a href="#">SPI_DATE_REG</a> | Version control | 0x00F0  | R/W    |

### 38.12.2 GP-SPI3 Register Summary

The addresses in this section are relative to GP-SPI3 base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column Access are explained in Section [Access Types for Registers](#).

| Name                                       | Description                                 | Address | Access   |
|--|---|---------|----------|
| <b>User-defined control registers</b>      |   |         |          |
| <a href="#">SPI_CMD_REG</a>                | Command control register                    | 0x0000  | varies   |
| <a href="#">SPI_ADDR_REG</a>               | Address value register                      | 0x0004  | R/W      |
| <a href="#">SPI_USER_REG</a>               | SPI USER control register                   | 0x0010  | varies   |
| <a href="#">SPI_USER1_REG</a>              | SPI USER control register 1                 | 0x0014  | R/W      |
| <a href="#">SPI_USER2_REG</a>              | SPI USER control register 2                 | 0x0018  | R/W      |
| <b>Control and configuration registers</b> |   |         |          |
| <a href="#">SPI_CTRL_REG</a>               | SPI control register                        | 0x0008  | R/W      |
| <a href="#">SPI_MS_DLEN_REG</a>            | SPI data bit length control register        | 0x001C  | R/W      |
| <a href="#">SPI_MISC_REG</a>               | SPI misc register                           | 0x0020  | R/W      |
| <a href="#">SPI_DMA_CONF_REG</a>           | SPI DMA control register                    | 0x0030  | varies   |
| <a href="#">SPI_SLAVE_REG</a>              | SPI slave control register                  | 0x00E0  | varies   |
| <a href="#">SPI_SLAVE1_REG</a>             | SPI slave control register 1                | 0x00E4  | R/W/SS   |
| <b>Clock control registers</b>             |   |         |          |
| <a href="#">SPI_CLOCK_REG</a>              | SPI clock control register                  | 0x000C  | R/W      |
| <a href="#">SPI_CLK_GATE_REG</a>           | SPI module clock and register clock control | 0x00E8  | R/W      |
| <b>Timing registers</b>                    |   |         |          |
| <a href="#">SPI_DIN_MODE_REG</a>           | SPI input delay mode configuration          | 0x0024  | R/W      |
| <a href="#">SPI_DIN_NUM_REG</a>            | SPI input delay number configuration        | 0x0028  | R/W      |
| <a href="#">SPI_DOUT_MODE_REG</a>          | SPI output delay mode configuration         | 0x002C  | R/W      |
| <b>Interrupt registers</b>                 |   |         |          |
| <a href="#">SPI_DMA_INT_ENA_REG</a>        | SPI interrupt enable register               | 0x0034  | R/W      |
| <a href="#">SPI_DMA_INT_CLR_REG</a>        | SPI interrupt clear register                | 0x0038  | WT       |
| <a href="#">SPI_DMA_INT_RAW_REG</a>        | SPI interrupt raw register                  | 0x003C  | R/WTC/SS |
| <a href="#">SPI_DMA_INT_ST_REG</a>         | SPI interrupt status register               | 0x0040  | RO       |

### 38.12.3 LP-SPI Register Summary

The addresses in this section are relative to LP-SPI base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column Access are explained in Section *Access Types for Registers*.

| Name                                       | Description                                    | Address | Access |
|--|--|---------|--------|
| <b>User-defined control registers</b>      |  |         |        |
| <a href="#">LP_SPI_CMD_REG</a>             | Command control register                       | 0x0000  | varies |
| <a href="#">LP_SPI_ADDR_REG</a>            | Address value register                         | 0x0004  | R/W    |
| <a href="#">LP_SPI_USER_REG</a>            | LP-SPI USER control register                   | 0x0010  | R/W    |
| <a href="#">LP_SPI_USER1_REG</a>           | LP-SPI USER control register 1                 | 0x0014  | R/W    |
| <a href="#">LP_SPI_USER2_REG</a>           | LP-SPI USER control register 2                 | 0x0018  | R/W    |
| <b>Control and configuration registers</b> |  |         |        |
| <a href="#">LP_SPI_CTRL_REG</a>            | LP-SPI control register                        | 0x0008  | R/W    |
| <a href="#">LP_SPI_MS_DLEN_REG</a>         | LP-SPI data bit length control register        | 0x001C  | R/W    |
| <a href="#">LP_SPI_MISC_REG</a>            | LP-SPI misc register                           | 0x0020  | R/W    |
| <a href="#">LP_SPI_DMA_CONF_REG</a>        | LP-SPI DMA control register                    | 0x0030  | WT     |
| <a href="#">LP_SPI_SLEEP_CONFO_REG</a>     | LP-SPI sleep configure register 0              | 0x0044  | R/W    |
| <a href="#">LP_SPI_SLEEP_CONF1_REG</a>     | LP-SPI sleep configure register 1              | 0x0048  | R/W    |
| <a href="#">LP_SPI_SLAVE_REG</a>           | LP-SPI slave control register                  | 0x00E0  | varies |
| <a href="#">LP_SPI_SLAVE1_REG</a>          | LP-SPI slave control register 1                | 0x00E4  | R/W/SS |
| <b>Clock control registers</b>             |  |         |        |
| <a href="#">LP_SPI_CLOCK_REG</a>           | LP-SPI clock control register                  | 0x000C  | R/W    |
| <a href="#">LP_SPI_CLK_GATE_REG</a>        | LP-SPI module clock and register clock control | 0x00E8  | R/W    |
| <b>Timing registers</b>                    |  |         |        |
| <a href="#">LP_SPI_DIN_MODE_REG</a>        | LP-SPI input delay mode configuration          | 0x0024  | R/W    |
| <a href="#">LP_SPI_DIN_NUM_REG</a>         | LP-SPI input delay number configuration        | 0x0028  | R/W    |
| <a href="#">LP_SPI_DOUT_MODE_REG</a>       | LP-SPI output delay mode configuration         | 0x002C  | R/W    |
| <b>Interrupt registers</b>                 |  |         |        |
| <a href="#">LP_SPI_DMA_INT_ENA_REG</a>     | LP-SPI interrupt enable register               | 0x0034  | R/W    |

| Name                                   | Description                            | Address | Access   |
|--|--|---------|----------|
| <a href="#">LP_SPI_DMA_INT_CLR_REG</a> | LP-SPI interrupt clear register        | 0x0038  | WT       |
| <a href="#">LP_SPI_DMA_INT_RAW_REG</a> | LP-SPI interrupt raw register          | 0x003C  | R/WTC/SS |
| <a href="#">LP_SPI_DMA_INT_ST_REG</a>  | LP-SPI interrupt status register       | 0x0040  | RO       |
| <a href="#">LP_SPI_DMA_INT_SET_REG</a> | LP-SPI interrupt software set register | 0x004C  | WT       |
| <b>CPU-controlled data buffer</b>      |  |         |          |
| <a href="#">LP_SPI_W0_REG</a>          | LP-SPI CPU-controlled buffer 0         | 0x0098  | R/W/SS   |
| <a href="#">LP_SPI_W1_REG</a>          | LP-SPI CPU-controlled buffer 1         | 0x009C  | R/W/SS   |
| <a href="#">LP_SPI_W2_REG</a>          | LP-SPI CPU-controlled buffer 2         | 0x00A0  | R/W/SS   |
| <a href="#">LP_SPI_W3_REG</a>          | LP-SPI CPU-controlled buffer 3         | 0x00A4  | R/W/SS   |
| <a href="#">LP_SPI_W4_REG</a>          | LP-SPI CPU-controlled buffer 4         | 0x00A8  | R/W/SS   |
| <a href="#">LP_SPI_W5_REG</a>          | LP-SPI CPU-controlled buffer 5         | 0x00AC  | R/W/SS   |
| <a href="#">LP_SPI_W6_REG</a>          | LP-SPI CPU-controlled buffer 6         | 0x00B0  | R/W/SS   |
| <a href="#">LP_SPI_W7_REG</a>          | LP-SPI CPU-controlled buffer 7         | 0x00B4  | R/W/SS   |
| <a href="#">LP_SPI_W8_REG</a>          | LP-SPI CPU-controlled buffer 8         | 0x00B8  | R/W/SS   |
| <a href="#">LP_SPI_W9_REG</a>          | LP-SPI CPU-controlled buffer 9         | 0x00BC  | R/W/SS   |
| <a href="#">LP_SPI_W10_REG</a>         | LP-SPI CPU-controlled buffer 10        | 0x00C0  | R/W/SS   |
| <a href="#">LP_SPI_W11_REG</a>         | LP-SPI CPU-controlled buffer 11        | 0x00C4  | R/W/SS   |
| <a href="#">LP_SPI_W12_REG</a>         | LP-SPI CPU-controlled buffer 12        | 0x00C8  | R/W/SS   |
| <a href="#">LP_SPI_W13_REG</a>         | LP-SPI CPU-controlled buffer 13        | 0x00CC  | R/W/SS   |

| <a href="#">LP_SPI_W15_REG</a>         | LP-SPI CPU-controlled buffer 15        | 0x00D4  | R/W/SS   |
| <b>Version register</b>                |  |         |          |
| <a href="#">LP_SPI_DATE_REG</a>        | Version control                        | 0x00F0  | R/W      |

## 38.13 Register

### 38.13.1 GP-SPI2 Register

The addresses in this section are relative to GP-SPI2 base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section *Programming Reserved Register Field*.

**Register 38.1. SPI\_CMD\_REG (0x0000)**

|            |   |   |   |   |   |   |   |                       |    |            |    |   |   |   |   |  |    |                 |  |  |  |  |  |  |  |  |       |  |  |  |   |  |  |  |
|------------|---|---|---|---|---|---|---|-----------------------|----|------------|----|---|---|---|---|--|----|-----------------|--|--|--|--|--|--|--|--|-------|--|--|--|---|--|--|--|
| (reserved) |   |   |   |   |   |   |   | SPI_USR<br>SPI_UPDATE |    | (reserved) |    |   |   |   |   |  |    | SPI_CONF_BITLEN |  |  |  |  |  |  |  |  |       |  |  |  |   |  |  |  |
| 31         |   |   |   |   |   |   |   | 25                    | 24 | 23         | 22 |   |   |   |   |  | 18 | 17              |  |  |  |  |  |  |  |  |       |  |  |  | 0 |  |  |  |
| 0          | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0                     | 0  | 0          | 0  | 0 | 0 | 0 | 0 |  |    |                 |  |  |  |  |  |  |  |  | Reset |  |  |  |   |  |  |  |

**SPI\_CONF\_BITLEN** Configures the SPI\_CLK cycles of SPI CONF state.

Measurement unit: SPI\_CLK clock cycle.

Can be configured in CONF state.

(R/W)

**SPI\_UPDATE** Configures whether or not to synchronize SPI registers from APB clock domain into SPI module clock domain.

0: Not synchronize

1: Synchronize

This bit is only used in SPI master transfer.

(WT)

**SPI\_USR** Configures whether or not to enable user-defined command.

0: Not enable

1: Enable

An SPI operation will be triggered when the bit is set. This bit will be cleared once the operation is done. Can not be changed by CONF\_buf.

(R/W/SC)

**Register 38.2. SPI\_ADDR\_REG (0x0004)**

|                    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|--------------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|
| SPI_USR_ADDR_VALUE |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| 0                  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| 0                  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| Reset              |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

**SPI\_USR\_ADDR\_VALUE** Configures the address to slave. Can be configured in CONF state.

(R/W)

**Register 38.3. SPI\_USER\_REG (0x0010)**

| SPI_USR_COMMAND<br>SPI_USR_ADDR<br>SPI_USR_DUMMY<br>SPI_USR_MISO<br>SPI_USR_MOSI<br>SPI_USR_DUMMY_IDLE<br>SPI_USR_MOSI_HIGHPART<br>SPI_USR_MISO_HIGHPART<br><br>(reserved) |    |    |    |    |    |    |    |    |   | SPI_SIO<br>(reserved)<br>SPI_USR_CONF_NXT<br>SPI_FWRITE_OCT<br>SPI_FWRITE_QUAD<br>SPI_FWRITE_DUAL<br>(reserved)<br>SPI_CK_OUT_EDGE<br>SPI_RSCK_I_EDGE<br>SPI_CS_SETUP<br>SPI_TSCK_I_HOLD<br>SPI_OPI_MODE<br>SPI_QPI_MODE<br>(reserved)<br>SPI_DOUTDIN |    |    |    |    |    |    |    |    |   |   |   |   |   |   |   |   |   |   |       |
|--|----|----|----|----|----|----|----|----|---|---|----|----|----|----|----|----|----|----|---|---|---|---|---|---|---|---|---|---|-------|
| 31   | 30 | 29 | 28 | 27 | 26 | 25 | 24 | 23 |   | 18  | 17 | 16 | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |       |
| 1  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0 | 0   | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0  | 0 | 0 | 1 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | Reset |

Reset

**SPI\_DOUTDIN** Configures whether or not to enable full-duplex communication.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_QPI\_MODE** Configures whether or not to enable QPI mode.

0: Disable

1: Enable

This configuration is applicable when the SPI controller works as master or slave. Can be configured in CONF state.

(R/W/SS/SC)

**SPI\_OPI\_MODE** Configures whether or not to enable OPI mode.

0: Disable. SPI controller works in other modes.

1: Enable. SPI controller works in OPI mode, all phases of which are in 8-bit mode.

This configuration is only applicable when the SPI controller works as master. Can be configured in CONF state.

(R/W)

**SPI\_TSCK\_I\_EDGE** Configures whether or not to change the polarity of TSCK in slave transfer.

0: TSCK = SPI\_CK\_I

1: TSCK = !SPI\_CK\_I

(R/W)

**SPI\_CS\_HOLD** Configures whether or not to keep SPI CS low when SPI is in DONE state.

0: Not keep low

1: Keep low

Can be configured in CONF state.

(R/W)

**SPI\_CS\_SETUP** Configures whether or not to enable SPI CS when SPI is in prepare (PREP) state.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

Continued on the next page...

**Register 38.3. SPI\_USER\_REG (0x0010)**

Continued from the previous page...

**SPI\_RSCK\_I\_EDGE** Configures whether or not to change the polarity of RSCK in slave transfer.

0: RSCK = !SPI\_CK\_I

1: RSCK = SPI\_CK\_I

(R/W)

**SPI\_CK\_OUT\_EDGE** Configures SPI clock mode together with SPI\_CK\_IDLE\_EDGE. Can be configured in CONF state. For more information, see Section [38.7.3](#).

(R/W)

**SPI\_FWRITE\_DUAL** Configures whether or not to enable the 2-bit mode of read-data phase in write operations.

0: Not enable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_FWRITE\_QUAD** Configures whether or not to enable the 4-bit mode of read-data phase in write operations.

0: Not enable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_FWRITE\_OCT** Configures whether or not to enable the 8-bit mode of read-data phase in write operations.

0: Not enable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_USR\_CONF\_NXT** Configures whether or not to enable the CONF state for the next transaction (segment) in a configurable segmented transfer.

0: This transfer will end after the current transaction (segment) is finished. Or this is not a configurable segmented transfer.

1: This configurable segmented transfer will continue its next transaction (segment).

Can be configured in CONF state.

(R/W)

**SPI\_SIO** Configures whether or not to enable 3-line half-duplex communication, where MOSI and MISO signals share the same pin.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

Continued on the next page...

**Register 38.3. SPI\_USER\_REG (0x0010)**

Continued from the previous page...

**SPI\_USR\_MISO\_HIGHPART** Configures whether or not to enable High-Part mode in read-data phase, i.e., only access to high-part of the buffers: SPI\_W8\_REG ~ SPI\_W15\_REG.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_USR\_MOSI\_HIGHPART** Configures whether or not to enable High-Part mode in write-data phase, i.e., only access to high-part of the buffers: SPI\_W8\_REG ~ SPI\_W15\_REG.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_USR\_DUMMY\_IDLE** Configures whether or not to disable SPI clock in DUMMY state.

0: Not disable

1: Disable

Can be configured in CONF state.

(R/W)

**SPI\_USR\_MOSI** Configures whether or not to enable the write-data (DOUT) state of an operation.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_USR\_MISO** Configures whether or not to enable the read-data (DIN) state of an operation.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_USR\_DUMMY** Configures whether or not to enable the DUMMY state of an operation.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_USR\_ADDR** Configures whether or not to enable the address (ADDR) state of an operation.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

Continued on the next page...

**Register 38.3. SPI\_USER\_REG (0x0010)**

Continued from the previous page...

**SPI\_USR\_COMMAND** Configures whether or not to enable the command (CMD) state of an operation.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

**Register 38.4. SPI\_USER1\_REG (0x0014)**

|                     |    |  |  |                  |    |  |  |                   |    |  |  |                          |    |   |   |            |   |   |   |                        |   |       |  |

**SPI\_USR\_DUMMY\_CYCLELEN** Configures the length of DUMMY state.

Measurement unit: SPI\_CLK clock cycles.

This value is (the expected cycle number - 1).

Can be configured in CONF state.

(R/W)

**SPI\_MST\_WFULL\_ERR\_END\_EN** Configures whether or not to end the SPI transfer when SPI RX AFIFO wfull error occurs in master full-/half-duplex transfers.

0: Not end

1: End

(R/W)

**SPI\_CS\_SETUP\_TIME** Configures the length of prepare (PREP) state.

Measurement unit: SPI\_CLK clock cycles.

This value is equal to the expected cycles - 1. This field is used together with SPI\_CS\_SETUP.

Can be configured in CONF state.

(R/W)

**SPI\_CS\_HOLD\_TIME** Configures the delay cycles of CS pin.

Measurement unit: SPI\_CLK clock cycles.

This field is used together with SPI\_CS\_HOLD.

Can be configured in CONF state.

(R/W)

**SPI\_USR\_ADDR\_BITLEN** Configures the bit length in address state.

This value is (expected bit number - 1).

Can be configured in CONF state.

(R/W)

### Register 38.5. SPI\_USER2\_REG (0x0018)

[illegible]

**SPI\_USR\_COMMAND\_VALUE** Configures the command value.

Can be configured in CONF state.

(R/W)

**SPI\_MST\_EMPTY\_ERR\_END\_EN** Configures whether or not to end the SPI transfer when SPI TX AFIFO read empty error occurs in master full-/half-duplex transfers.

0: Not end

1: End

(R/W)

**SPI\_USR\_COMMAND\_BITLEN** Configures the bit length of command state.

This value is (expected bit number - 1).

Can be configured in CONF state.

(R/W)

### Register 38.6. SPI\_CTRL\_REG (0x0008)

[illegible]

**SPI\_DUMMY\_OUT** Configures whether or not to output the SPI2 bus signals in DUMMY state.

0: Not output

1: Output

Can be configured in CONF state.

(R/W)

**SPI\_FADDR\_DUAL** Configures whether or not to enable 2-bit mode during address (ADDR) state.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_FADDR\_QUAD** Configures whether or not to enable 4-bit mode during address (ADDR) state.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_FADDR\_OCT** Configures whether or not to enable 8-bit mode during address (ADDR) state.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_FCMD\_DUAL** Configures whether or not to enable 2-bit mode during command (CMD) state.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_FCMD\_QUAD** Configures whether or not to enable 4-bit mode during command (CMD) state.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

Continued on the next page...

**Register 38.6. SPI\_CTRL\_REG (0x0008)**

Continued from the previous page...

**SPI\_FCMD\_OCT** Configures whether or not to enable 8-bit mode during command (CMD) state.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_FREAD\_DUAL** Configures whether or not to enable the 2-bit mode of read-data (DIN) state in read operations.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_FREAD\_QUAD** Configures whether or not to enable the 4-bit mode of read-data (DIN) state in read operations.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_FREAD\_OCT** Configures whether or not to enable the 8-bit mode of read-data (DIN) state in read operations.

0: Disable

1: Enable

Can be configured in CONF state. (R/W)

**SPI\_Q\_POL** Configures MISO line polarity.

0: Low

1: High

Can be configured in CONF state.

(R/W)

**SPI\_D\_POL** Configures MOSI line polarity.

0: Low

1: High

Can be configured in CONF state.

(R/W)

**SPI\_HOLD\_POL** Configures SPI\_HOLD output value when SPI is in idle.

0: Output low

1: Output high

Can be configured in CONF state.

(R/W)

Continued on the next page...

**Register 38.6. SPI\_CTRL\_REG (0x0008)****Continued from the previous page...****SPI\_WP\_POL** Configures the output value of write-protect signal when SPI is in idle.

0: Output low

1: Output high

Can be configured in CONF state.

(R/W)

**SPI\_RD\_BIT\_ORDER** Configures the bit order in read-data (MISO) state.

0: MSB first

1: LSB first

2: MSB first

3: LSB first

Can be configured in CONF state. For more information, see Table 38.5-6.

(R/W)

**SPI\_WR\_BIT\_ORDER** Configures the bit order in command (CMD), address (ADDR), and write-data (MOSI) states.

0: MSB first

1: LSB first

2: MSB first

3: LSB first

Can be configured in CONF state. For more information, see Table 38.5-6.

(R/W)

**Register 38.7. SPI\_MS\_DLEN\_REG (0x001C)****SPI\_MS\_DATA\_BITLEN** Configures the data bit length of SPI transfer in DMA-controlled master transfer or in CPU-controlled master transfer. Or configures the bit length of SPI RX transfer in DMA-controlled slave transfer.

This value shall be (expected bit\_num - 1).

Can be configured in CONF state.

(R/W)

**Register 38.8. SPI\_MISC\_REG (0x0020)**

|  |    |    |    |   |    |    |    |   |    |    |    |  |    |    |    |   |   |   |   |   |   |   |   |   |

Reset

Reset

**SPI\_CS0\_DIS** Configures whether or not to disable SPI\_CS0 pin.

0: SPI\_CS0 signal is from/to SPI\_CS0 pin.

1: Disable SPI\_CS0 pin.

Can be configured in CONF state.

(R/W)

**SPI\_CS1\_DIS** Configures whether or not to disable SPI\_CS1 pin.

0: SPI\_CS1 signal is from/to SPI\_CS1 pin.

1: Disable SPI\_CS1 pin.

Can be configured in CONF state.

(R/W)

**SPI\_CS2\_DIS** Configures whether or not to disable SPI\_CS2 pin.

0: SPI\_CS2 signal is from/to SPI\_CS2 pin.

1: Disable SPI\_CS2 pin.

Can be configured in CONF state.

(R/W)

**SPI\_CS3\_DIS** Configures whether or not to disable SPI\_CS3 pin.

0: SPI\_CS3 signal is from/to SPI\_CS3 pin.

1: Disable SPI\_CS3 pin.

Can be configured in CONF state.

(R/W)

**SPI\_CS4\_DIS** Configures whether or not to disable SPI\_CS4 pin.

0: SPI\_CS4 signal is from/to SPI\_CS4 pin.

1: Disable SPI\_CS4 pin.

Can be configured in CONF state.

(R/W)

**SPI\_CS5\_DIS** Configures whether or not to disable SPI\_CS5 pin.

0: SPI\_CS5 signal is from/to SPI\_CS5 pin.

1: Disable SPI\_CS5 pin.

Can be configured in CONF state.

(R/W)

Continued on the next page...

**Register 38.8. SPI\_MISC\_REG (0x0020)**

Continued from the previous page...

**SPI\_CK\_DIS** Configures whether or not to disable SPI\_CLK output.

0: Enable

1: Disable

Can be configured in CONF state.

(R/W)

**SPI\_MASTER\_CS\_POL** Configures the polarity of SPI\_CS $n$  ( $n = 0\sim5$ ) line in master transfer.

0: SPI\_CS $n$  is low active.

1: SPI\_CS $n$  is high active.

Can be configured in CONF state.

(R/W)

**SPI\_CLK\_DATA\_DTR\_EN** Configures whether or not to enable DTR mode for SPI\_CLK, DATA, and SPI\_DQS when the SPI works as master.

0: Enable DTR mode only for SPI\_DQS

1: Enable DTR mode for SPI\_CLK, DATA, and SPI\_DQS.

This bit should be used with SPI\_DATA\_DTR\_EN, SPI\_ADDR\_DTR\_EN, and SPI\_CMD\_DTR\_EN.

(R/W)

**SPI\_DATA\_DTR\_EN** Configures whether or not to enable DTR mode for SPI\_CLK and DATA in DOUT and DIN states when the SPI works as master in 1/2/4/8-bit mode.

0: Not enable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_ADDR\_DTR\_EN** Configures whether or not to enable DTR mode for SPI\_CLK and DATA in ADDR state when the SPI works as master in 1/2/4/8-bit mode.

0: Not enable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_CMD\_DTR\_EN** Configures whether or not to enable DTR mode for SPI\_CLK and DATA in CMD state when the SPI works as master in 1/2/4/8-bit mode.

0: Not enable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_SLAVE\_CS\_POL** Configures whether or not to invert SPI slave input CS polarity.

0: Not change

1: Invert

Can be configured in CONF state.

(R/W)

Continued on the next page...

**Register 38.8. SPI\_MISC\_REG (0x0020)**

Continued from the previous page...

**SPI\_DQS\_IDLE\_EDGE** Configured the default value of SPI\_DQS.

0: Low

1: High

Can be configured in CONF state.

(R/W)

**SPI\_CK\_IDLE\_EDGE** Configures the level of SPI\_CLK line when GP-SPI2 is in idle.

0: Low

1: High

Can be configured in CONF state.

(R/W)

**SPI\_CS\_KEEP\_ACTIVE** Configures whether or not to keep the SPI\_CS line low.

0: Not keep low

1: Keep low

Can be configured in CONF state.

(R/W)

**SPI\_QUAD\_DIN\_PIN\_SWAP** Configures whether or not to swap SPI Quad input pins.

0: Not swap

1: Swap SPI2D with SPI2Q, and SPI2WP with SPI2HD

Can be configured in CONF state.

(R/W)

**Register 38.9. SPI\_DMA\_CONF\_REG (0x0030)**

|  |    |    |    |    |            |    |   |   |   |   |    |    |    |    |    |   |   |   |   |   |   |   |   |   |  |   |   |   |   |   |       |

Reset

**SPI\_DMA\_OUTFIFO\_EMPTY** Represents whether or not the DMA TX FIFO is ready for sending data.

0: Ready  
1: Not ready  
(RO)

**SPI\_DMA\_INFIFO\_FULL** Represents whether or not the DMA RX FIFO is ready for receiving data.

0: Ready  
1: Not ready  
(RO)

**SPI\_DMA\_SLV\_SEG\_TRANS\_EN** Configures whether or not to enable DMA-controlled segmented transfer in slave half-duplex communication.

0: Disable  
1: Enable  
(R/W)

**SPI\_SLV\_RX\_SEG\_TRANS\_CLR\_EN** In slave segmented transfer, if the size of the DMA RX buffer is smaller than the size of the received data,

1: the data in all the following Wr\_DMA transactions will not be received.  
0: the data in this Wr\_DMA transaction will not be received, but in the following transactions,  
- if the size of DMA RX buffer is not 0, the data in following Wr\_DMA transactions will be received.  
- if the size of DMA RX buffer is 0, the data in following Wr\_DMA transactions will not be received.  
(R/W)

**SPI\_SLV\_TX\_SEG\_TRANS\_CLR\_EN** In slave segmented transfer, if the size of the DMA TX buffer is smaller than the size of the transmitted data,

1: the data in the following transactions will not be updated, i.e. the old data is transmitted repeatedly.  
0: the data in this transaction will not be updated. But in the following transactions,  
- if new data is filled in DMA TX FIFO, new data will be transmitted.  
- if no new data is filled in DMA TX FIFO, no new data will be transmitted.  
(R/W)

Continued on the next page...

**Register 38.9. SPI\_DMA\_CONF\_REG (0x0030)**

Continued from the previous page...

**SPI\_RX\_EOF\_EN** Configures the trigger source of GDMA\_IN\_SUC\_EOF\_CH $n$ \_INT\_RAW.

0: GDMA\_IN\_SUC\_EOF\_CH $n$ \_INT\_RAW is set by SPI\_TRANS\_DONE\_INT event in a single transfer, or by an SPI\_DMA\_SEG\_TRANS\_DONE\_INT event in a segmented transfer.

1: In a DAM-controlled transfer, if the bit number of transferred data is equal to (SPI\_MS\_DATA\_BITLEN + 1), then GDMA\_IN\_SUC\_EOF\_CH $n$ \_INT\_RAW will be set by hardware.  
(R/W)

**SPI\_DMA\_RX\_ENA** Configures whether or not to enable DMA-controlled receive data transfer.

0: Disable

1: Enable

(R/W)

**SPI\_DMA\_TX\_ENA** Configures whether or not to enable DMA-controlled send data transfer.

0: Disable

1: Enable

(R/W)

**SPI\_RX\_AFIFO\_RST** Configures whether or not to reset RX AFIFO (i.e., spi\_rx\_afifo in Figure 38.5-3 and Figure 38.5-4), which is used to receive data in SPI master and slave transfer.

0: Not reset

1: Reset

(WT)

**SPI\_BUF\_AFIFO\_RST** Configures whether or not to reset BUF TX AFIFO (i.e., buf\_tx\_afifo in Figure 38.5-3 and Figure 38.5-4), which is used to send data out in SPI slave CPU-controlled transfer and master transfer.

0: Not reset

1: Reset

(WT)

**SPI\_DMA\_AFIFO\_RST** Configures whether or not to reset DMA TX AFIFO (i.e., dma\_tx\_afifo in Figure 38.5-3 and Figure 38.5-4), which is used to send data out in SPI slave DMA-controlled transfer.

0: Not reset

1: Reset

(WT)

### Register 38.10. SPI\_SLAVE\_REG (0x00E0)

[illegible]

**SPI\_CLK\_MODE** Configures SPI clock mode.

- 0: SPI clock is off when CS becomes inactive.
- 1: SPI clock is delayed one cycle after CS becomes inactive.
- 2: SPI clock is delayed two cycles after CS becomes inactive.
- 3: SPI clock is always on.

Can be configured in CONF state.

(R/W)

**SPI\_CLK\_MODE\_13** Configures clock mode.

- 0: SPI clock mode 1 and mode 3. See Table 38.7-2.
- 1: SPI clock mode 0 and mode 2. See Table 38.7-2.

(R/W)

**SPI\_RSCK\_DATA\_OUT** Configures the edge of output data.

- 0: Output data at TSCK rising edge.  
1: Output data at RSCK rising edge.

(R/W)

**SPI\_SLV\_RDDMA\_BITLEN\_EN** Configures whether or not to use SPI\_SLV\_DATA\_BITLEN to store the data bit length of Rd\_DMA transfer.

- 0: Not use  
1: Use

(R/W)

**SPI\_SLV\_WRDMA\_BITLEN\_EN** Configures whether or not to use SPI\_SLV\_DATA\_BITLEN to store the data bit length of Wr DMA transfer.

- 0: Not use  
1: Use

(R/W)

**SPI\_SLV\_RDBUF\_BITLEN\_EN** Configures whether or not to use SPI\_SLV\_DATA\_BITLEN to store the data bit length of Rd\_BUF transfer.

- 0: Not use  
1: Use

(R/W)

Continued on the next page...

**Register 38.10. SPI\_SLAVE\_REG (0x00E0)**

Continued from the previous page...

**SPI\_SLV\_WRBUF\_BITLEN\_EN** Configures whether or not to use SPI\_SLV\_DATA\_BITLEN to store the data bit length of Wr\_BUF transfer.

0: Not use

1: Use

(R/W)

**SPI\_SLV\_LAST\_BYTE\_STRB** Represents the valid bits of the last received data byte in SPI slave full-duplex and half-duplex transfer.

(R/SS)

**SPI\_DMA\_SEG\_MAGIC\_VALUE** Configures the magic value of BM table in DMA-controlled configurable segmented transfer.

(R/W)

**SPI\_SLAVE\_MODE** Configures SPI work mode.

0: Master

1: Slave

(R/W)

**SPI\_SOFT\_RESET** Configures whether or not to reset the SPI clock line, CS line, and data line via software.

0: Not reset

1: Reset

Can be configured in CONF state.

(WT)

**SPI\_USR\_CONF** Configures whether or not to enable the CONF state of current DMA-controlled configurable segmented transfer.

0: No effect, which means the current transfer is not a configurable segmented transfer.

1: Enable, which means a configurable segmented transfer is started.

(R/W)

**SPI\_MST\_FD\_WAIT\_DMA\_TX\_DATA** Configures whether or not to wait DMA TX data gets ready before starting SPI transfer in master full-duplex transfer.

0: Not wait

1: Wait

(R/W)

Register 38.11. SPI\_SLAVE1\_REG (0x00E4)

|                   |    |    |    |    |   |  |  |  |  |                      |  |  |  |  |  |  |  |  |  |                     |  |  |  |  |  |  |  |  |  |       |

| 0                 |    |    |    |    |   |  |  |  |  | 0                    |  |  |  |  |  |  |  |  |  | 0                   |  |  |  |  |  |  |  |  |  | Reset |

**SPI\_SLV\_DATA\_BITLEN** Configures the transferred data bit length in SPI slave full-/half-duplex modes.  
(R/W/SS)

**SPI\_SLV\_LAST\_COMMAND** Configures the command value in slave mode.  
(R/W/SS)

**SPI\_SLV\_LAST\_ADDR** Configures the address value in slave mode.  
(R/W/SS)

### Register 38.12. SPI\_CLOCK\_REG (0x000C)

|    |    |    |    |     |    |     |    |     |   |       |
|----|----|----|----|-----|----|-----|----|-----|---|-------|
| 31 | 30 | 22 | 21 | 18  | 17 | 12  | 11 | 6   | 5 | 0     |
| 1  | 0  | 0  | 0  | 0   | 0  | 0   | 0  | 0   | 0 | 0     |
|    |    | 0  |    | 0x3 |    | 0x1 |    | 0x3 |   | Reset |

**SPI\_CLKCNT\_L** Configures clock duty cycles, together with SPI\_CLKCNT\_H and SPI\_CLKCNT\_N.

In master transfer, this field must be equal to SPI\_CLKCNT\_N.

In slave mode, it must be 0.

Can be configured in CONF state.

(R/W)

**SPI\_CLKCNT\_H** Configures the duty cycle of SPI\_CLK (high level) in master transfer.

It's recommended to configure this value to  $\text{floor}((\text{SPI\_CLKCNT\_N} + 1)/2 - 1)$ . `floor()` here is to round a number down, e.g.,  $\text{floor}(2.2) = 2$ .

In slave mode, it must be 0.

Can be configured in CONF state.

(R/W)

**SPI\_CLKCNT\_N** Configures the divider of SPI\_CLK in master transfer.

SPI\_CLK frequency is  $f_{\text{clk\_spi\_mst}} / (\text{SPI\_CLKDIV\_PRE} + 1) / (\text{SPI\_CLKCNT\_N} + 1)$ .

Can be configured in CONF state.

(R/W)

**SPI\_CLKDIV\_PRE** Configures the pre-divider of SPI\_CLK in master transfer.

Can be configured in CONF state.

(R/W)

**SPI\_CLK\_EQU\_SYSCLK** Configures whether or not the SPI\_CLK is equal to clk\_spi\_mst in master transfer.

0: SPI CLK is divided from clk spi mst.

1: SPI\_CLK is equal to clk\_spi\_mst.

Can be configured in CONF state.

(R/W)

Register 38.13. SPI\_CLK\_GATE\_REG (0x00E8)

**SPI\_CLK\_EN** Configures whether or not to enable clock gate.  
0: Disable  
1: Enable  
(R/W)

### Register 38.14. SPI\_DIN\_MODE\_REG (0x0024)

[illegible]

**SPI\_DINO\_MODE** Configures the input mode for SPI2D signal.

- 0: Input without delay
- 1: Input at the (SPI\_DINO\_NUM + 1)th falling edge of clk\_spi\_mst
- 2: Input at the (SPI\_DINO\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst rising edge cycle
- 3: Input at the (SPI\_DINO\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst falling edge cycle
- Can be configured in CONF state.
- (R/W)

**SPI\_DIN1\_MODE** Configures the input mode for SPI2Q signal.

- 0: Input without delay
- 1: Input at the (SPI\_DIN1\_NUM+1)th falling edge of clk\_spi\_mst
- 2: Input at the (SPI\_DIN1\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst rising edge cycle
- 3: Input at the (SPI\_DIN1\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst falling edge cycle
- Can be configured in CONF state.
- (R/W)

**SPI\_DIN2\_MODE** Configures the input mode for SPI2WP signal.

- 0: Input without delay
- 1: Input at the (SPI\_DIN2\_NUM + 1)th falling edge of clk\_spi\_mst
- 2: Input at the (SPI\_DIN2\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst rising edge cycle
- 3: Input at the (SPI\_DIN2\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst falling edge cycle
- Can be configured in CONF state.
- (R/W)

Continued on the next page...

**Register 38.14. SPI\_DIN\_MODE\_REG (0x0024)**

Continued from the previous page...

**SPI\_DIN3\_MODE** Configures the input mode for SPI2HD signal.

0: Input without delay

1: Input at the (SPI\_DIN3\_NUM + 1)th falling edge of clk\_spi\_mst

2: Input at the (SPI\_DIN3\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst rising edge cycle

3: Input at the (SPI\_DIN3\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst falling edge cycle

Can be configured in CONF state.

(R/W)

**SPI\_DIN4\_MODE** Configures the input mode for SPI2D4 signal.

0: Input without delay

1: Input at the (SPI\_DIN4\_NUM + 1)th falling edge of clk\_spi\_mst

2: Input at the (SPI\_DIN4\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst rising edge cycle

3: Input at the (SPI\_DIN4\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst falling edge cycle

Can be configured in CONF state.

(R/W)

**SPI\_DIN5\_MODE** Configures the input mode for SPI2D5 signal.

0: Input without delay

1: Input at the (SPI\_DIN5\_NUM + 1)th falling edge of clk\_spi\_mst

2: Input at the (SPI\_DIN5\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst rising edge cycle

3: Input at the (SPI\_DIN5\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst falling edge cycle

Can be configured in CONF state.

(R/W)

**SPI\_DIN6\_MODE** Configures the input mode for SPI2D6 signal.

0: Input without delay

1: Input at the (SPI\_DIN6\_NUM + 1)th falling edge of clk\_spi\_mst

2: Input at the (SPI\_DIN6\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst rising edge cycle

3: Input at the (SPI\_DIN6\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst falling edge cycle

Can be configured in CONF state.

(R/W)

Continued on the next page...

**Register 38.14. SPI\_DIN\_MODE\_REG (0x0024)**

Continued from the previous page...

**SPI\_DIN7\_MODE** Configures the input mode for SPI2D7 signal.

0: Input without delay

1: Input at the (SPI\_DIN7\_NUM + 1)th falling edge of clk\_spi\_mst

2: Input at the (SPI\_DIN7\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst rising edge cycle

3: Input at the (SPI\_DIN7\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst falling edge cycle

Can be configured in CONF state.

(R/W)

**SPI\_TIMING\_HCLK\_ACTIVE** Configures whether or not to enable HCLK (high-frequency clock) in SPI input timing module.

0: Disable

1: Enable

Can be configured in CONF state. (R/W)

**Register 38.15. SPI\_DIN\_NUM\_REG (0x0028)**

| (reserved) |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    | SPI_DIN7_NUM |    | SPI_DIN6_NUM |    | SPI_DIN5_NUM |    | SPI_DIN4_NUM |   | SPI_DIN3_NUM |   | SPI_DIN2_NUM |   | SPI_DIN1_NUM |   | SPI_DINO_NUM |   |

Reset

**SPI\_DINO\_NUM** Configures the delays to input signal SPI2D based on the setting of SPI\_DINO\_MODE.

0: Delayed by 1 clock cycle

1: Delayed by 2 clock cycles

2: Delayed by 3 clock cycles

3: Delayed by 4 clock cycles

Can be configured in CONF state.

(R/W)

**SPI\_DIN1\_NUM** Configures the delays to input signal SPI2Q based on the setting of SPI\_DIN1\_MODE.

0: Delayed by 1 clock cycle

1: Delayed by 2 clock cycles

2: Delayed by 3 clock cycles

3: Delayed by 4 clock cycles

Can be configured in CONF state.

(R/W)

**SPI\_DIN2\_NUM** Configures the delays to input signal SPI2WP based on the setting of SPI\_DIN2\_MODE.

0: Delayed by 1 clock cycle

1: Delayed by 2 clock cycles

2: Delayed by 3 clock cycles

3: Delayed by 4 clock cycles

Can be configured in CONF state.

(R/W)

**SPI\_DIN3\_NUM** Configures the delays to input signal SPI2HD based on the setting of SPI\_DIN3\_MODE.

0: Delayed by 1 clock cycle

1: Delayed by 2 clock cycles

2: Delayed by 3 clock cycles

3: Delayed by 4 clock cycles

Can be configured in CONF state.

(R/W)

Continued on the next page...

**Register 38.15. SPI\_DIN\_NUM\_REG (0x0028)**

Continued from the previous page...

**SPI\_DIN4\_NUM** Configures the delays to input signal SPI2D4 based on the setting of SPI\_DIN4\_MODE.

0: Delayed by 1 clock cycle

1: Delayed by 2 clock cycles

2: Delayed by 3 clock cycles

3: Delayed by 4 clock cycles

Can be configured in CONF state.

(R/W)

**SPI\_DIN5\_NUM** Configures the delays to input signal SPI2D5 based on the setting of SPI\_DIN5\_MODE.

0: Delayed by 1 clock cycle

1: Delayed by 2 clock cycles

2: Delayed by 3 clock cycles

3: Delayed by 4 clock cycles

Can be configured in CONF state.

(R/W)

**SPI\_DIN6\_NUM** Configures the delays to input signal SPI2D6 based on the setting of SPI\_DIN6\_MODE.

0: Delayed by 1 clock cycle

1: Delayed by 2 clock cycles

2: Delayed by 3 clock cycles

3: Delayed by 4 clock cycles

Can be configured in CONF state.

(R/W)

**SPI\_DIN7\_NUM** Configures the delays to input signal SPI2D7 based on the setting of SPI\_DIN7\_MODE.

0: Delayed by 1 clock cycle

1: Delayed by 2 clock cycles

2: Delayed by 3 clock cycles

3: Delayed by 4 clock cycles

Can be configured in CONF state.

(R/W)

### Register 38.16. SPI\_DOUT\_MODE\_REG (0x002C)

[illegible]

**SPI\_DOUT0\_MODE** Configures the output mode for SPI2D signal.

0: Output without delay

1: Output with a delay of a SPI module clock cycle at its falling edge

Can be configured in CONF state.

(R/W)

**SPI\_DOUT1\_MODE** Configures the output mode for SPI2Q signal.

0: Output without delay

1: Output with a delay of a SPI module clock cycle at its falling edge

Can be configured in CONF state.

(R/W)

**SPI\_DOUT2\_MODE** Configures the output mode for SPI2WP signal.

0: Output without delay

1: Output with a delay of a SPI module clock cycle at its falling edge

Can be configured in CONF state.

(R/W)

**SPI\_DOUT3\_MODE** Configures the output mode for SPI2HD signal.

0: Output without delay

1: Output with a delay of a SPI module clock cycle at its falling edge

Can be configured in CONF state.

(R/W)

**SPI\_DOUT4\_MODE** Configures the output mode for SPI2D4 signal.

0: Output without delay

1: Output with a delay of a SPI module clock cycle at its falling edge

Can be configured in CONF state.

(R/W)

**SPI\_DOUT5\_MODE** Configures the output mode for SPI2D5 signal.

0: Output without delay

1: Output with a delay of a SPI module clock cycle at its falling edge

Can be configured in CONF state.

(R/W)

**SPI DOUT6 MODE** Configures the output mode for SPI2D6 signal.

0: Output without delay

1: Output with a delay of a SPI module clock cycle at its falling edge

Can be configured in CONF state.

(R/W)

**Register 38.16. SPI\_DOUT\_MODE\_REG (0x002C)**

Continued from the previous page...

**SPI\_DOUT7\_MODE** Configures the output mode for SPI2D7 signal.

0: Output without delay

1: Output with a delay of a SPI module clock cycle at its falling edge

Can be configured in CONF state.

(R/W)

**SPI\_D\_DQS\_MODE** Configures the output mode for output SPI\_DQS signal.

0: Output without delay

1: Output is delayed for a SPI clock cycle at its falling edge.

Can be configured in CONF state.

(R/W)

**Register 38.19. SPI\_DMA\_INT\_RAW\_REG (0x003C)**

Continued from the previous page...

**SPI\_SLV\_WR\_BUF\_DONE\_INT\_RAW** The raw interrupt status of SPI\_SLV\_WR\_BUF\_DONE\_INT interrupt.

(R/WTC/SS)

**SPI\_TRANS\_DONE\_INT\_RAW** The raw interrupt status of SPI\_TRANS\_DONE\_INT interrupt.

(R/WTC/SS)

**SPI\_DMA\_SEG\_TRANS\_DONE\_INT\_RAW** The raw interrupt status of SPI\_DMA\_SEG\_TRANS\_DONE\_INT interrupt.

(R/WTC/SS)

**SPI\_SEG\_MAGIC\_ERR\_INT\_RAW** The raw interrupt status of SPI\_SEG\_MAGIC\_ERR\_INT interrupt.

(R/WTC/SS)

**SPI\_SLV\_BUF\_ADDR\_ERR\_INT\_RAW** The raw interrupt status of SPI\_SLV\_BUF\_ADDR\_ERR\_INT interrupt.

(R/WTC/SS)

**SPI\_SLV\_CMD\_ERR\_INT\_RAW** The raw interrupt status of SPI\_SLV\_CMD\_ERR\_INT interrupt.

(R/WTC/SS)

**SPI\_MST\_RX\_AFIFO\_WFULL\_ERR\_INT\_RAW** The raw interrupt status of SPI\_MST\_RX\_AFIFO\_WFULL\_ERR\_INT interrupt.

(R/WTC/SS)

**SPI\_MST\_TX\_AFIFO\_EMPTY\_ERR\_INT\_RAW** The raw interrupt status of SPI\_MST\_TX\_AFIFO\_EMPTY\_ERR\_INT interrupt.

(R/WTC/SS)

**SPI\_APP2\_INT\_RAW** The raw interrupt status of SPI\_APP2\_INT interrupt. The value is only controlled by the application.

(R/WTC/SS)

**SPI\_APP1\_INT\_RAW** The raw interrupt status of SPI\_APP1\_INT interrupt. The value is only controlled by the application.

(R/WTC/SS)

Register 38.20. SPI\_DMA\_INT\_ST\_REG (0x0040)

|            |    |    |    |    |    |    |    |    |    |    |    |   |   |   |   |   |   |   |   |   |   |   |       |

**SPI\_DMA\_INFIFO\_FULL\_ERR\_INT\_ST** The interrupt status of SPI\_DMA\_INFIFO\_FULL\_ERR\_INT interrupt.  
(RO)

**SPI\_DMA\_OUTFIFO\_EMPTY\_ERR\_INT\_ST** The interrupt status of SPI\_DMA\_OUTFIFO\_EMPTY\_ERR\_INT interrupt.  
(RO)

**SPI\_SLV\_EX\_QPI\_INT\_ST** The interrupt status of SPI\_SLV\_EX\_QPI\_INT interrupt.  
(RO)

**SPI\_SLV\_EN\_QPI\_INT\_ST** The interrupt status of SPI\_SLV\_EN\_QPI\_INT interrupt.  
(RO)

**SPI\_SLV\_CMD7\_INT\_ST** The interrupt status of SPI\_SLV\_CMD7\_INT interrupt.  
(RO)

**SPI\_SLV\_CMD8\_INT\_ST** The interrupt status of SPI\_SLV\_CMD8\_INT interrupt.  
(RO)

**SPI\_SLV\_CMD9\_INT\_ST** The interrupt status of SPI\_SLV\_CMD9\_INT interrupt.  
(RO)

**SPI\_SLV\_CMDA\_INT\_ST** The interrupt status of SPI\_SLV\_CMDA\_INT interrupt.  
(RO)

**SPI\_SLV\_RD\_DMA\_DONE\_INT\_ST** The interrupt status of SPI\_SLV\_RD\_DMA\_DONE\_INT interrupt.  
(RO)

**SPI\_SLV\_WR\_DMA\_DONE\_INT\_ST** The interrupt status of SPI\_SLV\_WR\_DMA\_DONE\_INT interrupt.  
(RO)

**SPI\_SLV\_RD\_BUF\_DONE\_INT\_ST** The interrupt status of SPI\_SLV\_RD\_BUF\_DONE\_INT interrupt.  
(RO)

**SPI\_SLV\_WR\_BUF\_DONE\_INT\_ST** The interrupt status of SPI\_SLV\_WR\_BUF\_DONE\_INT interrupt.  
(RO)

Continued on the next page...

**Register 38.20. SPI\_DMA\_INT\_ST\_REG (0x0040)**

Continued from the previous page...

**SPI\_TRANS\_DONE\_INT\_ST** The interrupt status of SPI\_TRANS\_DONE\_INT interrupt.  
(RO)

**SPI\_DMA\_SEG\_TRANS\_DONE\_INT\_ST** The interrupt status of SPI\_DMA\_SEG\_TRANS\_DONE\_INT interrupt.  
(RO)

**SPI\_SEG\_MAGIC\_ERR\_INT\_ST** The interrupt status of SPI\_SEG\_MAGIC\_ERR\_INT interrupt.  
(RO)

**SPI\_SLV\_BUF\_ADDR\_ERR\_INT\_ST** The status bit for SPI\_SLV\_BUF\_ADDR\_ERR\_INT interrupt.  
(RO)

**SPI\_SLV\_CMD\_ERR\_INT\_ST** The interrupt status of SPI\_SLV\_CMD\_ERR\_INT interrupt.  
(RO)

**SPI\_MST\_RX\_AFIFO\_WFULL\_ERR\_INT\_ST** The interrupt status of SPI\_MST\_RX\_AFIFO\_WFULL\_ERR\_INT interrupt.  
(RO)

**SPI\_MST\_TX\_AFIFO\_EMPTY\_ERR\_INT\_ST** The interrupt status of SPI\_MST\_TX\_AFIFO\_EMPTY\_ERR\_INT interrupt.  
(RO)

**SPI\_APP2\_INT\_ST** The interrupt status of SPI\_APP2\_INT interrupt.  
(RO)

**SPI\_APP1\_INT\_ST** The interrupt status of SPI\_APP1\_INT interrupt.  
(RO)

### Register 38.21. SPI\_DMA\_INT\_SET\_REG (0x0044)

[illegible]

**SPI\_DMA\_INFIFO\_FULL\_ERR\_INT\_SET** Write 1 to set SPI\_DMA\_INFIFO\_FULL\_ERR\_INT interrupt.  
(WT)

**SPI\_DMA\_OUTFIFO\_EMPTY\_ERR\_INT\_SET** Write 1 to set SPI\_DMA\_OUTFIFO\_EMPTY\_ERR\_INT in-  
terrupt.  
(WT)

**SPI\_SLV\_EX\_QPI\_INT\_SET** Write 1 to set SPI\_SLV\_EX\_QPI\_INT interrupt.  
(WT)

**SPI\_SLV\_EN\_QPI\_INT\_SET** Write 1 to set SPI\_SLV\_EN\_QPI\_INT interrupt.  
(WT)

**SPI\_SLV\_CMD7\_INT\_SET** Write 1 to set SPI\_SLV\_CMD7\_INT interrupt.  
(WT)

**SPI\_SLV\_CMD8\_INT\_SET** Write 1 to set SPI\_SLV\_CMD8\_INT interrupt.  
(WT)

**SPI\_SLV\_CMD9\_INT\_SET** Write 1 to set SPI\_SLV\_CMD9\_INT interrupt.  
(WT)

**SPI\_SLV\_CMDA\_INT\_SET** Write 1 to set SPI\_SLV\_CMDA\_INT interrupt.  
(WT)

**SPI\_SLV\_RD\_DMA\_DONE\_INT\_SET** Write 1 to set SPI\_SLV\_RD\_DMA\_DONE\_INT interrupt.  
(WT)

**SPI\_SLV\_WR\_DMA\_DONE\_INT\_SET** Write 1 to set SPI\_SLV\_WR\_DMA\_DONE\_INT interrupt.  
(WT)

**SPI\_SLV\_RD\_BUF\_DONE\_INT\_SET** Write 1 to set SPI\_SLV\_RD\_BUF\_DONE\_INT interrupt.  
(WT)

**SPI\_SLV\_WR\_BUF\_DONE\_INT\_SET** Write 1 to set SPI\_SLV\_WR\_BUF\_DONE\_INT interrupt.  
(WT)

**SPI\_TRANS\_DONE\_INT\_SET** Write 1 to set SPI\_TRANS\_DONE\_INT interrupt.  
(WT)

Continued on the next page...

**Register 38.21. SPI\_DMA\_INT\_SET\_REG (0x0044)**

Continued from the previous page...

**SPI\_DMA\_SEG\_TRANS\_DONE\_INT\_SET** Write 1 to set SPI\_DMA\_SEG\_TRANS\_DONE\_INT interrupt.  
(WT)

**SPI\_SEG\_MAGIC\_ERR\_INT\_SET** Write 1 to set SPI\_SEG\_MAGIC\_ERR\_INT interrupt.  
(WT)

**SPI\_SLV\_BUF\_ADDR\_ERR\_INT\_SET** Write 1 to set SPI\_SLV\_BUF\_ADDR\_ERR\_INT interrupt.  
(WT)

**SPI\_SLV\_CMD\_ERR\_INT\_SET** Write 1 to set SPI\_SLV\_CMD\_ERR\_INT interrupt.  
(WT)

**SPI\_MST\_RX\_AFIFO\_WFULL\_ERR\_INT\_SET** Write 1 to set SPI\_MST\_RX\_AFIFO\_WFULL\_ERR\_INT interrupt.  
(WT)

**SPI\_MST\_TX\_AFIFO\_EMPTY\_ERR\_INT\_SET** Write 1 to set SPI\_MST\_TX\_AFIFO\_EMPTY\_ERR\_INT interrupt.  
(WT)

**SPI\_APP2\_INT\_SET** Write 1 to set SPI\_APP2\_INT interrupt.  
(WT)

**SPI\_APP1\_INT\_SET** Write 1 to set SPI\_APP1\_INT interrupt.  
(WT)

**Register 38.22. SPI\_W0\_REG (0x0098)**

|          |   |
|----------|---|
| SPI_BUFO |   |
| 31       | 0 |
| 0        |   |
| Reset    |   |

**SPI\_BUFO** 32-bit data buffer 0.  
(R/W/SS)

## SPI\_BUF1

**SPI\_BUF1** 32-bit data buffer 1.  
(R/W/SS)

## SPI\_BUF2

**SPI\_BUF2** 32-bit data buffer 2.  
(R/W/SS)

## SPI\_BUF3

**SPI\_BUF3** 32-bit data buffer 3.  
(R/W/SS)

## SPI\_BUF4

|            |    | 0x2207202 |   |
|            |    | Reset     |   |

SPI\_DATE Version control register.  
(R/W)

38.13.2 GP-SPI3 Register

The addresses in this section are relative to GP-SPI3 base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section *Programming Reserved Register Field*.

Register 38.39. SPI\_CMD\_REG (0x0000)

|            |  |  |  |  |  |  |                       |  |            |  |  |  |  |    |    |    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |       |
|------------|--|--|--|--|--|--|-----------------------|--|------------|--|--|--|--|----|----|----|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|---|-------|
| (reserved) |  |  |  |  |  |  | SPI_USR<br>SPI_UPDATE |  | (reserved) |  |  |  |  |    |    |    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |       |
| 31         |  |  |  |  |  |  | 25                    |  |            |  |  |  |  | 24 | 23 | 22 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |       |
| 0          |  |  |  |  |  |  | 0                     |  |            |  |  |  |  | 0  | 0  | 0  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 | Reset |

**SPI\_UPDATE** Configures whether or not to synchronize SPI registers from APB clock domain into SPI module clock domain.  
0: Not synchronize  
1: Synchronize  
This bit is only used in SPI master transfer.  
(WT)

**SPI\_USR** Configures whether or not to enable user-defined command.  
0: Not enable  
1: Enable  
An SPI operation will be triggered when the bit is set. This bit will be cleared once the operation is done.  
(R/W/SC)

Register 38.40. SPI\_ADDR\_REG (0x0004)

|                    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |       |
|--------------------|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|---|-------|
| SPI_USR_ADDR_VALUE |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |       |
| 31                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0 |       |
| 0                  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   | Reset |

**SPI\_USR\_ADDR\_VALUE** Configures the address to slave.  
(R/W)

Register 38.41. SPI\_USER\_REG (0x0010)

Reset

**SPI\_DOUTDIN** Configures whether or not to enable full-duplex communication.

0: Disable

1: Enable

(R/W)

**SPI\_QPI\_MODE** Configures whether or not to enable QPI mode.

0: Disable

1: Enable

This configuration is applicable when the SPI controller works as master or slave.

(R/W/SS/SC)

**SPI\_TSCK\_I\_EDGE** Configures whether or not to change the polarity of TSCK in slave transfer.

0: TSCK = SPI\_CK\_I

1: TSCK = !SPI\_CK\_I

(R/W)

**SPI\_CS\_HOLD** Configures whether or not to keep SPI CS low when SPI is in DONE state.

0: Not keep low

1: Keep low

(R/W)

**SPI\_CS\_SETUP** Configures whether or not to enable SPI CS when SPI is in prepare (PREP) state.

0: Disable

1: Enable

(R/W)

**SPI\_RSCK\_I\_EDGE** Configures whether or not to change the polarity of RSCK in slave transfer.

0: RSCK = !SPI\_CK\_I

1: RSCK = SPI\_CK\_I

(R/W)

**SPI\_CK\_OUT\_EDGE** Configures SPI clock mode together with SPI\_CK\_IDLE\_EDGE. For more information, see Section 38.7.3.

(R/W)

Continued on the next page...

**Register 38.41. SPI\_USER\_REG (0x0010)**

Continued from the previous page...

**SPI\_FWRITE\_DUAL** Configures whether or not to enable the 2-bit mode of read-data phase in write operations.

0: Not enable

1: Enable

(R/W)

**SPI\_FWRITE\_QUAD** Configures whether or not to enable the 4-bit mode of read-data phase in write operations.

0: Not enable

1: Enable

(R/W)

**SPI\_SIO** Configures whether or not to enable 3-line half-duplex communication, where MOSI and MISO signals share the same pin.

0: Disable

1: Enable

(R/W)

**SPI\_USR\_MISO\_HIGHPART** Configures whether or not to enable High-Part mode in read-data phase, i.e., only access to high-part of the buffers: SPI\_W8\_REG ~ SPI\_W15\_REG.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_USR\_MOSI\_HIGHPART** Configures whether or not to enable High-Part mode in write-data phase, i.e., only access to high-part of the buffers: SPI\_W8\_REG ~ SPI\_W15\_REG.

0: Disable

1: Enable

Can be configured in CONF state.

(R/W)

**SPI\_USR\_DUMMY\_IDLE** Configures whether or not to disable SPI clock in DUMMY state.

0: Not disable

1: Disable

(R/W)

**SPI\_USR\_MOSI** Configures whether or not to enable the write-data (DOUT) state of an operation.

0: Disable

1: Enable

(R/W)

Continued on the next page...

**Register 38.41. SPI\_USER\_REG (0x0010)**

Continued from the previous page...

**SPI\_USR\_MISO** Configures whether or not to enable the read-data (DIN) state of an operation.

0: Disable

1: Enable

(R/W)

**SPI\_USR\_DUMMY** Configures whether or not to enable the DUMMY state of an operation.

0: Disable

1: Enable

(R/W)

**SPI\_USR\_ADDR** Configures whether or not to enable the address (ADDR) state of an operation.

0: Disable

1: Enable

(R/W)

**SPI\_USR\_COMMAND** Configures whether or not to enable the command (CMD) state of an operation.

0: Disable

1: Enable

(R/W)

**Register 38.42. SPI\_USER1\_REG (0x0014)**

|                          |    |     |    |    |    |    |    |   |   |   |   |   |   |   |   |       |
|--------------------------|----|-----|----|----|----|----|----|---|---|---|---|---|---|---|---|-------|
| SPI_USR_ADDR_BITLEN      |    |     |    |    |    |    |    |   |   |   |   |   |   |   |   |       |
| SPI_CS_HOLD_TIME         |    |     |    |    |    |    |    |   |   |   |   |   |   |   |   |       |

**SPI\_USR\_DUMMY\_CYCLELEN** Configures the length of DUMMY state.

Measurement unit: SPI\_CLK clock cycles.

This value is (the expected cycle number - 1).

(R/W)

**SPI\_MST\_WFULL\_ERR\_END\_EN** Configures whether or not to end the SPI transfer when SPI RX AFIFO wfull error occurs in master full-/half-duplex transfers.

0: Not end

1: End

(R/W)

**SPI\_CS\_SETUP\_TIME** Configures the length of prepare (PREP) state.

Measurement unit: SPI\_CLK clock cycles.

This value is equal to the expected cycles - 1. This field is used together with SPI\_CS\_SETUP.

(R/W)

**SPI\_CS\_HOLD\_TIME** Configures the delay cycles of CS pin.

Measurement unit: SPI\_CLK clock cycles.

This field is used together with SPI\_CS\_HOLD.

(R/W)

**SPI\_USR\_ADDR\_BITLEN** Configures the bit length in address state.

This value is (expected bit number - 1).

(R/W)

### Register 38.43. SPI\_USER2\_REG (0x0018)

|                        |  |  |  |  |  |  |    |  |  |  |  |  |  |                           |  |  |  |  |  |  |    |  |  |  |  |  |  |            |  |  |  |  |  |  |    |  |  |  |  |  |  |                       |  |  |  |  |  |  |  |  |  |  |  |  |  |

**SPI\_USR\_COMMAND\_VALUE** Configures the command value.

(R/W)

**SPI\_MST\_EMPTY\_ERR\_END\_EN** Configures whether or not to end the SPI transfer when SPI TX AFIFO read empty error occurs in master full-/half-duplex transfers.

0: Not end

1: End

(R/W)

**SPI\_USR\_COMMAND\_BITLEN** Configures the bit length of command state. This value is (expected bit number - 1).

(R/W)

### Register 38.44. SPI\_CTRL\_REG (0x0008)

[illegible]

**SPI\_DUMMY\_OUT** Configures whether or not to output the SPI3 bus signals in DUMMY state.

0: Not output

1: Output

(R/W)

**SPI\_FADDR\_DUAL** Configures whether or not to enable 2-bit mode during address (ADDR) state.

0: Disable

1: Enable

(R/W)

**SPI\_FADDR\_QUAD** Configures whether or not to enable 4-bit mode during address (ADDR) state.

0: Disable

1: Enable

(R/W)

**SPI\_FCMD\_DUAL** Configures whether or not to enable 2-bit mode during command (CMD) state.

0: Disable

1: Enable

(R/W)

**SPI\_FCMD\_QUAD** Configures whether or not to enable 4-bit mode during command (CMD) state.

0: Disable

1: Enable

(R/W)

**SPI\_FREAD\_DUAL** Configures whether or not to enable the 2-bit mode of read-data (DIN) state in read operations.

0: Disable

1: Enable

(R/W)

**SPI\_FREAD\_QUAD** Configures whether or not to enable the 4-bit mode of read-data (DIN) state in read operations.

0: Disable

1: Enable

(R/W)

Continued on the next page...

**Register 38.44. SPI\_CTRL\_REG (0x0008)**

Continued from the previous page...

**SPI\_Q\_POL** Configures MISO line polarity.

0: Low

1: High

(R/W)

**SPI\_D\_POL** Configures MOSI line polarity.

0: Low

1: High

(R/W)

**SPI\_HOLD\_POL** Configures SPI\_HOLD output value when SPI is in idle.

0: Output low

1: Output high

(R/W)

**SPI\_WP\_POL** Configures the output value of write-protect signal when SPI is in idle.

0: Output low

1: Output high

(R/W)

**SPI\_RD\_BIT\_ORDER** Configures the bit order in read-data (MISO) state.

0: MSB first

1: LSB first

2: MSB first

3: LSB first

(R/W)

**SPI\_WR\_BIT\_ORDER** Configures the bit order in command (CMD), address (ADDR), and write-data (MOSI) states.

0: MSB first

1: LSB first

2: MSB first

3: LSB first

(R/W)

Register 38.45. SPI\_MS\_DLEN\_REG (0x001C)

**SPI\_MS\_DATA\_BITLEN** Configures the data bit length of SPI transfer in CPU-controlled master transfer. Or configures the bit length of SPI RX transfer in DMA-controlled slave transfer. This value shall be (expected bit\_num - 1).  
(R/W)

Register 38.46. SPI\_MISC\_REG (0x0020)

|  |    |    |    |                                |    |    |    |  |   |   |   |   |   |   |   |
|--|----|----|----|--------------------------------|----|----|----|--|---|---|---|---|---|---|---|
| SPI_QUAD_DIN_PIN_SWAP<br>SPI_CS_KEEP_ACTIVE<br>SPI_CLK_IDLE_EDGE<br>(reserved) |    |    |    | SPI_SLAVE_CS_POL<br>(reserved) |    |    |    | SPI_MASTER_CS_POL<br>SPI_CLK_DIS<br>(reserved) |   |   |   | SPI_CS2_DIS<br>SPI_CS1_DIS<br>SPI_CS0_DIS |   |   |   |

| 0  | 0  | 0  | 0  | 0                              | 0  | 0  | 0  | 0  | 0 | 0 | 0 | 0   | 0 | 1 | 0 |

Reset

**SPI\_CS0\_DIS** Configures whether or not to disable SPI\_CS0 pin.

0: SPI\_CS0 signal is from/to SPI\_CS0 pin.

1: Disable SPI\_CS0 pin.

(R/W)

**SPI\_CS1\_DIS** Configures whether or not to disable SPI\_CS1 pin.

0: SPI\_CS1 signal is from/to SPI\_CS1 pin.

1: Disable SPI\_CS1 pin.

(R/W)

**SPI\_CS2\_DIS** Configures whether or not to disable SPI\_CS2 pin.

0: SPI\_CS2 signal is from/to SPI\_CS2 pin.

1: Disable SPI\_CS2 pin.

(R/W)

**SPI\_CLK\_DIS** Configures whether or not to disable SPI\_CLK output.

0: Enable

1: Disable

(R/W)

**SPI\_MASTER\_CS\_POL** Configures the polarity of SPI\_CS $n$  ( $n = 0\sim 2$ ) line in master transfer.

0: SPI\_CS $n$  is low active.

1: SPI\_CS $n$  is high active.

(R/W)

**SPI\_SLAVE\_CS\_POL** Configures whether or not invert SPI slave input CS polarity.

0: Not change

1: Invert

(R/W)

**SPI\_CLK\_IDLE\_EDGE** Configures the level of SPI\_CLK line when GP-SPI3 is in idle.

0: Low

1: High

(R/W)

**SPI\_CS\_KEEP\_ACTIVE** Configures whether or not to keep the SPI\_CS line low.

0: Not keep low

1: Keep low

(R/W)

Continued on the next page...

**Register 38.46. SPI\_MISC\_REG (0x0020)**

Continued from the previous page...

**SPI\_QUAD\_DIN\_PIN\_SWAP** Configures whether or not to swap SPI Quad input pins.

0: Not swap

1: Swap SPI3\_D with SPI3\_Q, and SPI3\_WP with SPI3\_HD

(R/W)

**Register 38.47. SPI\_DMA\_CONF\_REG (0x0030)**

|  |    |    |    |    |   |    |   |   |   |   |    |    |    |    |  |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |       |  |   |   |

Reset

**SPI\_DMA\_OUTFIFO\_EMPTY** Represents whether or not the DMA TX FIFO is ready for sending data.

0: Ready  
1: Not ready  
(RO)

**SPI\_DMA\_INFIFO\_FULL** Represents whether or not the DMA RX FIFO is ready for receiving data.

0: Ready  
1: Not ready  
(RO)

**SPI\_DMA\_SLV\_SEG\_TRANS\_EN** Configures whether or not to enable DMA-controlled segmented transfer in slave half-duplex communication.

0: Disable  
1: Enable  
(R/W)

**SPI\_SLV\_RX\_SEG\_TRANS\_CLR\_EN** In slave segmented transfer, if the size of the DMA RX buffer is smaller than the size of the received data,

1: the data in all the following Wr\_DMA transactions will not be received  
0: the data in this Wr\_DMA transaction will not be received, but in the following transactions,  
- if the size of DMA RX buffer is not 0, the data in following Wr\_DMA transactions will be received.  
- if the size of DMA RX buffer is 0, the data in following Wr\_DMA transactions will not be received.  
(R/W)

**SPI\_SLV\_TX\_SEG\_TRANS\_CLR\_EN** In slave segmented transfer, if the size of the DMA TX buffer is smaller than the size of the transmitted data,

1: the data in the following transactions will not be updated, i.e. the old data is transmitted repeatedly.  
0: the data in this transaction will not be updated. But in the following transactions,  
- if new data is filled in DMA TX FIFO, new data will be transmitted. - if no new data is filled in DMA TX FIFO, no new data will be transmitted.  
(R/W)

Continued on the next page...

**Register 38.47. SPI\_DMA\_CONF\_REG (0x0030)**

Continued from the previous page...

**SPI\_RX\_EOF\_EN** Configures the trigger source of GDMA\_IN\_SUC\_EOF\_CH $n$ \_INT\_RAW.

0: GDMA\_IN\_SUC\_EOF\_CH $n$ \_INT\_RAW is set by SPI\_TRANS\_DONE\_INT event in a single transfer, or by an SPI\_DMA\_SEG\_TRANS\_DONE\_INT event in a segmented transfer.

1: In a DAM-controlled transfer, if the bit number of transferred data is equal to (SPI\_MS\_DATA\_BITLEN + 1), then GDMA\_IN\_SUC\_EOF\_CH $n$ \_INT\_RAW will be set by hardware.  
(R/W)

**SPI\_DMA\_RX\_ENA** Configures whether or not to enable DMA-controlled receive data transfer.

0: Disable

1: Enable

(R/W)

**SPI\_DMA\_TX\_ENA** Configures whether or not to enable DMA-controlled send data transfer.

0: Disable

1: Enable

(R/W)

**SPI\_RX\_AFIFO\_RST** Configures whether or not to reset RX AFIFO (i.e., spi\_rx\_afifo in Figure 38.5-3 and Figure 38.5-4), which is used to receive data in SPI master and slave transfer.

0: Not reset

1: Reset

(WT)

**SPI\_BUF\_AFIFO\_RST** Configures whether or not to reset BUF TX AFIFO (i.e., buf\_tx\_afifo in Figure 38.5-3 and Figure 38.5-4), which is used to send data out in SPI slave CPU-controlled transfer and master transfer.

0: Not reset

1: Reset

(WT)

**SPI\_DMA\_AFIFO\_RST** Configures whether or not to reset DMA TX AFIFO (i.e., dma\_tx\_afifo in Figure 38.5-3 and Figure 38.5-4), which is used to send data out in SPI slave DMA-controlled transfer.

0: Not reset

1: Reset

(WT)

### Register 38.48. SPI\_SLAVE\_REG (0x00E0)

[illegible]

**SPI\_CLK\_MODE** Configures SPI clock mode.

- 0: SPI clock is off when CS becomes inactive.
- 1: SPI clock is delayed one cycle after CS becomes inactive.
- 2: SPI clock is delayed two cycles after CS becomes inactive.
- 3: SPI clock is always on.

(R/W)

**SPI\_CLK\_MODE\_13** Configures clock mode.

- 0: SPI clock mode 1 and mode 3. See Table 38.7-2.  
1: SPI clock mode 0 and mode 2. See Table 38.7-2.

(R/W)

**SPI\_RSCK\_DATA\_OUT** Configures the edge of output data.

- 0: Output data at TSCK rising edge.  
1: Output data at RSCK rising edge.

(R/W)

**SPI\_SLV\_RDDMA\_BITLEN\_EN** Configures whether or not to use SPI\_SLV\_DATA\_BITLEN to store the data bit length of Rd\_DMA transfer.

- 0: Not use  
1: Use

(R/W)

**SPI\_SLV\_WRDMA\_BITLEN\_EN** Configures whether or not to use SPI\_SLV\_DATA\_BITLEN to store the data bit length of Wr\_DMA transfer.

- 0: Not use  
1: Use

(R/W)

**SPI\_SLV\_RDBUF\_BITLEN\_EN** Configures whether or not to use SPI\_SLV\_DATA\_BITLEN to store the data bit length of Rd\_BUF transfer.

- 0: Not use  
1: Use

(R/W)

Continued on the next page...

**Register 38.48. SPI\_SLAVE\_REG (0x00E0)**

Continued from the previous page...

**SPI\_SLV\_WRBUF\_BITLEN\_EN** Configures whether or not to use SPI\_SLV\_DATA\_BITLEN to store the data bit length of Wr\_BUF transfer.

0: Not use

1: Use

(R/W)

**SPI\_SLV\_LAST\_BYTE\_STRB** Represents the valid bits of the last received data byte in SPI slave full-duplex and half-duplex transfer.

(R/SS)

**SPI\_SLAVE\_MODE** Configures SPI work mode.

0: Master

1: Slave

(R/W)

**SPI\_SOFT\_RESET** Configures whether to reset the SPI clock line, CS line, and data line via software.

0: Not reset

1: Reset

(WT)

**SPI\_MST\_FD\_WAIT\_DMA\_TX\_DATA** Configures whether or not to wait DMA TX data gets ready before starting SPI transfer in master full-duplex transfer.

0: Not wait

1: Wait

(R/W)

Register 38.49. SPI\_SLAVE1\_REG (0x00E4)

|                   |    |    |    |    |   |  |  |  |  |                      |  |  |  |  |  |  |  |  |  |                     |  |  |  |  |  |  |  |  |  |       |

Reset

**SPI\_CLKCNT\_L** Configures clock duty cycles, together with SPI\_CLKCNT\_H and SPI\_CLKCNT\_N.

In master transfer, this field must be equal to SPI\_CLKCNT\_N.

In slave mode, it must be 0.

Can be configured in CONF state.

(R/W)

**SPI\_CLKCNT\_H** Configures the duty cycle of SPI\_CLK (high level) in master transfer.

It's recommended to configure this value to  $\text{floor}((\text{SPI\_CLKCNT\_N} + 1)/2 - 1)$ . floor() here is to round a number down, e.g., floor(2.2) = 2.

In slave mode, it must be 0.

(R/W)

**SPI\_CLKCNT\_N** Configures the divider of SPI\_CLK in master transfer.

SPI\_CLK frequency is  $f_{\text{clk\_spi\_mst}}/(\text{SPI\_CLKDIV\_PRE} + 1)/(\text{SPI\_CLKCNT\_N} + 1)$ .

(R/W)

**SPI\_CLKDIV\_PRE** Configures the pre-divider of SPI\_CLK in master transfer.

(R/W)

**SPI\_CLK\_EQU\_SYSCLK** Configures whether or not the SPI\_CLK is equal to clk\_spi\_mst in master transfer.

0: SPI\_CLK is divided from clk\_spi\_mst.

1: SPI\_CLK is equal to clk\_spi\_mst.

(R/W)

Register 38.51. SPI\_CLK\_GATE\_REG (0x00E8)

|            |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |            |   |   |   |            |   |   |   |

**SPI\_DINO\_MODE** Configures the input mode for SPI3\_D signal.

0: Input without delay

1: Input at the (SPI\_DINO\_NUM + 1)th falling edge of clk\_spi\_mst

2: Input at the (SPI\_DINO\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst rising edge cycle

3: Input at the (SPI\_DINO\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst falling edge cycle

(R/W)

**SPI\_DIN1\_MODE** Configures the input mode for SPI3\_Q signal.

0: Input without delay

1: Input at the (SPI\_DIN1\_NUM+1)th falling edge of clk\_spi\_mst.

2: Input at the (SPI\_DIN1\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst rising edge cycle

3: Input at the (SPI\_DIN1\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst falling edge cycle

(R/W)

**SPI\_DIN2\_MODE** Configures the input mode for SPI3\_WP signal.

0: Input without delay

1: Input at the (SPI\_DIN2\_NUM + 1)th falling edge of clk\_spi\_mst

2: Input at the (SPI\_DIN2\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst rising edge cycle

3: Input at the (SPI\_DIN2\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst falling edge cycle

(R/W)

**SPI\_DIN3\_MODE** Configures the input mode for SPI3\_HD signal.

0: Input without delay

1: Input at the (SPI\_DIN3\_NUM + 1)th falling edge of clk\_spi\_mst

2: Input at the (SPI\_DIN3\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst rising edge cycle

3: Input at the (SPI\_DIN3\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst falling edge cycle

(R/W)

**SPI\_DINO\_NUM** Configures the delays to input signal SPI3\_D based on the setting of SPI\_DINO\_MODE.

- 0: Delayed by 1 clock cycle
  - 1: Delayed by 2 clock cycles
  - 2: Delayed by 3 clock cycles
  - 3: Delayed by 4 clock cycles
- (R/W)

**SPI\_DIN1\_NUM** Configures the delays to input signal SPI3\_Q based on the setting of SPI\_DIN1\_MODE.

- 0: Delayed by 1 clock cycle
  - 1: Delayed by 2 clock cycles
  - 2: Delayed by 3 clock cycles
  - 3: Delayed by 4 clock cycles
- (R/W)

**SPI\_DIN2\_NUM** Configures the delays to input signal SPI3\_WP based on the setting of SPI\_DIN2\_MODE.

- 0: Delayed by 1 clock cycle
  - 1: Delayed by 2 clock cycles
  - 2: Delayed by 3 clock cycles
  - 3: Delayed by 4 clock cycles
- (R/W)

**SPI\_DIN3\_NUM** Configures the delays to input signal SPI3\_HD based on the setting of SPI\_DIN3\_MODE.

- 0: Delayed by 1 clock cycle
  - 1: Delayed by 2 clock cycles
  - 2: Delayed by 3 clock cycles
  - 3: Delayed by 4 clock cycles
- (R/W)

Register 38.54. SPI\_DOUT\_MODE\_REG (0x002C)

- SPI\_DOUT0\_MODE** Configures the output mode for SPI3\_D signal.  
0: Output without delay  
1: Output with a delay of a SPI module clock cycle at its falling edge  
(R/W)
- SPI\_DOUT1\_MODE** Configures the output mode for SPI3\_Q signal.  
0: Output without delay  
1: Output with a delay of a SPI module clock cycle at its falling edge  
(R/W)
- SPI\_DOUT2\_MODE** Configures the output mode for SPI3\_WP signal.  
0: Output without delay  
1: Output with a delay of a SPI module clock cycle at its falling edge  
(R/W)
- SPI\_DOUT3\_MODE** Configures the output mode for SPI3\_HD signal.  
0: Output without delay  
1: Output with a delay of a SPI module clock cycle at its falling edge  
(R/W)

**SPI\_TRANS\_DONE\_INT\_RAW** The raw interrupt status of SPI\_TRANS\_DONE\_INT interrupt.

(R/WTC/SS)

**SPI\_DMA\_SEG\_TRANS\_DONE\_INT\_RAW** The raw interrupt status of SPI\_DMA\_SEG\_TRANS\_DONE\_INT interrupt.

(R/WTC/SS)

**SPI\_SLV\_BUF\_ADDR\_ERR\_INT\_RAW** The raw interrupt status of SPI\_SLV\_BUF\_ADDR\_ERR\_INT interrupt.

(R/WTC/SS)

**SPI\_SLV\_CMD\_ERR\_INT\_RAW** The raw interrupt status of SPI\_SLV\_CMD\_ERR\_INT interrupt.

(R/WTC/SS)

**SPI\_MST\_RX\_AFIFO\_WFULL\_ERR\_INT\_RAW** The raw interrupt status of SPI\_MST\_RX\_AFIFO\_WFULL\_ERR\_INT interrupt.

(R/WTC/SS)

**SPI\_MST\_TX\_AFIFO\_EMPTY\_ERR\_INT\_RAW** The raw interrupt status of SPI\_MST\_TX\_AFIFO\_EMPTY\_ERR\_INT interrupt.

(R/WTC/SS)

**SPI\_APP2\_INT\_RAW** The raw interrupt status of SPI\_APP2\_INT interrupt. The value is only controlled by the application.

(R/WTC/SS)

**SPI\_APP1\_INT\_RAW** The raw interrupt status of SPI\_APP1\_INT interrupt. The value is only controlled by the application.

(R/WTC/SS)

**LP\_SPI\_UPDATE** Configures whether or not to synchronize SPI registers from APB clock domain into SPI module clock domain.

0: Not synchronize

1: Synchronize

This bit is only used in SPI master transfer.

(WT)

**LP\_SPI\_USR** Configures whether or not to enable user-defined command.

0: Not enable

1: Enable

An SPI operation will be triggered when the bit is set. This bit will be cleared once the operation is done.

(R/W/SC)

**Register 38.78. LP\_SPI\_ADDR\_REG (0x0004)**

**LP\_SPI\_DOUTDIN** Configures whether or not to enable full-duplex communication.

0: Disable

1: Enable

(R/W)

**LP\_SPI\_TSCK\_I\_EDGE** Configures whether or not to change the polarity of TSCK in slave transfer.

0: TSCK = SPI\_CK\_I

1: TSCK = !SPI\_CK\_I

(R/W)

**LP\_SPI\_CS\_HOLD** Configures whether or not to keep SPI CS low when SPI is in DONE state.

0: Not keep low

1: Keep low

(R/W)

**LP\_SPI\_CS\_SETUP** Configures whether or not to enable SPI CS when SPI is in prepare (PREP) state.

0: Disable

1: Enable

(R/W)

**LP\_SPI\_RSCK\_I\_EDGE** Configures whether or not to change the polarity of RSCK in slave transfer.

0: RSCK = !SPI\_CK\_I

1: RSCK = SPI\_CK\_I

(R/W)

**LP\_SPI\_CK\_OUT\_EDGE** Configures SPI clock mode together with LP\_SPI\_CK\_IDLE\_EDGE.

For more information, see Section [38.7.3](#). (R/W)

**LP\_SPI\_SIO** Configures whether or not to enable 3-line half-duplex communication, where MOSI and MISO signals share the same pin.

0: Disable

1: Enable

(R/W)

Continued on the next page...

**Register 38.79. LP\_SPI\_USER\_REG (0x0010)**

Continued from the previous page...

**LP\_SPI\_USR\_MISO\_HIGHPART** Configures whether or not to enable High-Part mode in read-data phase, i.e., only access to high-part of the buffers: LP\_SPI\_W8\_REG ~ LP\_SPI\_W15\_REG.

0: Disable

1: Enable

(R/W)

**LP\_SPI\_USR\_MOSI\_HIGHPART** Configures whether or not to enable High-Part mode in write-data phase, i.e., only access to high-part of the buffers: LP\_SPI\_W8\_REG ~ LP\_SPI\_W15\_REG.

0: Disable

1: Enable

(R/W)

**LP\_SPI\_USR\_DUMMY\_IDLE** Configures whether or not to disable SPI clock in DUMMY state.

0: Not disable

1: Disable

(R/W)

**LP\_SPI\_USR\_MOSI** Configures whether or not to enable the write-data (DOUT) state of an operation.

0: Disable

1: Enable

(R/W)

**LP\_SPI\_USR\_MISO** Configures whether or not to enable the read-data (DIN) state of an operation.

0: Disable

1: Enable

(R/W)

**LP\_SPI\_USR\_DUMMY** Configures whether or not to enable the DUMMY state of an operation.

0: Disable

1: Enable

(R/W)

**LP\_SPI\_USR\_ADDR** Configures whether or not to enable the address (ADDR) state of an operation.

0: Disable

1: Enable

(R/W)

**LP\_SPI\_USR\_COMMAND** Configures whether or not to enable the command (CMD) state of an operation.

0: Disable

1: Enable

(R/W)

### Register 38.80. LP\_SPI\_USER1\_REG (0x0014)

|                        |  |  |  |  |  |  |  |                     |  |  |  |  |  |  |  |                      |  |  |  |  |  |  |  |                             |  |  |  |  |  |  |  |            |  |  |  |  |  |  |  |                           |  |  |  |  |  |  |  |

**LP\_SPI\_USR\_DUMMY\_CYCLELEN** Configures the length of DUMMY state.

Measurement unit: SPI\_CLK clock cycles.

This value is (the expected cycle number - 1). (R/W)

**LP\_SPI\_MST\_WFULL\_ERR\_END\_EN** Configures whether or not to end the LP-SPI transfer when SPI RX AFIFO wfull error occurs in master full-/half-duplex transfers.

0: Not end

1: End

(R/W)

**LP\_SPI\_CS\_SETUP\_TIME** Configures the length of prepare (PREP) state.

Measurement unit: SPI\_CLK clock cycles.

This value is equal to the expected cycles - 1. This field is used together with LP\_SPI\_CS\_SETUP.  
(R/W)

**LP\_SPI\_CS\_HOLD\_TIME** Configures the delay cycles of CS pin.

Measurement unit: SPI\_CLK clock cycles.

This field is used together with LP\_SPI\_CS\_HOLD. (R/W)

**LP\_SPI\_USR\_ADDR\_BITLEN** Configures the bit length in address state.

This value is (expected bit number - 1). (R/W)

Register 38.81. LP\_SPI\_USER2\_REG (0x0018)

- LP\_SPI\_USR\_COMMAND\_VALUE

Configures the command value. (R/W)
- LP\_SPI\_MST\_EMPTY\_ERR\_END\_EN

Configures whether or not to end the LP-SPI transfer when SPI TX AFIFO read empty error occurs in master full-/half-duplex transfers.

0: Not end

1: End

(R/W)
- LP\_SPI\_USR\_COMMAND\_BITLEN

Configures the bit length of command state.

This value is (expected bit number - 1).

(R/W)

Register 38.82. LP\_SPI\_CTRL\_REG (0x0008)

|            |    |    |    |    |  |    |    |    |   |            |   |   |   |   |                              |   |   |   |   |            |   |   |   |   |                                |   |   |   |   |       |

**LP\_SPI\_DUMMY\_OUT** Configures whether or not to output the LP\_SPI bus signals in DUMMY state.

0: Not output

1: Output

(R/W)

**LP\_SPI\_Q\_POL** Configures MISO line polarity.

0: Low

1: High

(R/W)

**LP\_SPI\_D\_POL** Configures MOSI line polarity.

0: Low

1: High

(R/W)

**LP\_SPI\_RD\_BIT\_ORDER** Configures the bit order in read-data (MISO) state.

0: MSB first

1: LSB first

(R/W)

**LP\_SPI\_WR\_BIT\_ORDER** Configures the bit order in command (CMD), address (ADDR), and write-data (MOSI) states.

0: MSB first

1: LSB first

(R/W)

Register 38.83. LP\_SPI\_MS\_DLEN\_REG (0x001C)

**LP\_SPI\_MS\_DATA\_BITLEN** Configures the data bit length of SPI transfer in CPU-controlled master transfer.  
This value shall be (expected bit\_num - 1).  
(R/W)

Register 38.84. LP\_SPI\_MISC\_REG (0x0020)

|            |    |    |    |                       |   |   |   |                     |    |    |   |            |   |   |   |                     |   |   |   |            |   |   |   |                      |   |   |   |               |   |   |   |            |  |  |  |                |  |  |  |

**LP\_SPI\_CS0\_DIS** Configures whether or not to disable SPI\_CS0 pin.

0: SPI\_CS0 signal is from/to SPI\_CS0 pin.

1: Disable SPI\_CS0 pin.

(R/W)

**LP\_SPI\_CLK\_DIS** Configures whether or not to disable SPI\_CLK output.

0: Enable

1: Disable

(R/W)

**LP\_SPI\_MASTER\_CS\_POL** Configures the polarity of SPI\_CS0 line in master transfer.

0: SPI\_CS0 is low active.

1: SPI\_CS0 is high active.

(R/W)

**LP\_SPI\_SLAVE\_CS\_POL** Configures whether or not invert SPI slave input CS polarity.

0: Not change

1: Invert

(R/W)

**LP\_SPI\_CLK\_IDLE\_EDGE** Configures the level of SPI\_CLK line when LP-SPI is in idle.

0: Low

1: High

(R/W)

**LP\_SPI\_CS\_KEEP\_ACTIVE** Configures whether or not to keep the SPI\_CS line low.

0: Not keep low

1: Keep low

(R/W)

### Register 38.86. LP\_SPI\_SLEEP\_CONFO\_REG (0x0044)

Register map for LP\_SPI\_SIV\_WK\_CHAR0:

- Bit 31: (reserved)
- Bits 15-11: LP\_SPI\_SLEEP\_DIS\_RXFIFO\_WR\_EN
- Bits 14-10: LP\_SPI\_SLEEP\_EN
- Bits 9-7: LP\_SPI\_SIV\_WK\_MODE\_SEL
- Bits 6-4: LP\_SPI\_SIV\_WK\_CHAR\_MASK
- Bits 3-1: LP\_SPI\_SIV\_WK\_CHAR\_NUM
- Bit 0: LP\_SPI\_SIV\_WK\_CHAR0

Reset state values: 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0x0, 0x0, 0xa

LP\_SPI\_SLV\_WK\_CHAR0 Configures wake-up character 0.  
(R/W)

**LP\_SPI\_SLV\_WK\_CHAR\_NUM** Configures the amount of the enabled wake-up characters.  
(R/W)

**LP\_SPI\_SLV\_WK\_CHAR\_MASK** Configures the bit map for the characters to be masked.  
 Bit 0 ~ bit 4 correspond to wake-up character 0 ~ character 4, respectively.  
 If the bit value is:

- 0: The corresponding wake-up character is not masked.
- 1: The corresponding wake-up character is masked.

(R/W)

**LP\_SPI\_SLV\_WK\_MODE\_SEL** Configures the wake-up mode.

- 0: Wakes up the chip once the LP-SPI slave detects a start bit.
- 1: Wakes up the chip once the LP-SPI slave detects a specific sequence of characters.

(R/W)

**LP\_SPI\_SLEEP\_EN** Configures whether or not to enable sleep mode.  
0: Not enable  
1: Enable  
(R/W)

**LP\_SPI\_SLEEP\_DIS\_RXFIFO\_WR\_EN** Configures whether or not to store the data before wake-up.

- 0: Store the data
- 1: Not store the data

(R/W)

**LP\_SPI\_SLEEP\_WK\_DATA\_SEL** Configures in which states to detect the wake-up characters.

- 0: Only detect wake-up characters from RX data in DATA state.
- 1: Detect wake-up characters from RX data in all states.

(R/W)

Register 38.87. LP\_SPI\_SLEEP\_CONF1\_REG (0x0048)

**LP\_SPI\_SLV\_WK\_CHAR1**   Configures wake-up character 1.  
(R/W)

**LP\_SPI\_SLV\_WK\_CHAR2**   Configures wake-up character 2.  
(R/W)

**LP\_SPI\_SLV\_WK\_CHAR3**   Configures wake-up character 3.  
(R/W)

**LP\_SPI\_SLV\_WK\_CHAR4**   Configures wake-up character 4.  
(R/W)

**Register 38.88. LP\_SPI\_SLAVE\_REG (0x00E0)**

|            |    |    |    |  |   |   |   |   |   |   |   |            |    |    |   |  |   |   |   |            |   |   |       |   |  |  |  |

**LP\_SPI\_CLK\_MODE** Configures LP-SPI clock mode.

- 0: LP-SPI clock is off when CS becomes inactive.
- 1: LP-SPI clock is delayed one cycle after CS becomes inactive.
- 2: LP-SPI clock is delayed two cycles after CS becomes inactive.
- 3: LP-SPI clock is always on.

(R/W)

**LP\_SPI\_CLK\_MODE\_13** Configures clock mode.

- 0: SPI clock mode 1 and mode 3. See Table [38.7-2](#).
- 1: SPI clock mode 0 and mode 2. See Table [38.7-2](#).

(R/W)

**LP\_SPI\_RSCK\_DATA\_OUT** Configures the edge of output data.

- 0: Output data at TSCK rising edge.
- 1: Output data at RSCK rising edge.

(R/W)

**LP\_SPI\_SLV\_RDBUFF\_BITLEN\_EN** Configures whether or not to use SPI\_SLV\_DATA\_BITLEN to store the data bit length of Rd\_BUF transfer.

- 0: Not use
- 1: Use

(R/W)

**LP\_SPI\_SLV\_WRBUFF\_BITLEN\_EN** Configures whether or not to use SPI\_SLV\_DATA\_BITLEN to store the data bit length of Wr\_BUF transfer.

- 0: Not use
- 1: Use

(R/W)

**LP\_SPI\_SLAVE\_MODE** Configures SPI work mode.

- 0: Master
- 1: Slave

(R/W)

**LP\_SPI\_SOFT\_RESET** Configures whether to reset the SPI clock line, CS line, and data line via software.

- 0: Not reset
- 1: Reset

(WT)

Register 38.89. LP\_SPI\_SLAVE1\_REG (0x00E4)

|                         |    |    |    |    |   |  |  |  |  |

| Reset                   |    |    |    |    |   |  |  |  |  |

**LP\_SPI\_SLV\_DATA\_BITLEN** Configures the transferred data bit length in SPI slave full-/half-duplex modes.  
(R/W/SS)

**LP\_SPI\_SLV\_LAST\_COMMAND** Configures the command value in slave mode.  
(R/W/SS)

**LP\_SPI\_SLV\_LAST\_ADDR** Configures the address value in slave mode.  
(R/W/SS)

Reset

**LP\_SPI\_CLKCNT\_L** Configures clock duty cycles, together with LP\_SPI\_CLKCNT\_H and LP\_SPI\_CLKCNT\_N.

In master transfer, this field must be equal to LP\_SPI\_CLKCNT\_N.

In slave mode, it must be 0.

(R/W)

**LP\_SPI\_CLKCNT\_H** Configures the duty cycle of LP\_SPI\_CLK (high level) in master transfer.

It's recommended to configure this value to  $\text{floor}((\text{LP\_SPI\_CLKCNT\_N} + 1)/2 - 1)$ . `floor()` here is to round a number down, e.g.,  $\text{floor}(2.2) = 2$ .

In slave mode, it must be 0.

(R/W)

**LP\_SPI\_CLKCNT\_N** Configures the divider of LP\_SPI\_CLK in master transfer.

LP\_SPI\_CLK frequency is  $f_{lp\_spi\_clk}/(LP\_SPI\_CLKDIV\_PRE + 1)/(LP\_SPI\_CLKCNT\_N + 1)$ .

(R/W)

**LP\_SPI\_CLKDIV\_PRE** Configures the pre-divider of LP\_SPI\_CLK in master transfer.

(R/W)

**LP\_SPI\_CLK\_EQU\_SYSCLK** Configures whether or not the LP\_SPI\_CLK is equal to lp\_spi\_pclk in master transfer.

0: LP\_SPI\_CLK is divided from lp\_spi\_pclk.

1: LP\_SPI\_CLK is equal to lp\_spi\_pclk.

(R/W)

**LP\_SPI\_DINO\_MODE** Configures the input mode for LP\_SPI\_D signal.

0: Input without delay

1: Input at the (LP\_SPI\_DINO\_NUM + 1)th falling edge of clk\_spi\_mst

2: Input at the (LP\_SPI\_DINO\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst rising edge cycle

3: Input at the (LP\_SPI\_DINO\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst falling edge cycle

(R/W)

**LP\_SPI\_DIN1\_MODE** Configures the input mode for LP\_SPI\_Q signal.

0: Input without delay

1: Input at the (LP\_SPI\_DIN1\_NUM+1)th falling edge of clk\_spi\_mst

2: Input at the (LP\_SPI\_DIN1\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst rising edge cycle

3: Input at the (LP\_SPI\_DIN1\_NUM + 1)th rising edge of clk\_hclk plus one clk\_spi\_mst falling edge cycle

(R/W)

**LP\_SPI\_TIMING\_HCLK\_ACTIVE** Configures whether or not to enable HCLK (high-frequency clock) in LP-SPI input timing module.

0: Disable

1: Enable

(R/W)

**LP\_SPI\_DINO\_NUM** Configures the delays to input signal LP\_SPI\_D based on the setting of LP\_SPI\_DINO\_MODE.

- 0: Delayed by 1 clock cycle
  - 1: Delayed by 2 clock cycles
  - 2: Delayed by 3 clock cycles
  - 3: Delayed by 4 clock cycles
- (R/W)

**LP\_SPI\_DIN1\_NUM** Configures the delays to input signal LP\_SPI\_Q based on the setting of LP\_SPI\_DIN1\_MODE.

- 0: Delayed by 1 clock cycle
  - 1: Delayed by 2 clock cycles
  - 2: Delayed by 3 clock cycles
  - 3: Delayed by 4 clock cycles
- (R/W)

**LP\_SPI\_DOUT0\_MODE** Configures the output mode for LP\_SPI\_D signal.

- 0: Output without delay
  - 1: Output with a delay of an LP-SPI module clock cycle at its falling edge
- (R/W)

**LP\_SPI\_DOUT1\_MODE** Configures the output mode for LP\_SPI\_Q signal.

- 0: Output without delay
  - 1: Output with a delay of an LP-SPI module clock cycle at its falling edge
- (R/W)

**LP\_SPI\_SLV\_RD\_BUF\_DONE\_INT\_CLR** Write 1 to clear SPI\_SLV\_RD\_BUF\_DONE\_INT interrupt.  
(WT)

**LP\_SPI\_SLV\_WR\_BUF\_DONE\_INT\_CLR** Write 1 to clear SPI\_SLV\_WR\_BUF\_DONE\_INT interrupt.  
(WT)

**LP\_SPI\_TRANS\_DONE\_INT\_CLR** Write 1 to clear SPI\_TRANS\_DONE\_INT interrupt.  
(WT)

**LP\_SPI\_WAKEUP\_INT\_CLR** Write 1 to clear LP\_SPI\_WAKEUP\_INT interrupt.  
(WT)

**LP\_SPI\_SLV\_BUF\_ADDR\_ERR\_INT\_CLR** Write 1 to clear SPI\_SLV\_BUF\_ADDR\_ERR\_INT interrupt.  
(WT)

**LP\_SPI\_SLV\_CMD\_ERR\_INT\_CLR** Write 1 to clear SPI\_SLV\_CMD\_ERR\_INT interrupt.  
(WT)

**LP\_SPI\_MST\_RX\_AFIFO\_WFULL\_ERR\_INT\_CLR** Write 1 to clear SPI\_MST\_RX\_AFIFO\_WFULL\_ERR\_INT interrupt.  
(WT)

**LP\_SPI\_MST\_TX\_AFIFO\_EMPTY\_ERR\_INT\_CLR** Write 1 to clear SPI\_MST\_TX\_AFIFO\_EMPTY\_ERR\_INT interrupt.  
(WT)

**LP\_SPI\_APP2\_INT\_CLR** Write 1 to clear SPI\_APP2\_INT interrupt.  
(WT)

**LP\_SPI\_APP1\_INT\_CLR** Write 1 to clear SPI\_APP1\_INT interrupt.  
(WT)

Register 38.97. LP\_SPI\_DMA\_INT\_RAW\_REG (0x003C)

**LP\_SPI\_SLV\_RD\_BUF\_DONE\_INT\_RAW** The raw interrupt status of SPI\_SLV\_RD\_BUF\_DONE\_INT interrupt.  
(R/WTC/SS)

**LP\_SPI\_SLV\_WR\_BUF\_DONE\_INT\_RAW** The raw interrupt status of SPI\_SLV\_WR\_BUF\_DONE\_INT interrupt.  
(R/WTC/SS)

**LP\_SPI\_TRANS\_DONE\_INT\_RAW** The raw interrupt status of SPI\_TRANS\_DONE\_INT interrupt.  
(R/WTC/SS)

**LP\_SPI\_WAKEUP\_INT\_RAW** The raw interrupt status of LP\_SPI\_LP\_SPI\_WAKEUP\_INT interrupt.  
(R/WTC/SS)

**LP\_SPI\_SLV\_BUF\_ADDR\_ERR\_INT\_RAW** The raw interrupt status of SPI\_SLV\_BUF\_ADDR\_ERR\_INT interrupt.  
(R/WTC/SS)

**LP\_SPI\_SLV\_CMD\_ERR\_INT\_RAW** The raw interrupt status of SPI\_SLV\_CMD\_ERR\_INT interrupt.  
(R/WTC/SS)

**LP\_SPI\_MST\_RX\_AFIFO\_WFULL\_ERR\_INT\_RAW** The raw interrupt status of SPI\_MST\_RX\_AFIFO\_WFULL\_ERR\_INT interrupt.  
(R/WTC/SS)

**LP\_SPI\_MST\_TX\_AFIFO\_EMPTY\_ERR\_INT\_RAW** The raw interrupt status of SPI\_MST\_TX\_AFIFO\_EMPTY\_ERR\_INT interrupt.  
(R/WTC/SS)

**LP\_SPI\_APP2\_INT\_RAW** The raw interrupt status of SPI\_APP2\_INT interrupt.  
The value is only controlled by the application.  
(R/WTC/SS)

**LP\_SPI\_APP1\_INT\_RAW** The raw interrupt status of SPI\_APP1\_INT interrupt.  
The value is only controlled by the application.  
(R/WTC/SS)

**LP\_SPI\_SLV\_RD\_BUF\_DONE\_INT\_ST** The interrupt status of SPI\_SLV\_RD\_BUF\_DONE\_INT interrupt.  
(RO)

**LP\_SPI\_SLV\_WR\_BUF\_DONE\_INT\_ST** The interrupt status of SPI\_SLV\_WR\_BUF\_DONE\_INT interrupt.  
(RO)

**LP\_SPI\_TRANS\_DONE\_INT\_ST** The interrupt status of SPI\_TRANS\_DONE\_INT interrupt.  
(RO)

**LP\_SPI\_WAKEUP\_INT\_ST** The interrupt status bit of LP\_SPI\_WAKEUP\_INT interrupt.  
(RO)

**LP\_SPI\_SLV\_BUF\_ADDR\_ERR\_INT\_ST** The interrupt status bit of SPI\_SLV\_BUF\_ADDR\_ERR\_INT interrupt.  
(RO)

**LP\_SPI\_SLV\_CMD\_ERR\_INT\_ST** The interrupt status of SPI\_SLV\_CMD\_ERR\_INT interrupt.  
(RO)

**LP\_SPI\_MST\_RX\_AFIFO\_WFULL\_ERR\_INT\_ST** The interrupt status of SPI\_MST\_RX\_AFIFO\_WFULL\_ERR\_INT interrupt.  
(RO)

**LP\_SPI\_MST\_TX\_AFIFO\_EMPTY\_ERR\_INT\_ST** The interrupt status of SPI\_MST\_TX\_AFIFO\_EMPTY\_ERR\_INT interrupt.  
(RO)

**LP\_SPI\_APP2\_INT\_ST** The interrupt status of SPI\_APP2\_INT interrupt.  
(RO)

**LP\_SPI\_APP1\_INT\_ST** The interrupt status of SPI\_APP1\_INT interrupt.  
(RO)

Register 38.99. LP\_SPI\_DMA\_INT\_SET\_REG (0x004C)

## Chapter 39

### I2C Controller (I2C)

The I2C (Inter-Integrated Circuit) bus allows ESP32-P4 to communicate with multiple external devices. These external devices can share one I2C bus. ESP32-P4 has three I2C controllers: two in the main system and one in the low-power system. The two I2C controllers in the main system can act as a master or a slave (referred to as I2C below), while the one in the low-power system can only act as a master (referred to as LP\_I2C below), which can still work when the main system sleeps.

#### 39.1 Overview

The I2C bus has two lines, namely a serial data line (SDA) and a serial clock line (SCL). Both SDA and SCL lines are open-drain. The I2C bus can be connected to a single or multiple master devices and a single or multiple slave devices. However, only one master device can access a slave at a time via the bus.

The master initiates communication by generating a START condition: pulling the SDA line low while SCL is high. Then it issues nine clock pulses via SCL. The first eight pulses are used to transmit a 7-bit address followed by a read/write ( $R/\overline{W}$ ) bit. If the address of an I2C slave matches the 7-bit address transmitted, this matching slave can respond by pulling SDA low on the ninth clock pulse. The master and the slave can send or receive data according to the  $R/\overline{W}$  bit. Whether to terminate the data transfer or not is determined by the logic level of the acknowledge (ACK) bit. During data transfer, SDA changes only when SCL is low. Once the communication has finished, the master sends a STOP condition: pulling SDA up while SCL is high. If a master both reads and writes data in one transfer, then it should send a RSTART condition, a slave address, and a  $R/\overline{W}$  bit before changing its operation. The RSTART condition is used to change the transfer direction and the mode of the devices (master mode or slave mode).

#### 39.2 Features

The I2C controller of ESP32-P4 has the following features:

- Master mode and slave mode
- Communication between multiple masters and slaves
- Standard mode (100 Kbit/s)
- Fast mode (400 Kbit/s)
- 7-bit addressing and 10-bit addressing
- Continuous data transfer achieved by pulling SCL low in slave mode
- Programmable digital noise filtering
- Dual address mode, which uses slave address and slave memory or register address

## 39.3 I2C Architecture

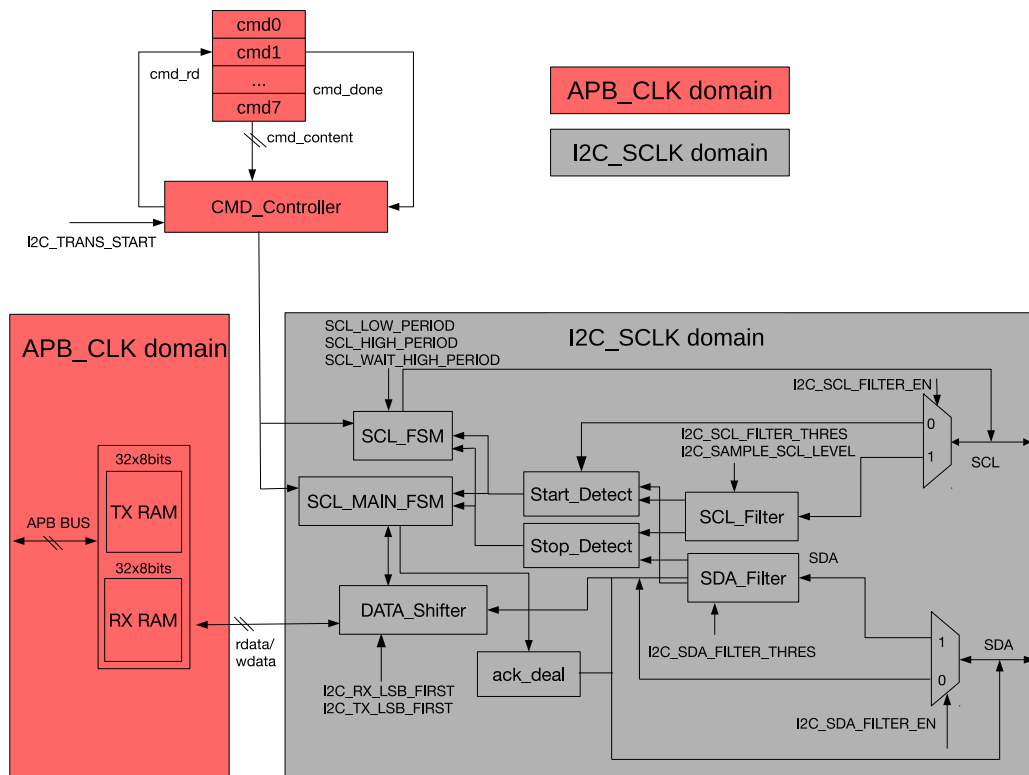

Figure 39.3-1. I2C Master Architecture

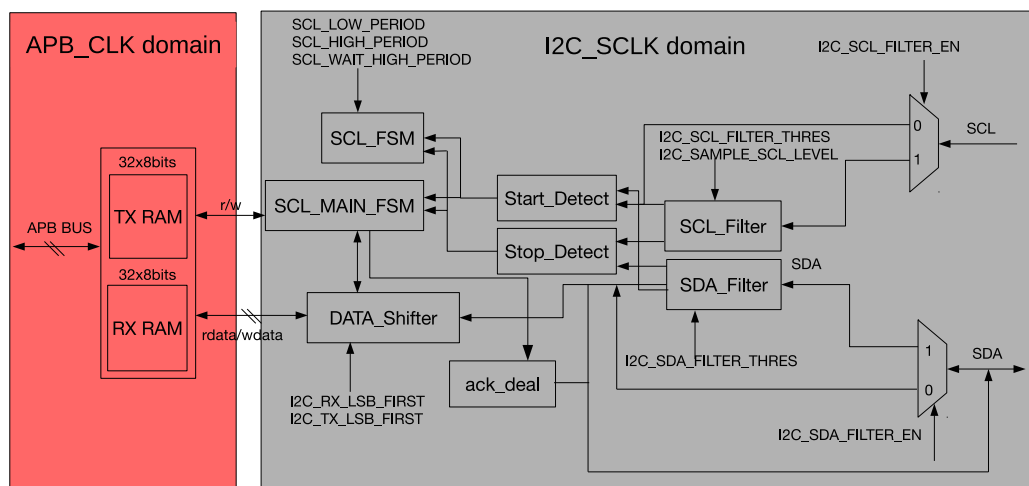

Figure 39.3-2. I2C Slave Architecture

The I2C controller runs either in master mode or slave mode, which is determined by `I2C_MS_MODE`. Figure 39.3-1 shows the architecture of a master, while Figure 39.3-2 shows that of a slave. The I2C controller has the following main parts:

- Transmit and receive memory (TX/RX RAM): store data to be transmitted and data received respectively.
- Command controller (CMD\_Controller): generate (R)START, STOP, WRITE, READ, and END commands

- SCL clock controller (SCL\_FSM): generate the timing sequence conforming to the I2C protocol. Figure 39.3-3 and Table 39.3-1 are the timing diagram and corresponding parameters of the I2C protocol.
- SDA data controller (SCL\_MAIN\_FSM): control the execution of I2C commands and the data sequence of the SDA line. It also controls the ACK\_deal module to generate the ACK bit and detect the level of the ACK bit on the SDA line.
- Serial/parallel data converter (DATA\_Shifter): shift data between serial and parallel form
- Filter for SCL (SCL\_Filter): remove noises on SCL input signals
- Filter for SDA (SDA\_Filter): remove noises on SDA input signals
- ACK bit controller (ack\_deal): generate the ACK bit and detect the level of the ACK bit on the SDA line under the control of SCL\_MAIN\_FSM.

Besides, the I2C controller also has a clock module that generates I2C clocks, and a synchronization module that synchronizes the APB bus and the I2C controller.

The clock module is used to select clock sources, turn on and off clocks, and divide clocks. The synchronization module synchronizes signal transfer between different clock domains.

Table 39.3-1. I2C Timing Parameters (Cited from Table 5 in [The I2C-bus specification](#) Version 2.1)

## 39.4 Functional Description

As mentioned above, one or more masters and one or more slaves can be connected on the I2C bus. The following sections describe the operations of the ESP32-P4 I2C controllers. Note that operations may differ between the I2C controllers in ESP32-P4 and other masters or slaves on the bus. Please refer to datasheets of individual I2C devices for specific information.

### 39.4.1 Clock Configuration

Registers, TX RAM, and RX RAM are configured and accessed in the APB\_CLK clock domain. The main logic of the I2C controller, including SCL\_FSM, SCL\_MAIN\_FSM, SCL\_FILTER, SDA\_FILTER, and DATA\_SHIFTER, are in the I2C\_SCLK clock domain.

You can configure the clock source for I2C\_SCLK of I2C0 in the main system (HP) to FOSC\_20M\_CLK or XTAL\_40M\_CLK via [HP\\_SYS\\_CLKRST\\_I2C0\\_CLK\\_SRC\\_SEL](#) and configure that of I2C1 in the main system via [HP\\_SYS\\_CLKRST\\_I2C1\\_CLK\\_SRC\\_SEL](#). For the clock source for I2C\_SCLK of LP\_I2C in the low-power system (LP), you can configure it to XTAL\_D2\_CLK, LP\_DYN\_FAST\_CLK, or PLL\_LP\_CLK 8 MHz via [LPPERI\\_LP\\_I2C\\_CLK\\_SEL](#).

The steps to configure the clock source for HP I2C0 are as follows:

- Enable the clock source for I2C\_SCLK of I2C0 by configuring [HP\\_SYS\\_CLKRST\\_I2C0\\_CLK\\_EN](#) to 1.
- When [HP\\_SYS\\_CLKRST\\_I2C0\\_SRC\\_SEL](#) is 0, the clock source is XTAL\_40M\_CLK.
- When [HP\\_SYS\\_CLKRST\\_I2C0\\_SRC\\_SEL](#) is 1, the clock source is FOSC\_20M\_CLK.

The steps to configure the clock source for HP I2C1 are as follows:

- Enable the clock source for I2C\_SCLK of I2C1 by configuring [HP\\_SYS\\_CLKRST\\_I2C1\\_CLK\\_EN](#) to 1.

- When `HP_SYS_CLKRST_I2C1_SRC_SEL` is 0, the clock source is `XTAL_40M_CLK`.
- When `HP_SYS_CLKRST_I2C1_SRC_SEL` is 1, the clock source is `FOSC_20M_CLK`.

The steps to configure the clock source for LP\_I2C are as follows:

- Enable the clock source for I2C\_SCLK of LP\_I2C by configuring `LPPERI_CK_EN_LP_I2C` to 1.
- When `LPPERI_LP_I2C_CLK_SEL` is 0, the clock source is `LP_DYN_FAST_CLK`.
- When `LPPERI_LP_I2C_CLK_SEL` is 1, the clock source is `XTAL_D2_CLK`.
- When `LPPERI_LP_I2C_CLK_SEL` is 2, the clock source is `PLL_LP_CLK` 8 MHz.

The clock source then passes through a fractional divider to generate I2C\_SCLK according to the following equation:

$$I2C\_SCLK\_DIV\_NUM + 1 + \frac{I2C\_SCLK\_DIV\_A}{I2C\_SCLK\_DIV\_B}$$

In the equation, `I2C_SCLK_DIV_NUM` represents the integer part of the divisor, `I2C_SCLK_DIV_A` represents the numerator of the fractional part of the divisor, and `I2C_SCLK_DIV_B` represents the denominator of the fractional part of the divisor. Limited by timing parameters, the derived clock I2C\_SCLK should operate at a frequency 20 times larger than SCL's frequency.

For I2C0:

- Configure `I2C_SCLK_DIV_NUM` via `HP_SYS_CLKRST_I2C0_CLK_DIV_NUM`.
- Configure `I2C_SCLK_DIV_A` via `HP_SYS_CLKRST_I2C0_CLK_DIV_NUMERATOR`.
- Configure `I2C_SCLK_DIV_B` via `HP_SYS_CLKRST_I2C0_CLK_DIV_DENOMINATOR`.

For I2C1:

- Configure `I2C_SCLK_DIV_NUM` via `HP_SYS_CLKRST_I2C1_CLK_DIV_NUM`.
- Configure `I2C_SCLK_DIV_A` via `HP_SYS_CLKRST_I2C1_CLK_DIV_NUMERATOR`.
- Configure `I2C_SCLK_DIV_B` via `HP_SYS_CLKRST_I2C1_CLK_DIV_DENOMINATOR`.

### 39.4.2 SCL and SDA Noise Filtering

`SCL_Filter` and `SDA_Filter` modules are identical and are used to filter signal noise on SCL and SDA, respectively. These filters can be enabled or disabled by configuring `I2C_SCL_FILTER_EN` and `I2C_SDA_FILTER_EN`.

Take `SCL_Filter` as an example. When enabled, `SCL_Filter` samples input signals on the SCL line continuously. These input signals are valid only if they remain unchanged for consecutive `I2C_SCL_FILTER_THRES` `I2C_SCLK` clock cycles. Given that only valid input signals can pass through the filter, `SCL_Filter` can remove glitches whose pulse width is shorter than `I2C_SCL_FILTER_THRES` `I2C_SCLK` clock cycles, while `SDA_Filter` can remove glitches whose pulse width is shorter than `I2C_SDA_FILTER_THRES` `I2C_SCLK` clock cycles.

### 39.4.3 SCL Clock Stretching

The I2C controller in slave mode (i.e., slave) can realize the function called clock stretching by holding the SCL line low to suspend data transmission in exchange for more time to process data. This function is enabled

by setting the [I2C\\_SLAVE\\_SCL\\_STRETCH\\_EN](#) bit. The time period to release the SCL line from stretching is configured by setting the [I2C\\_STRETCH\\_PROTECT\\_NUM](#) field, in order to avoid timing sequence errors. The slave can choose to achieve clock stretching by holding the SCL line low when one of the following four events occurs:

1. Address match: The address of the slave matches the address sent by the master via the SDA line, and the  $R/\overline{W}$  bit is 1.
2. RAM being full: RX RAM of the slave is full. Note that when the slave receives less than the FIFO depth, which is 32 bytes in ESP32-P4 I2C, it is not necessary to enable clock stretching; when the slave receives FIFO depth bytes or more, you may interrupt data transmission to wrapped around RAM via the FIFO threshold, or enable clock stretching for more time to process data. When clock stretching is enabled, [I2C\\_RX\\_FULL\\_ACK\\_LEVEL](#) must be cleared, otherwise there will be unpredictable consequences.
3. RAM being empty: The slave is sending data, but its TX RAM is empty.
4. Sending an ACK: If [I2C\\_SLAVE\\_BYTE\\_ACK\\_CTL\\_EN](#) is set, the slave pulls SCL low when sending an ACK bit. At this stage, software validates data and configures [I2C\\_SLAVE\\_BYTE\\_ACK\\_LVL](#) to control the level of the ACK bit. Note that when RX RAM of the slave is full, the level of the ACK bit to be sent is determined by [I2C\\_RX\\_FULL\\_ACK\\_LEVEL](#), instead of [I2C\\_SLAVE\\_BYTE\\_ACK\\_LVL](#). In this case, [I2C\\_RX\\_FULL\\_ACK\\_LEVEL](#) should also be cleared to ensure proper functioning of clock stretching.

When clock stretching occurs, the cause of stretching can be read from the [I2C\\_STRETCH\\_CAUSE](#) bit. Clock stretching can be disabled by setting the [I2C\\_SLAVE\\_SCL\\_STRETCH\\_CLR](#) bit.

### 39.4.4 Generating SCL Pulses in Idle State

Usually, when the I2C bus is idle, the SCL line is held high. The I2C controller in ESP32-P4 can be programmed to generate SCL pulses in an idle state. This function only works when the I2C controller is configured as master. If the [I2C\\_SCL\\_RST\\_SLV\\_EN](#) bit is set, hardware will send [I2C\\_SCL\\_RST\\_SLV\\_NUM](#) SCL pulses, and then automatically clear the [I2C\\_SCL\\_RST\\_SLV\\_EN](#) bit.

### 39.4.5 Synchronization

I2C registers are configured in the APB\_CLK domain, whereas the I2C controller is configured in the asynchronous I2C\_SCLK domain. Therefore, before being used by the I2C controller, register values should be synchronized by first writing configuration registers and then writing 1 to [I2C\\_CONF\\_UPGATE](#). Registers that need synchronization are listed in Table [39.4-1](#).

Table 39.4-1. I2C Synchronous Registers

| Register                     | Field                      | Address |
|------------------------------|----------------------------|---------|
| I2C_CTR_REG                  | I2C_SLV_TX_AUTO_START_EN   | 0x0004  |
|                              | I2C_ADDR_10BIT_RW_CHECK_EN |         |
|                              | I2C_ADDR_BROADCASTING_EN   |         |
|                              | I2C_SDA_FORCE_OUT          |         |
|                              | I2C_SCL_FORCE_OUT          |         |
|                              | I2C_SAMPLE_SCL_LEVEL       |         |
|                              | I2C_RX_FULL_ACK_LEVEL      |         |
|                              | I2C_MS_MODE                |         |
|                              | I2C_TX_LSB_FIRST           |         |
|                              | I2C_RX_LSB_FIRST           |         |
|                              | I2C_ARBITRATION_EN         |         |
| I2C_TO_REG                   | I2C_TIME_OUT_EN            | 0x000C  |
|                              | I2C_TIME_OUT_VALUE         |         |
| I2C_SLAVE_ADDR_REG           | I2C_ADDR_10BIT_EN          | 0x0010  |
|                              | I2C_SLAVE_ADDR             |         |
| I2C_FIFO_CONF_REG            | I2C_FIFO_ADDR_CFG_EN       | 0x0018  |
| I2C_SCL_SP_CONF_REG          | I2C_SDA_PD_EN              | 0x0080  |
|                              | I2C_SCL_PD_EN              |         |
|                              | I2C_SCL_RST_SLV_NUM        |         |
|                              | I2C_SCL_RST_SLV_EN         |         |
| I2C_SCL_STRETCH_CONF_REG     | I2C_SLAVE_BYTE_ACK_CTL_EN  | 0x0084  |
|                              | I2C_SLAVE_BYTE_ACK_LVL     |         |
|                              | I2C_SLAVE_SCL_STRETCH_EN   |         |
|                              | I2C_STRETCH_PROTECT_NUM    |         |
| I2C_SCL_LOW_PERIOD_REG       | I2C_SCL_LOW_PERIOD         | 0x0000  |
| I2C_SCL_HIGH_PERIOD_REG      | I2C_WAIT_HIGH_PERIOD       | 0x0038  |
|                              | I2C_HIGH_PERIOD            |         |
| I2C_SDA_HOLD_REG             | I2C_SDA_HOLD_TIME          | 0x0030  |
| I2C_SDA_SAMPLE_REG           | I2C_SDA_SAMPLE_TIME        | 0x0034  |
| I2C_SCL_START_HOLD_REG       | I2C_SCL_START_HOLD_TIME    | 0x0040  |
| I2C_SCL_RSTART_SETUP_REG     | I2C_SCL_RSTART_SETUP_TIME  | 0x0044  |
| I2C_SCL_STOP_HOLD_REG        | I2C_SCL_STOP_HOLD_TIME     | 0x0048  |
| I2C_SCL_STOP_SETUP_REG       | I2C_SCL_STOP_SETUP_TIME    | 0x004C  |
| I2C_SCL_ST_TIME_OUT_REG      | I2C_SCL_ST_TO_I2C          | 0x0078  |
| I2C_SCL_MAIN_ST_TIME_OUT_REG | I2C_SCL_MAIN_ST_TO_I2C     | 0x007C  |
| I2C_FILTER_CFG_REG           | I2C_SCL_FILTER_EN          | 0x0050  |
|                              | I2C_SCL_FILTER_THRES       |         |
|                              | I2C_SDA_FILTER_EN          |         |
|                              | I2C_SDA_FILTER_THRES       |         |

### 39.4.6 Open-Drain Output

SCL and SDA output drivers must be configured as open-drain. There are two ways to achieve this:

1. Set `I2C_SCL_FORCE_OUT` and `I2C_SDA_FORCE_OUT`, and configure `GPIO_PINn_PAD_DRIVER` for corresponding SCL and SDA pads as open-drain.
2. Clear `I2C_SCL_FORCE_OUT` and `I2C_SDA_FORCE_OUT`.

Because these lines are configured as open-drain, the low-to-high transition time of each line is longer, determined together by the pull-up resistor and line capacitance. The output duty cycle of I2C is limited by the SDA and SCL line's pull-up speed, mainly SCL's speed.

In addition, when `I2C_SCL_FORCE_OUT` and `I2C_SCL_PD_EN` are set to 1, SCL can be forced low; when `I2C_SDA_FORCE_OUT` and `I2C_SDA_PD_EN` are set to 1, SDA can be forced low.

### 39.4.7 Timing Parameter Configuration

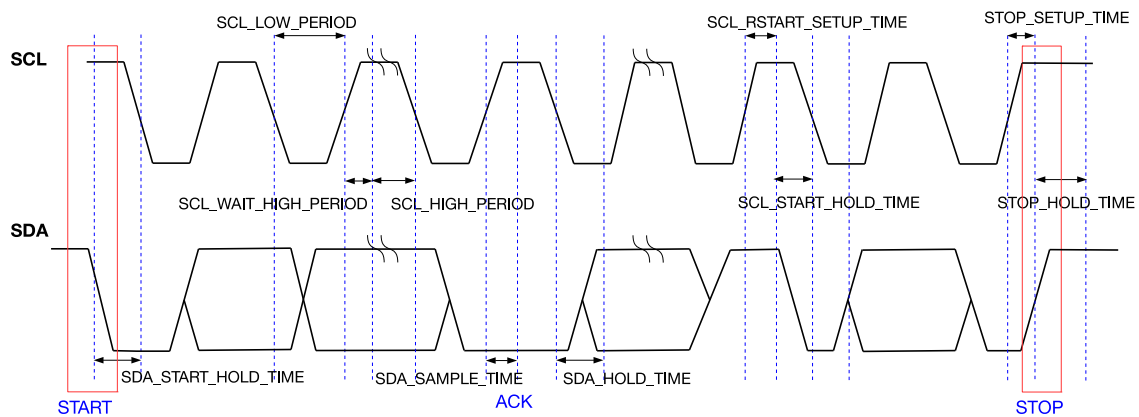

Figure 39.4-1. I2C Timing Diagram

Figure 39.4-1 shows the timing diagram of an I2C master. This figure also specifies registers used to configure the START bit, STOP bit, data hold time, data sample time, waiting time on the rising SCL edge, etc. Timing parameters are calculated as follows in `I2C_SCLK` clock cycles:

1.  $t_{LOW} = (I2C\_SCL\_LOW\_PERIOD + 1) \cdot T_{I2C\_SCLK}$
2.  $t_{HIGH} = (I2C\_SCL\_HIGH\_PERIOD + 1) \cdot T_{I2C\_SCLK}$
3.  $t_{SU:STA} = (I2C\_SCL\_RSTART\_SETUP\_TIME + 1) \cdot T_{I2C\_SCLK}$
4.  $t_{HD:STA} = (I2C\_SCL\_START\_HOLD\_TIME + 1) \cdot T_{I2C\_SCLK}$
5.  $t_r = (I2C\_SCL\_WAIT\_HIGH\_PERIOD + 1) \cdot T_{I2C\_SCLK}$
6.  $t_{SU:STO} = (I2C\_SCL\_STOP\_SETUP\_TIME + 1) \cdot T_{I2C\_SCLK}$
7.  $t_{BUF} = (I2C\_SCL\_STOP\_HOLD\_TIME + 1) \cdot T_{I2C\_SCLK}$
8.  $t_{HD:DAT} = (I2C\_SDA\_HOLD\_TIME + 1) \cdot T_{I2C\_SCLK}$
9.  $t_{SU:DAT} = (I2C\_SCL\_LOW\_PERIOD - I2C\_SDA\_HOLD\_TIME) \cdot T_{I2C\_SCLK}$

Timing registers below are divided into two groups, depending on the mode in which these registers are active:

- Master mode only:

1. **I2C\_SCL\_START\_HOLD\_TIME**: Specifies the interval between the moment SDA is pulled low and the moment SCL is pulled low when the master generates a START condition. This interval is (**I2C\_SCL\_START\_HOLD\_TIME** + 1) in I2C\_SCLK cycles. This register is active only when the I2C controller works in master mode.
2. **I2C\_SCL\_LOW\_PERIOD**: Specifies the low period of SCL. This period lasts (**I2C\_SCL\_LOW\_PERIOD** + 1) in I2C\_SCLK cycles. This register is active only when the I2C controller works in master mode.

However, this period could be extended in the following scenarios:

- SCL is pulled low by peripheral devices when I2C acts as a master.
  - SCL is pulled low by an END command executed by the I2C controller.
  - SCL is pulled low by clock stretching when I2C acts as a slave.
3. **I2C\_SCL\_WAIT\_HIGH\_PERIOD**: Specifies the time for SCL to switch from low to high in I2C\_SCLK cycles. Please make sure that SCL can be pulled high within this time period. Otherwise, the high period of SCL may be incorrect. This register is active only when the I2C controller works in master mode.
  4. **I2C\_SCL\_HIGH\_PERIOD**: Specifies the high period of SCL in I2C\_SCLK cycles. This register is active only when the I2C controller works in master mode. When SCL goes high within (**I2C\_SCL\_WAIT\_HIGH\_PERIOD** + 1) in I2C\_SCLK cycles, its frequency is:

$$f_{scl} = \frac{f_{I2C\_SCLK}}{I2C\_SCL\_LOW\_PERIOD + I2C\_SCL\_HIGH\_PERIOD + I2C\_SCL\_WAIT\_HIGH\_PERIOD + 3 + I2C\_SCL\_FILTER\_THRES}$$

where 3 represents the amount of clock cycles required to synchronize the SCL. If the SCL filtering function is turned on, the delay caused by **I2C\_SCL\_FILTER\_THRES** needs to be added. As the SCL low-to-high transition time represented by **I2C\_SCL\_WAIT\_HIGH\_PERIOD** + 1 module clock can be affected by the pull-up resistor, IO drive capability, SCL line capacitance, etc., deviation may occur between the actual frequency of the test and the theoretical frequency. At this point, deviations can be reduced by adjusting the value of **I2C\_SCL\_WAIT\_HIGH\_PERIOD**.

- Master mode and slave mode:

1. **I2C\_SDA\_SAMPLE\_TIME**: Specifies the interval between the rising edge of SCL and the level sampling time of SDA. It is advised to set a value in the middle of SCL's high period, so as to correctly sample the level of SCL. This register is active both in master mode and slave mode.
2. **I2C\_SDA\_HOLD\_TIME**: Specifies the interval between changing the SDA output level and the falling edge of SCL. This register is active both in master mode and slave mode.

Timing parameters limits corresponding register configuration.

1.  $\frac{f_{I2C\_SCLK}}{f_{SCL}} > 20$
2.  $3 \times f_{I2C\_SCLK} \leq (I2C\_SDA\_HOLD\_TIME - 4) \times f_{APB\_CLK}$
3.  $I2C\_SDA\_HOLD\_TIME + I2C\_SCL\_START\_HOLD\_TIME > SDA\_FILTER\_THRES + 3$
4.  $I2C\_SCL\_WAIT\_HIGH\_PERIOD < I2C\_SDA\_SAMPLE\_TIME < I2C\_SCL\_HIGH\_PERIOD$
5.  $I2C\_SDA\_SAMPLE\_TIME < I2C\_SCL\_WAIT\_HIGH\_PERIOD + I2C\_SCL\_START\_HOLD\_TIME + I2C\_SCL\_RSTART\_SETUP\_TIME$
6.  $I2C\_STRETCH\_PROTECT\_NUM + I2C\_SDA\_HOLD\_TIME > I2C\_SCL\_LOW\_PERIOD$

### 39.4.8 Timeout Control

The I2C controller has three types of timeout control, namely timeout control for SCL\_FSM, for SCL\_MAIN\_FSM, and for the SCL line. The first two are always enabled, while the third is configurable.

When SCL\_FSM remains unchanged for more than  $2^{I2C\_SCL\_ST\_TO\_I2C}$  clock cycles, an `I2C_SCL_ST_TO_INT` interrupt is triggered, and then SCL\_FSM goes to idle state. The value of `I2C_SCL_ST_TO_I2C` should be less than or equal to 22, which means SCL\_FSM could remain unchanged for  $2^{22}$  I2C\_SCLK clock cycles at most before the interrupt is generated.

When SCL\_MAIN\_FSM remains unchanged for more than  $2^{I2C\_SCL\_MAIN\_ST\_TO\_I2C}$  I2C\_SCLK clock cycles, an `I2C_SCL_MAIN_ST_TO_INT` interrupt is triggered, and then SCL\_MAIN\_FSM goes to idle state. The value of `I2C_SCL_MAIN_ST_TO_I2C` should be less than or equal to 22, which means SCL\_MAIN\_FSM could remain unchanged for  $2^{22}$  clock cycles at most before the interrupt is generated.

Timeout control for SCL is enabled by setting `I2C_TIME_OUT_EN`. When the level of SCL remains unchanged for more than  $2^{I2C\_TIME\_OUT\_VALUE}$  clock cycles, an `I2C_TIME_OUT_INT` interrupt is triggered, and then the I2C bus goes to idle state.

### 39.4.9 Command Configuration

When the I2C controller works in master mode, CMD\_Controller reads commands from 8 sequential command registers and controls SCL\_FSM and SCL\_MAIN\_FSM accordingly.

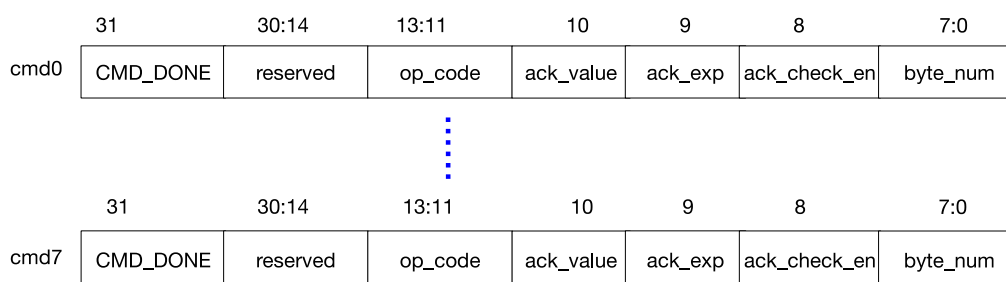

Figure 39.4-2. Structure of I2C Command Registers

Command registers, whose structure is illustrated in Figure 39.4-2, are active only when the I2C controller works in master mode. Fields of command registers are:

1. **CMD\_DONE**: Indicates that a command has been executed. After each command has been executed, the CMD\_DONE bit in the corresponding command register is set to 1 by hardware. By reading this bit, the software can tell if the command has been executed. When writing new commands, this bit must be cleared by software.
2. **op\_code**: Indicates the command. The I2C controller supports five commands:
  - **WRITE**: `op_code` = 1. The I2C controller sends a slave address, a register address (only in dual address mode), and data to the slave.
  - **STOP**: `op_code` = 2. The I2C controller sends a STOP bit defined by the I2C protocol. This code also indicates that the command sequence has been executed, and the CMD\_Controller stops reading commands. After restarted by software, the CMD\_Controller resumes reading commands from command register 0.

- READ: op\_code = 3. The I2C controller reads data from the slave.
  - END: op\_code = 4. The I2C controller pulls the SCL line down and suspends I2C communication. This code also indicates that the command sequence has been completed, and the CMD\_Controller stops executing commands. Once the software refreshes data in command registers and the RAM, the CMD\_Controller can be restarted to execute commands from command register 0 again.
  - RSTART: op\_code = 6. The I2C controller sends a START bit or a RSTART bit defined by the I2C protocol.
3. ack\_value: Used to configure the level of the ACK bit sent by the I2C controller during a read operation. This bit is ignored in RSTART, STOP, END, and WRITE conditions.
  4. ack\_exp: Used to configure the level of the ACK bit expected by the I2C controller during a write operation. This bit is ignored during RSTART, STOP, END, and READ conditions.
  5. ack\_check\_en: Used to enable the I2C controller during a write operation to check whether the ACK level sent by the slave matches ack\_exp in the command. If this bit is set and the level received does not match ack\_exp in the WRITE command, the master will generate an I2C\_NACK\_INT interrupt and a STOP condition for data transfer. If this bit is cleared, the controller will not check the ACK level sent by the slave. This bit is ignored during RSTART, STOP, END, and READ conditions.
  6. byte\_num: Specifies the length of data (in bytes) to be read or written. It can range from 1 to 255 bytes. This bit is ignored during RSTART, STOP, and END conditions.

Each command sequence is executed starting from command register 0 and terminated by a STOP or an END. Therefore, there must be a STOP or an END command in the eight command registers.

A complete data transfer on the I2C bus should be initiated by a START and terminated by a STOP. The transfer process may be completed using multiple sequences, separated by END commands. Each sequence may differ in the direction of data transfer, clock frequency, slave addresses, data length, etc. This allows efficient use of available peripheral RAM and also achieves more flexible I2C communication.

### 39.4.10 TX/RX RAM Data Storage

Both TX RAM and RX RAM are  $32 \times 8$  bits and can be accessed in FIFO or non-FIFO mode. If [I2C\\_NONFIFO\\_EN](#) bit is cleared, both RAMs are accessed in FIFO mode; if [I2C\\_NONFIFO\\_EN](#) bit is set, both RAMs are accessed in non-FIFO mode.

TX RAM stores data that the I2C controller needs to send. During communication, when the I2C controller needs to send data (except acknowledgment bits), it reads data from TX RAM and sends them sequentially via SDA. When the I2C controller works in master mode, all data must be stored in TX RAM in the order they need to be sent to slaves. The data stored in TX RAM include slave addresses, read/write bits, register addresses (only in dual address mode) and data to be sent. When the I2C controller works in slave mode, TX RAM only stores data to be sent.

TX RAM can be read and written by the CPU. The CPU writes to TX RAM either in FIFO mode or in non-FIFO mode (direct address). In FIFO mode, the CPU writes to TX RAM via the fixed address [I2C\\_DATA\\_REG](#), with addresses for writing in TX RAM incremented automatically by hardware. In non-FIFO mode, the CPU accesses TX RAM directly via address fields ([I2C Base Address](#) + 0x100) ~ ([I2C Base Address](#) + 0x17C). Each byte in TX RAM occupies an entire word in the address space. Therefore, the address of the first byte is [I2C Base](#)

[Address](#) + 0x100, the second byte is [I2C Base Address](#) + 0x104, the third byte is [I2C Base Address](#) + 0x108, and so on. The CPU can only read TX RAM via direct addresses. Bytes written to the TX RAM can be read back by the CPU, via the direct addresses. Addresses for reading TX RAM are the same as addresses for writing TX RAM.

RX RAM stores data the I2C controller receives during communication. When the I2C controller works in slave mode, neither slave addresses sent by the master nor register addresses (only in dual address mode) will be stored in RX RAM. Values of RX RAM can be read by software after I2C communication is completed.

RX RAM can only be read by the CPU. The CPU reads RX RAM either in FIFO mode or in non-FIFO mode (direct address). In FIFO mode, the CPU reads RX RAM via the fixed address [I2C\\_DATA\\_REG](#), with addresses for reading RX RAM incremented automatically by hardware. In non-FIFO mode, the CPU accesses TX RAM directly via address fields ([I2C Base Address](#) + 0x180) ~ ([I2C Base Address](#) + 0x1FC). Each byte in RX RAM occupies an entire word in the address space. Therefore, the address of the first byte is [I2C Base Address](#) + 0x180, the second byte is [I2C Base Address](#) + 0x184, the third byte is [I2C Base Address](#) + 0x188 and so on.

In FIFO mode, the TX RAM of a master may wrap around to send data larger than the FIFO depth. Set [I2C\\_FIFO\\_PRT\\_EN](#). If the size of data to be sent is smaller than [I2C\\_TXFIFO\\_WM\\_THRHD](#) (master), an [I2C\\_TXFIFO\\_WM\\_INT](#) (master) interrupt is generated. After receiving the interrupt, the software continues writing to [I2C\\_DATA\\_REG](#) (master). Please ensure that software writes to or refreshes TX RAM before the master sends data, otherwise it may result in unpredictable consequences.

In FIFO mode, the RX RAM of a slave may also wrap around to receive data larger than the FIFO depth. Set [I2C\\_FIFO\\_PRT\\_EN](#) and clear [I2C\\_RX\\_FULL\\_ACK\\_LEVEL](#). If data already received (to be overwritten) is larger than [I2C\\_RXFIFO\\_WM\\_THRHD](#) (slave), an [I2C\\_RXFIFO\\_WM\\_INT](#) (slave) interrupt is generated. After receiving the interrupt, the software continues reading from [I2C\\_DATA\\_REG](#) (slave).

### 39.4.11 Data Conversion

DATA\_Shifter is used for serial/parallel conversion, converting byte data in TX RAM to an outgoing serial bitstream or an incoming serial bitstream to byte data in RX RAM. [I2C\\_RX\\_LSB\\_FIRST](#) and [I2C\\_TX\\_LSB\\_FIRST](#) can be used to select LSB- or MSB-first storage and transmission of data.

### 39.4.12 Addressing Mode

The ESP32-P4 I2C controller supports 7-bit and 10-bit addressing. 10-bit addressing can be mixed with 7-bit addressing. Besides, the ESP32-P4 I2C controller also supports dual address mode.

Define the slave address as SLV\_ADDR. In 7-bit addressing mode, the slave address is SLV\_ADDR[6:0]; in 10-bit addressing mode, the slave address is SLV\_ADDR[9:0].

In 7-bit addressing mode, the master only needs to send one byte of the address, which comprises SLV\_ADDR[6:0] and a  $R/\overline{W}$  bit. In the 7-bit addressing mode, there is a special case called general call addressing (broadcast). It is enabled by setting [I2C\\_ADDR\\_BROADCASTING\\_EN](#) in a slave. When the slave receives the general call address (0x00) from the master and the  $R/\overline{W}$  bit followed is 0, it responds to the master regardless of its own address.

In 10-bit addressing mode, the master needs to send two bytes of address. The first byte is slave\_addr\_first\_7bits followed by a  $R/\overline{W}$  bit, and slave\_addr\_first\_7bits should be configured as (0x78 | SLV\_ADDR[9:8]). The second byte is slave\_addr\_second\_byte, which should be configured as SLV\_ADDR[7:0].

The slave can enable 10-bit addressing by configuring [I2C\\_ADDR\\_10BIT\\_EN](#). [I2C\\_SLAVE\\_ADDR](#) is used to configure I2C slave address. Specifically, [I2C\\_SLAVE\\_ADDR\[14:7\]](#) should be configured as [SLV\\_ADDR\[7:0\]](#), and [I2C\\_SLAVE\\_ADDR\[6:0\]](#) should be configured as  $(0x78 \mid \text{SLV\_ADDR}[9:8])$ . Since a 10-bit slave address has one more byte than a 7-bit address, `byte_num` of the WRITE command and the number of bytes in the RAM increase by one. Please refer to [Programming Example](#) for detailed descriptions.

When working in slave mode, the I2C controller supports dual address mode, where the first address is the address of an I2C slave, and the second one is the slave's memory address. When using dual address mode, RAM must be accessed in non-FIFO mode. Dual address mode is enabled by setting [I2C\\_FIFO\\_ADDR\\_CFG\\_EN](#). When the slave address received by the slave is inconsistent with the internally configured slave address, the [I2C\\_SLAVE\\_ADDR\\_UNMATCH](#) interrupt will be generated.

### 39.4.13 $R/\overline{W}$ Bit Check in 10-bit Addressing Mode

In 10-bit addressing mode, when [I2C\\_ADDR\\_10BIT\\_RW\\_CHECK\\_EN](#) is set to 1, the I2C controller performs a check on the first byte, which consists of `slave_addr_first_7bits` and a  $R/\overline{W}$  bit. When the  $R/\overline{W}$  bit does not indicate a WRITE operation, i.e., not in line with the I2C protocol, the data transfer ends. If the check feature is not enabled, when the  $R/\overline{W}$  bit does not indicate a WRITE, the data transfer still continues, but transfer failure may occur.

### 39.4.14 To Start the I2C Controller

To start the I2C controller in master mode, after configuring the controller to master mode and command registers, write 1 to [I2C\\_TRANS\\_START](#) in order to let the master start to parse and execute command sequences. The master always executes a command sequence starting from the command register 0 to a STOP or an END. To execute another command sequence starting from command register 0, refresh commands by writing 1 again to [I2C\\_TRANS\\_START](#).

There are two ways to start the I2C controller in slave mode:

- Set [I2C\\_SLV\\_TX\\_AUTO\\_START\\_EN](#), and the slave starts automatic transfer upon an address match;
- Clear [I2C\\_SLV\\_TX\\_AUTO\\_START\\_EN](#), and always set [I2C\\_TRANS\\_START](#) before accepting any transfer.

## 39.5 Functional Differences Between LP\_I2C and I2C

LP\_I2C can be used as a master to communicate with external devices when the main system sleeps. LP\_I2C includes all the functions of the ESP32-P4 I2C<sub>master</sub>, but doesn't include any functions of ESP32-P4 I2C<sub>slave</sub>. It does not contain any registers related to the I2C<sub>slave</sub>. For detailed register list, see [39.8.2 LP\\_I2C Register Summary](#).

The design differences between LP\_I2C and I2C master are as follows:

- The size of TX/RX RAM in LP\_I2C is 16\*8 bit, which means the TX/RX FIFO depth is 16 bytes.
- The clock source of APB\_CLK in LP\_I2C is CLK\_AON\_FAST. The clock source for I2C\_SCLK is configured via [LPPERI\\_LP\\_I2C\\_CLK\\_SEL](#). The corresponding bits are:
  - 0: CLK\_ROOT\_FAST
  - 1: CLK\_XTALD2

– 2: PLL\_F8M\_CLK

Configuring [LPPERI\\_CK\\_EN\\_LP\\_I2C](#) to 1 enables the clock source of I2C\_SCLK. Adjust the timing registers accordingly when the clock frequency changes.

See the programming examples of ESP32-P4 I2C<sub>slave</sub> in [39.6](#) for that of LP\_I2C.

## 39.6 Programming Example

This section provides programming examples for typical communication scenarios. ESP32-P4 has two I2C controllers. For the convenience of description, I2C masters and slaves in all subsequent figures are ESP32-P4 I2C controllers. I2C master is referred to as I2C<sub>master</sub>, and I2C slave is referred to as I2C<sub>slave</sub>.

### 39.6.1 I2C<sub>master</sub> Writes to I2C<sub>slave</sub> with a 7-bit Address in One Command Sequence

#### 39.6.1.1 Introduction

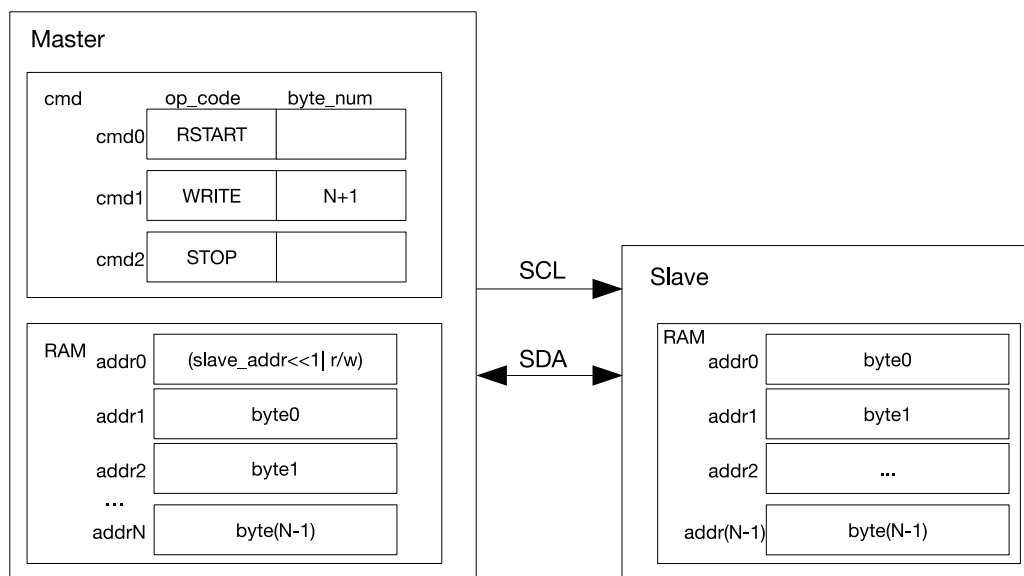

Figure 39.6-1. I2C<sub>master</sub> Writing to I2C<sub>slave</sub> with a 7-bit Address

Figure [39.6-1](#) shows how I2C<sub>master</sub> writes N bytes of data to I2C<sub>slave</sub> registers or RAM using 7-bit addressing. As shown in figure [39.6-1](#), the first byte in the RAM of I2C<sub>master</sub> is a 7-bit I2C<sub>slave</sub> address followed by a  $R/\overline{W}$  bit. When the  $R/\overline{W}$  bit is 0, it indicates a WRITE operation. The remaining bytes are used to store data ready for transfer. The cmd box contains related command sequences.

After the command sequence is configured and data in RAM is ready, I2C<sub>master</sub> enables the controller and initiates data transfer by setting the [I2C\\_TRANS\\_START](#) bit. The controller has four steps to take:

1. Wait for SCL to go high, to avoid SCL being used by other masters or slaves.
2. Execute a RSTART command by sending a START bit.
3. Execute a WRITE command by taking N+1 bytes from the RAM in order and sending them to I2C<sub>slave</sub> in the same order. The first byte is the address of I2C<sub>slave</sub>.

4. Execute a STOP command. Once the I2C<sub>master</sub> transfers a STOP bit, an I2C\_TRANS\_COMPLETE\_INT interrupt is generated.

### 39.6.1.2 Configuration Example

1. Configure the timing parameter registers of I2C<sub>master</sub> and I2C<sub>slave</sub> according to Section 39.4.7.
2. Set I2C\_MS\_MODE (master) to 1, and I2C\_MS\_MODE (slave) to 0.
3. Write 1 to I2C\_CONF\_UPGATE (master) and I2C\_CONF\_UPGATE (slave) to synchronize registers.
4. Configure command registers of I2C<sub>master</sub>.

| Command register      | op_code | ack_value | ack_exp | ack_check_en | byte_num |
|-----------------------|---------|-----------|---------|--------------|----------|
| I2C_COMMAND0 (master) | RSTART  | —         | —       | —            | —        |
| I2C_COMMAND1 (master) | WRITE   | ack_value | ack_exp | 1            | N+1      |
| I2C_COMMAND2 (master) | STOP    | —         | —       | —            | —        |

5. Write the address of I2C<sub>slave</sub> and data to be sent to TX RAM of I2C<sub>master</sub> in either FIFO mode or non-FIFO mode according to Section 39.4.10.
6. Write the address of I2C<sub>slave</sub> to I2C\_SLAVE\_ADDR (slave) in I2C\_SLAVE\_ADDR\_REG (slave) register.
7. Write 1 to I2C\_CONF\_UPGATE (master) and I2C\_CONF\_UPGATE (slave) to synchronize registers.
8. Write 1 to I2C\_TRANS\_START (master) and I2C\_TRANS\_START (slave) to start transfer.
9. I2C<sub>slave</sub> compares the slave address sent by I2C<sub>master</sub> with its own address in I2C\_SLAVE\_ADDR (slave). When ack\_check\_en (master) in I2C<sub>master</sub>'s WRITE command is 1, I2C<sub>master</sub> checks ACK value each time it sends a byte. When ack\_check\_en (master) is 0, I2C<sub>master</sub> does not check the ACK value and take I2C<sub>slave</sub> as a matching slave by default.
  - Match: If the received ACK value matches ack\_exp (master) (the expected ACK value), I2C<sub>master</sub> continues data transfer.
  - Not match: If the received ACK value does not match ack\_exp, I2C<sub>master</sub> generates an I2C\_NACK\_INT (master) interrupt and stops data transfer.
10. I2C<sub>master</sub> sends data, and determines whether to check ACK value according to ack\_check\_en (master).
11. If data to be sent (N) is larger than TX FIFO depth, TX RAM of I2C<sub>master</sub> may wrap around in FIFO mode. For details, please refer to Section 39.4.10.
12. If data to be received (N) is larger than RX FIFO depth, RX RAM of I2C<sub>slave</sub> may wrap around in FIFO mode. For details, please refer to Section 39.4.10.

If data to be received (N) is larger than RX FIFO depth, the other way is to enable clock stretching by setting the I2C\_SLAVE\_SCL\_STRETCH\_EN (slave), and clearing I2C\_RX\_FULL\_ACK\_LEVEL. When RX RAM is full, an I2C\_SLAVE\_STRETCH\_INT (slave) interrupt is generated. In this way, I2C<sub>slave</sub> can hold SCL low, in exchange for more time to read data. After the software has finished reading, you can set I2C\_SLAVE\_STRETCH\_INT\_CLR (slave) to 1 to clear interrupt, and set I2C\_SLAVE\_SCL\_STRETCH\_CLR (slave) to release the SCL line.

13. After data transfer completes, I2C<sub>master</sub> executes the STOP command, and generates an I2C\_TRANS\_COMPLETE\_INT (master) interrupt.

39.6.2 I2C<sub>master</sub> Writes to I2C<sub>slave</sub> with a 10-bit Address in One Command Sequence

39.6.2.1 Introduction

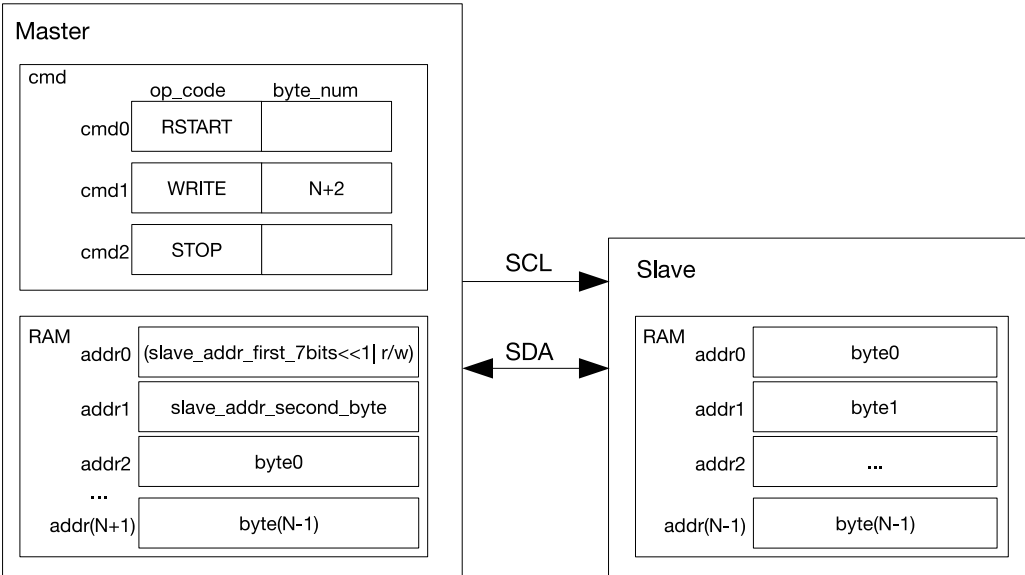

Figure 39.6-2. I2C<sub>master</sub> Writing to a Slave with a 10-bit Address

Figure 39.6-2 shows how I2C<sub>master</sub> writes N bytes of data using 10-bit addressing to an I2C slave. The configuration and transfer process is similar to what is described in 39.6.1, except that a 10-bit I2C<sub>slave</sub> address is formed from two bytes. Since a 10-bit I2C<sub>slave</sub> address has one more byte than a 7-bit I2C<sub>slave</sub> address, byte\_num and length of data in TX RAM increase by 1 accordingly.

39.6.2.2 Configuration Example

1. Set I2C\_MS\_MODE (master) to 1, and I2C\_MS\_MODE (slave) to 0.
2. Write 1 to I2C\_CONF\_UPGATE (master) and I2C\_CONF\_UPGATE (slave) to synchronize registers.
3. Configure command registers of I2C<sub>master</sub>.

| Command registers     | op_code | ack_value | ack_exp | ack_check_er | byte_num |
|-----------------------|---------|-----------|---------|--------------|----------|
| I2C_COMMAND0 (master) | RSTART  | —         | —       | —            | —        |
| I2C_COMMAND1 (master) | WRITE   | ack_value | ack_exp | 1            | N+2      |
| I2C_COMMAND2 (master) | STOP    | —         | —       | —            | —        |

4. Configure I2C\_SLAVE\_ADDR (slave) in I2C\_SLAVE\_ADDR\_REG (slave) as I2C<sub>slave</sub>'s 10-bit address, and set I2C\_ADDR\_10BIT\_EN (slave) to 1 to enable 10-bit addressing.

5. Write the address of I2C<sub>slave</sub> and data to be sent to TX RAM of I2C<sub>master</sub>. The first byte of the address of I2C<sub>slave</sub> comprises ((0x78 | I2C\_SLAVE\_ADDR[9:8])«1) and a  $R/\overline{W}$  bit. The second byte of the address of I2C<sub>slave</sub> is I2C\_SLAVE\_ADDR[7:0]. These two bytes are followed by data to be sent in FIFO or non-FIFO mode.
6. Write 1 to I2C\_CONF\_UPGATE (master) and I2C\_CONF\_UPGATE (slave) to synchronize registers.
7. Write 1 to I2C\_TRANS\_START (master) and I2C\_TRANS\_START (slave) to start transfer.
8. I2C<sub>slave</sub> compares the slave address sent by I2C<sub>master</sub> with its own address in I2C\_SLAVE\_ADDR (slave). When ack\_check\_en (master) in I2C<sub>master</sub>'s WRITE command is 1, I2C<sub>master</sub> checks ACK value each time it sends a byte. When ack\_check\_en (master) is 0, I2C<sub>master</sub> does not check the ACK value and take I2C<sub>slave</sub> as a matching slave by default.
  - Match: If the received ACK value matches ack\_exp (master) (the expected ACK value), I2C<sub>master</sub> continues data transfer.
  - Not match: If the received ACK value does not match ack\_exp, I2C<sub>master</sub> generates an I2C\_NACK\_INT (master) interrupt and stops data transfer.
9. I2C<sub>master</sub> sends data, and determines whether to check ACK value according to ack\_check\_en (master).
10. If data to be sent is larger than TX FIFO depth, TX RAM of I2C<sub>master</sub> may wrap around in FIFO mode. For details, please refer to Section 39.4.10.
11. If data to be received is larger than RX FIFO depth, RX RAM of I2C<sub>slave</sub> may wrap around in FIFO mode. For details, please refer to Section 39.4.10.
 

If data to be received is larger than RX FIFO depth, the other way is to enable clock stretching by setting I2C\_SLAVE\_SCL\_STRETCH\_EN (slave), and clearing I2C\_RX\_FULL\_ACK\_LEVEL to 0. When RX RAM is full, an I2C\_SLAVE\_STRETCH\_INT (slave) interrupt is generated. In this way, I2C<sub>slave</sub> can hold SCL low, in exchange for more time to read data. After the software has finished reading, you can set I2C\_SLAVE\_STRETCH\_INT\_CLR (slave) to 1 to clear interrupt, and set I2C\_SLAVE\_SCL\_STRETCH\_CLR (slave) to release the SCL line.
12. After data transfer completes, I2C<sub>master</sub> executes the STOP command, and generates an I2C\_TRANS\_COMPLETE\_INT (master) interrupt.

### 39.6.3 I2C<sub>master</sub> Writes to I2C<sub>slave</sub> with Two 7-bit Addresses in One Command Sequence

### 39.6.3.1 Introduction

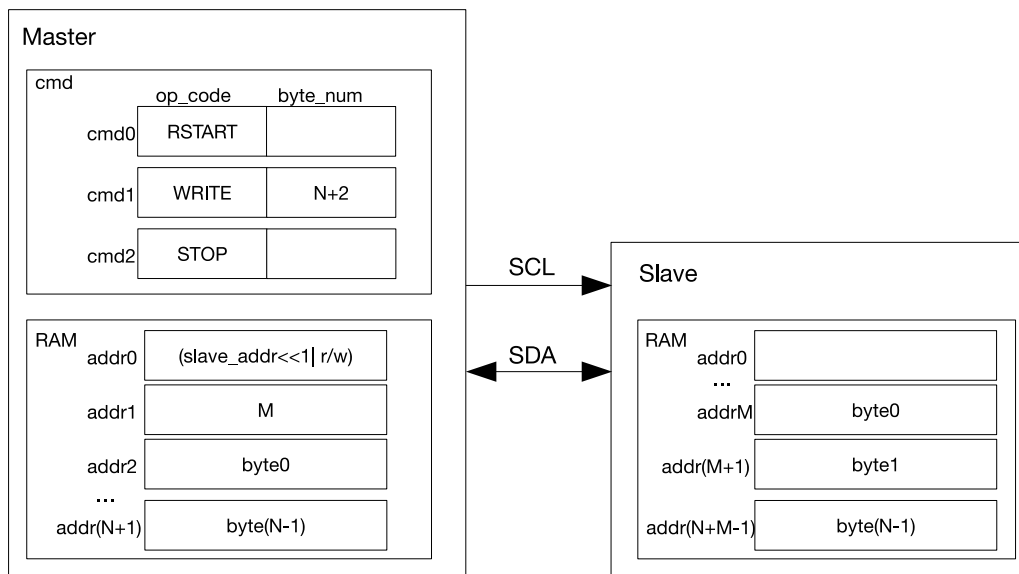

Figure 39.6-3. I2C<sub>master</sub> Writing to I2C<sub>slave</sub> with Two 7-bit Addresses

Figure 39.6-3 shows how I2C<sub>master</sub> writes N bytes of data to I2C<sub>slave</sub> registers or RAM using 7-bit double addressing. The configuration and transfer process is similar to what is described in Section 39.6.1, except that in 7-bit dual address mode I2C<sub>master</sub> sends two 7-bit addresses. The first address is the address of an I2C slave, and the second one is I2C<sub>slave</sub>'s memory address (i.e., addrM in Figure 39.6-3). When using double addressing, RAM must be accessed in non-FIFO mode. The I2C slave puts received byte0 ~ byte (N-1) into its RAM in an order starting from addrM. The RAM is overwritten every 32 bytes.

### 39.6.3.2 Configuration Example

1. Set I2C\_MS\_MODE (master) to 1, and I2C\_MS\_MODE (slave) to 0.
2. Set I2C\_FIFO\_ADDR\_CFG\_EN (slave) to 1 to enable dual address mode.
3. Write 1 to I2C\_CONF\_UPGATE (master) and I2C\_CONF\_UPGATE (slave) to synchronize registers.
4. Configure command registers of I2C<sub>master</sub>.

| Command registers     | op_code | ack_value | ack_exp | ack_check_er | byte_num |
|-----------------------|---------|-----------|---------|--------------|----------|
| I2C_COMMAND0 (master) | RSTART  | —         | —       | —            | —        |
| I2C_COMMAND1 (master) | WRITE   | ack_value | ack_exp | 1            | N+2      |
| I2C_COMMAND2 (master) | STOP    | —         | —       | —            | —        |

5. Write the address of I2C<sub>slave</sub> and data to be sent to TX RAM of I2C<sub>master</sub> in FIFO or non-FIFO mode.
6. Write the address of I2C<sub>slave</sub> to I2C\_SLAVE\_ADDR (slave) in I2C\_SLAVE\_ADDR\_REG (slave) register.
7. Write 1 to I2C\_CONF\_UPGATE (master) and I2C\_CONF\_UPGATE (slave) to synchronize registers.
8. Write 1 to I2C\_TRANS\_START (master) and I2C\_TRANS\_START (slave) to start transfer.

9. I2C<sub>slave</sub> compares the slave address sent by I2C<sub>master</sub> with its own address in [I2C\\_SLAVE\\_ADDR](#) (slave). When `ack_check_en` (master) in I2C<sub>master</sub>'s WRITE command is 1, I2C<sub>master</sub> checks ACK value each time it sends a byte. When `ack_check_en` (master) is 0, I2C<sub>master</sub> does not check ACK value and take I2C<sub>slave</sub> as a matching slave by default.
  - Match: If the received ACK value matches `ack_exp` (master) (the expected ACK value), I2C<sub>master</sub> continues data transfer.
  - Not match: If the received ACK value does not match `ack_exp`, I2C<sub>master</sub> generates an `I2C_NACK_INT` (master) interrupt and stops data transfer.
10. I2C<sub>slave</sub> receives the RX RAM address sent by I2C<sub>master</sub> and adds the offset.
11. I2C<sub>master</sub> sends data, and determines whether to check ACK value according to `ack_check_en` (master).
12. If data to be sent is larger than TX FIFO depth, TX RAM of I2C<sub>master</sub> may wrap around in FIFO mode. For details, please refer to Section [39.4.10](#).
13. If data to be received is larger than RX FIFO depth, you may enable clock stretching by setting [I2C\\_SLAVE\\_SCL\\_STRETCH\\_EN](#) (slave), and clearing [I2C\\_RX\\_FULL\\_ACK\\_LEVEL](#) to 0. When RX RAM is full, an [I2C\\_SLAVE\\_STRETCH\\_INT](#) (slave) interrupt is generated. In this way, I2C<sub>slave</sub> can hold SCL low, in exchange for more time to read data. After the software has finished reading, you can set [I2C\\_SLAVE\\_STRETCH\\_INT\\_CLR](#) (slave) to 1 to clear interrupt, and set [I2C\\_SLAVE\\_SCL\\_STRETCH\\_CLR](#) (slave) to release the SCL line.
14. After data transfer completes, I2C<sub>master</sub> executes the STOP command, and generates an `I2C_TRANS_COMPLETE_INT` (master) interrupt.

#### 39.6.4 I2C<sub>master</sub> Writes to I2C<sub>slave</sub> with a 7-bit Address in Multiple Command Sequences

### 39.6.4.1 Introduction

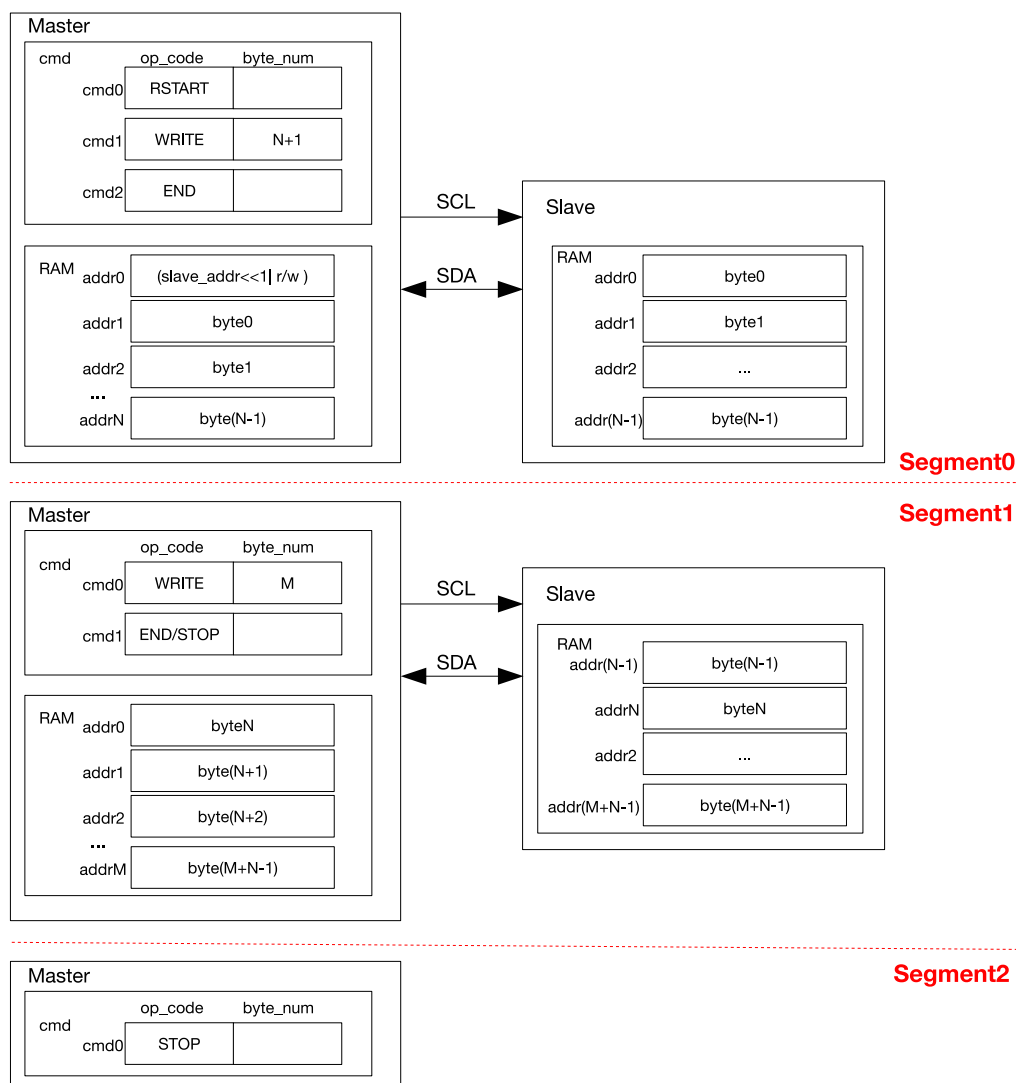

Figure 39.6-4. I2C<sub>master</sub> Writing to I2C<sub>slave</sub> with a 7-bit Address in Multiple Sequences

Given that the I2C Controller RAM holds only the size of TX/RX FIFO depth, when data are too large to be processed, it is advised to transmit them in multiple command sequences. At the end of every command sequence is an END command. When the controller executes this END command, SCL will be pulled low, and the software can refresh command sequence registers and the RAM for the next transfer.

Figure 39.6-4 shows how I2C<sub>master</sub> writes to an I2C slave in two or three segments as an example. For the first segment, the CMD\_Controller registers are configured as shown in Segment0. Once data in I2C<sub>master</sub>'s RAM is ready and I2C\_TRANS\_START is set, I2C<sub>master</sub> initiates data transfer. After executing the END command, I2C<sub>master</sub> turns off the SCL clock and pulls SCL low to reserve the bus. Meanwhile, the controller generates an I2C\_END\_DETECT\_INT interrupt.

For the second segment, after detecting the I2C\_END\_DETECT\_INT interrupt, the software refreshes the CMD\_Controller registers, reloads the RAM, and clears this interrupt, as shown in Segment1. If cmd1 in the second segment is a STOP, then data is transmitted to I2C<sub>slave</sub> in two segments. I2C<sub>master</sub> resumes data transfer after I2C\_TRANS\_START is set, and terminates the transfer by sending a STOP bit.

For the third segment, after the second data transfer finishes and an I2C\_END\_DETECT\_INT is detected, the

CMD\_Controller registers of I2C<sub>master</sub> are configured as shown in Segment2. Once [I2C\\_TRANS\\_START](#) is set, I2C<sub>master</sub> generates a STOP bit and terminates the transfer.

Note that other I2C<sub>master</sub>s will not transact on the bus between two segments. The bus is only released after a STOP command is sent. The I2C controller can be reset by setting [I2C\\_FSM\\_RST](#) field at any time. This field will later be cleared automatically by hardware.

### 39.6.4.2 Configuration Example

1. Set [I2C\\_MS\\_MODE](#) (master) to 1, and [I2C\\_MS\\_MODE](#) (slave) to 0.
2. Write 1 to [I2C\\_CONF\\_UPGATE](#) (master) and [I2C\\_CONF\\_UPGATE](#) (slave) to synchronize registers.
3. Configure command registers of I2C<sub>master</sub>.

| Command registers                     | op_code | ack_value | ack_exp | ack_check_en | byte_num |
|---------------------------------------|---------|-----------|---------|--------------|----------|
| <a href="#">I2C_COMMAND0</a> (master) | RSTART  | —         | —       | —            | —        |
| <a href="#">I2C_COMMAND1</a> (master) | WRITE   | ack_value | ack_exp | 1            | N+1      |
| <a href="#">I2C_COMMAND2</a> (master) | END     | —         | —       | —            | —        |

4. Write the address of I2C<sub>slave</sub> and data to be sent to TX RAM of I2C<sub>master</sub> in either FIFO mode or non-FIFO mode according to Section [39.4.10](#).
5. Write the address of I2C<sub>slave</sub> to [I2C\\_SLAVE\\_ADDR](#) (slave) in [I2C\\_SLAVE\\_ADDR\\_REG](#) (slave) register
6. Write 1 to [I2C\\_CONF\\_UPGATE](#) (master) and [I2C\\_CONF\\_UPGATE](#) (slave) to synchronize registers.
7. Write 1 to [I2C\\_TRANS\\_START](#) (master) and [I2C\\_TRANS\\_START](#) (slave) to start transfer.
8. I2C<sub>slave</sub> compares the slave address sent by I2C<sub>master</sub> with its own address in [I2C\\_SLAVE\\_ADDR](#) (slave). When [ack\\_check\\_en](#) (master) in I2C<sub>master</sub>'s WRITE command is 1, I2C<sub>master</sub> checks ACK value each time it sends a byte. When [ack\\_check\\_en](#) (master) is 0, I2C<sub>master</sub> does not check ACK value and take I2C<sub>slave</sub> as a matching slave by default.
  - Match: If the received ACK value matches [ack\\_exp](#) (master) (the expected ACK value), I2C<sub>master</sub> continues data transfer.
  - Not match: If the received ACK value does not match [ack\\_exp](#), I2C<sub>master</sub> generates an [I2C\\_NACK\\_INT](#) (master) interrupt and stops data transfer.
9. I2C<sub>master</sub> sends data, and checks ACK value or not according to [ack\\_check\\_en](#) (master).
10. After the [I2C\\_END\\_DETECT\\_INT](#) (master) interrupt is generated, set [I2C\\_END\\_DETECT\\_INT\\_CLR](#) (master) to 1 to clear this interrupt.
11. Update I2C<sub>master</sub>'s command registers.

| Command registers                     | op_code  | ack_value | ack_exp | ack_check_en | byte_num |
|---------------------------------------|----------|-----------|---------|--------------|----------|
| <a href="#">I2C_COMMAND0</a> (master) | WRITE    | ack_value | ack_exp | 1            | M        |
| <a href="#">I2C_COMMAND1</a> (master) | END/STOP | —         | —       | —            | —        |

- 12. Write M bytes of data to be sent to TX RAM of I2C<sub>master</sub> in FIFO or non-FIFO mode.
- 13. Write 1 to I2C\_TRANS\_START (master) bit to start the transfer and repeat step 9.
- 14. If the command is a STOP, I2C stops the transfer and generates an I2C\_TRANS\_COMPLETE\_INT (master) interrupt.
- 15. If the command is an END, repeat step 10.
- 16. Update I2C<sub>master</sub>'s command registers.

| Command registers of I2C <sub>master</sub> | op_code | ack_value | ack_exp | ack_check_er | byte_num |
|--|---------|-----------|---------|--------------|----------|
| I2C_COMMAND1 (master)                      | STOP    | —         | —       | —            | —        |

- 17. Write 1 to I2C\_TRANS\_START (master) bit to start transfer.
- 18. I2C<sub>master</sub> executes the STOP command and generates an I2C\_TRANS\_COMPLETE\_INT (master) interrupt.

### 39.6.5 I2C<sub>master</sub> Reads I2C<sub>slave</sub> with a 7-bit Address in One Command Sequence

#### 39.6.5.1 Introduction

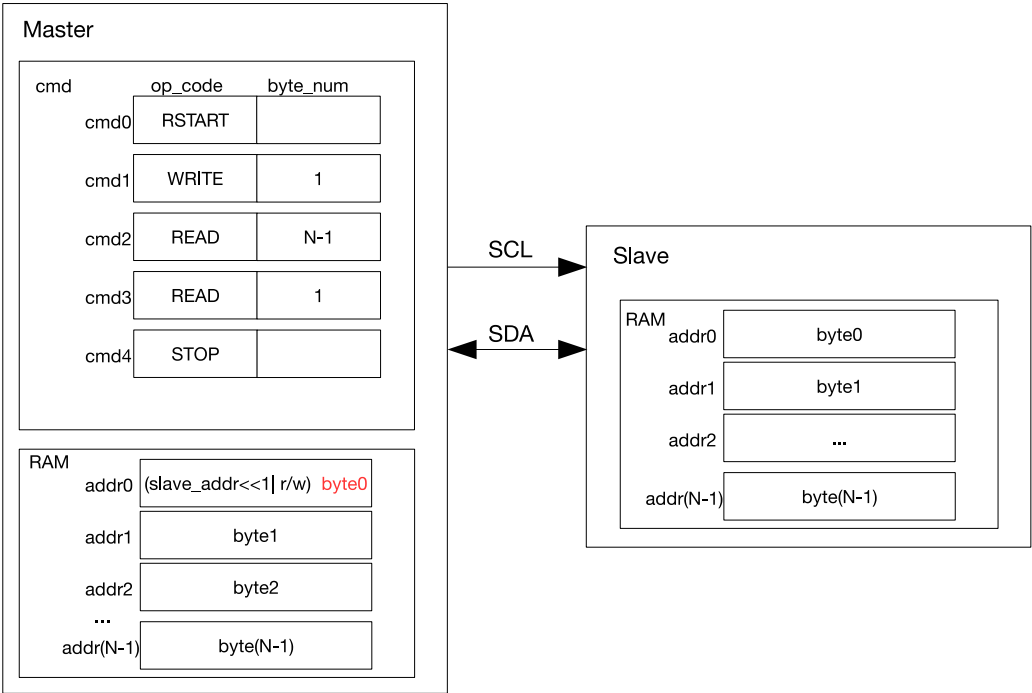

Figure 39.6-5. I2C<sub>master</sub> Reading I2C<sub>slave</sub> with a 7-bit Address

Figure 39.6-5 shows how I2C<sub>master</sub> reads N bytes of data from an I2C slave using 7-bit addressing. cmd1 is a WRITE command, and when this command is executed I2C<sub>master</sub> sends the address of I2C<sub>slave</sub>. The byte sent comprises a 7-bit I2C<sub>slave</sub> address and a  $R/\overline{W}$  bit. When the  $R/\overline{W}$  bit is 1, it indicates a READ operation. If the

address of an I2C slave matches the sent address, this matching slave starts sending data to I2C<sub>master</sub>.

I2C<sub>master</sub> generates acknowledgments according to `ack_value` defined in the READ command upon receiving a byte.

As illustrated in Figure 39.6-5, I2C<sub>master</sub> executes two READ commands: it generates ACKs for (N-1) bytes of data in cmd2, and a NACK for the last byte of data in cmd 3. This configuration may be changed as required.

I2C<sub>master</sub> writes received data into the controller RAM from `addr0`, whose original content (the address of I2C<sub>slave</sub> and a  $R/\overline{W}$  bit) is overwritten by `byte0` marked red in Figure 39.6-5.

### 39.6.5.2 Configuration Example

1. Set `I2C_MS_MODE` (master) to 1, and `I2C_MS_MODE` (slave) to 0.
2. We recommend setting `I2C_SLAVE_SCL_STRETCH_EN` (slave) to 1, so that SCL can be held low for more processing time when I2C<sub>slave</sub> needs to send data. If this bit is not set, the software should write data to be sent to I2C<sub>slave</sub>'s TX RAM before I2C<sub>master</sub> initiates the transfer. The configuration below is applicable to the scenario where `I2C_SLAVE_SCL_STRETCH_EN` (slave) is 1.
3. Write 1 to `I2C_CONF_UPGATE` (master) and `I2C_CONF_UPGATE` (slave) to synchronize registers.
4. Configure command registers of I2C<sub>master</sub>.

| Command registers of I2C <sub>master</sub> | op_code | ack_value | ack_exp | ack_check_en | byte_num |
|--|---------|-----------|---------|--------------|----------|
| <code>I2C_COMMAND0</code> (master)         | RSTART  | —         | —       | —            | —        |
| <code>I2C_COMMAND1</code> (master)         | WRITE   | 0         | 0       | 1            | 1        |
| <code>I2C_COMMAND2</code> (master)         | READ    | 0         | 0       | 1            | N-1      |
| <code>I2C_COMMAND3</code> (master)         | READ    | 1         | 0       | 1            | 1        |
| <code>I2C_COMMAND4</code> (master)         | STOP    | —         | —       | —            | —        |

5. Write the address of I2C<sub>slave</sub> to TX RAM of I2C<sub>master</sub> in either FIFO mode or non-FIFO mode according to Section 39.4.10.
6. Write the address of I2C<sub>slave</sub> to `I2C_SLAVE_ADDR` (slave) in `I2C_SLAVE_ADDR_REG` (slave) register.
7. Write 1 to `I2C_CONF_UPGATE` (master) and `I2C_CONF_UPGATE` (slave) to synchronize registers.
8. Write 1 to `I2C_TRANS_START` (master) bit to start I2C<sub>master</sub>'s transfer.
9. Start I2C<sub>slave</sub>'s transfer according to Section 39.4.14.
10. I2C<sub>slave</sub> compares the slave address sent by I2C<sub>master</sub> with its own address in `I2C_SLAVE_ADDR` (slave). When `ack_check_en` (master) in I2C<sub>master</sub>'s WRITE command is 1, I2C<sub>master</sub> checks ACK value each time it sends a byte. When `ack_check_en` (master) is 0, I2C<sub>master</sub> does not check ACK value and take I2C<sub>slave</sub> as a matching slave by default.
  - Match: If the received ACK value matches `ack_exp` (master) (the expected ACK value), I2C<sub>master</sub> continues data transfer.

- Not match: If the received ACK value does not match `ack_exp`, `I2Cmaster` generates an `I2C_NACK_INT` (master) interrupt and stops data transfer.
11. After `I2C_SLAVE_STRETCH_INT` (slave) is generated, the `I2C_STRETCH_CAUSE` bit is 0. The address of `I2Cslave` matches the address sent over SDA, and `I2Cslave` needs to send data.
  12. Write data to be sent to TX RAM of `I2Cslave` in either FIFO mode or non-FIFO mode according to Section 39.4.10.
  13. Set `I2C_SLAVE_SCL_STRETCH_CLR` (slave) to 1 to release SCL.
  14. `I2Cslave` sends data, and `I2Cmaster` checks ACK value or not according to `ack_check_en` (master) in the READ command.
  15. If data to be read by `I2Cmaster` is larger than the TX FIFO depth of `I2Cslave`, an `I2C_SLAVE_STRETCH_INT` (slave) interrupt will be generated when TX RAM of `I2Cslave` becomes empty. In this way, `I2Cslave` can hold SCL low, so that software has more time to pad data in TX RAM of `I2Cslave` and read data in RX RAM of `I2Cmaster`. After software has finished reading, you can set `I2C_SLAVE_STRETCH_INT_CLR` (slave) to 1 to clear interrupt, and set `I2C_SLAVE_SCL_STRETCH_CLR` (slave) to release the SCL line.
  16. After `I2Cmaster` has received the last byte of data, set `ack_value` (master) to 1. `I2Cslave` will stop the transfer once receiving the `I2C_NACK_INT` interrupt.
  17. After data transfer completes, `I2Cmaster` executes the STOP command, and generates an `I2C_TRANS_COMPLETE_INT` (master) interrupt.

### 39.6.6 `I2Cmaster` Reads `I2Cslave` with a 10-bit Address in One Command Sequence

39.6.6.1 Introduction

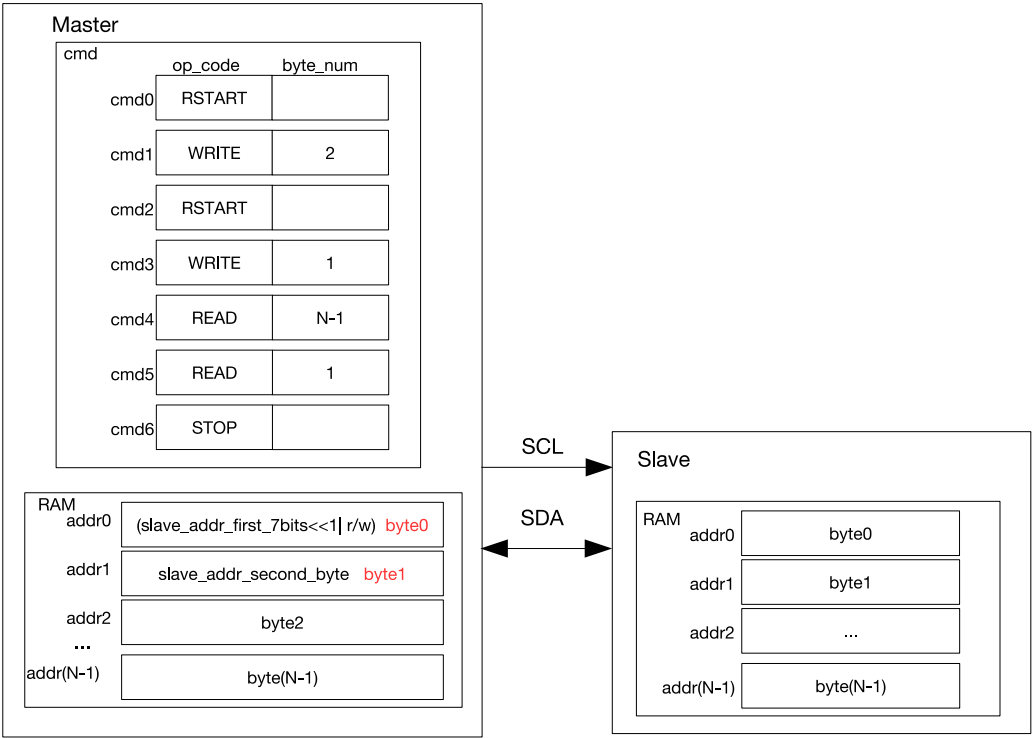

Figure 39.6-6. I2C<sub>master</sub> Reading I2C<sub>slave</sub> with a 10-bit Address

Figure 39.6-6 shows how I2C<sub>master</sub> reads data from an I2C slave using 10-bit addressing. Unlike 7-bit addressing, in 10-bit addressing the WRITE command of the I2C<sub>master</sub> is formed from two bytes, and correspondingly TX RAM of this master stores a 10-bit address of two bytes. The  $R/\overline{W}$  bit in the first byte is 0, which indicates a WRITE operation. After a RSTART condition, I2C<sub>master</sub> sends the first byte of address again to read data from I2C<sub>slave</sub>, but the  $R/\overline{W}$  bit is 1, which indicates a READ operation. The two address bytes can be configured as described in Section 39.6.2.

39.6.6.2 Configuration Example

1. Set `I2C_MS_MODE` (master) to 1, and `I2C_MS_MODE` (slave) to 0.
2. We recommend setting `I2C_SLAVE_SCL_STRETCH_EN` (slave) to 1, so that SCL can be held low for more processing time when I2C<sub>slave</sub> needs to send data. If this bit is not set, the software should write data to be sent to I2C<sub>slave</sub>'s TX RAM before I2C<sub>master</sub> initiates the transfer. The configuration below is applicable to a scenario where `I2C_SLAVE_SCL_STRETCH_EN` (slave) is 1.
3. Write 1 to `I2C_CONF_UPGATE` (master) and `I2C_CONF_UPGATE` (slave) to synchronize registers.
4. Configure command registers of I2C<sub>master</sub>.

| Command registers of I2C <sub>master</sub> | op_code | ack_value | ack_exp | ack_check_er | byte_num |
|--|---------|-----------|---------|--------------|----------|
| I2C_COMMAND0 (master)                      | RSTART  | —         | —       | —            | —        |
| I2C_COMMAND1 (master)                      | WRITE   | 0         | 0       | 1            | 2        |

|                                       |        |   |   |   |     |
|---------------------------------------|--------|---|---|---|-----|
| <a href="#">I2C_COMMAND2</a> (master) | RSTART | — | — | — | —   |
| <a href="#">I2C_COMMAND3</a> (master) | WRITE  | 0 | 0 | 1 | 1   |
| <a href="#">I2C_COMMAND4</a> (master) | READ   | 0 | 0 | 1 | N-1 |
| <a href="#">I2C_COMMAND5</a> (master) | READ   | 1 | 0 | 1 | 1   |
| <a href="#">I2C_COMMAND6</a> (master) | STOP   | — | — | — | —   |

- Configure [I2C\\_SLAVE\\_ADDR](#) (slave) in [I2C\\_SLAVE\\_ADDR\\_REG](#) (slave) as  $I2C_{\text{slave}}$ 's 10-bit address, and set [I2C\\_ADDR\\_10BIT\\_EN](#) (slave) to 1 to enable 10-bit addressing.
- Write the address of  $I2C_{\text{slave}}$  and data to be sent to TX RAM of  $I2C_{\text{master}}$  in either FIFO or non-FIFO mode. The first byte of address comprises  $((0x78 | I2C\_SLAVE\_ADDR[9:8]) \ll 1)$  and a  $R/\overline{W}$  bit, which is 1 and indicates a WRITE operation. The second byte of address is [I2C\\_SLAVE\\_ADDR](#)[7:0]. The third byte is  $((0x78 | I2C\_SLAVE\_ADDR[9:8]) \ll 1)$  and a  $R/\overline{W}$  bit, which is 1 and indicates a READ operation.
- Write 1 to [I2C\\_CONF\\_UPGATE](#) (master) and [I2C\\_CONF\\_UPGATE](#) (slave) to synchronize registers.
- Write 1 to [I2C\\_TRANS\\_START](#) (master) to start  $I2C_{\text{master}}$ 's transfer.
- Start  $I2C_{\text{slave}}$ 's transfer according to Section 39.4.14.
- $I2C_{\text{slave}}$  compares the slave address sent by  $I2C_{\text{master}}$  with its own address in [I2C\\_SLAVE\\_ADDR](#) (slave). When [ack\\_check\\_en](#) (master) in  $I2C_{\text{master}}$ 's WRITE command is 1,  $I2C_{\text{master}}$  checks ACK value each time it sends a byte. When [ack\\_check\\_en](#) (master) is 0,  $I2C_{\text{master}}$  does not check ACK value and take  $I2C_{\text{slave}}$  as a matching slave by default.
  - Match: If the received ACK value matches [ack\\_exp](#) (master) (the expected ACK value),  $I2C_{\text{master}}$  continues data transfer.
  - Not match: If the received ACK value does not match [ack\\_exp](#),  $I2C_{\text{master}}$  generates an [I2C\\_NACK\\_INT](#) (master) interrupt and stops data transfer.
- $I2C_{\text{master}}$  sends a RSTART and the third byte in TX RAM, which is  $((0x78 | I2C\_SLAVE\_ADDR[9:8]) \ll 1)$  and a  $R/\overline{W}$  bit that indicates READ.
- $I2C_{\text{slave}}$  repeats step 10. If its address matches the address sent by  $I2C_{\text{master}}$ ,  $I2C_{\text{slave}}$  proceed on to the next steps.
- After [I2C\\_SLAVE\\_STRETCH\\_INT](#) (slave) is generated, the [I2C\\_STRETCH\\_CAUSE](#) bit is 0. The address of  $I2C_{\text{slave}}$  matches the address sent over SDA, and  $I2C_{\text{slave}}$  needs to send data.
- Write data to be sent to TX RAM of  $I2C_{\text{slave}}$  in either FIFO mode or non-FIFO mode according to Section 39.4.10.
- Set [I2C\\_SLAVE\\_SCL\\_STRETCH\\_CLR](#) (slave) to 1 to release SCL.
- $I2C_{\text{slave}}$  sends data, and  $I2C_{\text{master}}$  checks ACK value or not according to [ack\\_check\\_en](#) (master) in the READ command.

17. If data to be read by I2C<sub>master</sub> is larger than the TX FIFO depth of I2C<sub>slave</sub>, an [I2C\\_SLAVE\\_STRETCH\\_INT](#) (slave) interrupt will be generated when TX RAM of I2C<sub>slave</sub> becomes empty. In this way, I2C<sub>slave</sub> can hold SCL low, so that software has more time to pad data in TX RAM of I2C<sub>slave</sub> and read data in RX RAM of I2C<sub>master</sub>. After the software has finished reading, you can set [I2C\\_SLAVE\\_STRETCH\\_INT\\_CLR](#) (slave) to 1 to clear interrupt, and set [I2C\\_SLAVE\\_SCL\\_STRETCH\\_CLR](#) (slave) to release the SCL line.
18. After I2C<sub>master</sub> has received the last byte of data, set ack\_value (master) to 1. I2C<sub>slave</sub> will stop transfer once receiving the I2C\_NACK\_INT interrupt.
19. After data transfer completes, I2C<sub>master</sub> executes the STOP command, and generates an I2C\_TRANS\_COMPLETE\_INT (master) interrupt.

## 39.6.7 I2C<sub>master</sub> Reads I2C<sub>slave</sub> with Two 7-bit Addresses in One Command Sequence

### 39.6.7.1 Introduction

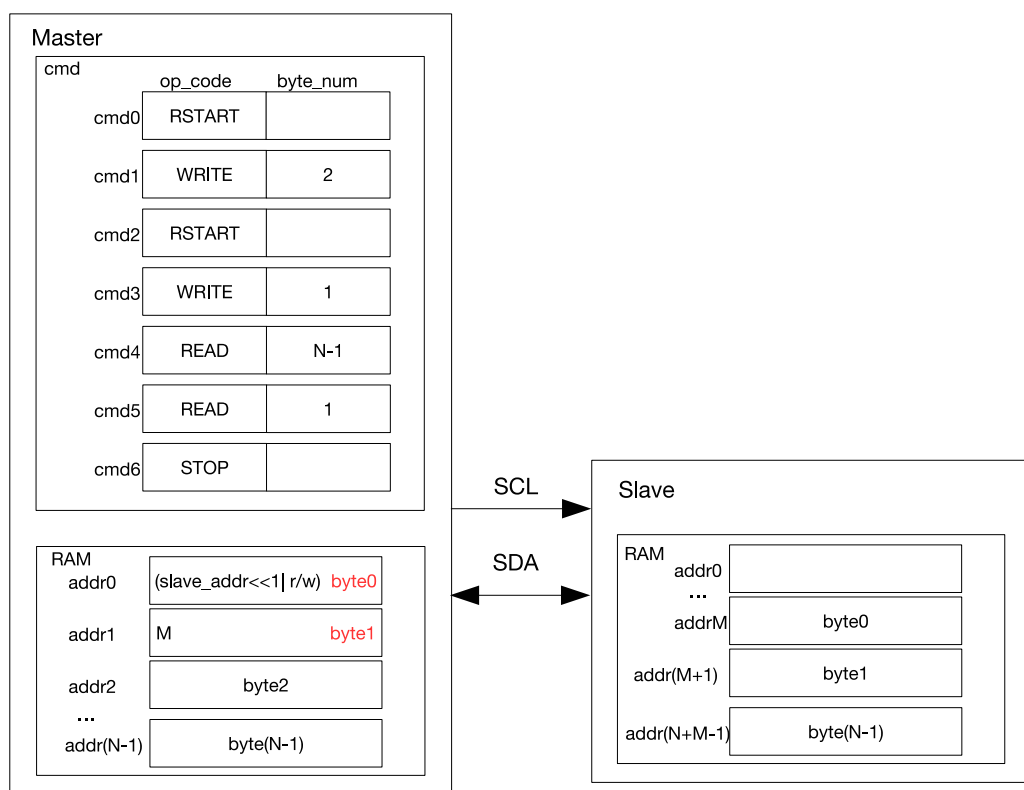

Figure 39.6-7. I2C<sub>master</sub> Reading N Bytes of Data from addrM of I2C<sub>slave</sub> with a 7-bit Address

Figure 39.6-7 shows how I2C<sub>master</sub> reads data from specified addresses in an I2C slave. I2C<sub>master</sub> sends two bytes of addresses: the first byte is a 7-bit I2C<sub>slave</sub> address followed by a  $R/\overline{W}$  bit, which is 0 and indicates a WRITE; the second byte is I2C<sub>slave</sub>'s memory address. After a RSTART condition, I2C<sub>master</sub> sends the first byte of address again, but the  $R/\overline{W}$  bit is 1 which indicates a READ. Then, I2C<sub>master</sub> reads data starting from addrM.

### 39.6.7.2 Configuration Example

1. Set `I2C_MS_MODE` (master) to 1, and `I2C_MS_MODE` (slave) to 0.
2. We recommend setting `I2C_SLAVE_SCL_STRETCH_EN` (slave) to 1, so that SCL can be held low for more processing time when `I2Cslave` needs to send data. If this bit is not set, the software should write data to be sent to `I2Cslave`'s TX RAM before `I2Cmaster` initiates the transfer. The configuration below is applicable to the scenario where `I2C_SLAVE_SCL_STRETCH_EN` (slave) is 1.
3. Set `I2C_FIFO_ADDR_CFG_EN` (slave) to 1 to enable dual address mode.
4. Write 1 to `I2C_CONF_UPGATE` (master) and `I2C_CONF_UPGATE` (slave) to synchronize registers.
5. Configure command registers of `I2Cmaster`.

| Command registers of <code>I2C<sub>master</sub></code> | op_code | ack_value | ack_exp | ack_check_en | byte_num |
|--|---------|-----------|---------|--------------|----------|
| <code>I2C_COMMAND0</code> (master)                     | RSTART  | —         | —       | —            | —        |
| <code>I2C_COMMAND1</code> (master)                     | WRITE   | 0         | 0       | 1            | 2        |
| <code>I2C_COMMAND2</code> (master)                     | RSTART  | —         | —       | —            | —        |
| <code>I2C_COMMAND3</code> (master)                     | WRITE   | 0         | 0       | 1            | 1        |
| <code>I2C_COMMAND4</code> (master)                     | READ    | 0         | 0       | 1            | N-1      |
| <code>I2C_COMMAND5</code> (master)                     | READ    | 1         | 0       | 1            | 1        |
| <code>I2C_COMMAND6</code> (master)                     | STOP    | —         | —       | —            | —        |

6. Configure `I2C_SLAVE_ADDR` (slave) in `I2C_SLAVE_ADDR_REG` (slave) register as `I2Cslave`'s 7-bit address, and set `I2C_ADDR_10BIT_EN` (slave) to 0 to enable 7-bit addressing.
7. Write the address of `I2Cslave` and data to be sent to TX RAM of `I2Cmaster` in either FIFO or non-FIFO mode according to Section 39.4.10. The first byte of address comprises ( `I2C_SLAVE_ADDR[6:0]` )«1) and a  $R/\overline{W}$  bit, which is 0 and indicates a WRITE. The second byte of the address is memory address M of `I2Cslave`. The third byte is ( `I2C_SLAVE_ADDR[6:0]` )«1) and a  $R/\overline{W}$  bit, which is 1 and indicates a READ.
8. Write 1 to `I2C_CONF_UPGATE` (master) and `I2C_CONF_UPGATE` (slave) to synchronize registers.
9. Write 1 to `I2C_TRANS_START` (master) to start `I2Cmaster`'s transfer.
10. Start `I2Cslave`'s transfer according to Section 39.4.14.
11. `I2Cslave` compares the slave address sent by `I2Cmaster` with its own address in `I2C_SLAVE_ADDR` (slave). When `ack_check_en` (master) in `I2Cmaster`'s WRITE command is 1, `I2Cmaster` checks ACK value each time it sends a byte. When `ack_check_en` (master) is 0, `I2Cmaster` does not check ACK value and takes `I2Cslave` as a matching slave by default.
  - Match: If the received ACK value matches `ack_exp` (master) (the expected ACK value), `I2Cmaster` continues data transfer.

- Not match: If the received ACK value does not match `ack_exp`, `I2C_master` generates an `I2C_NACK_INT` (master) interrupt and stops data transfer.
12. `I2C_slave` receives memory address sent by `I2C_master` and adds the offset.
  13. `I2C_master` sends a RSTART and the third byte in TX RAM, which is  $((0x78 \mid I2C\_SLAVE\_ADDR[9:8]) \ll 1)$  and a R bit.
  14. `I2C_slave` repeats step 11. If its address matches the address sent by `I2C_master`, `I2C_slave` proceed on to the next steps.
  15. After `I2C_SLAVE_STRETCH_INT` (slave) is generated, the `I2C_STRETCH_CAUSE` bit is 0. The address of `I2C_slave` matches the address sent over SDA, and `I2C_slave` needs to send data.
  16. Write data to be sent to TX RAM of `I2C_slave` in either FIFO mode or non-FIFO mode according to Section 39.4.10.
  17. Set `I2C_SLAVE_SCL_STRETCH_CLR` (slave) to 1 to release SCL.
  18. `I2C_slave` sends data, and `I2C_master` checks ACK value or not according to `ack_check_en` (master) in the READ command.
  19. If data to be read by `I2C_master` is larger than the TX FIFO depth of `I2C_slave`, an `I2C_SLAVE_STRETCH_INT` (slave) interrupt will be generated when TX RAM of `I2C_slave` becomes empty. In this way, `I2C_slave` can hold SCL low, so that software has more time to pad data in TX RAM of `I2C_slave` and read data in RX RAM of `I2C_master`. After software has finished reading, you can set `I2C_SLAVE_STRETCH_INT_CLR` (slave) to 1 to clear interrupt, and set `I2C_SLAVE_SCL_STRETCH_CLR` (slave) to release the SCL line.
  20. After `I2C_master` has received the last byte of data, set `ack_value` (master) to 1. `I2C_slave` will stop transfer once receiving the `I2C_NACK_INT` interrupt.
  21. After data transfer completes, `I2C_master` executes the STOP command, and generates an `I2C_TRANS_COMPLETE_INT` (master) interrupt.

### 39.6.8 `I2C_master` Reads `I2C_slave` with a 7-bit Address in Multiple Command Sequences

## 39.6.8.1 Introduction

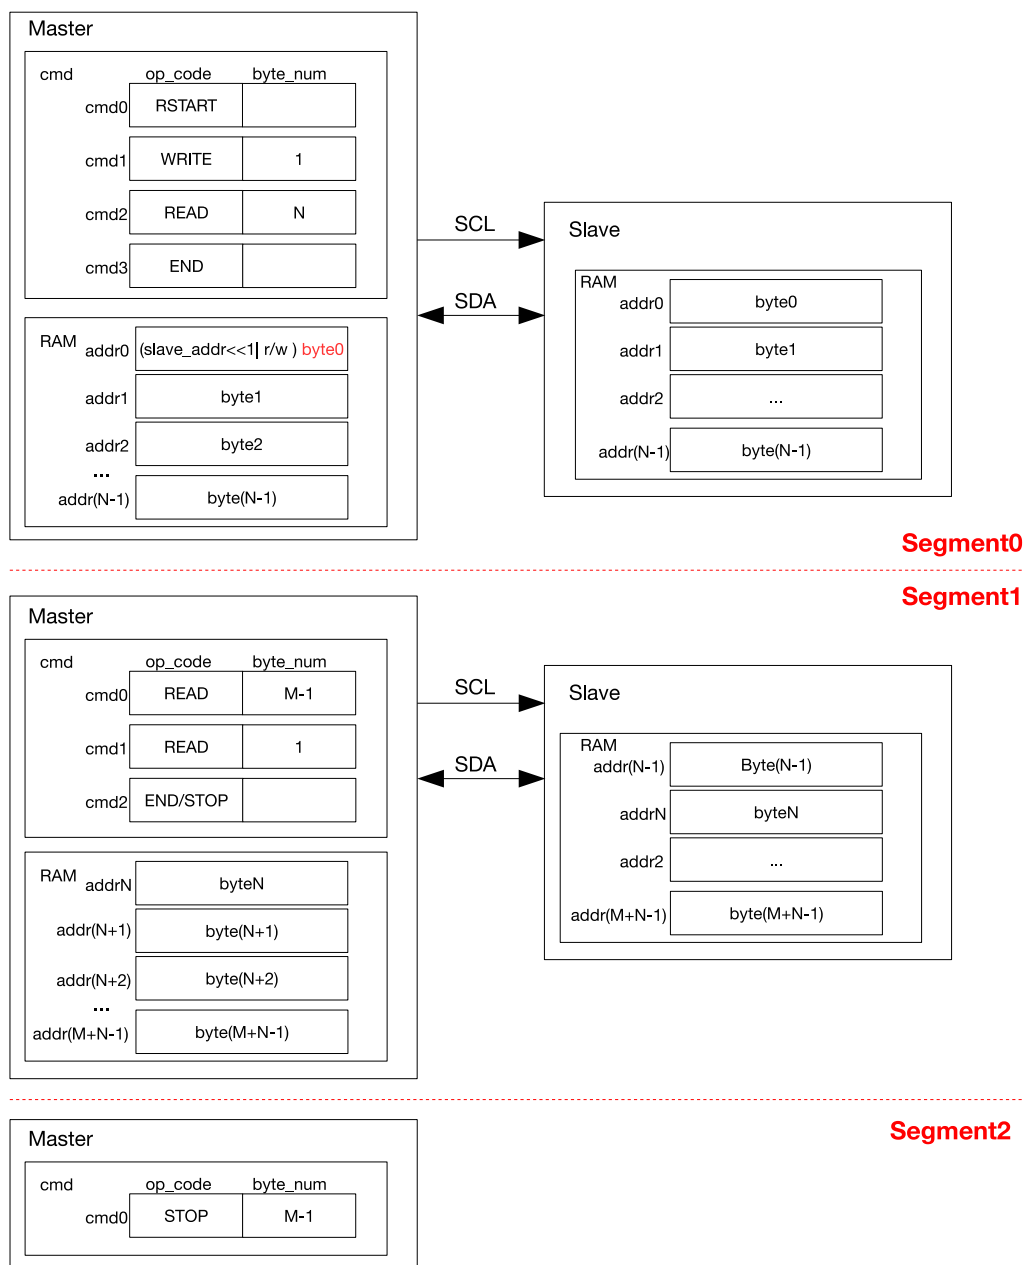

Figure 39.6-8. I2C<sub>master</sub> Reading I2C<sub>slave</sub> with a 7-bit Address in Segments

Figure 39.6-8 shows how I2C<sub>master</sub> reads (N+M) bytes of data from an I2C slave in two/three segments separated by END commands. Configuration procedures are described as follows:

1. The procedures for Segment0 is similar to 39.6-5, except that the last command is an END.
2. Prepare data in the TX RAM of I2C<sub>slave</sub>, and set I2C\_TRANS\_START to start data transfer. After executing the END command, I2C<sub>master</sub> refreshes command registers and the RAM as shown in Segment1, and clears the corresponding I2C\_END\_DETECT\_INT interrupt. If cmd2 in Segment1 is a STOP, then data is read from I2C<sub>slave</sub> in two segments. I2C<sub>master</sub> resumes data transfer by setting I2C\_TRANS\_START and terminates the transfer by sending a STOP bit.
3. If cmd2 in Segment1 is an END, then data is read from I2C<sub>slave</sub> in three segments. After the second data

transfer finishes and an I2C\_END\_DETECT\_INT interrupt is detected, the cmd box is configured as shown in Segment2. Once I2C\_TRANS\_START is set, I2C<sub>master</sub> terminates the transfer by sending a STOP bit.

### 39.6.8.2 Configuration Example

1. Set I2C\_MS\_MODE (master) to 1, and I2C\_MS\_MODE (slave) to 0.
2. We recommend setting I2C\_SLAVE\_SCL\_STRETCH\_EN (slave) to 1, so that SCL can be held low for more processing time when I2C<sub>slave</sub> needs to send data. If this bit is not set, the software should write data to be sent to I2C<sub>slave</sub>'s TX RAM before I2C<sub>master</sub> initiates the transfer. The configuration below is applicable to a scenario where I2C\_SLAVE\_SCL\_STRETCH\_EN (slave) is 1.
3. Write 1 to I2C\_CONF\_UPGATE (master) and I2C\_CONF\_UPGATE (slave) to synchronize registers.
4. Configure command registers of I2C<sub>master</sub>.

| Command registers of I2C <sub>master</sub> | op_code | ack_value | ack_exp | ack_check_en | byte_num |
|--|---------|-----------|---------|--------------|----------|
| I2C_COMMAND0 (master)                      | RSTART  | —         | —       | —            | —        |
| I2C_COMMAND1 (master)                      | WRITE   | 0         | 0       | 1            | 1        |
| I2C_COMMAND2 (master)                      | READ    | 0         | 0       | 1            | N        |
| I2C_COMMAND3 (master)                      | END     | —         | —       | —            | —        |

5. Write the address of I2C<sub>slave</sub> to TX RAM of I2C<sub>master</sub> in FIFO or non-FIFO mode.
6. Write the address of I2C<sub>slave</sub> to I2C\_SLAVE\_ADDR (slave) in I2C\_SLAVE\_ADDR\_REG (slave) register.
7. Write 1 to I2C\_CONF\_UPGATE (master) and I2C\_CONF\_UPGATE (slave) to synchronize registers.
8. Write 1 to I2C\_TRANS\_START (master) to start I2C<sub>master</sub>'s transfer.
9. Start I2C<sub>slave</sub>'s transfer according to Section 39.4.14.
10. I2C<sub>slave</sub> compares the slave address sent by I2C<sub>master</sub> with its own address in I2C\_SLAVE\_ADDR (slave). When ack\_check\_en (master) in I2C<sub>master</sub>'s WRITE command is 1, I2C<sub>master</sub> checks ACK value each time it sends a byte. When ack\_check\_en (master) is 0, I2C<sub>master</sub> does not check the ACK value and takes I2C<sub>slave</sub> as a matching slave by default.
  - Match: If the received ACK value matches ack\_exp (master) (the expected ACK value), I2C<sub>master</sub> continues data transfer.
  - Not match: If the received ACK value does not match ack\_exp, I2C<sub>master</sub> generates an I2C\_NACK\_INT (master) interrupt and stops data transfer.
11. After I2C\_SLAVE\_STRETCH\_INT (slave) is generated, the I2C\_STRETCH\_CAUSE bit is 0. The address of I2C<sub>slave</sub> matches the address sent over SDA, and I2C<sub>slave</sub> needs to send data.
12. Write data to be sent to TX RAM of I2C<sub>slave</sub> in either FIFO mode or non-FIFO mode according to Section 39.4.10.
13. Set I2C\_SLAVE\_SCL\_STRETCH\_CLR (slave) to 1 to release SCL.

14. I2C<sub>slave</sub> sends data, and I2C<sub>master</sub> checks ACK value or not according to ack\_check\_en (master) in the READ command.
15. If data to be read by I2C<sub>master</sub> in one READ command (N or M) is larger than the TX FIFO depth of I2C<sub>slave</sub>, an I2C\_SLAVE\_STRETCH\_INT (slave) interrupt will be generated when TX RAM of I2C<sub>slave</sub> becomes empty. In this way, I2C<sub>slave</sub> can hold SCL low so that software has more time to pad data in TX RAM of I2C<sub>slave</sub> and read data in RX RAM of I2C<sub>master</sub>. After the software has finished reading, you can set I2C\_SLAVE\_STRETCH\_INT\_CLR (slave) to 1 to clear interrupt, and set I2C\_SLAVE\_SCL\_STRETCH\_CLR (slave) to release the SCL line.
16. Once finishing reading data in the first READ command, I2C<sub>master</sub> executes the END command and triggers an I2C\_END\_DETECT\_INT (master) interrupt, which is cleared by setting I2C\_END\_DETECT\_INT\_CLR (master) to 1.
17. Update I2C<sub>master</sub>'s command registers using one of the following two methods:

| Command registers of I2C <sub>master</sub> | op_code | ack_value | ack_exp | ack_check_en | byte_num |
|--|---------|-----------|---------|--------------|----------|
| I2C_COMMAND0 (master)                      | READ    | ack_value | ack_exp | 1            | M        |
| I2C_COMMAND1 (master)                      | END     | —         | —       | —            | —        |

Or

| Command registers of I2C <sub>master</sub> | op_code | ack_value | ack_exp | ack_check_en | byte_num |
|--|---------|-----------|---------|--------------|----------|
| I2C_COMMAND0 (master)                      | READ    | 0         | 0       | 1            | M-1      |
| I2C_COMMAND0 (master)                      | READ    | 1         | 0       | 1            | 1        |
| I2C_COMMAND1 (master)                      | STOP    | —         | —       | —            | —        |

18. Write M bytes of data to be sent to TX RAM of I2C<sub>slave</sub>. If M is larger than the TX FIFO depth, then repeat step 12 in FIFO or non-FIFO mode.
19. Write 1 to I2C\_TRANS\_START (master) bit to start the transfer and repeat step 14.
20. If the last command is a STOP, then set ack\_value (master) to 1 after I2C<sub>master</sub> has received the last byte of data. I2C<sub>slave</sub> stops transfer upon the I2C\_NACK\_INT interrupt. I2C<sub>master</sub> executes the STOP command to stop the transfer and generates an I2C\_TRANS\_COMPLETE\_INT (master) interrupt.
21. If the last command is an END, then repeat step 16 and proceed on to the next steps.
22. Update I2C<sub>master</sub>'s command registers.

| Command registers of I2C <sub>master</sub> | op_code | ack_value | ack_exp | ack_check_en | byte_num |
|--|---------|-----------|---------|--------------|----------|
| I2C_COMMAND1 (master)                      | STOP    | —         | —       | —            | —        |

23. Write 1 to I2C\_TRANS\_START (master) bit to start transfer.

24. I2C<sub>master</sub> executes the STOP command to stop transfer, and generates an I2C\_TRANS\_COMPLETE\_INT (master) interrupt.

## 39.7 Interrupts

ESP32-P4's I2C<sub>n</sub> can generate the I2C<sub>n</sub>\_INTR interrupt signal that will be sent to the [Interrupt Matrix](#). There are several internal interrupt sources from I2C<sub>n</sub> that can generate the above interrupt signal(s) as follows:

- I2C\_SLAVE\_STRETCH\_INT: Triggered when one of the four stretching events occurs in slave mode.
- I2C\_DET\_START\_INT: Triggered when the master or the slave detects a START signal.
- I2C\_SCL\_MAIN\_ST\_TO\_INT: Triggered when the main state machine SCL\_MAIN\_FSM remains unchanged for over [I2C\\_SCL\\_MAIN\\_ST\\_TO\\_I2C\[23:0\]](#) clock cycles.
- I2C\_SCL\_ST\_TO\_INT: Triggered when the state machine SCL\_FSM remains unchanged for over [I2C\\_SCL\\_ST\\_TO\\_I2C\[23:0\]](#) clock cycles.
- I2C\_RXFIFO\_UDF\_INT: Triggered when the I2C controller reads RX FIFO via the APB bus, but RX FIFO is empty.
- I2C\_TXFIFO\_OVF\_INT: Triggered when the I2C controller writes TX FIFO via the APB bus, but TX FIFO is full.
- I2C\_NACK\_INT: Triggered when the ACK value received by the master is not as expected, or when the ACK value received by the slave is 1.
- I2C\_TRANS\_START\_INT: Triggered when the I2C controller sends a START bit.
- I2C\_TIME\_OUT\_INT: Triggered when SCL stays high or low for more than  $2^{I2C\_TIME\_OUT\_VALUE}$  clock cycles during data transfer.
- I2C\_TRANS\_COMPLETE\_INT: Triggered when the I2C controller detects a STOP bit.
- I2C\_MST\_TXFIFO\_UDF\_INT: Triggered when TX FIFO of the master underflows.
- I2C\_ARBITRATION\_LOST\_INT: Triggered when the SDA's output value does not match its input value while the master's SCL is high.
- I2C\_BYTE\_TRANS\_DONE\_INT: Triggered when the I2C controller sends or receives a byte.
- I2C\_END\_DETECT\_INT: Triggered when op\_code of the master indicates an END command and an END condition is detected.
- I2C\_RXFIFO\_OVF\_INT: Triggered when RX FIFO of the I2C controller overflows.
- I2C\_TXFIFO\_WM\_INT: I2C TX FIFO watermark interrupt. Triggered when [I2C\\_FIFO\\_PRT\\_EN](#) is 1 and the pointers of TX FIFO are less than [I2C\\_TXFIFO\\_WM\\_THRHD\[4:0\]](#).
- I2C\_RXFIFO\_WM\_INT: I2C RX FIFO watermark interrupt. Triggered when [I2C\\_FIFO\\_PRT\\_EN](#) is 1 and the pointers of RX FIFO are greater than [I2C\\_RXFIFO\\_WM\\_THRHD\[4:0\]](#).
- I2C\_SLAVE\_ADDR\_UNMATCH\_INT: Triggered when the received slave address is inconsistent with the internally configured slave address in slave mode.

**Note:**

For definitions of *interrupt*, *interrupt signal*, *interrupt source*, and their correlations, please refer to Chapter [11 Interrupt Matrix](#) > Section [11.2 Interrupt Terminology in ESP32-P4](#).

Each interrupt source can be configured by a common set of registers that are described in Section [Interrupt Configuration Registers](#). The specific registers can be found in Section [39.8.1 I2C Register Summary](#).

## 39.8 Register Summary

### 39.8.1 I2C Register Summary

The addresses in this section are relative to the I2C Controller base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

The abbreviations given in Column **Access** are explained in Section *Access Types for Registers*.

| Name   | Description  | Address | Access   |
|--|--|---------|----------|
| <b>Timing registers</b>                      |  |         |          |
| <a href="#">I2C_SCL_LOW_PERIOD_REG</a>       | Configures the low level width of the SCL Clock  | 0x0000  | R/W      |
| <a href="#">I2C_SDA_HOLD_REG</a>             | Configures the hold time after a negative SCL edge   | 0x0030  | R/W      |
| <a href="#">I2C_SDA_SAMPLE_REG</a>           | Configures the sample time after a positive SCL edge   | 0x0034  | R/W      |
| <a href="#">I2C_SCL_HIGH_PERIOD_REG</a>      | Configures the high level width of SCL   | 0x0038  | R/W      |
| <a href="#">I2C_SCL_START_HOLD_REG</a>       | Configures the delay between the SDA and SCL negative edge for a start condition                         | 0x0040  | R/W      |
| <a href="#">I2C_SCL_RSTART_SETUP_REG</a>     | Configures the delay between the positive edge of SCL and the negative edge of SDA                       | 0x0044  | R/W      |
| <a href="#">I2C_SCL_STOP_HOLD_REG</a>        | Configures the delay after the SCL clock edge for a stop condition                                       | 0x0048  | R/W      |
| <a href="#">I2C_SCL_STOP_SETUP_REG</a>       | Configures the delay between the SDA and SCL rising edge for a stop condition Measurement unit: i2c_sclk | 0x004C  | R/W      |
| <a href="#">I2C_SCL_ST_TIME_OUT_REG</a>      | SCL status time out register   | 0x0078  | R/W      |
| <a href="#">I2C_SCL_MAIN_ST_TIME_OUT_REG</a> | SCL main status time out register  | 0x007C  | R/W      |
| <b>Configuration registers</b>               |  |         |          |
| <a href="#">I2C_CTR_REG</a>                  | Transmission setting   | 0x0004  | varies   |
| <a href="#">I2C_TO_REG</a>                   | Setting time out control for receiving data  | 0x000C  | R/W      |
| <a href="#">I2C_SLAVE_ADDR_REG</a>           | Local slave address setting  | 0x0010  | R/W      |
| <a href="#">I2C_FIFO_CONF_REG</a>            | FIFO configuration register  | 0x0018  | R/W      |
| <a href="#">I2C_FILTER_CFG_REG</a>           | SCL and SDA filter configuration register  | 0x0050  | R/W      |
| <a href="#">I2C_SCL_SP_CONF_REG</a>          | Power configuration register   | 0x0080  | varies   |
| <a href="#">I2C_SCL_STRETCH_CONF_REG</a>     | Set SCL stretch of I2C slave   | 0x0084  | varies   |
| <b>Status registers</b>                      |  |         |          |
| <a href="#">I2C_SR_REG</a>                   | Describe I2C work status   | 0x0008  | RO       |
| <a href="#">I2C_FIFO_ST_REG</a>              | FIFO status register   | 0x0014  | RO       |
| <a href="#">I2C_DATA_REG</a>                 | Rx FIFO read data  | 0x001C  | HRO      |
| <b>Interrupt registers</b>                   |  |         |          |
| <a href="#">I2C_INT_RAW_REG</a>              | Raw interrupt status   | 0x0020  | R/SS/WTC |
| <a href="#">I2C_INT_CLR_REG</a>              | Interrupt clear bits   | 0x0024  | WT       |
| <a href="#">I2C_INT_ENA_REG</a>              | Interrupt enable bits  | 0x0028  | R/W      |

| Name                                      | Description                                 | Address | Access |
|---|---|---------|--------|
| <a href="#">I2C_INT_STATUS_REG</a>        | Status of captured I2C communication events | 0x002C  | RO     |
| <b>Command registers</b>                  |   |         |        |
| <a href="#">I2C_COMDO_REG</a>             | I2C command register 0                      | 0x0058  | varies |
| <a href="#">I2C_COMD1_REG</a>             | I2C command register 1                      | 0x005C  | varies |
| <a href="#">I2C_COMD2_REG</a>             | I2C command register 2                      | 0x0060  | varies |
| <a href="#">I2C_COMD3_REG</a>             | I2C command register 3                      | 0x0064  | varies |
| <a href="#">I2C_COMD4_REG</a>             | I2C command register 4                      | 0x0068  | varies |
| <a href="#">I2C_COMD5_REG</a>             | I2C command register 5                      | 0x006C  | varies |
| <a href="#">I2C_COMD6_REG</a>             | I2C command register 6                      | 0x0070  | varies |
| <a href="#">I2C_COMD7_REG</a>             | I2C command register 7                      | 0x0074  | varies |
| <b>Version register</b>                   |   |         |        |
| <a href="#">I2C_DATE_REG</a>              | Version register                            | 0x00F8  | R/W    |
| <b>Address register</b>                   |   |         |        |
| <a href="#">I2C_TXFIFO_START_ADDR_REG</a> | I2C TX FIFO base address register           | 0x0100  | HRO    |
| <a href="#">I2C_RXFIFO_START_ADDR_REG</a> | I2C RX FIFO base address register           | 0x0180  | HRO    |

## 39.8.2 LP\_I2C Register Summary

The abbreviations given in Column **Access** are explained in Section [Access Types for Registers](#).

| Name  | Description  | Address | Access |
|---|--|---------|--------|
| <b>Timing Registers</b>                         |  |         |        |
| <a href="#">LP_I2C_SCL_LOW_PERIOD_REG</a>       | Configures the low level width of the SCL Clock                                    | 0x0000  | R/W    |
| <a href="#">LP_I2C_SDA_HOLD_REG</a>             | Configures the hold time after a negative SCL edge                                 | 0x0030  | R/W    |
| <a href="#">LP_I2C_SDA_SAMPLE_REG</a>           | Configures the sample time after a positive SCL edge                               | 0x0034  | R/W    |
| <a href="#">LP_I2C_SCL_HIGH_PERIOD_REG</a>      | Configures the high level width of SCL   | 0x0038  | R/W    |
| <a href="#">LP_I2C_SCL_START_HOLD_REG</a>       | Configures the delay between the SDA and SCL negative edge for a start condition   | 0x0040  | R/W    |
| <a href="#">LP_I2C_SCL_RSTART_SETUP_REG</a>     | Configures the delay between the positive edge of SCL and the negative edge of SDA | 0x0044  | R/W    |
| <a href="#">LP_I2C_SCL_STOP_HOLD_REG</a>        | Configures the delay after the SCL clock edge for a stop condition                 | 0x0048  | R/W    |
| <a href="#">LP_I2C_SCL_STOP_SETUP_REG</a>       | Configures the delay between the SDA and SCL positive edge for a stop condition    | 0x004C  | R/W    |
| <a href="#">LP_I2C_SCL_ST_TIME_OUT_REG</a>      | SCL status time out register   | 0x0078  | R/W    |
| <a href="#">LP_I2C_SCL_MAIN_ST_TIME_OUT_REG</a> | SCL main status time out register  | 0x007C  | R/W    |
| <b>Configuration Registers</b>                  |  |         |        |
| <a href="#">LP_I2C_CTR_REG</a>                  | Transmission setting   | 0x0004  | varies |
| <a href="#">LP_I2C_TO_REG</a>                   | Setting time out control for receiving data  | 0x000C  | R/W    |
| <a href="#">LP_I2C_FIFO_CONF_REG</a>            | FIFO configuration register  | 0x0018  | R/W    |
| <a href="#">LP_I2C_FILTER_CFG_REG</a>           | SCL and SDA filter configuration register  | 0x0050  | R/W    |
| <a href="#">LP_I2C_SCL_SP_CONF_REG</a>          | Power configuration register   | 0x0080  | varies |

| Name   | Description                                 | Address | Access  |
|--|---|---------|---------|
| <b>Status Registers</b>                      |   |         |         |
| <a href="#">LP_I2C_SR_REG</a>                | Describe I2C work status                    | 0x0008  | RO      |
| <a href="#">LP_I2C_FIFO_ST_REG</a>           | FIFO status register                        | 0x0014  | RO      |
| <a href="#">LP_I2C_DATA_REG</a>              | Rx FIFO read data                           | 0x001C  | RO      |
| <b>Interrupt Registers</b>                   |   |         |         |
| <a href="#">LP_I2C_INT_RAW_REG</a>           | Raw interrupt status                        | 0x0020  | R/SS/WT |
| <a href="#">LP_I2C_INT_CLR_REG</a>           | Interrupt clear bits                        | 0x0024  | WT      |
| <a href="#">LP_I2C_INT_ENA_REG</a>           | Interrupt enable bits                       | 0x0028  | R/W     |
| <a href="#">LP_I2C_INT_STATUS_REG</a>        | Status of captured I2C communication events | 0x002C  | RO      |
| <b>Command Registers</b>                     |   |         |         |
| <a href="#">LP_I2C_COMD0_REG</a>             | I2C command register 0                      | 0x0058  | varies  |
| <a href="#">LP_I2C_COMD1_REG</a>             | I2C command register 1                      | 0x005C  | varies  |
| <a href="#">LP_I2C_COMD2_REG</a>             | I2C command register 2                      | 0x0060  | varies  |
| <a href="#">LP_I2C_COMD3_REG</a>             | I2C command register 3                      | 0x0064  | varies  |
| <a href="#">LP_I2C_COMD4_REG</a>             | I2C command register 4                      | 0x0068  | varies  |
| <a href="#">LP_I2C_COMD5_REG</a>             | I2C command register 5                      | 0x006C  | varies  |
| <a href="#">LP_I2C_COMD6_REG</a>             | I2C command register 6                      | 0x0070  | varies  |
| <a href="#">LP_I2C_COMD7_REG</a>             | I2C command register 7                      | 0x0074  | varies  |

| <a href="#">LP_I2C_DATE_REG</a>              | Version register                            | 0x00F8  | R/W     |
| <b>Address Registers</b>                     |   |         |         |
| <a href="#">LP_I2C_TXFIFO_START_ADDR_REG</a> | I2C TXFIFO base address register            | 0x0100  | HRO     |
| <a href="#">LP_I2C_RXFIFO_START_ADDR_REG</a> | I2C RXFIFO base address register            | 0x0180  | HRO     |

## 39.9 Registers

### 39.9.1 I2C Registers

The addresses in this section are relative to the I2C Controller base address provided in Table 6.3-2 in Chapter 6 *System and Memory*.

For how to program reserved fields, please refer to Section [Programming Reserved Register Field](#).

Register 39.1. I2C\_SCL\_LOW\_PERIOD\_REG (0x0000)

|   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                    |   |   |  |  |  |  |  |       |  |
|---|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--------------------|---|---|--|--|--|--|--|-------|--|
| (reserved)                                      |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | I2C_SCL_LOW_PERIOD |   |   |  |  |  |  |  |       |  |
| 31  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 9                  | 8 | 0 |  |  |  |  |  |       |  |
| 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0                  |   |   |  |  |  |  |  | Reset |  |

**I2C\_SCL\_LOW\_PERIOD** Configures the low level width of the SCL Clock in master mode.  
Measurement unit: I2C\_SCLK clock cycles  
(R/W)

Register 39.2. I2C\_SDA\_HOLD\_REG (0x0030)

|   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                   |  |  |  |  |  |  |  |       |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |
|---|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|-------------------|--|--|--|--|--|--|--|-------|--|--|--|--|--|--|--|---|--|--|--|--|--|--|--|
| (reserved)                                      |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | I2C_SDA_HOLD_TIME |  |  |  |  |  |  |  |       |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |
| 31  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 9                 |  |  |  |  |  |  |  | 8     |  |  |  |  |  |  |  | 0 |  |  |  |  |  |  |  |
| 0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0                 |  |  |  |  |  |  |  | Reset |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |

**I2C\_SDA\_HOLD\_TIME** Configures the time to hold the data after the falling edge of SCL.  
Measurement unit: I2C\_SCLK clock cycles  
(R/W)

**Register 39.3. I2C\_SDA\_SAMPLE\_REG (0x0034)**

|            |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                     |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  | |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |  | **I2C\_SCL\_HIGH\_PERIOD** Configures for how long SCL remains high in master mode.

Measurement unit: I2C\_SCLK clock cycles

(R/W)

**I2C\_SCL\_WAIT\_HIGH\_PERIOD** Configures the SCL\_FSM's waiting period for SCL high level in master mode.

Measurement unit: I2C\_SCLK clock cycles

(R/W)

### Register 39.5. I2C\_SCL\_START\_HOLD\_REG (0x0040)

**I2C\_SCL\_START\_HOLD\_TIME** Configures the time between the falling edge of SDA and the falling edge of SCL for a START condition.

Measurement unit: I2C\_SCLK clock cycles

(R/W)

### Register 39.6. I2C\_SCL\_RSTART\_SETUP\_REG (0x0044)

**I2C\_SCL\_RSTART\_SETUP\_TIME** Configures the time between the positive edge of SCL and the negative edge of SDA for a RESTART condition.

Measurement unit: I2C\_SCLK clock cycles

(R/W)

### Register 39.7. I2C\_SCL\_STOP\_HOLD\_REG (0x0048)

**I2C\_SCL\_STOP\_HOLD\_TIME** Configures the delay after the STOP condition.

Measurement unit: I2C\_SCLK clock cycles

(R/W)

**Register 39.8. I2C\_SCL\_STOP\_SETUP\_REG (0x004C)**

|   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                         |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |       |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

**I2C\_SDA\_FORCE\_OUT** Configures the SDA output mode.

0: Open drain output

1: Direct output

(R/W)

**I2C\_SCL\_FORCE\_OUT** Configures the SCL output mode.

0: Open drain output

1: Direct output

(R/W)

**I2C\_SAMPLE\_SCL\_LEVEL** Configures the sample mode for SDA.

0: Sample SDA data on the SCL high level

1: Sample SDA data on the SCL low level

(R/W)

**I2C\_RX\_FULL\_ACK\_LEVEL** Configures the ACK value that needs to be sent by the master when the received RX RAM has reached the threshold.

(R/W)

**I2C\_MS\_MODE** Configures the module as an I2C Master or Slave.

0: Slave

1: Master

(R/W)

**I2C\_TRANS\_START** Configures whether the slave starts sending the data in TX FIFO.

0: No effect

1: Start

(WT)

**I2C\_TX\_LSB\_FIRST** Configures to control the sending order for data needing to be sent.

0: send data from the most significant bit

1: send data from the least significant bit

(R/W)

**I2C\_RX\_LSB\_FIRST** Configures to control the storage order for received data.

0: receive data from the most significant bit

1: receive data from the least significant bit

(R/W)

Continued on the next page...

**Register 39.11. I2C\_CTR\_REG (0x0004)**

Continued from the previous page...

**I2C\_CLK\_EN** Configures whether to gate clock signal for registers.

0: Support clock only when registers are read or written to by software

1: Force clock on for registers

(R/W)

**I2C\_ARBITRATION\_EN** Configures to enable I2C bus arbitration detection.

0: No effect

1: Enable

(R/W)

**I2C\_FSM\_RST** Configures to reset the SCL\_FSM.

0: No effect

1: Reset (WT)

**I2C\_CONF\_UPGATE** Configures this bit for synchronization.

0: No effect

1: Synchronize (WT)

**I2C\_SLV\_TX\_AUTO\_START\_EN** Configures to enable slave to send data automatically

0: Disable

1: Enable

(R/W)

**I2C\_ADDR\_10BIT\_RW\_CHECK\_EN** Configures to check if the R/W bit of 10-bit addressing consists with I2C protocol.

0: Not check

1: Check (R/W)

**I2C\_ADDR\_BROADCASTING\_EN** Configures to support the 7-bit general call function.

0: Not support

1: Support

(R/W)

**I2C\_SCL\_RST\_SLV\_EN** Configures to send out SCL pulses when I2C master is IDLE. The number of pulses equals to I2C\_SCL\_RST\_SLV\_NUM[4:0].

0: Invalid

1: Send out SCL pulses

(R/W/SC)

**I2C\_SCL\_RST\_SLV\_NUM** Configure the pulses of SCL generated in I2C master mode.

Valid when I2C\_SCL\_RST\_SLV\_EN is 1.

Measurement unit: I2C\_SCLK clock cycles

(R/W)

**I2C\_SCL\_PD\_EN** Configures to power down the I2C output SCL line.

0: Not power down.

1: Not work and power down.

Valid only when I2C\_SCL\_FORCE\_OUT is 1. (R/W)

**I2C\_SDA\_PD\_EN** Configures to power down the I2C output SDA line.

0: Not power down.

1: Not work and power down.

Valid only when I2C\_SDA\_FORCE\_OUT is 1. (R/W)

Register 39.17. I2C\_SCL\_STRETCH\_CONF\_REG (0x0084)

**I2C\_STRETCH\_PROTECT\_NUM** Configures the time period to release the SCL line from stretching to avoid timing violation. Usually it should be larger than the SDA setup time.

Measurement unit: I2C\_SCLK clock cycles

(R/W)

**I2C\_SLAVE\_SCL\_STRETCH\_EN** Configures to enable slave SCL stretch function. The SCL output line will be stretched low when I2C\_SLAVE\_SCL\_STRETCH\_EN is 1 and a stretch event happens. The stretch cause can be seen in I2C\_STRETCH\_CAUSE.

0: Disable

1: Enable

(R/W)

**I2C\_SLAVE\_SCL\_STRETCH\_CLR** Configures to clear the I2C slave SCL stretch function.

0: No effect

1: Clear

(WT)

**I2C\_SLAVE\_BYTE\_ACK\_CTL\_EN** Configures to enable the function for the slave to control ACK level.

0: Disable

1: Enable

(R/W)

**I2C\_SLAVE\_BYTE\_ACK\_LVL** Configures the ACK level when slave controlling ACK level function is enabled.

0: Low level

1: High level

**I2C\_RESP\_REC** Represents the received ACK value in master mode or slave mode.

- 0: ACK
- 1: NACK. (RO)

**I2C\_SLAVE\_RW** Represents the transfer direction in slave mode.

- 0: Master writes to slave. 1: Master reads from slave
- (RO)

**I2C\_ARB\_LOST** Represents whether the I2C controller loses control of SCL line.

- 0: No arbitration lost
- 1: Arbitration lost
- (RO)

**I2C\_BUS\_BUSY** Represents the I2C bus state.

- 0: The I2C bus is in an idle state.
- 1: The I2C bus is busy transferring data
- (RO)

**I2C\_SLAVE\_ADDRESSED** Represents whether the address sent by the master is equal to the address of the slave.

Valid only when the module is configured as an I2C Slave.

- 0: Not equal
- 1: Equal
- (RO)

**I2C\_RXFIFO\_CNT** Represents the number of data bytes received in RAM. (RO)

**I2C\_STRETCH\_CAUSE** Represents the cause of SCL clocking stretching in slave mode.

- 0: Stretching SCL low when the master starts to read data.
- 1: Stretching SCL low when I2C TX FIFO is empty in slave mode.
- 2: Stretching SCL low when I2C RX FIFO is full in slave mode.
- 3: Invalid
- (RO)

**I2C\_TXFIFO\_CNT** Represents the number of data bytes to be sent. (RO)

Continued from the previous page...

**I2C\_SCL\_MAIN\_STATE\_LAST** Represents the states of the I2C module state machine.

- 0: Idle
- 1: Address shift
- 2: ACK address
- 3: Rx data
- 4: Tx data
- 5: Send ACK
- 6: Wait ACK
- 7: Invalid
- (RO)

**I2C\_SCL\_STATE\_LAST** Represents the states of the state machine used to produce SCL.

- 0: Idle
- 1: Start
- 2: Negative edge
- 3: Low
- 4: Positive edge
- 5: High
- 6: Stop
- 7: Invalid
- (RO)

**I2C\_RXFIFO\_WM\_INT\_ST** The masked interrupt status of I2C\_RXFIFO\_WM\_INT interrupt. (RO)

**I2C\_TXFIFO\_WM\_INT\_ST** The masked interrupt status of I2C\_TXFIFO\_WM\_INT interrupt. (RO)

**I2C\_RXFIFO\_OVF\_INT\_ST** The masked interrupt status of I2C\_RXFIFO\_OVF\_INT interrupt. (RO)

**I2C\_END\_DETECT\_INT\_ST** The masked interrupt status of the I2C\_END\_DETECT\_INT interrupt. (RO)

**I2C\_BYTE\_TRANS\_DONE\_INT\_ST** The masked interrupt status of the I2C\_END\_DETECT\_INT interrupt. (RO)

**I2C\_ARBTRATION\_LOST\_INT\_ST** The masked interrupt status of the I2C\_ARBTRATION\_LOST\_INT interrupt. (RO)

**I2C\_MST\_TXFIFO\_UDF\_INT\_ST** The masked interrupt status of I2C\_TRANS\_COMPLETE\_INT interrupt. (RO)

**I2C\_TRANS\_COMPLETE\_INT\_ST** The masked interrupt status of the I2C\_TRANS\_COMPLETE\_INT interrupt. (RO)

**I2C\_TIME\_OUT\_INT\_ST** The masked interrupt status of the I2C\_TIME\_OUT\_INT interrupt. (RO)

**I2C\_TRANS\_START\_INT\_ST** The masked interrupt status of the I2C\_TRANS\_START\_INT interrupt. (RO)

**I2C\_NACK\_INT\_ST** The masked interrupt status of I2C\_SLAVE\_STRETCH\_INT interrupt. (RO)

**I2C\_TXFIFO\_OVF\_INT\_ST** The masked interrupt status of I2C\_TXFIFO\_OVF\_INT interrupt. (RO)

Continued on the next page...

**Register 39.24. I2C\_INT\_STATUS\_REG (0x002C)**

Continued from the previous page...

**I2C\_RXFIFO\_UDF\_INT\_ST** The masked interrupt status of I2C\_RXFIFO\_UDF\_INT interrupt. (RO)

**I2C\_SCL\_ST\_TO\_INT\_ST** The masked interrupt status of I2C\_SCL\_ST\_TO\_INT interrupt. (RO)

**I2C\_SCL\_MAIN\_ST\_TO\_INT\_ST** The masked interrupt status of I2C\_SCL\_MAIN\_ST\_TO\_INT interrupt. (RO)

**I2C\_DET\_START\_INT\_ST** The masked interrupt status of I2C\_DET\_START\_INT interrupt. (RO)

**I2C\_SLAVE\_STRETCH\_INT\_ST** The masked interrupt status of I2C\_SLAVE\_STRETCH\_INT interrupt. (RO)

**I2C\_GENERAL\_CALL\_INT\_ST** The masked interrupt status of I2C\_GENERAL\_CALL\_INT interrupt. (RO)

**I2C\_SLAVE\_ADDR\_UNMATCH\_INT\_ST** The masked interrupt status of I2C\_SLAVE\_ADDR\_UNMATCH\_INT interrupt. (RO)

**Register 39.25. I2C\_COMDO\_REG (0x0058)**

Reset

**I2C\_COMMAND0** Configures command 0.

It consists of three parts:

op\_code is the command

1: WRITE

2: STOP

3: READ

4: END

6: RSTART

Byte\_num represents the number of bytes that need to be sent or received.

ack\_check\_en, ack\_exp, and ack are used to control the ACK bit. See I2C cmd structure [39.4-2](#) for more information.

(R/W)

**I2C\_COMMAND0\_DONE** Represents whether command 0 is done in I2C Master mode.

0: Not done

1: Done

(R/W/SS)

**Register 39.26. I2C\_COMD1\_REG (0x005C)**

## I2C\_DATE

Reset

PRELIMINARY

Register 39.34. I2C\_TXFIFO\_START\_ADDR\_REG (0x0100)

I2C\_TXFIFO\_START\_ADDR Represents the I2C TX FIFO first address. (HRO)

Register 39.35. I2C\_RXFIFO\_START\_ADDR\_REG (0x0180)

I2C\_RXFIFO\_START\_ADDR Represents the I2C RX FIFO first address. (HRO)

39.9.2 LP\_I2C Registers

Register 39.36. LP\_I2C\_SCL\_LOW\_PERIOD\_REG (0x0000)

LP\_I2C\_SCL\_LOW\_PERIOD Configures the low level width of the SCL Clock in master mode.  
Measurement unit: i2c\_sclk  
(R/W)

Register 39.37. LP\_I2C\_SDA\_HOLD\_REG (0x0030)

**LP\_I2C\_SDA\_HOLD\_TIME** Configures the time to hold the data after the falling edge of SCL.  
Measurement unit: i2c\_sclk  
(R/W)

Register 39.38. LP\_I2C\_SDA\_SAMPLE\_REG (0x0034)

**LP\_I2C\_SDA\_SAMPLE\_TIME** Configures the time for sampling SDA.  
Measurement unit: i2c\_sclk  
(R/W)

**Register 39.39. LP\_I2C\_SCL\_HIGH\_PERIOD\_REG (0x0038)**

|            |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    |                             |  |  |  |  |  |   |   |                        |  |  |  |   |  |  |   |
